BERKS FARM DEVELOPS FIRST 30-LB. COW

L. H. C. PRINCESS ANNETJE ALCARTRA.

A daughter of the \$50,000 Bull, King Segis Pontiac Alcartra

HER SIRE:—KING SEGIS PONTIAC ALCARTRA, the \$50,000 bull, who is a century sire, having 120 A.R.O. Daughters and 94 Sons. Three of his daughters have crossed the 30-lb. mark. He has 55 others from 20 to 29.57 lb. His sire is King Segis Pontiac who is by King Segis from the great old cow, Pontiac Clothilde De Kol 2d, who has three records above 30-lb. His dam is K. P. Alcartra, who has 30.87 lb. butter in seven days as a three-year-old. She was by King of the Pontiacs from Alcartra Polkadot Ormsby with a record of 31.25 lb. butter in seven days and five A. R. O. daughters.

HER DAM:—TIDY ABBEKERK PRINCESS ANNETJE with a record of 30.92 lb. of butter in seven days. Her sire, Tidy Abbekerk Prince, with over a hundred A. R. O. daughters is from the great old cow, Tidy Abbekerk, with 27.29 lb. butter and 551 lb. milk. This cow has five A. R. O. daughters and five sons. The dam's dam is Pauline Clyde De Kol 2d, with three A. R. O. daughters.

We have two fine daughters of this cow in the herd by King Tweede Spring Farm. Some other good records in the making. Also a few young bulls for sale.

The Gift Herd of Penn State College

Generous Dairymen Donate Cattle

ENTERPRISING Pennsylvania dairymen had a day all to themselves during the recent Farmers' Week, at the Pennsylvania State College. Wednesday, December 20th, was a Dairy Breeders' Field Day, at which time twenty-six head of purebred dairy cattle, each animal the gift of some Pennsylvania dairyman to Penn State, were exhibited and formally given to the college by the donors.

CENTRAL PENNSYLVANIA BREEDERS' CHOICE
Donated to the State College herd by the Central Pennsylvania Breeders' Association, Williamsport, Lycoming County.

Of the entire group of cattle exhibited, more than half were Holsteins. There were six Ayrshires, five Jerseys, and one lone Guernsey heifer. The special event attracted considerable attention among the Farmers' Week visitors, and quite appropriately claims first rank among the features of the winter gathering of farm folks at Penn State.

The fourteen blue-blooded Holsteins that were led before the spectators at this unique ceremony, were all of excellent type and breeding and give every indication that they will add many creditable records to the already long list that the college herd boasts. The dairymen of the state adopted an unusual plan to rebuild the college dairy herd, when they started a campaign last summer to "Endow an Empty Stanchion at State College." From the beginning, the Holstein breeders figured prominently in the progress of the movement, with the result that many splendid individuals were added to the black-and-white group in the college barns.

Most of the contributors of these gift cattle traveled to State College from their homes in various parts of the state, to personally present their animals to officials of the agricultural school, at the gathering in the col-

lege livestock pavilion. Others sent representatives to introduce their gift cows.

The list of individual and group Holstein donors is as follows: Central Pennsylvania Breeders' Association, Williamsport, Lycoming County, "Central Pennsylvania Breeders' Choice;" E. H. Weiler and Son, Warren County, Weiler Farm Yankee Beauty; Allegheny County Holstein-Friesian Association, Hazel Langtry Sylvia; Simon Stahlman, Brookville, Jefferson County, Model Stock Farm Beauty Fayne; Mary Josephine McCracken, Brookville, Pollyanna Segis De Kol; Chester County Holstein-Friesian Association, Willowna Luella; M. L. Jones, Chester County, Westtown Dot Aaggie Colantha; Hugh Moore, Chester County, Korndyke Valdessa Markwell; N. E. Pennsylvania Feed Dealers Association, Bradford County, Cornucopia Pauline Blossom 2d; Troy-Canton Bull Association, Crestmont Bradco Walker; Lathrop

WEILER FARM YANKEE BEAUTY
Donated to the State College herd by E. I. Weiler & Son, Warren, Pennsylvania.

Farm, Susquehanna County, Lathrop Penstate Homestead; Crawford County Bull Association, a heifer; and J. B. Moore and Son, Warren County, a cow. The other Holstein was given by Eugene B. Bennett, now of Brooklyn, New York, but formerly a resident of the Keystone State and president of the Pennsylvania Holstein-Friesian Association.

Without a doubt, the most interesting picture of the entire ceremony was promoted by 14-year-old Mary Josephine McCracken, in her presentation of Polly-

anna Segis De Kol, the three-year-old heifer that was a Christmas gift from her father, J. P. McCracken, when the heifer was only four weeks of age. With the gift cow before her as she spoke, this little high school miss held the attention of every eye as she proceeded with her choicely-worded speech. Her words might well be taken as expressive of the spirit displayed by all the donors who have interested themselves in the college herd's rehabilitation.

Addressing Dean Watts, and her fellow-patrons of animal and dairy husbandry, Miss McCracken said, "It affords me great pleasure to have the opportunity to present to this great institution, this young cow, which is the result of 15 years of careful and intensive breeding of the long-distance and high butterfat-content type of Holstein-Friesian cattle at Wakefield Stock Farm. This heifer was born November 22, 1919. She was presented to me the following Christmas, at four weeks of age, as my Christmas present.

"Her dam, Maplecrest Polly De Kol, is one of the foundation animals in the Wakefield Herd. Her sire is the senior herdsire, King Segis Longfield Lenore. She freshened on January 4, 1922. At the beginning of her lactation period, under ordinary farm conditions, she gave 40 lb. of rich testing milk at two milkings a day.

"My reason for presenting her to the college is that she may have the best possible chance to make good under the direction of Professor Borland and Herdsman Jones.

MARY JOSEPHINE McCRACKEN
and the three-year-old heifer, Pollyanna Segis De Kol, which she donated to the State College herd.

"I trust, in placing this individual in the dairy herd of this institution and under the supervision of experienced men, that her record may not only prove a good advertisement for our own herd at Wakefield Stock Farm, but also be a help to the college, and to the students, as well as the breeders in general. I thank you."

Miss McCracken, who is now a first-year student in the Richdsville High School, at Brookville, is looking forward to the time three years hence, when she is to enter the Pennsylvania State College and take a four-year course in home economics.

Accepting the cattle in behalf of the college and the Agricultural School, Dean R. L. Watts remarked that "this is an epoch-making day in the history of the Pennsylvania State College. I do not believe that you dairymen fully realize just how much you are doing

in building up the college dairy herd with cattle of this type. With the increased interest in the dairy course here at Penn State, as evidenced by the greater number enrolling each successive year, the generosity of the breeders will have a real influence and be of material benefit in affording better opportunities for our students in dairy husbandry.

"The excellent dairy cows presented to Penn State by the breeders will have a real part to play in the experimental work of the college, as well as in teaching

DEAN R. L. WATTS
Voicing the appreciation of college and agricultural school officials for Pennsylvania Dairymen's gifts of twenty-six purebred dairy cattle, Dairy Breeders' Field Day, Wednesday, December 20, 1922.

the students the essentials of judging and selection. The breeders and the twenty to thirty thousand visitors who pass through the college dairy barns annually will also receive inspiration from these gift cattle."

At the close of the meeting in the pavilion, dairymen were led to an examination of the future of the dairy industry, in a talk by Secretary Fred Rasmussen, of the State Department of Agriculture.

High-Producing Grades

WISCONSIN boasts of a grade Holstein cow that has a record of 20,932 lb. milk in one year and 80,097 lb. in five years. Ohio tells the world that the best cow in the state during September, according to cow testing association records, was a grade Jersey, while the October champion was a grade Holstein "without as much as a name."

Such publicity may give some the idea that there isn't so much to this purebred talk after all. But when the breeding of such grade cows is looked into carefully it is invariably found that they trace back to well-bred animals. The use of a purebred bull from high-producing ancestry goes back a number of generations, so far in some instances that these grade cows are practically purebred, though ineligible to registry.

High production in cows is an inherited, not an acquired, characteristic, whether the cows are purebred or high grade. And these high-producing grade cows simply point out again the importance of using the best sires of known ancestry.—*Chicago Drovers Journal*.

Don't rust. Even a good reputation will tarnish if it isn't kept in constant use.

Idaho A Coming Dairy State

By Reid Murray

WHEN the western people step out to do something, they do it. When Governor Davis of Idaho, personally conducted a "Dairy Special" in his state last month, he did it with the purpose of definite results if the conditions were right for dairying. There can be no doubt but what the "Gem of the

ton for it, and they want to market it through the dairy cow.

Among the establishments visited that were raising Holsteins was the Technical Institute herd at Weiser. Some splendid black and whites were at this farm, and excellent yearly records are being made. From this herd, the foundation for many good herds of the state has been selected.

Mr. G. A. Rock of Parma has been breeding for about ten years and has some very excellent cows. The herds of the state were all in fine condition and have ample available feeds at all times. Mr. Rock's cattle had access to a stack of excellent quality alfalfa at all times.

At Caldwell, we saw a grandson of Matador Segis Walker at the head of the Branch Experiment Station herd and he was a "real" bull.

The Nampa district has the dairy industry very well developed with a large condensery and two large creameries—one a coöperative creamery making over a million lb. butter a year.

Governor Davis congratulating the winners in the milking contest on the Savage Holstein Farm, Burley, Idaho.

Mountain" State is destined to become a great dairy territory.

In the first place the irrigated lands of Idaho produce crops that are ideal feeds for dairy cows—alfalfa and silage—and she produces them in enormous quantities. The weather conditions are nearly ideal for dairying—and in many places expensive barns are not necessary. The freight rates have "pushed the state a thousand miles further from market," and it costs about \$6.400 to send a trainload of 40 cars of alfalfa to market.

Part of the milking contest on the Savage Holstein Farm. Governor Davis and Annie Savage—both out to win.

But if this trainload of alfalfa is concentrated in a carload of butter, \$6,000 is saved in freight. Instead of the grower getting \$5 to \$8 a ton, the present price, good dairy cattle will give them at least \$15 to \$20 a

Governor Davis examining the herdsire at the Institute Farm, Weiser, Idaho. Prof. J. H. Frandsen is holding the animal.

Near Boise, we visited the ranch now owned by J. S. Boone, who is milking about 95 cows at present and has over two hundred head of cattle. It is on this farm that Segis Pietertje Prospect was bred and born, and where King Segis roth was owned.

One of the newer dairy centers is at Jerome. The work done by Mr. Shepherd and Mr. W. E. Meyer, is showing fine results. The importation of large numbers of dairy cattle during the past year has given this county a start that will make it a real dairy community in a short time. Wisconsin Holsteins from Clark County, and Manitowoc County, are near Jerome. They were brought in last fall and were doing very good.

A son of C. L. C. P. 4th, the famous Pinehurst sire was at the head of the good Hastings and Anderson herd near Jerome, and a fine bull he is.

At Burley we visited the good herd of Levi M. Savage, and found large type, good individuality and

high-producing cows. The accompanying picture of one of Mr. Savage's cows, with Governor Davis milking, shows the size they get on them in this territory.

Around Pocatello, and Blackfoot there is much interest in getting new herds. At Blackfoot there is a large sugar beet factory and with the alfalfa and silage, they have available large quantities of beet pulp.

At Pocatello we met Mr. Alex Thompson, who had purchased 88 head of Wisconsin Holsteins for himself and neighbors. Among these was a purebred from Kirkpatrick Brothers, Reedsburg, which was put on test and milked over 84 lb. a day and made over 23 lb. butter.

The Idaho Falls territory is gradually developing the dairy business, recently formed a bull association and are purchasing 24 purebred Holstein bulls. This is reputed to be the largest bull association ever formed.

H. J. Wartchow, formerly of Jefferson County, Wisconsin, is now milking 15 splendid purebreds near here.

Johnson Brothers have a milking herd of 50 cows and the herdsire, Buffalo Duke Doede, is a maternal brother of Duchess Skylark Ormsby.

At Sugar City we saw the good herd of Geo. A. Pincock. When Mr. Pincock was asked how he hap-

Stacking alfalfa hay with the "Mormon Derrick" in Idaho. The stack contains nearly 500 tons.

pened to have a purebred dairy herd he said from reading a dairy paper that a friend sent to him for a while. This shows in a small way the importance of breed papers and the press.

On our return home we stopped part of one day at Salt Lake City. We found the State Dairy and Food Commission getting ready for a State "Milk Campaign," so it looks as if the seeds of appreciation are sprouting all over the entire country.

Purebred sires and more foundation females are not all the need in Southern Idaho. They also need the dairy and breed papers and there are wonderful opportunities for the fieldmen of all breeds of dairy cattle to assist these good people in getting started making progress in this great basic industry.

Among the members of the party invited to Idaho by Governor Davis were: Prof. E. H. Farrington, Dairy Department of University of Wisconsin; H. R. Sarles, Dairy Husbandman, Ames, Iowa; C. L. Burlingham, secretary, Ayrshire Breeders' Association, Vermont; K. Musser, New Hampshire, Associate Sec-

retary of American Guernsey Cattle Club; Dr. H. A. Harding, Research Expert, Frederick C. Mathews Co., Detroit; J. L. Kraft of Kraft Cheese fame, Chicago; Prof. J. H. Fransden, Dairy Editor of the *Copper* papers; Kirk Fox, associate editor of *The Dairy Farmer*; Dr. Carl Larsen, chief dairy division, Wash-

One of the good cows of the Intermountain Institute Farm, Weiser, Idaho. A number of state records have been made on this farm.

ington, D. C.; and several prominent U. P. Railroad Agricultural men as "Farmer" Smith and H. A. Smith and Joel Priest of the Oregon Shortline.

Everyone on the Special seemed convinced that southern Idaho was to make a good steady healthy growth in dairying.

President Lowden on Co-operation

I HAVE seen pictures of some of Holstein cows in the United States, and I have seen pictures of some of the scrubs, and when I look at these beautiful representatives of these various dairy breeds and when I am told, as I was by the Department of Agriculture, that only 3 per cent of all the dairy animals in America are purebred and that all the balance are scrubs, I wonder how in the world anybody can have it in his heart to say anything unkindly about any of these dairy breeds and why he should not feel it his duty to fall into step with his brethren of the other breeds and make a common battle against the 97 per cent of scrubs which are impoverishing the farms of America and making hopeless the future of the boys and girls upon those farms.

Father was annoyed. His expensive gold watch had failed him. It wouldn't go at all. "I can't think what's the matter," he complained. "May be it needs cleaning."

"Oh, no, daddy," objected four-year-old Henry. "Cause baby and I had it in the bathroom washing it yesterday."

The worthlessness of poor quality and scrub sires lives after them—in their low-producing daughters—the good is oft interred with their bones.

Dairying in the Argentine

THE dairy industry in Argentina has shown constant and remarkably rapid growth in recent years. In 1910 the production of butter was 16,617,000 lb., and of cheese, 6,045,000 lb. By 1921 butter production had increased to 72,294,000 lb. and cheese production to 52,265,000 lb. Most of the increase has occurred since 1917.

This expansion of the Argentine dairy industry is making available on the English markets large quantities of Argentine butter in competition with that from other exporting countries. It is also placing large quantities of cheese on American markets. The report of D. S. Bullock, agricultural commissioner of the United States Department of Agriculture, of a recent visit to "La Taporita," one of the leading dairy farms and cheese factories in Argentina, may therefore be of interest to American dairymen. The report follows:

"La Taporita" is located at El Trebol in the Santa Fe province, within the present highly localized dairy section of Argentina. Both the farm and factory are operated practically as one enterprise. The farm, or "Estancia," contains about 37,000 acres made up of a number of separated farms. Part of the land is divided into "Tambos," or dairies, of about 370 acres each. On each "Tambo" there are 75 to 130 cows. On the entire farm there are about 15,000 head of cattle and 2,000 hogs.

The factory makes butter and casein and an Italian cheese of the "Grana" type, being the largest factory in

MILKING "A LA ARGENTINE"

The hind legs of the cow are tied together and the calf is tied to the right foreleg of the cow.

Argentina and perhaps in the world producing this type of cheese. Milk is received daily from about 50 patrons, but the larger part of the supply comes from "La Taporita." The general plan is to contribute milk to the factory from the cows on the farm, grow all calves, sell steers, and use up all by-products to feed the hogs. Practically all feed used is grown on the farm.

Each "Tambo" is operated by a man and his family. Holstein cows are used on some of the farms; grade Shorthorns on others. One farm has 105 Holstein-Friesian cows, six of which are purebreds. Only purebred sires are used on the farms, one bull for each 100

cows. Heifers are bred to freshen at three years of age. The heifers are raised entirely on pasture.

Milking methods on these farms are characteristic of extensive dairying in the region. The cows are milked but once a day. The calf is turned loose and allowed to suck a little. At milking time the calf is tied to the right front leg of the cow. The cow's hind legs are also tied together. After milking, the calf is allowed to run with the cow. Up to two weeks old the calves remain with the cows 19 hours daily. At this age the calves are considered well started and the time the calves remain with the cows is gradually reduced until

DRYING CASEIN AT EL TREBOL, ARGENTINA

at four months of age they are with the cow only one hour a day.

This method is not conducive to a large production per cow, Shorthorn cows on grass producing only 13 quarts per day. Cows normally milk about eight months.

The Holstein cows are giving larger production than the Shorthorns, and the calves are much more robust and less difficult to get started than those of the Shorthorns, particularly in the winter months.

On the farms having the Holstein-Friesian cows, it is planned to milk the cows twice a day, and to study the results of this method as compared with the dual purpose system now in use on all the dairies.

It is also thought that the heifers can be made to freshen earlier than at three years of age under more intensive raising methods such as feeding some grain in addition to the pasture.

The growing of steers as a part of the dual purpose plan is an important phase of the industry. Under this plan two-year-old Holstein steers compare favorably with Shorthorns of the same age. It was stated that Holstein steers at this age, when turned into good pasture for fattening, take on gains more rapidly and are in condition for the market sooner than Shorthorns. The packers ordinarily pay about 8 per cent to 10 per cent less for Holstein steers of the same weight as Shorthorns, but the local buyers make no difference.

The factory is new and modern in every respect. From 3,400 to 3,700 gallons of milk daily is received in summer and winter months, and from 6,000 to 6,300 gallons in spring and autumn months.

The milk from each patron is received separately and put in small vats where it is kept until tested for cheese-

making qualities. All milk is required to be clean, sweet, and not more than 12 hours old when received at the factory. The milk is delivered on schedule to avoid rush periods. After delivering milk each patron washes his cans at a stand provided for the purpose; the cans are then scalded.

Milk not suitable for cheese is skimmed; butter is made from the cream and casein from the skimmed milk. The factory is making from 550 to 650 lb. of butter and from 450 to 550 lb. casein a day. All butter made from cream is packed in 55-lb. boxes for the foreign trade. The butter pays for the milk, so that the casein is almost clear profit. Cost of manufacture is very small. Each 100 lb. milk will make from 3 to 3.2 lb. casein. The casein was selling at the time of the visit for about 12c per lb.

The factory makes about 25 cheeses a day. A yield of 7 per cent of the milk is obtained. Normally the fat content of the cheese is from 38 per cent to 44 per cent. The skimmed whey is used for feeding hogs. The cheese after being pressed is salted first with coarse salt and afterwards placed in vats of brine, where it remains from 12 to 14 days. On removal from the brine each cheese is marked with date of manufacture and put in an underground curing cellar, which is kept at a uniform temperature of 14 to 15 degrees Centigrade and held seventeen months. No attention is paid to humidity. Every three or four days each cheese is thoroughly brushed with a stiff brush. Five or seven months after making, the cheese is painted with lamp-black, which gives the characteristic black color of this type of cheese. There were in the cellars 20,000 cheeses, weighing about 55 lb. each. This particular cheese—Italian of the type "Grana"—was selling at the time of the visit for the equivalent of about 63c United States gold per lb.

The United States, Italy and some other countries are the principal foreign markets for the cheese. Before the war Italy exported to the United States an average of more than 20,000,000 lb. cheese annually. Shipments then fell off until 1920 less than 1,000,000 lb. annually was shipped to this country. In 1921 Italy came back to an export trade with the United States of 9,000,000 lb. The United States received no cheese from Argentina before the war but since 1919 has received an average of over 7,000,000 lb. annually from this source. Thus, imports of cheese from Argentina have in recent years supplemented the supplies received from Italy, although the combined total imports of "Italian" cheese is somewhat less than was formerly received from Italy alone.

Abortion Prevented by Steam Bone Meal

P. V. EWING

MANY breeders and dairymen are complaining of losses due to abortion in their cattle. Are you among the losers? It is true that this evil is spreading and infesting more and more the best herds of leading dairymen and breeders.

Experiment stations have been working on this problem and through repeated tests have discovered that a

great many cases of abortion are caused by a deficiency of mineral matter in the feeding rations. A lack of sufficient amount of calcium and phosphorus weakens the resistance of the cow and so it easily becomes a prey to abortion germs.

Healthy cattle can only be maintained by a careful balancing of rations in regard to the quantity of inorganic material required. Most grains which comprise the bulk of cattle rations have been found to be lacking in the amount of mineral matter they supply. At least they do not supply a sufficient amount of minerals.

Some breeders have realized the necessity for added mineral matter and are resorting to the use of the highly complex salt mixtures on the market and are dosing their pregnant cows with these. But this is unnecessary and unwise when the extra minerals needed by the cow during pregnancy can be supplied in sufficient quantities by feeding a simple bone meal.

Special Steam Bone Mineral Meal has proven very satisfactory for this purpose. Many dairymen and breeders are using it in their cattle rations and are finding that it is materially adding to the health of the cow in producing a greater milk flow and longer productivity. But most of all they are finding it to be one of the best preventives of abortion in their cattle.

Federal Extension Activities

BY HENRY C. WALLACE
U. S. Secretary of Agriculture.

THE United States Department of Agriculture has about four thousand employees who work in co-operation with the state agricultural colleges.

Agricultural agents are employed in about 2,100 counties, home-demonstrations agents in 800 counties, and club agents in 200 counties. In addition, there are 750 district agents and specialists in the preparation of subject matter who coöperate with the county extension workers. It is estimated that through the extension personnel the department comes in contact with about 2,500,000 farm homes. The 491,000 boys and girls enrolled in club work report products valued at more than \$7,000,000. Of the field agents, 272 are colored and work to aid negro farmers. About \$7,000,000 of Federal money was spent for extension work during the past year, to which was added about \$9,700,000 of State money.

The educational motion pictures of the department are growing in favor; 33 new films were completed, and 21 old films revised. Work was begun on 28 new subjects. The department now has a total of 547 reels available for distribution. Pictures are circulated by extension workers and schools. It is estimated that the department films are seen each year by an audience of between four and five million persons.

The department exhibits were displayed at more than 60 fairs and expositions and special shows, at which the total attendance was more than 4,000,000. The form of presentation of these exhibits has been much improved. An attractive exhibit for the Brazilian International Centennial Exposition at Rio de Janeiro, depicting the agricultural resources and development of the United States, was designed, prepared, and shipped to Brazil.

Grandview Farm

Home of Missouri's Champion Holstein Herd

ONE of the show places in the farm territory around Kansas City, is the King Barn at Grandview, Missouri. This barn accommodates 150 head of cattle, and is circular in form with round ells radiating to the four chief points of the compass. The round portion is eighty-four feet in diameter, is equipped with forty stanchions in the inner circle and twenty-four box stalls in the outer circle. There is loft space for 400 tons of hay and James equipment is used. Radiating from the main barn are the test barn, calf and maternity barns, the bull barn, office and milk room and the men's sleeping quarters. The buildings are

CHARLEVOIX MARBURY DE KOL
First-prize yearling and junior champion at the Ozark Stock Show.
Second-prize yearling at the Oklahoma State Fair. Owned by
A. J. King, Grandview and Kansas City, Missouri.

electrically lighted and are supplied with water which is pumped from a spring 400 feet away. Grand View Farm comprises something over a section of as good land as Missouri boasts and that is saying a lot.

The King herd at the present contains over 200 head. The four chief families represented are the Ormsbys, the May Echo Sylvias, the Korndykes, and the King Segis Pontiac strains.

The Ormsby herd consists of Pabst Creator Daisy a splendid son of the Pabst sire, Creator; four daughters of Ormsby Sensation; four daughters of King of the Ormsbys; a daughter of Creator; one of Sir Pietertje Mercedes 37th; four daughters of King Pietertje Ormsby Piebe; a daughter of King Bess Burke Ormsby and several others of closely related lines. From this it can be seen that Mr. King is a believer in the blood of Sir Pietertje Ormsby Mercedes and Spring Brook Bess Burke.

Mr. King is evidently a follower of the auctioneers' adage: "Let the other fellow work for you." When tests, official or long-time, are made in the Pabst herd in Wisconsin, in the Beaver Dam herd in New York State, in the Winterthur herd in Delaware, in the Hargrove & Arnold herd in Iowa; and in many herds in Minnesota, Wisconsin and other great cattle states the records made will have a tendency to increase the selling value of the related animals in the King herd.

Similar reasoning appears to be followed out in the

selection of the May Echo Sylvia line of breeding. In this herd there is a son and daughter of Carnation King Sylvia, the bull purchased by the Carnation Stock Farms at Milwaukee for \$106,000. This son of May Echo Sylvia has a number of daughters and although they are young, already they are showing that the producing capacity of the famous champion has been transmitted through this son to her granddaughters. There are two daughters of Champion Echo Sylvia Pontiac, and the work of his daughters in the Hardy herd is too well-known to need recalling to the attention of our readers at this time. Daughters of this bull in other hands have made wonderful records in official test and he now has eleven daughters above the 30 lb. mark only one of which made her record as a mature cow. The two daughters of Avon Pontiac Echo are, of course, sisters to Roycroft Mildred, the world record junior four-year-old for seven- and thirty-day milk production. So that, in this Missouri herd there are heifers sired by three different sons of May Echo Sylvia. Then, too, there are daughters of Alcartra King Sylvia who was by Carnation King Sylvia from the famous Tilly Alcartra whose year milk records of 30,451.4 lb. and 33,425 lb. were both world's records at the time of making. There are daughters of King Echo Sylvia Johanna who was the sire of Carnation King Sylvia and who was by Avon Pontiac Echo and from Belle Model Johanna 2d, a cow that two different years made over 37 lb. butter in seven days and three different years exceeded thirty-two lb. The Korndyke and King Segis Pontiac families are from stock equally as famous and are composed of just as choice individuals.

KING SYLVIA CARNATION
First-prize yearling, junior and grand champion at the Ozark Stock Show, and the Missouri State Fair. Owned by A. J. King, Grandview and Kansas City, Missouri.

Both long-time and short-time tests are made and some very nice records have been completed under the care of Wesley Billings, a young man hailing from Pennsylvania whose life-time has been spent around black and white cattle. Three two-year-old heifers were recently tested and each made over 20 lb. butter in the week. The dam of the junior herdsire, King Sylvia Carnation, made 26.28 lb. butter in seven days, 610 lb.

milk, tested under adverse conditions. She with some others, will be continued on year test.

Mr. King has been a liberal buyer at the greatest sales held during the past few years. In fact, you can scarcely mention a sale of national magnitude at which he has not been present. He is a judge of quality, bids only on the best, and generally goes home with a few good ones. At the recent herd dispersal of Frank Bock & Sons at Wichita, Mr. King purchased three Kansas State champions together with several other large record cows and their heifers. At this time he made arrangements with Frank Bock, Jr., who handled these animals while they made their state records and who will take charge of Rose Hill, an establishment recently purchased by Mr. King. At this place long-time test records as well as short-time records will be made and the quality of the animals purchased indicate that we shall hear more of this establishment. By having several breeding farms it will be possible to keep the several lines of breeding entirely separate and to intensify the blood of the strains that do the best in their new home and prove the most satisfactory under Missouri environment.

Exhibits from the King herd have been seen the past fall at the great fairs in the Southwest and were exhibited with a considerable degree of success. The herd was always a strong competitor for the group prizes, a sure indication of uniform high quality. At the Missouri State Fair, King won a majority of the first prize in this class as a yearling and was junior and King Sylvia Carnation, who was by Carnation King Sylvia from a daughter of Avon Pontiac Echo won first prize in this class as a yearling and was junior and grand champion at the Ozark Stock Show while he gave the winners of the blue a stiff battle at the Arkansas and Oklahoma State Fairs. At the Ozark Stock Show the yearling heifer Charlevoix Marbury De Kol was the junior champion and she was placed second in her class at the Oklahoma State Fair.

The King herd contains more animals of the May

Echo Sylvia strain and more Ormsby blood than has any other herd in the great Southwest. Mr. A. J. King who is in the real estate business in Kansas City is showing his confidence in purebred Holsteins by increasing his herds and investments at a time when many men who during the past years have been considered as leaders in the industry, are selling out or reducing their herds. The wisest man who ever operated on the Chicago Board of Trade said "the best way to make money was to buy when the other fellow wished to sell." By this he meant to buy at a price that was below the true selling value, a condition very easily created when a large number of men are in a selling mood.

The visitors and delegates present at the Kansas City meeting last June who enjoyed the hospitality of Mr. King, or who even made his acquaintance at that event where he was much in evidence, will certainly wish that Dame Fortune smile her sweetest on Grandview and its branch establishments during 1923 and succeeding years.

New Extension Man

ALLEN M. CRISSEY of Salem, New Jersey, formerly editor of the *Black and White Bugle*, the New Jersey State Holstein paper, has been engaged as fieldman by the extension committee of the National Association. He will have charge of a district composed of the states of Pennsylvania, New Jersey and Delaware. He paid an official visit to W. Hugh Jones, secretary of the Pennsylvania Federation of Holstein-Friesian Clubs on December 29th. His first job is an investigation of conditions in the district supplying Philadelphia with milk. It is alleged that there is unfair discrimination on the part of the distributors against milk from Holstein cows. Mr. Crissey then plans a trip around the State of Pennsylvania, visiting and organizing local clubs and getting acquainted with breeders and general conditions.

THE A. J. KING HOLSTEIN BARN AT GRANDVIEW, MISSOURI.

Supreme Court Declares Board of Directors Illegal

Judge Pooley's Decision a Scathing Indictment of Official Incompetency

Orders New Election of Six Directors—Delegate System Scrapped as Illegal—All Meetings Outside New York Declared Illegal Prior to 1921—Tears the Hands of Political Rapacity from the Throat of the Plain Breeder and Dairyman—Big Damage Actions Against D. D. Aitken and Illegal Board Rumored

THE legal action recently brought against the Directors of the Holstein-Friesian Association under Section 32 of the General Corporation Law has brought down upon the heads of the present illegal Board of Directors of the Association an avalanche of consequences the full import of which can scarcely be measured at this writing.

It is a great victory to the plain breeders and dairymen, and too much praise cannot be accorded Edward P. George, a plain farmer and dairyman, who had the courage to stand up alone and to demand an accounting of the men who have made a political machine of our Association, and who, by their persistent disregard of the rights of the membership to manage its own affairs have brought down upon their heads the rebuke of the Supreme Court of the State of New York.

Elsewhere in this issue will be found our editorial comments upon this very far-reaching decision of the Supreme Court of the State of New York; and believing that each and every member of the Association is vitally interested, we have printed the text of Justice Pooley's decision which is as follows:

SUPREME COURT: ERIE COUNTY.

In the matter of the application of

EDWARD P. GEORGE, pursuant to Sec. 32, General Corporation Law, to review and set aside the election of Directors of the Holstein-Friesian Association of America.

ERIE SPECIAL TERM
October, 1922.

Messrs. Frank C. Laughlin, Henry W. Killeen and John A. Kelly, of counsel for the applicant.

Messrs. O. U. Kellogg, C. M. Horn, and Louis L. Babcock, for the Association, opposed.

The application seeks to have the election of sixteen directors in 1922 declared void because they were elected under an alleged illegal by-law. The determination of this matter therefore involves an inquiry into various acts of the corporation going back several years.

The Association is a membership corporation created by special act of New York State Legislature (Chap.

333, Laws of 1885) and providing that Section 2: The officers of said Association shall be a president and four vice-presidents, to be designated as first, second, third and fourth; one secretary and editor, six directors, and such other officers as may be provided for by the by-laws of this Association; and said officers shall respectively perform the duties imposed upon them by the by-laws. Said officers shall be elected by ballot from and by its members at its first meeting and thereafter at its annual meeting to be held on the third Wednesday of March of each and every year, in the City of Buffalo, at its place of business, or other convenient time or place fixed by the by-laws and duly designated by the secretary in his notice by mail to members of such meeting.

In 1913 the Association voted to reincorporate under the Membership Corporations Law, and a certificate thereof was made and acknowledged and filed in the office of the Secretary of State at Albany and in the office of the County Clerk of Onondaga County in January, 1914, reincorporating the Association with six directors.

The first annual meeting thereafter was held in June, 1914, at Chicago, Illinois. The call for this meeting provided for the election of three directors for the term of two years to succeed three whose terms were about to expire. But at this meeting, new by-laws were adopted providing for six directors to be elected instead of three, and the then present three directors whose terms expired in 1915, should continue to serve the balance of their terms. These by-laws also provided that thereafter, at each annual meeting, three directors should be elected for a term of three years. This annual meeting then proceeded to elect six directors which increased the board from six to nine.

Section 14 of the Membership Corporations Law, at that time, provided:

"Changing number of directors. A membership corporation, created under or by a general or special law, may by vote of the majority of its members present at an annual meeting, or at any special meeting duly called for that purpose and so specified in the notice of the said meeting, determine to change the number of its directors to any number which a corporation created under this chapter for the same purposes is authorized

to have. Notice of such special meeting shall be given as provided by Section 26 of the Stock Corporation Law, or by publication thereof once in each week, for three successive weeks next preceding the time when such special meeting is to be held, in at least two newspapers within the county where such special meeting is to be held. On such determination, a majority of the directors shall sign, acknowledge and file an amended certificate specifying such reduction or increase; and thereupon the number of directors shall be the number stated in such certificate. Each director then in office shall serve until his term expires, and there shall be no election of directors until the number of directors is less than the number specified in the certificate."

The action of the annual meeting aside from its being held out of the state, increasing the number of directors from six to nine was legal, provided the amended certificate required by Section 14 was filed.

It is manifest that while the annual meeting had the right to increase, it could not proceed at that meeting to elect. The increase would never become effective until the amended certificate was filed, because the section declares that "thereupon (the filing) the number of directors shall be the number stated in such certificate." It seems clear that the section contemplated that the increase would apply to subsequent annual meetings, and would not be available at the annual meeting which voted the increase.

It seems to be conceded that no amended certificate was filed until July, 1919, and that therefore no increase of the number of directors was consummated, and the number of directors was limited to six, up to the time of filing the amended certificate. The filing of the amended certificate in July, 1919, could not legalize the elections prior thereto, it applied only to prospective elections.

This annual meeting of 1914 at Chicago was illegally held because there was no authority to hold the annual meeting outside the state of New York.

It follows that any action seeking to increase the number of directors was futile, and the provision for six directors remained.

The same is true of the meeting of June 4, 1919, in Philadelphia, where the Association undertook to increase the number of directors to sixteen.

The right to hold its annual meeting outside the state of New York came when in May, 1921, the legislature enacted Chap. 577, Laws of 1921. It amended Section 48 of the Membership Corporations Law, by providing that an association having a membership of at least one thousand, might hold its annual meeting without the state in any state or territory of the United States, provided that it makes and files a written designation of a person upon whom process may be served. This Association has a membership of 22,000 and a designation has been made of a person upon whom process may be served. It therefore has the authority since May 5, 1921, to hold its annual meeting without this state.

This enactment of Chap. 577, Laws of 1921, also amended Section 14 of the Membership Corporations Law by changing the requirement for the reduction or increase of the number of directors by providing that such certificate may be signed, acknowledged and filed by the president and secretary of a special meeting which

voted such reduction or increase, whereas before the amendment, such certificate was required to be made and filed by a majority of the directors. The certificate herein was made and filed by the president and secretary of the annual meeting held in Philadelphia, and not of a special meeting called to vote upon the proposition. Moreover the meeting in Philadelphia was not a legal meeting.

My conclusion, therefore, is that the directorate of the Association consists of six members and that the attempt to increase to nine and again to sixteen failed.

Ormsby vs. Vermont Cop. Min. Co., 56 N. Y. 623, holds that neither stockholders nor directors could do a corporate act, out of the jurisdiction creating the corporation which should have any force to bind those who did not participate in it.

The petitioner here did not participate in any of the meetings in person or by proxy except in one instance when his proxy was present but did not vote on any of the questions raised in this proceeding. He became a member in 1918. He is the owner of a large herd of Holstein cattle purchased on the strength of the records of this Association. It appears that the illegal Board of Directors have persisted in an attempt to expunge the records which have a direct bearing upon the value of his cattle, so that he is vitally interested. He cannot be charged with laches because the questions involved were the subject of litigation, upon the conclusion of which he promptly instituted this proceeding.

Many pertinent questions are discussed in the very full briefs on both sides in this proceeding and it would be a pleasure to cover them in this memo. A prompt disposal, however, will not admit of it. My study of them and the many cases cited, lead to the conclusion stated and an order will be settled embodying them. A new election of six directors will be ordered, a finding made that the attempted increase to nine and to sixteen directors were illegal, that the petitioner is within his rights and his action timely in instituting this proceeding, and such other finding as may be adopted from the suggestions of either party deemed pertinent for the record.

JUSTICE CHARLES A. POOLEY,
Judge Supreme Court, State of New York.
Handed down January 3, 1923.

If every rose has its thorn, how about those flowery beds of ease?

"So your father is ill. I hope it is nothing contagious."

"So do I. The doctor says he is suffering from overwork."

There was a young woman who lived in a shoe—
Black patent leather, size No. 2,
She looked most unhappy, she couldn't walk straight,
And neither would you with a foot No. 8!

How to Provide an Adequate Feed Supply

By Louis H. Klaas

WHENEVER passing through a dairy district in the early spring, just as the first sprouts of grass appear a little above the ground, we are always impressed with the fact that so many herds are turned out on grass, or rather to graze, while there is as yet no possibility of a "full bite" and the seeking out of the few sprouts is only a disappointing pastime for the cows.

What does this mean? It at least has two significant bearings on the feed supply. It indicates that barns and bins are getting low, that every effort must be made to stretch out the hay, in fact every time one takes a forkful he looks back and wonders whether he took too much with reference to the days yet to come.

The condition of the cows also indicates that they have had to get along on a "stretchy" ration, in return for which they at best could but return a milk check which the owner has to stretch, and stretch quite hard, in order to cover the needs of his family, to say nothing of buying hay or feed for the cows.

With reference to the future it means that if the cows are left to nibble off the grass just as it comes up there never will be a "full bite," for the fact is that

Corn, cane, and mongol soybeans, planted for silage June 10, 1922. Estimated yield fifteen tons per acre. This is where fourteen tons per acre of mammoth clover was plowed under the week previous. On Milky Vale Farm, Maple Park, Ill., Louis H. Klaas, Proprietor.

anything that grows out of the ground must get some little distance above the ground for breathing space in order that it may grow thriftily. Thus the cows are forced to get along on a short ration at a time when of all times they should have a good full feed.

July comes, brings heat, flies, dry weather and still shorter feed. Fall comes, then the cold, raw winds shrivel up a bunch of bony creatures that go into winter without any promising prospects for high or even fair production. During the long, cold winter when every mouthful the cows eat must be hand fed, one feels every time feed is handled that it must be stretched out to last until the sprouts of grass again appear. The above presents the experience of a large percentage of the dairy farmers of the northern states.

The first step to provide an adequate feed supply is to keep the cows off the grass until it has a good start, not only a "full bite" but enough that experience will

show that there will be plenty of grass as long as the grass season lasts.

On Milky Vale (formerly Milky Way) Dairy Farm, our diary shows that we never turn our cows out on grass until the 20th or 23d of May at which time there is usually a good cover. This cover is instrumental in doing three things well which the short feed can do but poorly, if at all.

First, it furnishes an abundant feed supply; second, it provides breathing space for the grass enabling it to grow much faster; and third, it keeps the ground covered in a measure, thus retaining moisture to make the superior growth.

As a further aid to the grass we apply our manure in the fall and winter to the pasture. Last year, 1921, on 31 acres we pastured about 40 head of stock. The feed was so abundant that we cut ten good loads of hay and two loads of timothy bundles for seed in our pasture. This year we cut eleven loads of hay in the pasture and left as many more in the field.

The problem of securing hay of the right character and in sufficient amount is usually attended with a variety of difficulties. Timothy and clover being usually seeded together form the hay ration on many dairy farms. While clover is a very good feed, it lasts only one season after which timothy becomes the principal hay crop.

When we have a cow that will not go dry we keep her in the barn and feed her on timothy hay which is kept for horsefeed. That is its only place of real value in a dairy ration.

To supply our herd with sufficient hay regardless of quality, would require 30 to 35 acres of the ordinary meadow. But we use alfalfa entirely, Grimm variety. Instead of 30 acres we have only 15. From this we had last year an abundant supply of feed all the time and we baled two carloads for market. This year we again received a supply beyond our needs and sold a part of the third crop in the field at ten dollars per acre net. This was equal to what some crops in this locality for the entire year returned the past season, gross income, such as oats, 40 bushel per acre at 25c per bushel.

The fourth crop furnished pasture of the finest kind during the month of October and produced about five dollars worth of milk per acre. We have used the Grimm alfalfa for 12 years and found it to pass through severe winters when other varieties completely killed out. Thus we have the hay problem happily solved as to maximum production from a minimum number of acres, also as to quality and reasonable certainty of crop.

The third item in the dairy ration as is to be expected is silage, concerning which but little need be said except as to feeds used and methods of planting. We use ordinary field corn checking it in with three or four kernels in the hill. Then we change the planter into a drill and go over the same rows again planting in mongol soy beans and amber sugar cane, mixing five quarts of beans and one quart of cane seed in the boxes

and dropping about eight beans between two hills of corn. At this rate it requires about one bushel of beans for five acres. Thus we have a feed that for quantity furnishes from 15 to 20 tons silage per acre. As to quality it supplies carbohydrates in the corn, protein in the beans and an abundant and palatable succulence in the cane. To fill our silo it requires ordinarily from 15 to 16 acres of fairly good corn. Last year we filled it with nine acres of the above combination.

Thus we have developed a system of feed supply in

actual practice which gives very gratifying results, both as to quality and quantity of feed and also as to minimum number of acres required. This makes dairying pleasant as well as profitable.

For concentrates we use corn, oats and barley ground together, and purchase practically no mill feeds. Our herd was the leading herd for production in our cow testing association for October, also for August and July.

Recent Records on Keystone Farm

KEYSTONE Farms is one of the many good Holstein breeding establishments of Pennsylvania and like a vast majority of the Holstein establishments in that state is operated by a real breeder and dairyman. The owner is Mr. C. A. Pratt who has had a purebred sire at the head of his dairy for twenty-five years. The entire herd with the exception of the herd-sires have been bred and raised upon the Keystone Farms. Mr. Pratt has been building up the present herd for many years; in fact, before he became a member of the Holstein-Friesian Association of America in 1909. A number of splendid records have been made in his herd and animals sold from here have made good elsewhere. The foundation from which Mr. George E. Stevenson built up his famous hornless strain came, as the name indicates, from the Keystone Farms; while some splendid records were made in the Crestmont herd, owned by Harry C. Gates, on daughters of Segis Hengerveld Beets Lyons which came from this establishment.

A splendid record recently made in the Keystone herd was on Keystone Segis Beets 2d, a senior three-year-old that produced 27.22 lb. butter, 702.4 lb. milk in seven days and 112 lb. butter and 2,807.3 lb. milk, in thirty days. Note that the thirty-day milk record is practically four times the amount produced in the best seven days, while the thirty-day butter record exceeds four times the best seven days' production. This cow made 105 lb. milk her best day which is quite a production for a three-year-old heifer. She is a daughter of The Sixth Korndyke who was by Spring Farm King Pontiac 6th, a bull whose daughters have made some very fine records both in short-time and long-time official work. His dam, Fairview Beauty Pietertje 3d made two seven-day records above 20 lb. butter as a two-year-old; as a junior averaging 69 lb. in a day and as a senior two-year-old averaging 80 lb. milk a day. Continued on long-time test she produced 733.74 lb. butter, 16,762.7 lb. milk in a year. She is a daughter of the famous Pontiac Korndyke and was from Fairview Beauty Pietertje, a daughter of Beauty Pietertje Butter King. Other daughters of The Sixth Korndyke that recently completed records were Keystone Princess Segis 2d with 66 lb. milk in a day as a two-year-old; 439.7 lb. milk, 17.95 lb. butter in seven days; 874.4 lb. milk, 34.80 lb. butter in fourteen days and Tromp Beauty Korndyke 329.4 lb. milk, 13.95 lb. butter in a week as a two-year-old.

It is not our intention to tell about all the members

of the Keystone herd, that we will keep for a later article, but just to mention some of the nice records recently closed. Keystone Tromp Beauty 2d a junior four-year-old made 448.3 lb. milk, 19.21 lb. butter in a week. She was sired by a grandson of King of the Pontiacs.

Keystone Segis Lyons Walker, a junior two-year-old daughter of Keystone Segis Beets 2d showed she inherited the producing capacity of her dam by making

KEYSTONE SEGIS BEETS 2d
702.4 lb. milk, 27.22 lb. butter in seven days; 2,807.3 lb. milk, 112 lb. butter in thirty days as a senior-three-year-old. Owned by C. A. Pratt, Keystone Farms, LeRaysville, Pa.

72.4 lb. milk in a day, 476.5 lb. milk, 18.96 lb. butter in a week and 1,958.9 lb. milk, 77.20 lb. butter in thirty days. She is sired by King Colantha Walker, a bull whose fifteen nearest dams have seven-day records averaging 30 lb. butter, nine of these dams are 30-lb. cows. A six generation chart of this bull shows that twenty-nine of the thirty-one dams depicted on the chart average 27 lb. butter in seven-days' official work.

One of the earlier sires of the Keystone herd was Prince Segis Korndyke, Jr. This bull has a score or more daughters in the A. R. O., two of which have exceeded 30 lb. in seven days. His dam was Beauty Rauwerd De Kol, 30.54 lb. butter, 719 lb. milk in a week, one of the good daughters of Pietertje Hengerveld's Count De Kol. His sire Prince Segis Korndyke also has a long list of good record daughters and was from the same dam as the noted King Segis.

Prince Segis Korndyke, Jr., has a number of good daughters in the Keystone herd, two of which recently completed good records. One is Pearl Celosia Korndyke, 89 lb. milk in a day; 549.5 lb. milk, 21.67 lb. but-

ter in seven days and 2,476.8 lb. milk, 84.48 lb. butter in thirty days; the other, Amleto Segis Johanna made 79.4 lb. milk in a day; 528.9 lb. milk, 22.67 lb. butter in seven days; 2,210.5 lb. milk, 92.31 lb. butter in thirty days.

Another bull who has had considerable influence on the building of the Keystone herd is Segis Hengerveld Beets Lyons who was by Pietertje Hengerveld Segis a century sire himself and a son of King Segis from Blanche Lyons De Kol, a thirty-three-lb. daughter of Pietertje Hengerveld's Count De Kol. The dam of this sire is Bloomingdale Hengerveld Edith, 32.45 lb. butter in a week, the second highest record daughter of Hengerveld De Kol the first century sire. Her dam was a 24-lb. daughter of Paul Beets De Kol, a century sire. Bloomingdale Hengerveld Edith was a member of the Sinissippi herd, owned by President Lowden and in that herd lived to a good old age, in fact, may be still living for all we know as she was hale and hearty the last time we saw her at our President's establishment.

A Fund of Selling Talk

THE November *Monthly News Letter* of the Wisconsin Cow Testing Association was issued from Madison on December 14th. Enclosed was a four-page leaflet entitled "Profitable Half-Sisters of the Purebred Cow." This term is used for daughters of a purebred bull.

The article was so full of information that can be used as selling arguments by Holstein owners desiring to dispose of young bulls that we are reproducing it in full.

"Grade cows, sired by bred-for-production bulls, are little half-sisters to the purebred cow. They may lack the aristocracy of the blue-blood lineage. They may be roosting on the lower limbs of the family tree. But please remember that old adage, 'the bull is half the herd,' often gets in its work on behalf of the grade cow—and her owner. Grade cows are one of the four fundamental stepping stones to dairy achievement. These steps are: a purebred bull of proven worth; grade daughters that 'take after father,' an owner that feeds wisely and well; and the systematic use of the milk scales and that fat test.

Grade cows of this kind have enabled many a struggling young dairyman to graduate from the lean-to milk shed to concrete floors and steel stanchions. Yet a grade cow that is backed by a common bull, a 'doubtful daddie,' is about as much use as a pound of oleo at a cow testers' picnic!

Wisconsin has 127 cow testing associations, and every one of them has grade cows sired by purebred bulls that are producing records which any practical dairymen might well be proud to claim.

That more than 80 per cent of these profitable well-sired grades are Holsteins reflects both upon the good judgment of their owners and the inherited ability of the Holstein bull to transmit something besides hair and horns!

Three daughters of Segis Hengerveld Beets Lyons recently closed records. Keystone Beets Johanna milked 80 lb. a day and produced 536.8 lb. milk, 25.11 lb. butter in a week; Keystone Beets Korndyke Lyons milked 76 lb. milk in a day; 506.7 lb. milk, 22.51 lb. butter in seven days while Keystone Segis Johanna 3d milked 79.3 lb. milk in a day; 530.3 lb. milk, 22.94 lb. butter in a week and 2,104.8 lb. milk, 90.41 lb. butter in thirty days.

In the present Keystone herd there are more than a score of daughters of The Sixth Korndyke, and much is expected from these young cows in the future. This bull is a faultless individual and has transmitted individuality of a high order to his offspring.

The present owner of Keystone Farms is Clement A. Pratt, who modestly passes the credit for the development of this bunch of nice record cows to his son Avery D. Pratt, who cared for and milked the animals. We must all acknowledge that he did well.

At the grade show and sale at the 1922 National Dairy Exposition a splendid chance was afforded to examine and purchase some of the world's very best grade Holsteins. First, we have with us in this assemblage the world's record grade cow. She is Aggie, consigned by D. W. Huenink of Cedar Grove cow testing association, Sheboygan County, Wisconsin. She is entered in the class for cows giving 500 lb. or more, and also in the class of five grade cows from one association. Mr. Huenink, a careful feeder, possesses the high record cow testing association herd in Wisconsin. His 10 cows averaged 560 lb. butterfat, equal to 700 lb. butter, from 15,960 lb. milk.

At six years old, Aggie made the world's grade cow record, as yet undefeated. This was 20,932 lb. milk, testing 3.9 per cent fat, 817.4 lb. butterfat or 1,022.0 lb. butter. Bring on a better one! Her total production for the five years from 1917 to 1922, was 80,097 lb. milk; 4 per cent fat; 3,201.8 lb. butterfat. The return above feed cost on her product for five years was \$1,229.23. This makes a straight average per year of 640 lb. butterfat or 800 lb. butter, valued at \$436.10, with a return of \$245.85 a year above feed cost. Aggie held the Wisconsin state testing association championship for 1919, 1920, 1921, and 1922.

Think of the seven cows in Barn C from the Monroe-Green County (Wisconsin) herd owned by Ludlow & Schild. Four of them are sired by one purebred Holstein bull, and three of them are by another purebred Holstein sire. The first four average 10 years of age, and the other three average five years old. Ludlow & Schild have used purebred bulls on grade and native cows for 10 years. The average size and frame of these animals is marvelous. It is only about two years ago, however, that Ludlow & Schild began systematic testing in an association. The seven cows which were exhibited by the Holstein-Friesian Association of Amer-

ica in Barn C are mighty good producers, as these brief figures show.

Name	Lb. Milk	Lb. Fat	Lb. Butter
Anna	14,941	531	663
Nance	14,105	456	570
Star	13,017	422	527
Matilda	13,070	365	456
Sylvia	11,673	414	517
Nettie	11,271	411	513
Blackie	10,182	403	500

These are cows direct from the top herd in this Green County Association. The 30 cows making up this leading herd are all grade Holsteins. Their average

for the year was 11,145 lb. milk and 459 lb. butter, while the average return over feed cost was \$95.66.

Grades are worthy of investment. Remember that the average production per cow in Wisconsin, the leading dairy state, is 5,000 lb. milk and 190 lb. fat. Cow Test Association cows average 6,936 lb. milk, 265.7 lb. butterfat according to records of 61,000 cows in the associations.

Ninety-six per cent of all Wisconsin members of Cow Test Associations use purebred bulls. They have found that the bull is more than half the herd. Let him be a good purebred."

Breaks State Record at First Try

NEARLY two years ago E. A. Barthelemy of St. Cloud, Minn., decided that a good dairy farm was needed in his part of the country, so, on his farm of 350 acres he built a splendid barn and is stocking up with Holsteins of the highest quality. The great record of 23,286.9 lb. milk, made in a year as a junior two-year-old by Mankato Colantha Ormsby Bess has brought the Barthelemy herd into prominence as this is the Minnesota State record for the class. Mankato Colantha Ormsby Bess produced over 20,000 lb. milk in 305 days and is due to freshen January 5, 1923. She freshened for the first time at two years, three months, twenty-three days on November 13, 1922, so that she will qualify in the 305-day division. Her ten months' milk record is exceeded only by one other heifer in the junior two-year-old class. Her year butter record is 817.45 lb.

The St. Cloud Holstein Farm, as the Barthelemy establishment is called, is located about six miles from St. Cloud on a state highway between that city and Duluth. The main cow barn is 118 feet long and 48 feet wide. It contains stanchions for forty-eight cows, has nine box stalls 9 feet by 12 feet and a bull barn 10 feet by 22 feet. The floors are of cork brick and concrete. The barn is built with drop siding and the inside is ceiled. James equipment is used with individual watercups and an up-to-date ventilating system has been installed. The barn is connected with a two-story

granary 26 feet by 36 feet in which the feed is ground and mixed and then supplied to the barn by chutes. A capacious cellar furnishes storage for beets and mangels. There is an electric lighting plant and a 1,200 gallon water pressure tank. These

are contained in the milk house which is equipped with an electric cream separator and cooler. The silos are made of Lansing glazed tile, are forty-five feet high, one is fourteen and the other sixteen feet in diameter.

The hospital and horse barn are together. This building is 36 by 40 feet and contains four box stalls and four cow stalls beside the horse stalls. It is planned to build a new calf barn next year.

The present St. Cloud herd consists of seventy-five head. All the animals are given a chance to show what they can do in official test. The first animal to complete a year record is Mankato Colantha Ormsby Bess and she broke the Minnesota State record for her class and stands second in the world for ten months' milk production. Two other two-year-old daughters of King Colantha Ormsby Bess are on test in this herd. Mankato Mechthilde Ormsby Bess, freshening at two years and twenty-four days made over 20 lb. butter in seven days, and in 267 days, has 12,303.7 lb. milk and 546 lb. butter. The other, Lillamere Bonnie Clothilde, at two years and one month just finished a year's record of 12,481.7 lb. milk, 690 lb. butter.

Mr. Barthelemy purchased his first foundation animals, fourteen head, in the Blue Earth County Consignment Sale at Mankato in March, 1921. Then at the Minnesota State Sale held at Fairbault, May, 1921, he secured a number of the tops. One of his purchases made a year record of over 1,000 lb. butter; a three-year-old made over 960 lb. butter; and several others exceeded 700 lb. It is the intention to line-breed along the lines of the Ormsby strain. A half interest was purchased in two herds owned by the Mankato Holstein Farms. These are

Barns and Herd on the St. Cloud Holstein Farm, St. Cloud, Minn. E. A. Barthelemy, proprietor.

Mankota Ruby Marathon Ormsby and Ormsby Korn-dyke Lad 8th.

Mankato Ruby Marathon Ormsby is a son of Marathon Bess Burke and of the well-known Ruby Karen

MANKATO COLANTHA ORMSBY BESS

817.45 lb. butter, 23,286.9 lb. milk in a year as a junior two-year-old; Minnesota State record for milk. Over 20,000 lb. milk in ten months, second highest record in the world for age. Owned by E. A. Barthelemy, St. Cloud, Minnesota.

Mercedes who has records of 35.03 lb. butter, 524.4 lb. milk made in seven days as a junior four-year-old. In 340 days at the same age she made 17,193.1 lb. milk,

901.56 lb. butter. She has four-year records that average better than 900 lb. butter. Ormsby Korn-dyke Lad 8th as his name indicates is a son of the great New York sire Ormsby Korn-dyke Lad and his dam is Beaver Dam Alcartra. Calving at thirty months of age, this young cow produced 26.12 lb. butter, 560.4 lb. milk in seven days and 1,003.42 lb. butter, 23,497.9 lb. milk in a year. She is a daughter of King of the Alcartras from the 27-lb. two-year-old Beaver Dam Lass 2d who has a record of over 13,000 lb. milk and nearly 600 lb. butter made in ten months as a three-year-old.

Mankato Colantha Ormsby Bess is the first animal in the St. Cloud herd to complete a year test and she made a state record. With high-class foundation animals given the best of care; splendidly housed and plenty of good feed, the future success of the St. Cloud herd is practically assured.

Rip Van Winkle found a still,
A bootleg still.
He took a drink, as some men will,
Beside the rill.

It was a funny brand they kept,
My little dears.
'Twas there old Rip Van Winkle slept,
For twenty years.
—Louisville Courier-Journal.

Feed in Relation to Fat

By George Leslie

PROFIT being the excess of returns over expenditures, the greater the volume or amount of returns, the more profit. In dairying the returns are milk and butterfat, progeny and fertilizing material, and the expenditure we are mainly here concerned with is for feed to keep the cow in condition and allow her to produce a maximum amount of milk and fat, and a strong calf.

All intelligent dairy farmers know the great increase of milk which comes from good feeding; but many are in doubt about whether feed can increase the butterfat. Here there arises a difference in understanding. Feed can increase the *total butterfat* for the lactation period, but it cannot make a permanent increase of the cow's normal, natural average *percentage of fat*.

Again, the feeding to increase the total fat must be done in the two or three months your cow is dry and about the first six weeks she is in milk. This means liberal grain for the first named time and light feeding for the second. But when, at the end of this six, or possibly ten weeks, the cow has come back to her normal, fixed fat percentage, she cannot, by any legitimate means of feeding, be made to raise it during that lactation.

In other words, we can, by feed, increase materially the amount of milk, and raise the fat *percentage* above normal for a limited period, both increases followed by more profit over cost of feed; but we cannot by any process of feeding or kind of feed permanently change

the cow's fixed *ratio* of butterfat to milk.

For instance, a cow with four records, all authenticated by her breed Association, made at full age, gave a little short of 10,000 lb. milk and 500 lb. fat as the lowest production, and 14,500 lb. milk and 750 lb. fat as the highest. Her low fat was 4.9 per cent and her highest 5.18 per cent, but her average for the four years was 5 per cent which was undoubtedly her normal fat. Her high record was the result of careful feeding through the dry period as well as while she was in milk.

Another, whose normal fat was not over 3.5 per cent, was fed so that she did not fall below 5 per cent for the first 25 days after calving and for 47 days kept to not less than 4 per cent. Her fat for that lactation was, we'll say, raised possibly one per cent for that year, entirely due to careful feeding.

It is entirely probable that a continuation of such practice will tend to fix in the cow the habit of maximum production in response to feeding, and this habit and ability her progeny would inherit. This phase of the question has its importance, as the dam's high production materially increases the calf's value either for breeding or selling.

A third, in doubling her milk and *Total Fat* in making a record when she was properly fed, had for the second year exactly the same fat *Percentage* as she showed the first year, not even a tenth of one per cent higher or lower. This cow made a very high fat milk for the early weeks of her milking period on a small

amount of feed, having been fitted carefully when dry. But, in spite of the great increase in total production, her fixed, normal percentage of fat remained constant.

We have, in traveling in the middle west and south this year, heard this question of the effect of feed on the butterfat yield discussed by many dairymen who have varied views, some insisting that their changes of feed tend to either raise or lower their individual cow's fat per cent; others being undecided, and wanting to know the truth, because of hearing conflicting stories from different sources. Among them were readers of *THE BREEDER AND DAIRYMAN*, so we take this way of getting the message across to them in a form that will, we hope, be convincing. This is information gained from facts that are within the knowledge of the writer and we all know that "an ounce of fact is worth a ton of theory."

Ten Little Motorists

Ten little motorists driving down the line,
One hit a trolley car—then there were nine.

Nine little motorists, monkeying with Fate,
One bumped a motor truck—then there were eight.

Eight little motorists trusting much in Heaven,
One tried to hog the road—then there were seven.

Seven little motorists trying clever tricks,
One met a railroad train—then there were six.

Six little motorists thought that they could drive,
One skidded off a bridge—then there were five.

Five little motorists speeding more and more,
One struck a Thank-you-ma'am—then there were four.

Four little motorists driving recklessly,
One sassed a traffic cop—then there were three.

Three little motorists heaving into view,
One passed upon a curve—then there were two.

Two little motorists out to make a run,
One hit a granite wall—then there was one.

One little motorist packing quite a bun,
He's in a prison cell—so there was none!

Here is a history it is well to heed,
It has a moral he who drives may read!

—Berton Braley.

League Milk Prices For January

At the regular monthly meeting of the Board of Directors of the Dairymen's League Coöperative Association, Inc., held at the general offices in Utica, New York, on December 20th, it was recommended that the prices to be paid by dealers for January milk be practically the same as those which have prevailed in December. These prices which are for 3% milk in 201-210-mile base zone, are as follows:

Class 1. \$3.37. Milk in this class is disposed of in the fluid markets.

Class 2. \$2.90. Milk in this class is manufactured into ice cream and soft cheeses.

Class 3-A. Fifty-nine cents above the average wholesale quotations for butter in the New York City market with the usual allowance of 5c for making and the differential of 4c per lb. for butterfat. Milk in this class is used in the manufacture of condensed and evaporated milk and milk products.

Class 3-B. Price to be 40c above the average wholesale

quotations for butter in New York City, with the usual allowance for making and butterfat. Milk of this class is manufactured into hard cheeses.

Class 4-A. Milk manufactured into butter, based on the average wholesale quotations in New York City figured on an overrun of 16% with the usual allowance for making. When no profitable disposition for skimmed milk is made, 5c per hundred lb. to be added to above price.

Class 4-B. Milk that is made into American cheese, average New York City wholesale market quotations with the usual allowance for making and butterfat.

Jessie—"I can't imagine how you get money out of your husband."

Bessie—"Oh, I simply say I'm going back to mother, and he immediately hands me the fare."

Letters to the Editor

HOLSTEINS FOR BEEF

The large exhibits of milking Shorthorns as a dual-purpose breed at the recent Chicago International and the many people that were interested in them, is evidence that Holstein breeders are standing in their own light by not making a corresponding exhibit of their cattle. While they need not compete in the same ring, the public could see their dual purpose value. Along side of the dual purpose class, it would be well to have a beef class; showing grade steers of different ages as the Shorthorn men did; also fat, dry cows, also have dressed beef classes.

Such exhibits at the International and several other prominent fairs would be of immense value to the breed. The Central States Fair at Aurora, Illinois, should be one of them; for from present indications this will become one of the leading fairs of the United States. If a few prominent Holstein breeders would take hold of this scheme is earnest, there is no doubt of its ultimate success and great value.

Then, I believe, we should have an annex to the Advanced Registry admitting only such cows—grades or full bloods—as are owned by dairymen, fed and handled as ordinary dairy cows are, milked only twice a day. The first cow of that class to give as high as 16,000 lb. in a year was one I imported in the first lot for Wm. A. Russell in 1874. She had just ordinary dairy keep while making that record.

It is well-known that those excessive records made by different breeds are produced by systematic cramming and milking three and four times in twenty-four hours, a practice that ordinary dairymen cannot follow. GEORGE W. BROWN.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Gentlemen:

We invariably find in every city, men devoting their efforts to the uplifting of their fellow men and for the betterment of the place in which they reside. If we did not have such men to display an interest, many times we would lose the good things in life, our city would not grow and things in general would become stagnant. Therefore, *THE HOLSTEIN BREEDER AND DAIRYMAN* is to be congratulated for establishing a publication which will protect "the interests of the men who breed Holsteins and make dairying their business."

Have enjoyed reading of the events which transpired at the "behind closed doors" meeting which has been brought to the attention of the small breeder through your paper. Keep it up.

As Father Time is bringing,
Your Birthday first to view,
Here's wishing *BREEDER-DAIRYMAN*,
The best success to you.

Wishing the *HOLSTEIN BREEDER AND DAIRYMAN* the best of success for the coming year, I am, Very truly yours,
OHIO.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

January 8, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Another Way to Milk the Membership

WE were amused while reading an editorial in what Used To Be the leading Holstein publication and which for the last few years has been notorious for its policy of working for everything that was against the breeders and against everything that was for the breeders. The editor now anticipates that the breeders, through the National Association are going to support his publication financially by paying for space in the Advertising Columns in which to print the Association reports which other publications have been printing and are perfectly willing to continue to publish without charge. Judge Pooley's decision evidently has come in time to stop this form of *Graft*.

Justice

ON another page of this issue, we have printed the decision of Justice Charles A. Pooley, Judge of the Supreme Court of the state of New York, handed down in the action brought by Edward P. George against the Holstein-Friesian Association of America.

THE BREEDER AND DAIRYMAN yields to the temptation to say, "We told you so!" and, while the decision handed down by Judge Pooley speaks for itself, we cannot refrain from calling the attention of our readers and the membership generally, as to what this means to our Association.

It is a distinct, positive victory for the small breeder and dairyman whose rights as members of the Asso-

ciation have been so ruthlessly disregarded by the political clique, who, illegally elected at Philadelphia, and by the use of so-called "steam roller" methods, have, since 1919, rode rough shod over the rank and file of the membership in a wild orgy of extravagance such as this Association or any other purebred registry association has never before witnessed.

It marks the downfall of tyranny, political intrigue and greed that first became manifested publicly in June, 1919, following the illegal action taken at Philadelphia, when an illegal Board of Directors in direct violation of the by-laws and their self-evident duty voted a salary of \$12,000.00 per year to D. D. Aitken, as President of the Association, and began a wild-eyed reign of extravagance that resulted in the expenditure of over \$140,000.00 in one year for so-called "extension purposes."

It has brought to an abrupt halt, the rapacity of political greed, in its attempt to take away from the membership their right, as members, to handle their own affairs, and it completely nullifies the wholesale changes of the Association by-laws, whereby power has been taken away from the plain people and placed in the hands of men who have boasted of their political cunning and laughed at the efforts of honest men with honest intentions to keep the Holstein Association of America true to its course as a "Record Association," and not an aggregation of political cow sales' manipulators whose sole object has seemed to be one of personal gain.

It nullifies the Delegate System of electing Association officers whereby fully ninety per cent of the Association membership were disfranchised, and again restores to them the right to "elect their officers by ballot," voting in person or by proxy, as provided by the constitution and by-laws, as they existed prior to the so-called "special meeting" held at St. Paul, Minn., in October, 1921, more than a thousand miles west of the center of Holstein population, when paid state secretaries and paid officers of the Association, spending the money of the plain breeder and dairyman, and by the use of their proxies strangled the principle of "Home Rule," and dealt a death blow to the Holstein industry.

This decision further directs an election to be held for the purpose of electing six directors, as was originally provided by the Constitution, and this would seem to imply that every illegal act done or committed by the "various Board of Illegal Directors" to which Justice Pooley calls attention, must be undone, and the Association made to function as a membership corporation and under the laws of the State of New York governing such Association.

Taken all in all it leaves our Association affairs in a most deplorable and chaotic state.

We are informed that papers in an action to compel D. D. Aitken to return into the Association treasury the sum of \$24,000.00 received at the hands of the illegal Board of Directors chosen at Philadelphia in 1919, and again at St. Paul in 1920, are already being prepared.

It is also rumored that big court actions for damages are contemplated being brought against directors individually for their illegal conduct of Association affairs, and injunction proceedings threaten to stop further ex-

travagant expenditure of the Association funds. Surely, no illegal body of directors can perform a legal act, and the Supreme Court has held all these Boards of Directors elected outside New York State to be illegal.

While official incompetency, stubbornness and political intrigue has brought the Holstein Association into disgrace, and subjected it to ridicule in the eyes of the world, let us hope that the plain people, the plain breeders and dairymen who make up fully ninety per cent of the membership, will so arouse and assert themselves so that every politician in the Association shall be driven out of high official positions and relegated to that obscurity that his conduct merits.

Unconsciously, no doubt, but none the less surely, Justice Pooley by the decision rendered in the action brought by Edward P. George, has done the Holstein-Friesian Association of America a great service.

Justice has laid its restraining hand on those who have been willing to follow the teachings of false gods and to perpetuate a political oligarchy upon the ruins of what was intended to be a simple, record Association, seeking to function under the Membership Corporations Law of the State of New York by virtue of which it was created. It has pointed the right road and every member of the Association having its best interests at heart will be glad to lend his full cooperation to its restoration under by-laws that we earnestly hope will give to every member the fullest right of self-expression in Association affairs and bring back the Association itself to its former prestige as a breed organization of value to the industry it was created to serve.

Another and very important chapter has been written into the history of the Holstein-Friesian Association of America, by the Supreme Court of the State of New York. It furnishes food for serious thought and careful consideration. It points the folly and the futility of entrusting the management of Association affairs to the hands of those who persistently disregard the law and by so doing waste the resources of the Association

and bring it into disrepute with the law-abiding element everywhere.

This decision of the Supreme Court completely vindicates the position which THE HOLSTEIN BREEDER AND DAIRYMAN has always taken upon the questions at issue, and proves very conclusively that there must be a "house cleaning," and at once. To this we earnestly pledge our fullest cooperation and will use the full power and influence of this journal to inaugurate in the management of Association affairs, a plan of economy, sanity, and a restoration of the rights of the membership to manage Association affairs freed from the baneful influences of political intrigue and a desire for personal gain and personal exploitation.

The Holstein-Friesian Association of America prospered for more than a quarter of a century under the guidance of Frederick L. Houghton, its secretary who has devoted his life to the interests of the Association and the industry it serves.

The Holstein-Friesian Association of America built up a reserve fund of more than a quarter of a million dollars on a 25c transfer fee and made the Holstein cow the acknowledged superior of any breed of cattle in the world, and without the expenditure of thousands upon thousands of dollars for so-called "extension service" or the promoting of "whirlwind campaigns."

The Holstein-Friesian Association of America must be restored to the plain breeders and dairymen who make up ninety per cent of its membership. It must be freed from those elements of incompetency and political chicanery which has been dragging it down into the gutter of disrepute among the breed associations of the world and which has brought it to its present condition before the court of Justice.

To this we again pledge our best efforts and we want every man who breeds purebred Holstein cattle as a livelihood and *not* as a hobby, to enlist under our banner and to pledge himself to fight for the rights of the small breeder and dairyman until justice and right shall prevail.

Paid State Secretary a Failure

IN reviewing the Public Sale Reports for the year ending December 31st, noting the prices received for cattle in the different states and comparing the average prices for which cattle have sold in the states where the Aitken Whirlwind Campaign Paid Secretary Movement had been in operation, with prices received for cattle in states that have never been invaded by Professional Organizers or have employed a State Sale Promoter, the results are remarkably interesting. They show that the State Sale Organizers, born by the Aitken Whirlwind Campaign methods, have operated to the detriment of the breeders, that the breeders are more capable of managing their own selling problems, secure higher average prices for their cattle and maintain the confidence of the public.

In making the comparison we will take the state of Pennsylvania, a state that revolted against the Aitken Whirlwind Campaign and the employing of a Paid State Sale Promoter. Compare the prices received in Pennsylvania for cattle sold at public auction

during the past 12 months with prices received in other Holstein states where the Aitken Whirlwind Campaign Paid Secretary Movement was in operation.

Begin, if you please, with the New England States where Mr. Aitken staged one of his famous whirlwind campaigns which cost the National Association over \$5,400 including Mr. Aitken's salary of \$12,000 per year and expenses and his assistant, Mr. Pollock at \$6,500 per year and expenses and Fred Koenig who was acting as press agent at \$4,000 per year and expenses, together with some two or three other employees of the association. This outfit, composed of professional organizers and promoters, were able to collect in money and pledges from the New England breeders, some \$6,800 with which to employ a sale manager to look after the buying and selling interests of the breeders in the New England States.

Mr. C. L. Blackman was employed to take charge of the work in New England and the report of the New England sale reveals that cattle brought an aver-

It marks the downfall of tyranny, political intrigue and greed that first became manifested publicly in June, 1919, following the illegal action taken at Philadelphia, when an illegal Board of Directors in direct violation of the by-laws and their self-evident duty voted a salary of \$12,000.00 per year to D. D. Aitken, as President of the Association, and began a wild-eyed reign of extravagance that resulted in the expenditure of over \$140,000.00 in one year for so-called "extension purposes."

It has brought to an abrupt halt, the rapacity of political greed, in its attempt to take away from the membership their right, as members, to handle their own affairs, and it completely nullifies the wholesale changes of the Association by-laws, whereby power has been taken away from the plain people and placed in the hands of men who have boasted of their political cunning and laughed at the efforts of honest men with honest intentions to keep the Holstein Association of America true to its course as a "Record Association," and not an aggregation of political cow sales' manipulators whose sole object has seemed to be one of personal gain.

It nullifies the Delegate System of electing Association officers whereby fully ninety per cent of the Association membership were disfranchised, and again restores to them the right to "elect their officers by ballot," voting in person or by proxy, as provided by the constitution and by-laws, as they existed prior to the so-called "special meeting" held at St. Paul, Minn., in October, 1921, more than a thousand miles west of the center of Holstein population, when paid state secretaries and paid officers of the Association, spending the money of the plain breeder and dairyman, and by the use of their proxies strangled the principle of "Home Rule," and dealt a death blow to the Holstein industry.

This decision further directs an election to be held for the purpose of electing six directors, as was originally provided by the Constitution, and this would seem to imply that every illegal act done or committed by the "various Board of Illegal Directors" to which Justice Pooley calls attention, must be undone, and the Association made to function as a membership corporation and under the laws of the State of New York governing such Association.

Taken all in all it leaves our Association affairs in a most deplorable and chaotic state.

We are informed that papers in an action to compel D. D. Aitken to return into the Association treasury the sum of \$24,000.00 received at the hands of the illegal Board of Directors chosen at Philadelphia in 1919, and again at St. Paul in 1920, are already being prepared.

It is also rumored that big court actions for damages are contemplated being brought against directors individually for their illegal conduct of Association affairs, and injunction proceedings threaten to stop further ex-

travagant expenditure of the Association funds. Surely, no illegal body of directors can perform a legal act, and the Supreme Court has held all these Boards of Directors elected outside New York State to be illegal.

While official incompetency, stubbornness and political intrigue has brought the Holstein Association into disgrace, and subjected it to ridicule in the eyes of the world, let us hope that the plain people, the plain breeders and dairyman who make up fully ninety per cent of the membership, will so arouse and assert themselves so that every politician in the Association shall be driven out of high official positions and relegated to that obscurity that his conduct merits.

Unconsciously, no doubt, but none the less surely, Justice Pooley by the decision rendered in the action brought by Edward P. George, has done the Holstein-Friesian Association of America a great service.

Justice has laid its restraining hand on those who have been willing to follow the teachings of false gods and to perpetuate a political oligarchy upon the ruins of what was intended to be a simple, record Association, seeking to function under the Membership Corporations Law of the State of New York by virtue of which it was created. It has pointed the right road and every member of the Association having its best interests at heart will be glad to lend his full coöperation to its restoration under by-laws that we earnestly hope will give to every member the fullest right of self-expression in Association affairs and bring back the Association itself to its former prestige as a breed organization of value to the industry it was created to serve.

Another and very important chapter has been written into the history of the Holstein-Friesian Association of America, by the Supreme Court of the State of New York. It furnishes food for serious thought and careful consideration. It points the folly and the futility of entrusting the management of Association affairs to the hands of those who persistently disregard the law and by so doing waste the resources of the Association

and bring it into disrepute with the law-abiding element everywhere.

This decision of the Supreme Court completely vindicates the position which THE HOLSTEIN BREEDER AND DAIRYMAN has always taken upon the questions at issue, and proves very conclusively that there must be a "house cleaning," and at once. To this we earnestly pledge our fullest coöperation and will use the full power and influence of this journal to inaugurate in the management of Association affairs, a plan of economy, sanity, and a restoration of the rights of the membership to manage Association affairs freed from the baneful influences of political intrigue and a desire for personal gain and personal exploitation.

The Holstein-Friesian Association of America prospered for more than a quarter of a century under the guidance of Frederick L. Houghton, its secretary who has devoted his life to the interests of the Association and the industry it serves.

The Holstein-Friesian Association of America built up a reserve fund of more than a quarter of a million dollars on a 25c transfer fee and made the Holstein cow the acknowledged superior of any breed of cattle in the world, and without the expenditure of thousands upon thousands of dollars for so-called "extension service" or the promoting of "whirlwind campaigns."

The Holstein-Friesian Association of America must be restored to the plain breeders and dairyman who make up ninety per cent of its membership. It must be freed from those elements of incompetency and political chicanery which has been dragging it down into the gutter of disrepute among the breed associations of the world and which has brought it to its present condition before the court of Justice.

To this we again pledge our best efforts and we want every man who breeds purebred Holstein cattle as a livelihood and *not* as a hobby, to enlist under our banner and to pledge himself to fight for the rights of the small breeder and dairyman until justice and right shall prevail.

Paid State Secretary a Failure

IN reviewing the Public Sale Reports for the year ending December 31st, noting the prices received for cattle in the different states and comparing the average prices for which cattle have sold in the states where the Aitken Whirlwind Campaign Paid Secretary Movement had been in operation, with prices received for cattle in states that have never been invaded by Professional Organizers or have employed a State Sale Promoter, the results are remarkably interesting. They show that the State Sale Organizers, born by the Aitken Whirlwind Campaign methods, have operated to the detriment of the breeders, that the breeders are more capable of managing their own selling problems, secure higher average prices for their cattle and maintain the confidence of the public.

In making the comparison we will take the state of Pennsylvania, a state that revolted against the Aitken Whirlwind Campaign and the employing of a Paid State Sale Promoter. Compare the prices received in Pennsylvania for cattle sold at public auction

during the past 12 months with prices received in other Holstein states where the Aitken Whirlwind Campaign Paid Secretary Movement was in operation.

Begin, if you please, with the New England States where Mr. Aitken staged one of his famous whirlwind campaigns which cost the National Association over \$5,400 including Mr. Aitken's salary of \$12,000 per year and expenses and his assistant, Mr. Pollock at \$6,500 per year and expenses and Fred Koenig who was acting as press agent at \$4,000 per year and expenses, together with some two or three other employees of the association. This outfit, composed of professional organizers and promoters, were able to collect in money and pledges from the New England breeders, some \$6,800 with which to employ a sale manager to look after the buying and selling interests of the breeders in the New England States.

Mr. C. L. Blackman was employed to take charge of the work in New England and the report of the New England sale reveals that cattle brought an aver-

age, of \$159 per head or \$35 per head less than the average price received for Holsteins sold during the same period of time in the state of Pennsylvania. If this is a just comparison, it might be inferred that Mr. Blackman's services cost the New England breeders in addition to his salary and expenses the tidy sum of \$10,290, a sum which represents an additional amount which the New England cattle would have brought had they been sold at the Pennsylvania price.

It is very interesting also to compare prices in New York with those in Pennsylvania. The Aitken Whirlwind Campaign Paid Secretary outfit carried a high hand in the state of New York. They succeeded in collecting from the breeders in sums ranging from \$5 to \$550, the handsome total of \$12,500 and from other sources, additional sums, making a total amount available to carry on state association work of something over \$17,000. They began operations in May 1920 with E. R. Zimmer acting as secretary. Mr. Zimmer's report presented the following January, 1921 at the meeting in Rochester, disclosed that \$16,600 of the \$17,000 had been expended by the association in the short period of eight months with the small balance in the treasury of \$361. The annual report the following year reveals that the sale and banquet held at Rochester during the time the first report was rendered resulted in an indebtedness to the association of \$1,916.14 or at the time the first report was rendered the association, while it had a balance in the treasury of \$361 it was in debt \$1,916.14. This was an extraordinary record of extravagance and the report shows that the Holstein-Friesian World had milked the state organization during the first eight months to the tune of \$2,600 for advertising. But extravagance did not cease. The annual report of December 31st, the year following the Rochester Sale and meeting, the financial statement shows that their total liabilities were \$4,874.63 and their assets consisted of office furniture, a few unpaid pledges and a small cash balance of \$178.78. Yet with such a record of extravagance, the New York State Association and similar organizations in other states were able by the means of the Delegate System to control the last annual convention of the Holstein-Friesian Association and levy a tax of 50c on each transfer fee towards their future support.

As this article is being prepared, we are wondering if it will be necessary for the New York State Association to solicit alms at their coming annual meeting or are the returns from the National Association enough to keep those in charge of the State Association in spending money?

With all this extravagance, the prices for which cattle have been selling at public auction in the state of New York is \$17 per head lower than the price received in Pennsylvania. We have received reports on the sale of 1,699 head of cattle being sold at public auction. Multiply \$17 per head, the difference between the selling price in Pennsylvania and New York, and it would give a handsome little nest-egg of \$28,883.

We will not devote any further space to relating the extravagant methods that have been pursued by the various state organizations that were organized under the Aitken Whirlwind Campaign Paid Secretary

Movement, as conditions in New York is a fair representation of the conditions that prevail generally among state organizations where state secretaries have been employed, all having a similar record of extravagance with little or no funds remaining in the treasury, representing only a small portion of the members of the National Association residing within the state, and the paid state secretary performing no legitimate services for the breeder that he cannot receive free of charge from the Extension Department of his state agricultural college, aside from managing and promoting public auction sales and the reports do not prove that he is an efficient sale manager. Quite the contrary.

In the state of Michigan where the Aitken Whirlwind Campaign State Paid Secretary Outfit put on a campaign, raised money and employed a secretary in the person of H. W. Norton, Jr., the report covering the sale of 399 head of cattle at public auction during the past year shows that an average price of \$149 was received or \$45 per head less than cattle were selling for in the state of Pennsylvania.

In the state of Wisconsin, where Mr. L. L. Oldham has been employed as paid state secretary and has been very active in promoting public sales, we have reports showing that 1,977 head of cattle were sold at public auction at an average price of a little over \$155 per head or \$39 per head less than the average price received for cattle sold at public auction in the state of Pennsylvania.

If the cattle that were sold in the state of Wisconsin had brought the prevailing price that was paid in Pennsylvania, it would have netted the consigners the tidy additional sum of \$75,000.00.

We do not believe a fairer comparison could be drawn than to compare the conditions and prevailing prices in the state of Ohio with those in the state of Pennsylvania, as the number of breeders of purebred cattle and number of members in the National Association is about equal in each state as is the total number of purebreds.

In comparing conditions in these two states we have a record of 568 head of cattle that were sold in the state of Ohio at an average price of \$171 per head or \$19 less than the prevailing price received for cattle at public auction in the state of Pennsylvania.

A study of the facts will conclusively prove that the State Paid Secretary Movement is a failure and that the industry is in a much more healthy and prosperous condition in the states where they have never operated than where they have operated and if we would go further in our comparison, it would reveal that there is just as much being accomplished in the way of eliminating tuberculosis and controlling diseases in dairy cattle, organizing bull associations, calf clubs and promoting cow testing association work, by the State and Federal authorities and the Dairy Extension Departments of the State Agricultural Colleges in the states where the State Paid Sale Organizers are not employed.

Wedded Eight Times, Is Broke.—Headline. The clearest case of cause and effect ever recorded.—*New York Sun*.

Finishing the Year Right

The Holstein-Friesian cow ended the year 1922 in a blaze of record-making glory. The capacity of the Black and White bovine when given unlimited feed and handled with skill appears practically unlimited from the point of maximum production. First came the breaking of the United States fat production record in year-test by May Walker Ollie Homestead, as reported in the December 22d issue of *THE BREEDER AND DAIRYMAN*. The official announcement came from Superintendent Gardner's office dated December 21st. Five days later from the same office came the report that the California cow, Aralia De Kol Mead 2d had produced nearly 27,000 lb. milk and butterfat equivalent to more than 1,300 lb. butter in the year.

On December 28th, Mr. Gardner announced that we have a new forty-lb. record on the California cow Bessie Snowball De Kol.

On December 29th, another report announced that the Minnesota cow Princess Changeling Segis had made over 31,000 lb. milk and nearly 1,300 lb. butter in a year. While gossip has it that the 30,000-lb. mark has been reached by one or more cows in the Carnation herd. The maximum production of the Holstein-Friesian cow under forced feeding apparently has no limit. The official announcements are as follows:

THE U. S. BUTTER CHAMPION

I am pleased to be able to report that the Holstein-Friesian cow May Walker Ollie Homestead, No. 300043 has broken all records for fat production in the semi-official yearly division, by producing in 365 consecutive days, 31,610.6 lb. milk containing 1,218.59 lb. fat. She freshened at the age of 6 years, 7 months, 25 days. Her sire is Piebe Laura Ollie Homestead King, No. 110474; her dam is May Walker of Arden, No. 186994. She was bred by J. M. Hackney, St. Paul, Minn., and is now owned by Minnesota Holstein Co., Austin, Minn. Her best seven-days' official production, made 39 days from freshening, is 714.6 lb. milk containing 27.91 lb. fat. In addition to three not less than seven-day strictly official test periods, she had 20 other test periods, of which ten were retests. Twenty different supervisors were employed in the conduct of the test. Freshening at the age of 2 years, 7 months, 21 days, she is credited with 13,166.6 lb. milk containing 507.52 lb. fat in 305 days. Next, at the age of 3 years, 6 months, 6 days during a 304-day test she is credited with 11,623.9 lb. milk containing 467.06 lb. fat, carrying her calf 192 days. At the age of 4 years, 7 months, 6 days she is credited with 22,535.8 lb. milk containing 877.28 lb. fat, in 365 days. She displaces Duchess Skylark Ormsby No. 124514, whose record for 365 days is 27,761.7 lb. milk containing 1,205.09 lb. fat. May Walker Ollie Homestead with her 365-day production of 1,218.59 lb. fat equivalent to 1,523.23 lb. butter on the 80 per cent basis now stands first in butterfat production among all cows and is the 59th Holstein-Friesian cow credited with a production exceeding 1,000 lb. fat in 365 days.

Dec. 21, 1922. MALCOLM H. GARDNER, Supt. of A. R.

IT RUNS IN THE FAMILY

I am pleased to announce that the Holstein-Friesian cow Aralia De Kol Mead 2d, No. 326061, has just closed a long-time test, and is credited with 26,938.5 lb. milk containing 1,043.07 lb. fat in 365 days, thus showing an average of 3.87 per cent in the milk. She freshened at the age of 6 years, 6 months, 11 days. Her sire is Segis Pontiac De Kol Burke No. 97472; her dam is Aralia De Kol Mead No. 182592. She was bred and is now owned by A. W. Morris & Sons Corporation, Woodland, Cal. Her best seven days' official production, made in the early part of the lactation period, is 570.7 lb. milk containing 29.7 lb. fat. At the age of 2 years, 5 months, 7 days she is credited with 17,295 lb. fat in seven days, and 67.213 lb. fat in thirty days; while during this lactation she is credited semi-officially with 18,785.6 lb. milk containing 680.81 lb. fat in 365 days. At the age of 4 years, 5 months, 25 days her seven-day official test shows 25.624 lb. fat; her thirty-day test, 95.414 lb. fat; and 305-day test 21,217.2 lb. milk containing 708.93 lb. fat, carrying her calf 241 days. In addition to two not less than

seven-day strictly official test periods, she had 12 other test periods, of which two were retests. Ten different supervisors were employed in the conduct of the test. Her 365-day production of 1,043.07 lb. fat equivalent to 1,303.83 lb. butter on the 80 per cent basis, gives her 32d place among cows producing above 1,000 lb. fat, she being the 60th cow to gain the high honor of producing 1,000 lb. in 365 days.

Dec. 26, 1922. MALCOLM H. GARDNER, Supt. of A. R.

THE NEW 40-LB. COW

I am advised through preliminary reports and by wire that the Holstein-Friesian cow Bessie Snowball De Kol No. 301028 has shown a production of 719.6 lb. milk containing 32.295 lb. fat in seven consecutive days, with the test still in progress. She freshened at the age of 7 years, 11 months. Her sire is Billy Snowball, No. 103220; her dam is Bessie Kantje De Kol 2d, No. 104127. She was bred by Mr. F. B. Stabler, Brodhead, Wis., and is now owned by Mr. Fred Hartsook, Lankershim, Cal. The production by days is as follows: 94.2 lb. milk, 4.428 lb. fat; 97 lb. milk, 4.557 lb. fat; 99.3 lb. milk, 4.857 lb. fat; 103.2 lb. milk; 4.747 lb. fat; 106.6 lb. milk, 4.654 lb. fat; 109.4 lb. milk, 4.293 lb. fat; 109.9 lb. milk, 4.759 lb. fat. At the age of 6 years, 1 month, 1 day, she is credited with 605.5 lb. milk containing 24.380 lb. fat in 7 days, 2,809.3 lb. milk containing 97.642 lb. fat in 30 days, and 8,225.6 lb. milk containing 276.181 lb. fat in 90 days; while continued on long-time test she is credited with 27,616.8 lb. milk containing 897.51 lb. fat in 365 days. The conduct of the test was thoroughly inspected by Mr. Robert A. Condee, acting for the National Association and the California State Association, and by Mr. Arthur Folger, superintendent of Official Testing in California. Two separate verifications were made, each substantiating the production claimed, with both Mr. Folger and Mr. Condee present at the last verification. Computed on the 80 per cent basis, the equivalent butter claimed for Bessie Snowball De Kol amounts to 40.368 lb.

Dec. 28, 1922. MALCOLM H. GARDNER, Supt. of A. R.

ANOTHER OVER THIRTY-ONE THOUSAND

I am pleased to announce that the Holstein-Friesian cow Princess Changeling Segis, No. 239070 has just closed a long-time test, and is credited with 31,063.3 lb. milk containing 1,030.05 lb. fat in 365 days, thus showing an average of 3.32 per cent in milk. She freshened at the age of 7 years, 9 months, 26 days. Her sire is King Segis Pontiac Count, No. 93909; her dam is Princess Gisella Changeling, No. 179476. She was bred and is now owned by J. M. Hackney, St. Paul, Minn. Her best seven-days' official production during the test is 628.5 lb. milk containing 24.635 lb. fat; and she is credited with 2,440.7 lb. milk containing 95.714 lb. fat in thirty days. Previous to the record just completed she has been officially tested for a longer or shorter time during three consecutive lactation periods, beginning with her first calving. The fat production for best seven-days in each lactation shown are 12.883 lb., 16.289 lb., and 21.262 lb. The best thirty-day tests for the last three lactation period are 52.928 lb., 64.113 lb., and 88.076 lb. fat. Her only previous long-time test begun at the age of 5 years, 11 months, 23 days, shows 776.54 lb. fat. During the test just finished, in addition to a 44-day strictly official period she had ten other test periods. Ten different supervisors were employed in the conduct of the test. Her 365-day fat production of 1,030.05 lb. equivalent to 1,287.56 lb. butter on the 80 per cent basis, gives her 41st place among cows producing above 1,000 lb. fat, she being the 61st cow to gain the honor of producing more than 1,000 lb. in 365 days.

Dec. 29, 1922. MALCOLM H. GARDNER, Supt. of A. R.

Your friends come in without knocking; your enemies knock without coming in.

If the good die young, where does the oldest inhabitant get off?

HELP! HELP!! HELP!!!

The Holstein Breeder and Dairyman,
Harrisburg, Pa.

Editor:-

I have read with great interest the Holstein Breeder and Dairyman since receiving my first copy and I think the breeders are very fortunate indeed in having a Live Holstein publication that is not continuously championing the cause of the Speculator and trying to put over some visionary, impracticable, worthless scheme on the industry and the breeders under the pretense that such is Extension work. More Speed and Power to you in the Good Work that you are doing.

I do not know the attitude your Good, Live Magazine will take towards the proposed expenditure of \$30,000 by the Holstein-Friesian Association of America to be spent in a campaign to advertise increased consumption of Holstein milk. However, I am going to give you my views and I hope you will pardon me if they do not coincide with the policy of your paper.

I am not in favor of the Association acting independently in conducting a National Campaign as is proposed. We have in existence, the National Dairy Council, organized for the sole purpose of advertising milk by acquainting the public with its superior nutritive value as compared with other foods. The Holstein-Friesian Association of America is contributing \$500 per month or \$6,000 per year to assist in this good work. If they have more money to spend for advertising milk, why not increase the appropriation?

We are informed by the Extension Committee that such an investment on the part of the owners of purebred Holstein cattle will prove to be profitable, but I am unable

to determine just how they arrive at this conclusion. It is reported that 85% of the total amount of market milk produced in the United States is produced by Holsteins, either grade or purebreds and we are told that 2% of the dairy cows are purebred Holsteins. This being the case, how does the Committee determine that an expenditure of \$30,000 by 2% of the 85% would net them a profit?

If 85% of the market milk is Holstein milk and 2% of the 85% invested \$30,000 in an advertising campaign and expect to receive a profit or even get their money back, this 2% cannot expect to receive over two eighty-fifths of the total returns from the money invested in advertising. Therefore, if \$30,000 represents two eighty-fifths it will mean that before the Holstein breeders receive Dollar for Dollar for the money they invested, there will have to be a net return on the \$30,000 invested of approximately \$12,750,000 or Four thousand One hundred and fifty percent profit. These figures look preposterous to me.

I am a member of the Dairymen's League and their report shows that they spent \$40,000 in the month of May, 1922, on advertising. If they found it such a wonderful investment, what in the world are they doing with the money? I have not seen any of it.

I am fully in accord with advertising milk and in paying my pro rata share through the Dairymen's League assessment, and I believe that is the way advertising money should be raised. There should be a tax on the amount of milk produced rather than a tax on 2% of the producers who happen to be fortunate or possibly unfortunate enough to be owning purebred Holsteins.

May I ask the discussion of the problem through the columns of your paper? Possibly some of your readers who are in favor of such an expenditure, can HELP me as one of the 2% of the 85%, to determine just what my pro rata share of the profits will be?

Cordially yours,

J. H. C.

Junior Department

The Story of Charles Beever

By HARRY AUSTIN CLAPP

This is not the story of a "Prodigal Son" but the story of a Provident Son for such is Charles Beever. The writer was at Hondo assisting Mr. Merritt, the county agent in organizing a Calf Club when he received a telegram from the People's State Bank of Pearsall, expressing their interest in forming a Holstein Calf Club. Arriving at Pearsall and meeting the officers of the bank he soon had their promise to finance a registered Holstein Calf Club and their notice that the money would be paid in on application. A visit to the Public School where the superintendent, also a club fan, allowed the privilege of giving a talk on club work to the school pupils. As result, ten boys signified their intention to become members. They met in the office of the county agent, elected officers and gave a formal order for their heifers and it was not long before registered Holstein heifers were delivered to the members.

The club work was under the direction of Mr. O. G. Tumlinson, county agent and done according to the rules of the Extension Service of the Texas A. & M. College. Suitable prizes were offered to those who developed the best heifers. Among the members was Charles Beever. Charles followed his instructions with the result that he not only won the first prize in the club which was \$25.00 in cash, but when he entered his heifer in the group competition of four clubs he again won first place the prize for which was a trip to the Farmers Short Course at the Texas A. & M. College.

This trip lasted one week and all expenses were paid including board, room and transportation from home to return. The county agent reports that as result of the success of Charles Beever four other boys and six men attended the short course. No one can properly estimate the value to any community of this fact. Charles entered his heifer at the Frio County Fair but was defeated by Roscoe Schott who took first and Championship with a heifer which stood second in the club competition. Every boy who joined this club has received invaluable

CHARLES BEEVER AND HIS PRIZE-WINNING HOLSTEIN HEIFER

instruction which will be of life-long benefit. They are all better young business farmers and have been taught the fundamentals of a safe, sane, farm business. Ever anxious to stimulate interest in "the breed that leads" the writer has for this year arranged several new and attractive features for club work and gives with this article the plan. As a direct result of the Holstein Calf Club work done by the writer several Holstein centers have been formed in this State. Places where the Black and White was unknown are now familiar with this great breed. Men who used to laugh at the Holstein now willingly acknowledge that she is all her admirers claim and more for wherever she has been treated right she has made good at the bucket.

Conditions. Any girl or boy between the ages of ten and eighteen years will be eligible to membership. The work will be done under the rules and regulations of the Extension Service of the Texas A. & M. College and in charge of the County Agent or some other reputable person if there is no county agent.

Two Classes. Class 1-A grade club will consist of twenty members at \$50.00 each. Class 2-A registered club will consist of ten members at \$100.00 each. In the first class twenty high grade heifers will be delivered and in the second class ten registered heifers will be delivered. In addition each club will be provided with a registered bull of no kin to the heifers. This will be club property and each member will enjoy an undivided interest in the bull. In order to relieve club members from the expense connected with the care of the bull, a registered heifer will be provided which will be the compensation to the custodian for the keep and care of the bull.

Prizes. The sum of fifty dollars will be placed in a local bank, to the credit of each club. This money will be subject to the order of the club manager and will be divided into four cash prizes when the heifers are judged.

The best heifer in each group of four clubs will win for its owner a Scholarship in the Texas A. & M. Summer Course of four weeks. This includes transportation from home and return. The County which is judged to have produced the best heifer will receive a registered heifer. This heifer is to be sold at auction during the annual encampment and money used by the County Agent to aid boys and girls to attend the Farmers Short Course at the Texas A. & M. College.

Delivery. All animals are delivered free of transportation charges to the station of the member. Safe arrival is guaranteed. This means that if an animal arrives dead, crippled or sick it will be replaced without cost to the member. Registration and transfer papers delivered without cost soon as issued. An extended pedigree showing four generations will be provided with each bull.

Insurance. Until January 1, 1923, all animals will carry insurance until noon of the day they are six months old. This means that any animal that dies from disease before it is six months old will be replaced without cost. This feature applies only to clubs organized before January 1, 1923.

Total Consideration. In each class of the total consideration will be the sum of One Thousand Dollars. Prizes, Club bulls, Heifers, for Bull care, Safe arrival guarantee and Insurance are all included in the total consideration.

Collegeport, Texas.

Holsteins as I Know Them

Competing in a class of 40 at the Chester County Holstein-Friesian Breeders' Association meeting, Towns End Farm, West Chester, Pa., on October 28th, Miss Ann W. Barclay, of Lionville, aged 13, carried off the first prize for skill in judging. There were two rings, one of cows and one of heifers. These were first scored by Professor A. A. Borland of the Dairy Department of the Pennsylvania State College. The juniors had to place the animals and then write their reasons for their judging, the placing counting 60% and the reasons 40%. Miss Barclay made a score of 95% while the second score was made by her brother Joseph who is 16 years old. The first prize was a heifer donated by the Keen Syndicate which consists of E. Page Allinson of Towns End Farm, F. C. Brinton, Jr., treasurer of the Pennsylvania Federation and Frank A. Keen, all of West Chester. The second prize, a heifer calf donated by Marshall L. Jones, was won by Joseph Barclay.

Miss Barclay and her brother have only lived on the

Miss Ann W. Barclay and her brother Joseph, winner of first and second prizes at the junior contest, Chester County breeders' field day.

farm a couple of years, but in that short time have gained knowledge and skill superior to that of many boys and girls who are farm bred. Miss Barclay, who is an artist and an accomplished musician, has favored the BREEDER AND DAIRYMAN with a special article which is herewith reproduced in her own words.

"I have lived on a farm only two years but in that short time I have learned more about cattle in general and Holsteins in particular than anything else. When we had been here about a year my brother and I joined a pig club under the supervision of Mr. B. A. Jarrett, county agent. From him we learned all we know of stock judging.

My first impression concerning the quality of milk was cream. Since coming to the farm we have reveled in the cream we received. I never thought of the other ingredients of which milk is composed, or their subsequent value, until I attended a Holstein-Friesian Association banquet. Since then I have read pamphlets and literature galore, have converted my family into believers of the true breed and resolved to raise a herd.

When we came to the farm I was like the city girl who, hearing a cow low, cried "Oh listen to the poor cow *Mewing* for her *Colt*." I feel a little better now. I judge cattle by three main points, the constitution, milk system and capacity. The constitution, lung power, is noticeable in the side, between the foreleg and barrel. A poor constitution shows in a depression at this point. The milk system is good when the udder is even, the milk veins large and the wells corresponding. The capacity is noticeable in a large barrel and well-sprung ribs. Under the head of capacity would also come the type, that is, whether the cow in question is beefy or angular. The ideal dairy cow, of course, is alert and angular.

I have now displayed all my knowledge, but not half my ignorance, which I hope you will excuse.

I can remember but one time, while living in the city, that I had any interest in cows or incidentally, butter making. At that time I was seized with a frenzy for making my fortune. An enthusiastic magazine article caught my attention. It told of a girl who, by dint of making butter, won as a prize a full-grown cow, which she kept, and at last was the owner of a large herd. We had quite a lot of skimmed milk in the house at the time, and a cat. Keep the cat in mind. I hastened into the kitchen, seized a bowl, a large egg-beater, and on the strength of my enthusiasm, some skimmed milk. I began to beat the skimmed milk—I beat and beat, I beat some more, then I suddenly remembered that I had not decided what to do with my wealth-to-be. I was lost in meditation. The cat—did you remember the cat? was lost in the skimmed milk. At last I turned around to continue the bent of my fortunes, but the early bird catches the worm, and the cat had beaten me to it, and was snugly settled in the sun. That was my first and last experience with butter making until we came to the farm.

My knowledge of the Holstein type began when visiting a neighbor who owned that breed. I was impressed by the splendid type they represented, and since then constant facts in their favor have proven to me that they are the finest and best type of dairy cow bred.

Signed, ANN W. BARCLAY.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Jan. 16—Syracuse, N. Y., New York State Holstein Breeders' Association.
 Jan. 16-19, 1923—Trenton, N. J., New Jersey Farm Products Show.
 Jan. 22-27—Harrisburg, Pa., Penna. Farm Products Show.
 Jan. 24—Harrisburg, Pa., Penna. Breeders' Banquet.
 Jan. 25—Harrisburg, Pa., Annual Meeting Penna. Federation of Holstein-Friesian Clubs.
 Feb. 1—Columbus, Ohio, Ohio Holstein-Friesian Breeders' Association Annual Meeting.
 Feb. 1—Brookings, S. D., Annual Meeting of the South Dakota Holstein-Friesian Association.

EVERSON AGAIN HONORED

At the annual meeting of the Jefferson County, Wisconsin Holstein Breeders' Association, the following officers were elected: William Everson, president, Lake Mills; Henry Anthes, Oakland, vice-president; A. F. Gafke, secretary, Jefferson; William Leonard, Fort Atkinson, treasurer.

PLAN CLUB STOCK FARM

The Holstein Breeders of Carter County, Oklahoma, have formed an organization for the purpose of promoting the dairy industry in Carter County and increasing the Holstein representation. Among the plans is one for the establishment of a stock farm and \$15,000 will be set aside as finances. This farm will be under the management of W. A. Ward, formerly in charge of the Holstein herd owned by the Modern Woodmen of America.

KANSAS BREEDERS ORGANIZE

There were twenty-eight Holstein breeders living around Fort Scott, Kansas, that met at the Goodlander Hotel, Saturday, December 9th, and organized a breeders' association for the promotion of Holstein breeding and the use of Holstein cows in the dairying business. The following officers were elected: Earl Williams, of Hiattville, president; Arthur Towles, of Fulton, vice-president, and Harry L. O'Bryan, of Fort Scott, secretary.

MUNCE TALKS TO BREEDERS

The principal speaker at a meeting of the cattle breeders of Lancaster County, which was held in the Farm Bureau rooms at Lancaster, Pa., December 12th, was Dr. T. A. Munce, a national figure in the cattle-breeding industry. Dr. Munce who is State Veterinarian of Pennsylvania was recently elected President of the United States Livestock Sanitary Association. He came to Lancaster at the request of the Lancaster County Holstein-Friesian Association. His subject was "The Eradication of Bovine Tuberculosis." He explained the causes of the disease, told how the State aided in eradicating the trouble and made suggestions as to preventative treatment.

EAU CLAIRE BREEDERS ELECT OFFICERS

The annual meeting of the Eau Claire County Holstein Breeders' Association was held at Augusta, Wisconsin, on December 9th. The officers for the coming year will be: Charles Newhouse, president; B. M. Arries, vice-president; and B. F. Von Berg, secretary-treasurer. The above officers, together with George McClelland, Foster, and W. S. Comings, Eau Claire, will make up the Board of Directors.

The Association voted to show a county herd at the Northern Wisconsin state fair to be held at Chippewa Falls in the fall of 1923. A committee of three consisting of Earl Newhouse, Augusta; George McClelland, Foster, and W. S. Comings, Eau Claire, were appointed to canvas the county early in the Summer and select the animals. The plans are to get as big a showing as possible out for the Eau Claire County

Fair and from the exhibits there select the best for the exhibit at Chippewa Falls.

The problem of financing the county assessment for the support of the State Holstein Breeders' Association was discussed by B. M. Arries, who is a director of the State organization and is now soliciting for members in the county. He said the need of keeping the State organization on its feet was a very real one because as long as there is a State Association one-third of the money paid by the breeders for transfer fees will be returned to be used in the State for advertising and extension work. The membership fees are now \$2.00 a year, which pays dues in both the local and state organizations.

FORM KENT COUNTY ASSOCIATION

The Kent County Holstein Breeders' Association was organized in the Association of Commerce rooms at Grand Rapids, Michigan on December 15th. An address was delivered by J. G. Hayes of Howell. The Constitution and By-laws are patterned after those of the Livingston County Association. John Buth of Grand Rapids, was appointed sales manager. The officers are as follows: President, D. R. Edgerly; Vice-president, J. Neil Lamoreaux; Secretary, Dudley H. Waters; Directors comprise Otto Fisher, Caledonia; John Buth, Grand Rapids; T. J. Blanchard, Cedar Springs; J. M. Spangelberg, Sparta, and the officers.

ELECT ASSOCIATE BOARD OF DIRECTORS

The Montgomery Holstein-Friesian Breeders' Association held their annual meeting on December 15th at Fonda, N. Y. The meeting was largely attended. Besides the election of officers and directors a Board of Associate Directors was elected from each town. This associate board is to work for greater expansion of the association and consists of the following: Lewis Waterstreet of Amsterdam, town of Amsterdam; George Dygert of Canajoharie, town of Canajoharie; R. B. Veeder of Sloansville, Charlestown; Raymond Youngs of Amsterdam, Florida; I. Newton Voorhees of Amsterdam, Glen; Chauncey Moyer of Fort Plain, Minden; Charles L. Gros of Fonda, Mohawk; George Everson of Fort Plain, Palatine; A. J. Pollock of Sprakers, Root; Aaron Failing of St. Johnsville, St. Johnsville. H. O. Wilkie of Amsterdam was elected President. The other officers are Vice-president, John Ingersoll, Fultonville; Secretary-Treasurer, Lee Dygert, Fort Plain; directors, in addition to officers, Jacob Rutishauser, Canajoharie; Frank Klock, St. Johnsville; George Everson, Fort Plain.

DAIRYMEN AND BUSINESS MEN MINGLE

The Littleton Commercial Club on December 5th entertained the dairymen and farmers in the territory immediately south of Denver at a dinner and smoker at Littleton, Colorado.

The guest of honor was Mrs. R. G. Douglas, who recently moved her celebrated Holstein herd to the Shirley Green farm at Fort Logan. Mrs. Douglas spoke of the great strides in cattle breeding that Colorado had made during the past year and hinted that there might be over-production in the near future.

James Gibson, formerly of New York State and now owner of a herd in Colorado, warned his hearers against inferior animals, remarking that there were "scrub purebreds" as well as plain scrubs.

H. R. Lascelles of the dairy extension force of the State Agricultural College said that people of the towns and business communities should be acquainted with some of the breeders' problems, and he urged better breeding and better treatment of dairy cows.

EXTENSION WORK

A meeting of the Holstein owners of Calumet County was held at Chilton, Wisconsin, December 5th. The principal speaker was Secretary L. L. Oldham of the Wisconsin Holstein Breeders' Association who gave a brief history of the State Holstein Association and its works. He said that proper advertising had brought a staple and profitable market to Calumet County farmers for surplus Holstein grades, and that the price of dairy cows was several times the beef prices. He stated that the dairy farmer has been very negligent in advertising his products and that there had been an under consumption of dairy products due to lack of organized, judicial advertising. He outlined a plan whereby members of a community Holstein club automatically became members of the State Holstein Association when the local club remits part of its dues to the State Organization. The Calumet County Association adopted this plan for 1922 and the coming year, 1923.

Dr. Klotzka briefly outlined the history of the Calumet County Holstein Association and there was a discussion of the plan of work for the ensuing year. The following officers were elected: Dr. Royal Klotzka, Chilton, president; Frank Kloehn, Forest Junction, vice-president; Leonard Seybold, Forest Junction, secretary; Orin C. Leverenz, New Holstein, treasurer. The directors were John Seybold, Forest Junction, Anton Molg, Chilton.

LIVINGSTON BREEDERS HAVE BUSY MEETING

The members of the Livingston County Holstein Club held their Annual Meeting at Caledonia, New York, December 14th. L. E. Doty of Geneseo, secretary of the organization presiding.

State Secretary E. R. Zimmer made the opening speech and stressed the importance of advertising Holstein milk and of Holstein breeders exhibiting at local, county and State fairs. He outlined the plan of the National Association to have sign boards advertising Holsteins and Holstein milk erected at strategic points throughout the country.

County club agent J. A. Reynolds talked on Holstein calf clubs and asked that a man be elected to represent Holstein interests on the Livingston County Board of Junior Extension. As a result of his talk Charles Perhamus of Caledonia was elected.

Louis P. Zumstein, tester of the Livonia Dairy Improvement Association reported the Hemlock Holstein sale and said it would be repeated next Fall. George S. Donnan discussed the value of seven-day records, yearly records and Dairy Improvement Association records, and stated that he believes that for the majority of Holstein breeders dairy improvement association records were extremely valuable.

D. H. T. Brooks, instructor of agriculture at the Avon High School emphasized the necessity of breeding good cattle. William Sheldon of Avon, a graduate of the agricultural course of the Avon High School related his experiences in breeding and exhibiting. Mr. Sheldon showed a heifer at the Rochester Exhibition and won the junior championship.

A Nominating Committee submitted a list of names for officers and directors and the report was accepted. The officers are as follows: William P. Thompson of Hunts, president of the association; Arthur E. Johnson of Caledonia, vice-president, and L. E. Doty, of Geneseo, secretary. Arthur Delany, of Livonia, was chosen executive committeeman, and George S. Donnan of York, advisory councilman. L. E. Doty was elected as delegate of the state convention with George Donnan as alternate.

COMPREHENSIVE PROGRAM FOR ROCK COUNTY

The Rock County Holstein Breeders' Association held their annual meeting at Janesville, Wisconsin. County Association dues were advanced to \$2.00 to meet the quota of Rock County with its one hundred and twenty members has to pay to support the state organization. Earl Cooper, calf club leader of the National Holstein Association praised the county for their calf club work and for the showing made by Edith Clark, the county first-prize winner, who also won at the Wisconsin State Fair and obtained a place at the National Dairy Show.

Officers were elected as follows: President, J. A. Craig,

Janesville; Vice-president, E. L. Benedict, Clinton; Secretary, J. W. Jones, Milton Junction; Treasurer, Archie Reed, Jr.; Directors, J. A. Craig, E. L. Benedict, J. W. Jones, Archie Reed, Jr., J. L. Fisher, Frank Milbrandt, Harold Ward, W. H. Latta, Arthur Tollefson, Henry Wieland, Jr., Orrie Steele and E. P. Coon.

The program for Association work for 1923 was outlined as follows: 1. Making Rock County an accredited area with 2,000 accredited herds, as many as there are in the entire state at the present time; 2. Better sires to build up the quality of the herds and having high record bulls in the Holstein herds of the county; 3. Junior club work to improve upon the first prize Rock County Holstein Club of 1922 winner at the Wisconsin State Fair and at the Junior Livestock Exposition; 4. More and better cow testing associations for Holstein cattle to increase production records; 5. A county Holstein show herd for the fair circuit; 6. Improvements at the county fairs for showing Holsteins; 7. A centralized method of listing all Holstein stock in the county through one central exchange; 8. Advertising Holstein dairy products within the county.

ONONDAGA COUNTY CLUB MEETS

The Onondaga County Association met at the Court House in Syracuse, N. Y., December 19th and enjoyed a busy meeting.

Wing R. Smith, treasurer of the Holstein-Friesian Association of America told a little about the finances and plans of the National Association.

E. A. Powell who has been a breeder of Holsteins for over fifty years urged every breeder to take an active part in the development of the breed's popularity.

Dr. W. Bales of the United States Department outlined the results and possibilities of area work in eliminating Bovine Tuberculosis.

The Club voted to hold a picnic at the farm of a prominent breeder in the county during the Summer and to tender a smoker to the members of the State Organization. This will be held at the Yates Hotel on January 17, 1923.

At the meeting the following officers were elected:—T. J. Murphy of Hawley & Murphy, at Liverpool, was elected president; Stephen C. Pendergast, of Phoenix, vice-president, and R. E. Deuel of Manlius, secretary-treasurer, John G. Horner of Lamson, Collin Armstrong of Fayetteville, and Mr. Pendergast were chosen members of the executive committee. Mr. Murphy was appointed to the advisory council of the New York State Holstein-Friesian Association, C. L. Amos, Syracuse, was elected delegate to the state convention in January, with Mr. Murphy as alternate.

The Treasurer's report showed a balance of \$134.17 in the treasury. The gathering was preceeded by a meeting of the dairymen interested in the eradication of Tuberculosis. Dr. George B. Derrick, county veterinarian, presented a report showing that 145 herds and 3,406 cattle are under supervision in the county. Last year 24 herds were accredited and this year 20 herds, numbering about 800 cattle, were added to the list.

DELAWARE BREEDERS ENDORSE DISTRICT PLAN

About forty breeders of Holstein cattle attended a meeting of the Delaware Holstein-Friesian Association held at the farm of J. Irvin Dayett, Cooch's Bridge, December 6th. Representative breeders of black and white cattle were present from New Jersey, Pennsylvania, and Maryland, as well as from Delaware. They inspected the Dayett herd and voiced many favorable comments on the Dayett animals, which have been exhibited at the Delaware State Fair for the past two or three years and have won a number of prizes.

The plan to incorporate Delaware, New Jersey and Pennsylvania into one district which would be placed in the charge of a field man appointed by the National Association was endorsed. After the business meeting the party visited the University Farm at Newark and looked over the college herd and then went to Wolfe Hall for a speaking program.

R. R. Graves of the United States Department of Agriculture

ture told of some of the results in the breeding experiments being carried on in various parts of the country under the supervision of the Federal Agriculture Department. A. D. Cobb, State Boys' and Girls' club leader, told of the club work in the state and said that over 130 purebred calves and heifers are now owned by Delaware boys and girls. Many of the heifers were able to win in the show ring defeating animals owned by old established breeders and several had made very creditable A. R. O. records. Holstein films were shown and greatly enjoyed.

FEES IN MINNESOTA

In a talk to the Northfield Community Holstein Club, November 18th, Robert Geiger, secretary of the Minnesota State Association explained the present status of that organization. He stated that of the state membership fee of 50 cents per animal of breeding age, with the minimum of \$10; for owners of purebreds, 40% is returned to the county associations in counties where the membership is less than 150. Counties having a membership of 150 or more get 50% of the fees back from the state association. The membership fee for owners of grades is 25 cents per animal with \$5 as the minimum.

There was considerable discussion as to whether or not Northfield Club should retain its identity or become one of the four locals of a Federated Rice County Club.

FAVOR BILLBOARD ADVERTISING

The Genesee Holstein Club met at Batavia, New York, December 16th, and elected as officers: E. H. Waite of Alexander, president; G. B. Robertson of Corfu, vice-president and C. L. Ford of West Bergen, secretary and treasurer. State Secretary Zimmer told of the state association's program for the coming year.

The matter of the erection of advertising sign boards was discussed and it was decided to erect at least one in Genesee County. The committee in charge are: R. E. Chapin of Batavia; G. B. Robertson; W. N. Aiken of LeRoy; and D. D. Nevinger of Alexander.

Active cooperation will be given the farm bureau in calf club work. The committee in charge are: C. R. Ogilvie and M. Judd of Batavia; D. A. Lantz of Basom; N. C. McCall of LeRoy; and E. Waite of Alexander. The membership committee was made up of M. Judd, C. D. Plu, of Basom; C. K. Ford, W. N. Aiken, and Ellsworth Waite.

Ellsworth Waite was named as delegate to the advisory council of the state association and M. Judd as delegate to the annual meeting with C. L. Ford as alternate.

GOOD TALKS AT WAUPACA

There was a large attendance at the annual meeting of the Waupaca County Breeders' Association. The business meeting was presided over by A. W. Ritchie, president of the Association. R. J. Schaefer of Appleton, a director of the National Association, emphasized the value of cow testing associations to purebred breeders as well as grade breeders especially during these times when official testing costs seem high in comparison with the prices of purebred cattle. A number of breeders present agreed with Mr. Schaefer and some of them said that they believed that cow testing association work was worth more than seven-day or short-time records. Mr. Moss of Delavan, spoke on Mineral Mixtures. This subject is one of considerable importance to Wisconsin dairymen and the Wisconsin College of Agriculture is one of the leading authorities on the subject. Other speakers were J. E. Christy of Waupaca, L. L. Oldham, state secretary; County Agent J. R. Dance, while short talks were given by quite a number of other breeders present, their subjects being given to them extemporaneous.

SEVEN ESSENTIAL POINTS

"Agriculture and Livestock are inseparable," said Leon Robbins, livestock editor of the Wisconsin *Agriculturist*, in an address to the members of the LaCrosse County Holstein Breeders' Association at their annual meeting, December 12th,

in the Chamber of Commerce rooms at La Crosse. He said there were seven essential points in building up of a good herd of livestock and he elaborated on these. The first is the desire to have a good herd; second, the necessity of knowing a good herd; third, individuality and breeding; fourth, necessity of building on a good foundation and taking every precaution to keep the herd clean; fifth, feeding, ninety per cent of the problem was to feed the cattle enough when they were young; sixth, cooperation; seventh, advertising.

Reid Murray, secretary of the Wisconsin Livestock Association, corroborated Mr. Robbins' statements. He urged the breeders to consign only good cattle to sales and said there was a good market for purebreds especially sires, right in the La Crosse district.

L. L. Oldham said that the towns and country districts are twins of the business world, the prosperity of one depends on the other. He appealed for support for the state association.

Chas Kohn, head of the Agricultural Bureau of the Chamber of Commerce, who were the hosts of the breeders at the meeting, told about the plans for the interstate fair. He said that a new \$125,000 pavilion will be completed by next year.

According to the Board of Directors the main efforts of the La Crosse Association next year will be centered on three things; first, county wide campaign to make the membership in the county 100%; second, for a big exhibit of Holsteins at least one hundred head at the next interstate fair with perhaps a Holstein day and a special Holstein judge; third, to have every breeder a member of a cow testing association.

The officers elected for the coming year at the meeting were: President, Alfred Nuttleman; Vice-president, James D. McDonald; Secretary, Sam Hyde; Treasurer, Jess Roberts. The board of directors is composed of the president and secretary of each local organization within the county. They are: Bangor, Walter Hesselberg, Dave Elliott; Campbell, Ray Hawkins, Howard Houser; Holmen, Arthur Nuttleman, Abner Engaas; Mormon Coulee, Sam Hyde, Henry Schild; Washington, Nich Arenz, Clarence Brye; West Salem, Alfred Nuttleman, J. D. McDonald. One director is elected by the board, the man chosen to act next year being Jess Roberts of Bangor.

DAUPHIN COUNTY CLUB FORMED

Holstein breeders of Dauphin County met at the Bonny-meads farm, Paxtang, Pa., and organized the Dauphin County Holstein-Friesian club, adopted constitution and by-laws and elected officers.

Hiram Billitt, superintendent of Bonnymeads farm presided at the meeting. It was decided to affiliate with the Pennsylvania Federation of Holstein-Friesian clubs. R. R. Burtner, assistant county agent for Dauphin County was elected honorary member. Hiram Billitt was elected president, Sam T. Witmer, vice-president, Dr. J. L. Lenker, treasurer, G. H. Truckell, secretary, and as directors, C. E. Cassell, E. H. Walters, Aaron Erdman, and Dr. Kirkpatrick. Dues were fixed at three dollars a year, one-third of which is to be remitted to the Pennsylvania Federation of Holstein-Friesian clubs and each member of the Dauphin County club will automatically become a paid-up member of the state organization. The objects of the Dauphin County club were stated to be as follows:

- To promote the best interests of the Holstein-Friesian breed of cattle.
- To raise the breed's standard of excellence.
- To discuss the best methods of breeding, rearing and exhibiting of dairy cattle.
- To interest the beginner, and especially the coming generation in becoming more efficient breeders and dairymen.
- To assist in the organization of calf clubs, cow testing associations and bull associations.
- To assist in disposing of surplus cattle, and securing foundation stock.
- To acquaint dairymen with the economic supremacy of the Holstein cow as a dairy animal.

Sometimes people who boast that they pay as they go are in no hurry about going.

Cow Testing Association Reports

WISCONSIN ASSOCIATIONS

Forty-six cows in the Oconomowoc Association produced over 40 lb. fat in the month of October and twenty-two produced over 50 lb. The high cow was a purebred Holstein belonging to H. E. Dickenson and she produced 2,028 lb. milk and exactly 76 lb. fat. The Dickenson herd had the high average of 1,175 lb. milk, 43.8 lb. fat.

The purebred Holstein herd owned by Mrs. J. M. Wagner headed the Hillsboro Association for the month of November with 707 lb. milk, 30.3 lb. fat. The mixed grade and purebred herd of Albert Kahler was second and the purebred Holstein herd owned by Albert Fick was third.

A purebred Holstein owned by Julius Fick led for individual production with 1,618 lb. milk and exactly 68 lb. fat.

The high herd in the Washington association consisted of 23 Holsteins owned by Frank Misna & Sons with an average of 963 lb. milk, 36.06 lb. fat. One of the Misna cows was second high individual producer with 1,481 lb. milk, 62.2 lb. fat. Misna cows stood fourth, fifth and sixth. The leader, owned by Victor Anderson, produced 1,113 lb. milk, 62.3 lb. fat.

A total of 384 cows were tested during November in the Shirley-Denmark association. The highest cow was a grade Holstein, nine years old, owned by Louis Schaetz of Denmark. She gave 1,658 lb. milk testing 3.8% equivalent to 63 lb. fat. The Schaetz herd consisting of sixteen grade Holsteins was high with an average of 981 lb. milk, 38.2 lb. fat.

The grade Holstein, Nig, owned by H. Boshier & Son, headed the Eau Claire Association No. 1 during November with 58.5 lb. butter, 1,027 lb. milk. Her daughter, Nig 2d, also was one of the honor cows.

A fine showing was made for the Monroe Association during November, according to the report of tester H. M. Auby. The first five cows are all registered Holsteins and are as follows:

Owner	Breed	Milk	Butterfat
Roderick & Steurry	RH	1,482	83.0
Henry Haberman	RH	2,040	73.4
Henry Haberman	RH	1,934	69.6
A. Barth & Son	RH	1,541	60.1
Fred Detwiler	RH	1,547	58.8

The five highest herd averages are:

Owner	Breed	Milk	Butterfat
A. Barth & Son	G & RH	995.69	31.93
Henry Haberman	RH	940.22	31.19
Fred Detwiler	G & RH	874.47	30.72
I. Ellingson	RH	790.15	26.29
F. Trumphy & Son	RH	720.96	25.50

Roderick & Steurry's cow, with eighty-three pounds of butterfat, is the highest cow in fat production shown in any of the reports issued by southwest Wisconsin test associations for November.

A herd of purebred Holsteins owned by Mrs. Anna Gillmore of Pleasant Prairie led the Kenosha County No. 1 association for the month of November. The thirteen head averaged 1,269 lb. milk, testing 3.6% and making 45.7 lb. butterfat. The high cow was a member of this herd and produced 1,941 lb. milk, 77.6 lb. fat.

Earl F. Smith reports that twenty-seven herds containing 385 cows were tested during the month of October in the Beloit Association, the average yield was 587 lb. milk, 22.4 lb. butterfat. Rockwell and Katterhenry had seventeen grade Holsteins that averaged 970 lb. milk, 35.1 lb. butterfat. A Guernsey herd was second; Albert Narston's ten grade Holsteins were third with an average of 911 lb. milk, 30.4 lb. fat.

Daisy, a grade Holstein four-year-old, owned by George Vergin was high cow in the Poy Sippi-Aurora Association for the month of October. This cow produced 1,070 lb. milk and 49.2 lb. butterfat. A grade Jersey was second with 924 lb. milk, 49.0 lb. fat. Mr. Vergin owned the high herd for the month, the average of this herd of grade Holsteins being 787 lb. milk, 28.7 lb. fat. The tester is C. J. Harrison.

There were 360 cows tested in the Mineral Point Association; fifty of these made more than 40 lb. butterfat, twenty-three more than 50 lb. and four more than 60 lb.

The high cow for fat production for the month was a grade Holstein owned by John T. McNeil, with a production of 1,522 lb. milk and 70 lb. fat while the high cow for milk production was a Grade Holstein owned by Ley Bros., with 1,606 lb. milk, 64.2 lb. fat. High herd was composed of grade Holsteins and averaged 960 lb. milk, 38.9 lb. fat. This herd was owned by Joe McGinnity.

Second high herd was owned by Ley Bros. This herd produced 902.9 lb. milk, 38.9 lb. fat.

Grade Holsteins led the Mishicot Association for the month of October. The leader, Nellie, owned by George Bartels, produced 1,398 lb. milk, 55.9 lb. fat for the month; Lapohr, owned by Albert Lorenz, was second with 53.7 lb. fat from 1,629 lb. milk. Fred Kappelman owned the high herd which had a record of 657.7 lb. milk, 27 lb. fat.

IN ALL WISCONSIN

Reports of 109 Wisconsin Cow Testing Associations show that during November registered Holsteins made a splendid showing although grade Guernseys show up better than they have for many months, there being no less than thirty-three grade Guernsey association leaders, with two purebred Guernsey leaders. There were thirty-three grade Holstein leaders, twenty-seven purebred Holsteins and three designated in the report as just Holsteins, making sixty-three of the 109 or 57%. There were six grade Jerseys leading and one registered Jersey while one leader is reported as a Holstein and Jersey cross; two of the leaders are grade Shorthorns, one a registered Shorthorn, one a registered Ayrshire and two are said to be Natives.

The state leader is owned by H. Jueds of the Leopolis-Tilled Association. Her breed is not given but she made 90.5 lb. fat in a month, and is the only cow that exceeded the 90-lb. mark. Second is a registered Holstein owned by Gillis & Draxler of the Dunn County No. 2 association. She has 84.4 lb. fat to her credit. Third is a registered Holstein

Holsteins that Will Please and Pay

Write your needs—or better—come and see our stock.

**BLAIR COUNTY
HOLSTEIN ASSOCIATION**

S. F. ZOOK, Sec'y
Curryville Penna.

owned by Harry Wieverdink of the Cedar Grove-Oostburg Association with 84.2 lb. fat. There were eight cows producing between 80 lb. and 90 lb. fat, seven of these are registered Holsteins and one is a grade Holstein. They are as follows:

Association	Owner	Breed	Lb. Fat
Dunn Co. No. 2	Gillis & Draxler	RH	84.4
Cedar Grove-Oostburg	Harry Wieverdink	RH	84.2
Farmington	W. Jaehning	H	83.9
La Grange	L. H. Phelps	RH	80.7
Richfield	A. Kurtz	RH	81.7
Monroe	Roderik & Steurry	RH	83.0
Sabin	J. Lawton	RH	81.8

A PROMISING START

The East Snyder County, Pennsylvania Cow Testing Association completed its first month. Eleven cows produced over 40 lb. butterfat and three over 50 lb. while 18 cows produced over 1,000 lb. milk and 10 over 1,200 lb. The high cow was a grade Holstein owned by D. E. Naugle with 53.4 lb. butterfat and 1,617 lb. milk, average test being 3.3%. The high cow for milk was a purebred Holstein, Retha Crumhorn De Kol Burke owned by Geo. Gemberling, she producing 1,860 lb. milk for the 30 days. The average for the ten leading cows was 1,421 lb. milk and 46.6 lb. butterfat. The ten leading cows were all Holsteins, six grade and four purebred. The highest averaging herd was owned by Geo. Gemberling of Selinsgrove whose eight cows in milk averaged 1,208 lb. per cow. The herd consists of mostly purebred Holsteins.

W. A. MARKLEY, Tester.

TESTING IN STANISLAUS COUNTY

The November report of the Stanislaus County Farm Bureau Dairy Department shows that during the month 3,008 cows were tested and averaged 661 lb. milk and 25.6 lb. butterfat. There were 232 cows that produced over 40 lb. in the month.

The herds are divided into classes. The first is for herds of 40 cows or more, the second for herds between 15 and 40 cows and the third for herds

containing less than 15 cows. The four highest averaging herds in the first class were all grade Holsteins, Kaiser Brothers with 60 cows leading with an average of 33.1 lb. fat and 958 lb. milk; John Gulart was second with 32 cows averaging 30.6 lb. fat and 790 lb. milk; Gon-

THIS IS ALL BULL

As a general rule, dairymen look upon the sort of bull they use as of minor importance. But when we consider the actual improvement of the quality of our dairy herds that may be brought about by the use of a good sire, it is a most important subject to consider. The dairy industry of the United States is a great industry, producing over 90 billion lb. of milk annually from 24 million cows, or less than 4,000 lb. per cow. The Netherlands have an average production of over 7,500 lb. of milk with 154 cows per square mile. Denmark has an average production of 5,666 lb. with 147 cows per square mile. Switzerland's average production is 6,950 lb. with 60 cows per square mile, while United States has only 8 cows per square mile.

It may be interesting to know something of the history of the development of dairying in these countries. It is a story of improving poorly bred stock of beef tendencies through weeding by cow testing associations, breeding done through bull associations and proper feeding. The accomplishments of the bull associations and cow testing associations in Europe are impressive, but no more so than in certain sections in this country. Evidence certainly indicates that the dairyman who would succeed is passing up a good business proposition if he refuses to accept the aid of these organizations, for they helpfully direct him in practices that lead to success.

Reports from 41 cow testing associations in the eleven Western States indicate that most of the members have eliminated scrub bulls. The testers of 41 associations report 1,010 herds containing 24,132 cows with 786 purebred bulls and 103 scrub bulls. Seven associations failed to report the number of members and eight failed to report the number of purebred sires used. Of the 41 associations reported, there are no scrub bulls used in 15 of them and only one scrub bull in each of 10 other associations, and but two scrub bulls in 4 other associations. In three associations, having a combined membership of 144 herds, there are 35 of the 103 scrub bulls now in use, and two of these three associations are in one county.

The degree of success that it is possible for a dairyman to attain is determined by the sort of cows he owns to-day; but what it will be to-morrow is determined largely by the sire he uses to-day. If the herd is a herd of scrubs capable of low production only to-day, a good sire will make it a good herd capable of high production to-morrow. And likewise the most desirable herd to-day may be converted by the bull into a herd of miserably low producers to-morrow.—Western Office U. S. Dairy Division.

WHAT WON'T THEY DO

"I'm worried about my complexion doctor; look at my face."

"My dear young lady, you'll have to diet."

"Oh, I never thought of that! What color do you think would suit me best?"

FAIRFAX COUNTY, VIRGINIA

The November report of the Fairfax County, Virginia No. 1 Cow Testing Association on tests of 588 cows in 27 herds shows 77 cows tested over 40-lb. butterfat and 16 over 50-lb. butterfat. The association averages were 705.1 lb. milk and 28 lb. butterfat.

The high cow for the month was a registered Holstein, owned by P. B. Crandall, Herndon, Va., producing 2,272 lb. milk and 70.4 lb. butterfat. The high herd were the 28 grade Holsteins owned by Ben. Middleton, Herndon, Va., averaging 889.1 lb. milk and 33.8 lb. butterfat. Four of the ten leading cows were purebred Holsteins, four were grade Holsteins, one was a grade Ayrshire and the other a grade Jersey.

TESTING IN THE WESTERN STATES

Oregon Association lead for average fat production in the seven western states. The three reported show 2,965 cows with an average of 31.4 lb. fat. The Lone Idaho Association has only 191 cows but of these twenty-six made over 40 lb. fat and the entire number averaged 29.8 lb. The eight Washington Associations show 2,240 cows with an average of 29.5 lb.; California has eighteen associations with 15,996 cows averaging 26.9 lb.; Colorado, Utah and Arizona show in the order named. In the states reporting there are thirty-nine associations, in which 23,894 cows are enrolled.

Holstein supremacy for average production received a setback this time as the high herd consisted of registered and grade Guernsey enrolled in the Still-aquamish, Washington Association. These nineteen cows, owned by the Valley Gem Farms, averaged 897 lb. milk, 46.5 lb. fat. The twenty-three Holsteins owned by M. Babylon of Santa Anna, California is second with an average of 1,087 lb. milk, 45.2 lb. fat. The sixteen cow Holstein dairy of the Green Mt. Dairy, Lamar, Colorado are third with an average of 1,445 lb. milk, and exactly 45 lb. fat.

The four leading places for herds consisting of fifteen or less cows are occupied by Holstein herds. John Hagglof of Oakville, Washington has seven cows that averaged 1,607 lb. milk, 59.9 lb. fat. J. Chapman of Salida, California has only three registered Holsteins but they averaged 1,512 lb. milk and 58 lb. fat. The ten cow Holstein dairy of J. L. Sebastian of Wasco, California is third with an average of 1,772 lb. milk, 51.6 lb. fat. The leading herd in the great Jersey state of Oregon consists of only four Holsteins with an average of 1,472 lb. milk, 51.5 lb. fat. They are owned by R. Anlicker, Goble, Ore., who is to be congratulated on the showing by his small but splendid producing dairy.

The individual leader for fat production is Crickett, a grade Holstein owned by C. S. Walker of Santa Anna, Calif., with a production of 2,145 lb. milk, 114.5 lb. fat. Second is Aaggie Segis Jr., a registered Holstein owned by A. E. Comfort of Hanford, Calif., with 2,628 lb. milk, 101 lb. fat. Aurelia, a registered Holstein owned by J. L. Sebastian of Wasco produced no less than 3,018 lb. milk, 93.6 lb. fat. She is the leader for milk production in the Western division. A cow of mixed breeding is next followed by Dairyland a registered Holstein owned by J. Chapman of Salida, Calif., with a production of 2,100 lb. milk, 84 lb. fat.

FRANKLIN COUNTY, OHIO

The Holstein herd of J. E. Baldwin and Ray Van Schoyck repeated their October triumphs in the Darby County Association during November. The Baldwin herd had seven cows in the list of twenty on the honor roll, while the

Schoyck herd had ten representatives on the list. A Baldwin cow was first with 62.5 lb. butterfat, 1,737 lb. milk and the Baldwin herd was high with an average of 2,120 lb. milk, 36.8 lb. butterfat. In the Madison Township Association, a Holstein owned by W. B. Turnbull of Gahanna led with 1,461 lb. milk, 54 lb. butterfat. The Turnbull herd consists of a dozen Jerseys and Holsteins and they averaged 786 lb. milk, 33.4 lb. fat. The lowest herd in the association averaged only 231 lb. milk, 12.8 lb. fat.

HONORS FOR WETTERING AND FITCHOME

During November, 643 cows were tested in the Kane County, Illinois, Association No. 3 and averaged 786 lb. milk, 26.2 lb. fat against 747 lb. milk, 23.9 lb. fat for November of 1921. Twelve purebred and three grade Holsteins were purchased by members of the association. Fred L. Wettering had the highest of the twenty-three herds tested with an average of 1,054 lb. milk, 34.8 lb. fat. Nine cows in this herd each exceeded 40 lb. fat; one of them was the second highest producing individual in the association with 1,657 lb. milk, 57.6 lb. fat. The State Training School for Girls had the second highest producing herd with Oscar Engstrom third.

The leader for production came from the Fitchome Farms and produced 1,911 lb. milk, 61.2 lb. fat. The sixty-two purebred Holsteins of this establishment averaged 910 lb. milk and 30.94 lb. fat. Due to the high price of feed the cost of producing 100 lb. milk was \$1.05 for feed alone is the statement of the association supervisor, Claude H. Heim.

A KENTUCKY LADY

Lady, a purebred Holstein owned by John Dellinger & Sons, led the Clark-Scott Counties Testing Associations with the production of 1,404 lb. milk, 58.9 lb. fat. Arta, another member of this herd, produced 1,731 lb. milk, but she produced only 50.1 lb. fat, ranking seventh on the list in the production of butterfat.

Louis H. Dreyer had two cows among the first ten, and George Potter, Louisville Cement Company, and John Carr each had one, all these of Clark County. Clifford Reid of Scott County held fifth place and Lawrence Baker, from Scott, eighth and ninth places. Oscar Erni of Sellersburg, Kentucky, had the best herd average of 32 lb. for fourteen cows.

SETS NEW HIGH MARKS

A purebred cow, Loma, owned by Cleland & Williams of Hiattville, led the Bourbon County, Kansas, Association with 1,854 lb. milk, 83.3 lb. fat produced during November. The Cleland & Williams herd of nine animals averaged 1,118 lb. milk, 39.2 lb. fat. This production and herd average are the highest ever recorded in the association. The nineteen highest cows were all Holsteins, ten were grades and nine purebreds and their average was 1,193 lb. milk, 42.2 lb. fat.

HOLSTEINS LED MICHIGAN DURING OCTOBER

During October, 1922, a purebred Holstein owned by T. C. Tiedebohl of Coloma, Michigan, led the Van Buren County Association and made the highest record of any cow tested in the seventeen Michigan Cow Testing Associations. She produced 104.2 lb. butterfat during the month and was milked three times daily. The eight purebred Holsteins owned by the Sherman Dairy Company of South Haven averaged 57.31 lb. fat which is the highest average for a Michigan herd during October.

HANSON FURNISHES THE LEADERS

The Long Prairie Cow Testing Association has finished another year's work. The leader of the Association for production was a registered Holstein, Lady De Kol Homestead Longfield, owned by Ivan Hanson of Clarissa, Minnesota, with 24,826 lb. milk and 1,025.3 lb. butter in 291 days.

The Hanson herd was the leader for herd average, with ten registered Holsteins averaging 380 lb. fat and 8,959 lb. milk.

STEFFENS HAVE HIGH AVERAGE

A herd of seventeen purebred Holsteins owned by H. Steffen & Son of Monroe, Washington, led the Snohomish Valley Association during November, with an average of 1,093 lb. milk, 36.4 lb. butterfat. The best individual record was that of Model Ruth Wayne, a five-year-old, owned by the Steffens with a production of 2,119 lb. milk, 62.6 lb. fat.

LED ALL KENTUCKY

A total of 170 cows consisting of 130 Jerseys and 34 Holsteins belonging to thirty-one different breeders were tested in Kentucky during October. Rhoda Overton Segis, owned by the Kentucky Holstein Farm of Bardstown was the highest producing cow.

Dept. E. Ketchum Mfg. Co., Luzerne, N. Y.

A WORD FROM ILLINOIS

Every man belonging to a cow testing association should make it his business to make the association a paying proposition. It is an investment, not a donation, and should be made to pay.

I have had men tell me that they have made more than enough the first month to pay for the year's work, and I have had others tell me that they had gotten but little, if any, benefit from it. Why the difference? The difference is just this: The man who was well pleased was a man who took advantage of his records, who discussed his various problems with the tester, and who made it his business to find out how the other fellow was doing it. He was a man who sold the unprofitable cow after she had been pointed out to him. He, too, was a man who believed in monthly meetings so that he could get acquainted with his fellow dairymen and could talk matters over with them.

Have you ever noticed that good cows are selling for more money in districts where cow testing associations have operated? The answer is easy. Those men have learned to know and appreciate the value of good cows.

Just keeping records does not mean anything to you, but keeping records on your cows for the sake of breeding, feeding, and weeding does mean more to you than your membership fee each year. Study your records; grade up your herd with them. These records on your cows are a cheap but safe and accurate basis on which you can in a short time breed up a profitable herd of dairy cattle.

C. S. RHODE.

ILLINOIS COW TESTING

A purebred Holstein owned by the Rock River Farms, Byron, lead all Illinois Association cows for production during the month of November with 2,109 lb. milk, 80.1 lb. butterfat.

The Rock River Farm cows made a wonderful showing, standing first, fourth

and fifth in the list. A grade Guernsey was second with 1,272 lb. milk, 78.9 lb. fat and a purebred Holstein owned by Leo Bauman of Madison County was third with 2,055 lb. milk and 78.1 lb. fat. A Rock River Farm cow is fourth with 77.9 lb. fat and another is fifth with 76.2 lb. fat from 2,178 lb. milk. Of the five others on the list of ten highest producing cows two are grade Holsteins, one a grade Jersey, one a purebred Jersey and one a Holstein and Jersey grade.

There are 18 associations reporting. In five instances the highest record cow is a purebred Holstein and in seven others a grade Holstein, while the leader in Lee County is a Holstein-Jersey grade.

The highest producing herd in the State consists of 8 grade Holsteins owned by Anna B. Pillatt of Adams County, with an average production of 1,182 lb. milk and 45.7 lb. fat. A Jersey herd is second while the 11-cow dairy of Earnest Sedgwick, all purebred Holsteins, is third with 1,228 lb. milk and 42.6 lb. fat. The splendid herd at the Rock River Farms make a remarkable showing, the 87 purebred and grade Holsteins averaging 1,078 lb. milk and 38.4 lb. fat. Mr. and Mrs. Medill McCormick have every reason to be proud of the showing their dairy is making. Eugene Nagel, with 29 purebred and grade Holsteins, leads Madison County Association with an average production of 828 lb. milk and 37.1 lb. fat, while the 16-cow dairy of Barmore & Rosentel heads Stephenson County with an average of 909 lb. milk and 35.8 lb. fat from 16 purebred and grade Holsteins.

TWO GOOD HOLSTEIN HERDS

A grade Holstein owned by O. Gustafson Bros. produced 1,845 lb. milk, 75.65 lb. butterfat during November in the New Sweden, Minn., testing association. Gustafson Brothers owned the second and third highest producers, one with 61.36 lb. butterfat, 1,461 lb. milk and the other with 57.96 lb. fat from 1,380 lb. milk. Despite this, however, the average of the herd was exceeded by the twelve Holsteins of Carl Borgeson with an average of 985 lb. milk, 37.43 lb. butterfat while the twelve Gustafson Bros. cows averaged 878 lb. milk and exactly 36 lb. fat. The November report is the best of the year in the association. In all, 228 cows were tested with 74 that exceeded 30 lb. fat and 23 that exceeded 40 lb. fat.

TO MOTORISTS

It is better to "Stop, Look and Listen" than it is to hurry, stall and hear the angels.

PENNSYLVANIA GRANGE AND LEGISLATION

The Pennsylvania State Grange at its Annual Meeting at Williamsport, December 12th and 14th, devoted some time to consideration of National Legislation. It ratified the recent action of the National Grange with reference to the Muscle Shoals project, reaffirmed its opposition to the Ship Subsidy bill, asked that Congress enact the "filled" milk bill as it passed the House of Representatives, favored the elimination of the electoral college and the election of the President and Vice-President by the direct vote of the people, opposed any attempt to remove the Bureau of Forestry from the Federal Department of Agriculture, favored the enactment of the Truth in Fabrics bill and demanded the rigid enforcement of the National Prohibition Law.

Pennsylvania now has 975 Subordinate Granges with a total membership of 96,000. The Treasurer's report showed a balance on hand at the end of the Grange year of \$42,935.51.

John A. McSparran of Lancaster County, recently defeated for the Governorship of the State, was reelected Master for the next two years.

WHY MILK FOR EXERCISE?

Why milk a lot of cows for exercise is the question asked by the Manchester, Iowa, *Democrat*, in reporting the production of the herd of H. C. Nieman which is located on Anandale Farm, near Manchester. The Nieman herd is enrolled in the local cow testing association and averaged 449.9 lb. butterfat, 13,314 lb. milk during the past association year. No herd in the state of Iowa came up to this average a year ago and while the complete records are not yet out, it is doubtful if any other herd equals these figures this year.

Mr. Nieman attributes his high average to the fact that he has culled close and fed well during the past few years and by belonging to a testing association he knew at the end of each month what each cow earned in dollars and cents.

EMMA IN THE LEAD

The herd of Maurice Jones of Big Rock, Ill., averaged the highest for milk and fat production during November in the Kane County Association No. 2. This herd averaged 1,114 lb. milk, 42.3 lb. fat. The highest producer was Emma, a purebred Holstein of the Jones herd. During the last twenty-seven days of November she produced 1,620 lb. of 4% milk containing 64.8 lb.

The R. D. Weseman herd of Virgil averaged 1,077 lb. milk, 36.6 lb. fat. Henry Lee's large herd of purebred and grade Holsteins was third with an average of 1,004 lb. milk, 36.14 lb. butterfat.

STRIKING

"Mr. X., when the lightning struck the barn, jumped over the cow he was milking and is resting very easily this afternoon."—From a News Item in the *Springfield, (Mass.) Union*.

THE KETCHUM EAR TAG

Repeat orders amounting to 200,000 show that the Ketchum Clincher Tag is making good with the Veterinary Department of the Dominion of Canada.

It is against the regulations for the United States Government or the government of any one state to recommend or endorse goods sold on the open market, but the fact that over one-quarter of a million Ketchum Clincher Tags have been used by the Federal and State Governments is an equally sure indication that Ketchum Tags have made good in the U. S. A. Testimonials from owners of cattle and from hog breeders in New York State, Georgia, California and intermediate states tell the same story, while among the testimonials prized by the Ketchum Company is a repeat order from Portugal, in which the European breeder says, "These are the best tags we have ever had." Veterinarians endorse them from the medical standpoint as well as for the ease of operation. They make a neat and business-like job.

It is very easy to place the tag in the animal's ear. They are light and very easily read and they "stay put." The Ketchum tag is rapidly growing in popularity and the many repeat orders show that they are giving satisfaction.

DR. COUE AND AUCTIONEER MEAD

"Every day and in every way he grows better and better." Dr. Emile Coue's words can be applied to Glenn R. Mead, the Live Wire Auctioneer of New York State. Mr. Mead is a worker and has made good, not only in his own State but in others, wherever he has been called upon to dispose of high class cattle. Mr. Mead is a breed booster and is vice-president of the Erie County Holstein Club, while he is in request as a speaker at gatherings of Holstein Breeders anywhere in western New York.

As an Auctioneer—well—we have only to refer you to what those who have employed him say and you can see for yourselves on the page advertisement appearing in this issue.

BOUND TO BRING GOOD RESULTS

A number of good young bulls have been brought into Green Lake County, Wisconsin, during the past few weeks.

A. G. Oelke of Princeton, purchased a grandson of Creator. The two nearest dams of this young bull averaged 32 lb. butter in seven days and he is a show animal.

V. E. Kutchin of Green Lake recently secured a very handsome young bull, a grandson of Ormsby Korndyke Lad.

Lyle Loveland of Dalton and Clarence McClelland of Berlin each purchased a grandson of Sir Pietertje Ormsby Mercedes 37th, while Earl Dalton of Dalton bought a grandson of Sir P. O. M. 37th and of Wisconsin Forbes. Walter Frost of Princeton also purchased a grandson of "37th" for his future herdsire.

SHOW AT DAIRYMEN'S MEETING

The 49th Annual Convention of the Illinois State Dairymen's Association will be held in Clinton on January 9th, 10th, and 11th. In connection with the event will be a dairy cattle show and cattle judging contest. Cattle exhibited must come from accredited herds or have passed a clean tuberculin test within ninety days of the day of the show. There are eight classes for the four great dairy breeds besides the championships in each breed. One of the judging contests is open to boys under twenty-one, the other to farmers above that age. Some valuable prizes will be given.

EX-SOLDIERS TO RUN DAIRIES

A recent visitor to the Model Dairy Farm located near Sioux City, South Dakota, and owned by the Sioux Falls Savings Bank, was Colonel Boyd Wales of Pierre, Land Settlement Commissioner. The Colonel is anxious to get the ex-service men who have bought farms with Government loans started with dairy cattle so that they may be able to make the most of their agricultural opportunities. Up to the present time 278 ex-service men of South Dakota have borrowed money from the Government to buy farm lands and it is expected the number up to January 1st will be 330. The men are required to have from 10 to 30% of the value of the land in livestock and machinery in order that they may have enough equipment to work with.

In South Dakota most of the men have selected cheaper land west of the river. Each man is required to live on his own farm, for the primary purpose of the legislation was to keep the boys away from the towns and on the farms.

Colonel Wales was in the 147th Field Artillery when in France and many of the men who are taking up farms formerly fought under his command.

LOLAND STOCK FARM

At the present time S. C. Jensen and Son of Clinton, Wisconsin, own 38 head of purebred Holsteins. This herd has passed a clean test and is expected to qualify for the accredited list. The Jensen herd recently led the Clinton Cow Testing Association for production.

Donalad It De Kol Bessie, four-year-old, was the leader in October, with 1,366 lb. milk and 60.1 lb. butterfat, while another member of the herd produced 1,550 lb. milk and 48.1 lb. butterfat.

The Jensen herd has been built up in the past decade, as it is just ten years ago since they obtained their first registered animal. The farm consists of 105 acres, is named Loland Stock Farm and is situated about a mile east of Clinton.

"Did you remember to remove the price marks from all the Christmas presents before you wrapped them up, Henry?"

"No, dear. Only from the inexpensive ones."—*Life*.

TRY IT FOR YOURSELF

That waving a red flag does not make a bull mad, was the declaration of Professor George M. Stratton of the University of California before the American Psychological Association at Cambridge, Mass., December 28th.

The Professor further stated that "Experiments show, that the real causes are general strangeness of the object, its brightness and its movement." "More attention," he said, "was paid to white than to red; about as much attention to green as to red; a sudden flutter of any color is mildly startling. It is probable that the popular belief arises from the fact that cattle, and particularly bulls, have attacked persons displaying red, when the cause of the attack lay in the behavior of the person or in other factors apart from the color itself."

BIG RECORD HELPS HERE

H. E. Robertson has just finished building a new certified barn on the Robertson Farms at York, Pa. He reports that he has sold a son of King Piebe of York to a dairyman in York County. The young bull won first prize in the senior calf class at the Maryland State Fair and also at the York Fair last Fall.

In the Robertson herd there are twenty daughters of the herd sire that will be developed this Winter. The great record of 1,523.23 lb. butter and 31,610.6 lb. milk made in a year by May Walker Ollie Homestead will enhance the selling value of the daughters of King Piebe of York, as he is a brother of the new American champion.

PROOF POSITIVE

Mother, said a little boy after coming from a walk. "I've seen a man who makes horses."

"Are you sure?" asked his mother. "Yes," he replied. "He had a horse nearly finished when I saw him; he was just nailing on its back feet."

SIOUX FALLS DAIRY DAY

While rather belated, a brief report of the doings at the opening of the Sioux Falls Holstein Dairy Company model barn on November 20th will be interesting to our readers, as the leading article in our December 8th issue told of the enterprise of the Sioux Falls Savings Bank, which owns the Sioux Falls Farm and herd.

A large crowd, including farmers and bankers from various parts of the State attended the event and closely inspected the barn, which has just been finished. One of the attractions was "Aggie," the champion grade cow of the world. Another was Mankato Pietertje Ormsby Lad, the eleven-year-old herdsire.

Busses were furnished to take the crowd from Sioux Falls to the farm and at noon all visitors were furnished with a lunch served in the hay mow of the new building. The opening address was made by John Wadden, president of the Sioux Falls Chamber of Commerce, who said that business at the present time in South Dakota was suffering, owing to the low prices the farmers were receiving. The great need of agriculture in the state is diversification, and dairying must be encouraged.

United States Senator Peter Norbeck called attention to the depressed condition of the agricultural and banking industries two years ago and said the revival of the War Finances Corporation was necessary to relieve the situation.

Hugh Van Pelt, one of the leading dairy experts and judges of the country told of coöperation and cow testing associations in Denmark, as an indication that dairying properly attended to brought adequate financial rewards. He said that people should drink more milk and said if they drank the amount of milk they should the twenty-three million cows in the United States would have to be doubled.

Mr. Johnson and his co-workers of the Sioux Falls Savings Bank are doing a good work in South Dakota for the welfare of the farmer and for agriculture said Mr. J. C. Marlow of Mankato, Minn. Mr. Marlow addressed most of his talk to the bankers present, commending the work of the Sioux Falls institution.

F. W. Schaeffer, in charge of the bank extension department, also made a brief address

June 14—Thorpe, Wis., W. H. Krause Annual Bred Heifer Sale.

HOLT HERD DISPERSAL

At the sale of the B. J. Holt and F. H. Holt herd at Kenosha, Wisconsin, December 12th, good prices were realized, 55 head averaging \$205. The high price was \$345 for a cow, paid by J. Krauser of Somers. Among the largest buyers were Henry Lewis of Racine, the Edgewater Stock Farms of Fort Atkinson and Clauson Brothers of Russell, Illinois. The auctioneer was L. C. Christensen of Franksville, with J. P. Torrey as pedigree man.

GOOD ACCREDITED HERD SALE

A large crowd attended the Whowell & Polley sale at Johnstown, Colorado, on November 22d. Seventy-two head of all ages averaged \$191.51. Most of the stock sold went to farms in the immediate vicinity of Johnstown. The herd was on the accredited list and the sale was the result of a five-year partnership contract between J. W. Whowell and Harry Whowell and their herdsman W. H. Polley. At the end of the five years the herd was to be dispersed and the proceeds divided. The Whowells own the 240-acre ranch on which the dairy has been located. This dairy has always held a high position in Colorado Cow Testing Association work and has headed the State list a number of months.

The top price was \$625, which Crowley & Letford of Johnstown paid for a cow. The following sale summary was prepared by County Agent H. H. Simpson:—

72 animals averaged	\$191.51
The 33 cows averaged	255.90
The 10 heifers averaged	224.00
The 8 heifer calves averaged	143.75
The 2 aged bulls averaged	340.00
The 6 young bulls averaged	107.50
The 12 bull calves averaged	43.75

CALIFORNIA BULL SALE

A consignment sale of bulls was held at Dos Palos, California, by the Dos Palos Holstein Breeders' Association and fifteen bulls were sold, ranging in age from six weeks to eighteen months. The highest price was \$175 for King Korndyke Segis Prilly, who was purchased by A. A. Sousa of Los Banos. King Prilly Hengerveld Inka brought the second highest price, \$110. He was purchased by Mr. Roduner of Merced. Both bulls came from the Carmignani herd. The sale was considered a success and will be repeated.

HALL BROTHERS DISPERSAL

The noted Hall Herd, owned by Hall Brothers of Denver, Colorado, was dispersed on the Western Holstein Farm, Denver, Colorado, November 20th. The top price was \$600, and it was paid by Mrs. Emma Snyder of the Western Dairy Farm which is also located near Denver. Her purchase was one of the high record cows. The entire herd averaged \$211 for over sixty head. Four head or more were purchased by the University of Wyoming, Mrs. M. E. Penrose, of Denver, B. F. Simpson of Denver and James Gibson of Morrison.

The Hall Herd was one of the oldest breeding establishments in Colorado and in it have been developed a number of Colorado champions. Both of the Hall Brothers have been prominent in Holstein cattle affairs.

GOOD GRADES SELL WELL

The dispersal of the Minor & Thornton herd of registered and grade Holsteins at Fresno, California, brought buyers from a long distance, as this herd had the history of being free from tuberculosis and abortion. The cattle were sold right off pasture and there were no official records on the animals. The top price for a registered cow was \$300 and 55 head averaged \$141. The demand for grades was a feature of the sale as the top cow brought \$310 and 32 head averaged \$111. More than half the sale offerings were young stock. The largest buyers came from southern California.

THE THIRD CHEHALIS SALE

The third annual Lewis County Sale held at Chehalis, Washington, December 9th, was handicapped by cold weather and the fact that many of the offerings were young. The top price was \$350 for Pauline Bergsma Hengerveld purchased by Mrs. Kate Stevens Bates of Cloverfield Farm, Olympia, Wash. L. L. Goff of Adna paid \$310 for Riverview Cordelia Felling, a three-year-old consigned by C. A. Ives of Centralia, Wash. The average price received for the forty-three females was \$138. Bulls sold low. F. R. Beals, Tillamook, Oregon, was the only buyer from a distance and he took several good ones.

The animals bringing \$200 or more with names and addresses of their purchasers are:

Pauline Bergsma Hengerveld, 6 yrs., Mrs. Kate S. Bates, Olympia, Wash.	\$350
Consigned by A. C. Mills, Curtis, Wash.	
Tussie Queen, 7 yrs., John Gerrets, Chehalis, Wash.	200
Riverview Constance Felling, 2 yrs., W. I. Rector, Bucoda	275
Riverview Cordelia Felling, 3 yrs., L. L. Goff, Adna	310
Consigned by Jas. C. Chamberlain, Ceres, Wash.	
Ceres Alpha Pontiac, 4 yrs., C. A. Ives, Centralia, Wash.	200
Consigned by H. R. Shoultz, Adna, Wash.	
Queen Waldorf Segis, 2 yrs., R. H. Russ, R. 4, Chehalis	205
Countess Ormsby Johanna, 2 yrs., C. A. Ives, Centralia	220
Consigned by George Galvin, Centralia, Wash.	
Chimacum Veeman Lutske, R. Hoffman and O. Skagen, Kent, Wash.	200

HEG HERD SELL WELL

Despite the fact that the Elmer E. Heg Dispersal Sale was handicapped by cold weather, a small crowd, and the cattle being unfitted, yet the sale was considered a success. The twenty-nine animals averaged \$198. The top price was \$400 which Ed Hoem of Snohomish, Wash., paid for Tyee Hiske Fayne world's record four-year-old milk producer in the 305-day division. In addition to her milk record of 25,213.4 lb. milk, Tyee had a butter record of 888.47 lb. in the ten months and a seven-day record of 31.3 lb. butter from 726.8 lb. milk.

John F. Jansen of Stanwood paid \$390 for Sheridan Zozo Johanna one of the handsomest animals in the sale. She had a seven-day butter record of over 26 lb. Kenneth Hodges of Everett started his herd by purchasing ten animals for \$1,720. Practically all the animals were taken by buyers in Snohomish County and Skagit County, the former county getting the bulk of the offerings.

Animals bringing \$200 or more with names and addresses of their purchasers are:

Tyee Hiske Fayne, 6 yrs.	Purchased by Ed. Hoem, Snohomish.	\$400
Tyee Peggy Fayne, 6 yrs.	Purchased by Kenneth Hodges, Everett.	360
Tyee Madcap Johanna, 3 yrs.	Purchased by Chas. E. Taylor.	210
Tyee Mellie Fayne, 5 yrs.	Purchased by Dr. H. Stockwell, Monroe.	255
Tyee Patricia Fayne, 6 yrs.	Purchased by Noble Lee, Mr. Vernon.	335
Tyee Hiske Johanna, 3 yrs.	Purchased by John F. Johnson, Stanwood.	220
Sheridan Zozo Johanna, 7 yrs.	Purchased by John Ellingsen, E. Stanwood.	390
Tyee Fayne Johanna, 1 yr.	Purchased by Carl Satra, E. Stanwood.	210
Tyee Hiske Fayne Johanna, 1 yr.		280
Tyee De Pauline Fayne, 3 yrs.		200

DOINGS AT BLOOMINGDALE

Pietertje Fayne Johanna the star cow of the Bloomingdale herd on December 6th dropped a very fine bull calf sired by King Model. The new arrival is a very large young fellow, is growing rapidly and is almost white in color having almost identically the same color markings as his sire. As mentioned in the November 8th issue of the BREEDER AND DAIRYMAN, Pietertje Fayne Johanna recently closed a record of 23,151.3 lb. milk and 1,118.32 lb. butter made in 365 days. She is a daughter of Beauty Walker Pietertje Prince and of Segis Fayne Johanna, one of the two cows that are dams of four daughters each with thousand pound year butter records. The year records of her four daughters average 21,194.4 lb. milk and 1,085.52 lb. butter. The daughters of King Model are making splendid records in both short time and long time tests, so it is evident that the young bull inherits producing capacity of the highest order. One of his sisters, Model Pontiac Cornucopia has a year record of 18,324.9 lb. milk and 873.17 lb. butter made as a junior two-year-old, she being only 26 months of age at time of starting this great test.

It is expected that Matador Hengerveld Bess, another good member of the Bloomingdale herd, will reach 1,250 lb. of butter by the time she has completed her year's work. She already is the highest record daughter of Matador Segis Walker whose daughters are certainly making splendid records in both short time and long time tests. In 330 days she produced 24,661 lb. milk and 1,191.97 lb. butter so as she has 35 days to go before completing her year. The three sisters of Matador Hengerveld Bess that have completed a year of test work and made over 1,000 lb. butter are Matador Mechthilde Vera with 1,169.65 lb. butter and 27,488 lb. milk, Segis Clothilde Emma with 1,165.63 lb. butter and 28,801.9 lb. milk and Matador Ormsby Betty with 1,003.3 lb. butter and 25,202 lb. milk. Vera was the first, Bess the second, Emma the third and Betty the sixth heifer sired by the Matador bull. They were all born during 1915 and Betty herself was nearly three months old before her sire had reached his second birthday.

NEW OREGON HERD

F. W. Durbin & Son of Salem, Oregon, recently purchased eight head of good Holsteins from the Waukesha County Holstein Breeders' Association. Mr. Durbin, who was a hop buyer at Salem before the 18th amendment went into effect, made the purchase in person and then left with Mrs. Durbin for Havana, Cuba, for a short vacation. The cattle were shipped to their new home in charge of Frank Durbin, junior member of the firm.

No wonder the Turks want to have war all the time. Each one of them has about thirty wives, and war is a vacation.

THE GOOD DIE YOUNG

The remarkable record of 23,286.9 lb. milk and 817.45 lb. butter made in a year by the junior two-year-old Mankato Colantha Ormsby Bess, the more remarkable because she will freshen again in less than fourteen months from the time of dropping her first calf, calls attention to the fact that her sire, King Colantha Ormsby Bess, although only a young bull, has gone where all good bulls go. The new Minnesota State Champion is his first daughter to complete a year record.

The cause of the death of King Colantha Ormsby Bess is reported as actinomycosis of the stomach which is said to be the only case of this kind on record in the United States. The death of this great young sire was not only a loss to his owners but to the breed as well. This is proven by the records of his first tested daughters and their winnings in the show ring.

In the Mankato Holstein herd, his first three daughters to freshen made the following records, Mankato Segis Ormsby Bess, freshening as a junior two-year-old, made 23,111 lb. of butter and in 8 months, 21 days has produced 15,627 lb. of milk and 627.79 lb. of butter. Mankato Stella Ormsby Bess freshened at two years, six months and nine days and made 20.02 lb. butter in 7 days and in 5 months and 27 days has 12,067.5 lb. of milk and 457.67 lb. of butter. Mankato Lady Ormsby Bess, as a junior two-year-old, 19.79 lb. of butter in seven days, in five months 8,311 lb. of milk and 305 lb. of butter. His six tested daughters average 18.17 lb. of butter in seven days, five of them averaging over 20 lb. A very high average will undoubtedly be made by these first six daughters of this sire to be tested as two-year-olds for the year.

In the St. Cloud Holstein herd owned by E. A. Barthelmy, besides Mankato Colantha Ormsby Bess he has two other daughters that have made a splendid showing as junior two-year-olds.

G. H. TRUCKELL

Harrisburg,

Penna.

Mankato Mechthilde Ormsby Bess, freshening at two years and 24 days over 20 lb. of butter in seven days and in 267 days has made 12,303.7 lb. of milk and 546 lb. of butter. The other, Lillamere Bonnie Clothilde, at two years and one month just finished a year's record of 12,481.7 lb. of milk and 690 lb. of butter.

The daughters of King Colantha Ormsby Bess combine high production with show ring type, one of them winning first as a senior yearling at the 1921 Dairy Cattle Congress, also winning first and junior championship at the 1921 National Dairy Show. In 1922 in the two-year-old classes his daughters stood second and fourth at the Minnesota State Fair; first at the Dairy Cattle Congress, and fourth and eighth at the National Dairy Show.

TESTING ASSOCIATIONS TELL TRUTH TO DAIRYMEN

The study of production records of large numbers of cows, made possible by the work of the many cow-testing associations that have been organized in almost every part of the country, has brought out a grist of information on the possibilities of dairy cow improvement and on the efficiency of various methods and practices. The records of many thousands of cows have been gone over in the last few years by the United States Department of Agriculture.

From the lowest producing group of cows to the highest producing group every jump of 50 pounds in annual butterfat production was accompanied by an increase of about \$16.00 in income over cost of feed. The more fat produced, the bigger this income. A few heavy producers are better than a larger number of light yielders.

The average production of the 21,234 cows whose 12-month records have been studied was 6,077 pounds of milk and 248 pounds of butterfat, or about 50 per cent more than the average of all the dairy cows in this country. The records show that selection of animals and better methods of feeding raise average production rapidly during the first year or two that the cow-testing association is in operation, but the figures for subsequent years show small gains. This is proof enough that there is still much room for improvement in the breeding of cow-testing association cows.

Each year more farmers realize the value of the testing association as a basis for herd improvement. On July 1, 1922, there were in operation 513 associations, including 12,458 herds and 215,321 cows, as compared with 452 associations the previous year. Wisconsin and Minnesota, two of the greatest dairy states, showed great gains in testing associations. During the year the number in Wisconsin grew from 103 to 127, and in Minnesota, from 23 to 37.

ALLENCREST FARM HAS NEW HERDSIRE

The new head of the Allencrest Farm herd is a son of King Quality from Valentine Korndyke a daughter of Sir Korndyke Manor De Kol with a record as a five-year-old of 505.7 lb. milk and 35.36 lb. butter in a week. Her dam is a daughter of Hengerveld De Kol and has a seven day butter record of 29.86 lb. and a thirty day record of 110.03 lb. This cow, Valentine De Kol Hengerveld is from Pauline Ida De Kol, a daughter of Lord Netherland De Kol with 26.62 lb. butter and 596.4 lb. milk in a week and 109.48 lb. butter and 2,444.3 lb. milk in thirty days.

Mr. Donald T. Graves has been in search of such a bull for quite a while. He did not want to purchase until he could see daughters of the bull that were in milk. The new herdsire has several daughters that are producing although as yet none have been tested. The promise they show, the capacity they inherit and the individuality they carry decided the purchase.

Back of the new Allencrest sire is a wonderful combination of producing strains. Hengerveld De Kol and Lord Netherland De Kol are both century sires, Hengerveld De Kol being the first and Lord Netherland De Kol the second bull to have 100 daughters with Advanced Registry records. Sir Korndyke Manor De Kol has 51 daughters in the official list. On the sire's side the combination of blood lines represented have a world wide reputation. The daughters and granddaughters of King Quality have made very large records both in short-time and long-time test. His dam, Addie De Kol Hartog is a thirty-lb. four-year-old who has a daughter above the thirty-lb. mark and whose dam Abby Hartog Clothilde is a thirty-one-lb. cow. The sire of King Quality is King Colantha Clothilde who was by the century sire Colantha Johanna Lad and whose dam, Abby Hartog Clothilde, is one of the greatest transmitting cows the breed has ever known, her sons siring producers while her daughters are not only themselves big producers but have evidently inherited the ability to transmit the capacity of large production to their own daughters and granddaughters.

Mr. Graves has certainly secured a splendid herdsire from the standpoint of pedigree. We know of no one better qualified to judge, for Mr. Graves is a student of pedigrees and is in great demand at the sales around Alden as a Pedigree Man. Many years of association with herds of high class Holsteins has qualified him as a judge of pedigrees and a judge of conformation and type, qualifications that are certainly needed in a box man for efficient and profitable work in the public auction ring.

REASSURING

Oh, sir, catch that man! He tried to kiss me. Genial Passerby—That's all right. There'll be another along in a minute.

What the Other Fellow Says About The Live Wire Auctioneer

Hearty Appreciation

I take this opportunity to express my hearty appreciation of your services at my sale. If I had the sale to hold over again you would be the only auctioneer, and if I can be of any service to you in the future, you are at liberty to call on me.

With best wishes for your success and assuring you again of my hearty appreciation, I am

Very sincerely yours,
B. B. McFadden,
Apalachin, N. Y.
BBMcF.J

From the Owner of Fancher Farm Maxie

I had a sale of forty-five head of thoroughbred Holstein cattle last fall. Mr. Glenn R. Mead was one of the auctioneers at my sale, and I am pleased to recommend him as a good auctioneer and full of enthusiasm, which extends not only to himself, but to the crowd.

Yours respectfully,
A. T. Fancher,
Salamanca,
New York
Dec. 12, 1922

From Bonalevo Farm

Batavia, New York
Dec. 18, 1922

Mr. Glenn R. Mead,
East Aurora, New York
My dear Mr. Mead:

We certainly are very pleased to write you of our entire satisfaction with your work as auctioneer at our reduction sale, May 6, 1921. Should we have another sale, we will be pleased to consider you as a candidate to auction our cattle.

With kind regards, we are
Yours very truly,
R. E. Chapin & Son
By R. E. Chapin
REC:L

From the Genial Owner of Wheatfield Farms

My old friend Glenn R. Mead in more than one respect has earned his title of being "The Live Wire Auctioneer", and everybody in East Aurora who knows him agrees with this remark.

Mr. Mead is not only popular with the Breeders, but with the general list of buyers, in fact with the audience as well, and he has shown himself to good advantage at the sales we have had at Wheatfield Farms.

In every respect he is a comer sure enough and I predict for him an increasingly successful career as the years

lend power to his voice and experience to his ambition. In fact being an auctioneer I usually wish him much "Jawey" at this holiday season of good will.

Yours very truly,
J. C. Dold,
For Wheatfield Farms

Thanks for Good Work

Mr. Glenn R. Mead,
East Aurora, New York
Dear Mr. Mead:

We want to thank you for the good work that you did at our public sale of Holstein-Friesian cattle. We do not hesitate to say you more than earned your money, and that we received the highest price possible to get. We will be glad to say a good word for you whenever possible.

With kind personal regards,
Yours very truly,
I. S. Mabey,
Williamsport, Pa.

Willingness to Work

Mr. Glenn R. Mead,
East Aurora, New York
Dear Sir:

It perhaps is a little late but I wish to let you know that as a member of the Sales committee of the recent sale of the Allegheny Steuben Holstein As-

sociation, I appreciate the good work you did for us.

Having observed you at this and two other sales this fall I can assure you that your ability, your energy, your pep and your willingness to work hard are the qualifications which with your rapidly increasing experience make you one of the most desirable of present day auctioneers.

One of our consignors recently said to me, "I think he will get bids if any man could get them."

Yours very truly,
Nathaniel H. Fuller
Friendship, N. Y.
Dec. 14, 1922

Work Was Splendid

Mr. Glenn R. Mead,
East Aurora, New York
My dear Glenn:

I am wondering how the Erie County Holstein Club is coming on. You seem to be its backbone so I ask you this question.

You know, Glenn, I have been watching you ever since you started selling Registered Holsteins and have given you some fatherly advice. I watched you carefully at the sale you had at Hornell in November and can say I never saw an auctioneer come faster. Your work was splendid.

With best wishes, I remain,
Very truly yours,
C. F. Bigler

GOOD RECORDS IN CROZER HERD

A number of splendid records recently completed in the good Pennsylvania herd owned by John P. Crozer of Upland. Queen Segis Maplecrest produced 876 lb. butter and 15,533 lb. milk in 365 days. When fresh she produced 592.9 lb. milk and 24,321 lb. butter in a week as a senior three-year-old. Aaggie Pontiac Creamelle Nazli, a daughter of Dutchland Creamelle Pietertje Lad, produced 720 lb. butter and 17,471.8 lb. milk in 365 days as a junior two-year-old. Carnation Matador Nena a daughter of Matador Segis Walker and Nena Newman Cornucopia made 568 lb. butter and 15,713 lb. milk in a year. This heifer was born May 16, 1919. Dutchland Konigen Rag, a daughter of King Segis Pontiac Konigen is on test as a junior two-year-old and in 290 days has 560 lb. butter and 12,714 lb. milk to her credit. Lady Beets Colantha Johanna a daughter of Colantha Johanna Lad 8th, is finishing a 305 day record and will make at least 800 lb. butter and 20,000 lb. milk. When fresh, she produced 538.7 lb. milk and 25.3 lb. butter in seven days.

A couple of nice short time official records have been finished, Aaggie De Kol of West Farm at five-years-old made 438.7 lb. milk and 27.66 lb. butter in seven days. As a senior two-year-old she produced 700 lb. butter and 14,444 lb. milk in a year. Nooksack Lunde Segis a daughter of Colony Korndyke Segis and Nooksack Lunde Oregon De Kol, as a senior four-year-old produced 24.95 lb. butter from 578.5 lb. milk. As a two-year-old heifer Nooksack produced 856 lb. butter and 21,000 lb. milk in a year and she is again on semi-official test, as is Aaggie De Kol of West Farm.

The animals of Crozer herd have been selected for pedigree and for producing capacity and are certainly making a nice showing. They are under the care of Manager W. S. Tomlinson.

THE MISSOURI COW RACE

The final results in the Missouri Cow Race has been announced by the College of Agriculture of the University of Missouri. This competition has extended from 1920 to 1922. It was in the form of a handicap, cows under full age having certain amounts added to their production in order to place them on an equal basis with older competitors. The Jersey cow Golden Fontaine's Susannah owned by Longview Farm at Lees Summit, produced the most butterfat in the year her total being 889.06 lb. and she wins the first prize of \$200.00. Le Gros Cazarine owned by S. R. Head of Hannibal is second with 799.50 lb. to her credit. Campus Josephine Galaxy of the University of Missouri is third with 738.01 lb. butterfat credited to her. University cows, however, did not compete for prizes. The special prize given by the Champion Milling and Grain Co. of Clinton, Iowa for the largest milk production in a year was carried off by Holsteins. Wadmantje FINDERNE Pride Pontiac of the Pickering Farm at Belton is first with a credited production of 24,471.5 lb. milk. Her stable mate, Ora FINDERNE Pontiac is second with 21,733 lb. milk. Campus Josephine Galaxy is in third place with 21,536.6 lb. and Queen FINDERNE Pontiac Clothilde, another Pickering cow is fourth with 21,063.8 lb.

Prizes were given for the largest amount of butterfat produced in 365 days for the cows whose owner had not commenced official testing earlier than September 1, 1920. Pickering carried off the first two prizes, Wadmantje FINDERNE Pride Pontiac with 848.84 lb. butterfat being first and Lady Mayflower Rest Easy being second with 8.72 lb. butterfat.

The A. W. Morrison, Jr. Special donated by A. Morrison, Jr. of Kansas City for the highest average production of butterfat for a Holstein herd, was carried off by Pickering cows whose six cows competing averaged 673.15 lb. butterfat. The special prize of an Air Power Water System donated by the Milwaukee Air Power Pump Co. of Milwaukee, Wisconsin for the herd having the highest average production of butterfat owned by a breeder who began official testing not earlier than September 1, 1920, was carried off by Pickering Farms with six cows averaging 673.15 lb. butterfat. The special prize of a Holstein bull calf donated by G. G. Davis of Columbia for the cow producing the second largest amount of butterfat in 365 days, said cow not milked over twice a day after the 45 days from the beginning of the record, was won by Mollie Hengerveld Model De Kol with a credited production of 602.72 lb. butterfat. She is owned by E. J. Rodekohl of Corder, Missouri. In giving this prize, Mr. Davis who is president of the Missouri Holstein-Friesian Association wished to encourage the testing of Holsteins owned by dairymen who did not make a practice of milking their test cows more than twice a day.

NEW BRITISH ONE DAY CHAMPION

The one day British milk record of 124.75 lb. held by Eastfield Blackberry has been beaten by Dunninald Daphne with 129.75 lb. This cow will be continued on year test as her owner believes that she can equal, if not surpass Brookside Colantha, the present champion for yearly work. In seven days ending November 18th, Daphne produced 869.75 lb. which is 59.25 lb. better than the best week of Brookside Colantha, who was the previous seven day champion, and whose record of 119 lb. milk in a day was surpassed by Eastfield Blackberry. The figures for Daphne's seven days are:

Sunday,	Nov. 12th.,	124 3/4 lb.
Monday,	Nov. 13th.,	129 3/4 lb.
Tuesday,	Nov. 14th.,	129 3/4 lb.
Wednesday,	Nov. 15th.,	115 3/4 lb.
Thursday,	Nov. 16th.,	123 3/4 lb.
Friday,	Nov. 17th.,	121 lb.
Saturday,	Nov. 18th.,	126 lb.

The first three days of the week the cow was milked four times daily and then a change was made to three times. We can imagine what an uproar there would be around an American herd if a cow that was establishing a record was changed from four times a day to three times a day milking. The day of the change she fell off 14 lb. but she came back and Saturday, the last day of the week, she exceeded the first day and her figures of 126 lb. was the third highest of the week.

Dunninald Daphne was born January 1913. Her sire was Dunninald Agility 1165 and her dam Dunninald Amazon. Her breeder was the late Major D. A. Spence and her present owner is Mr. E. Furness of Hamels Park, Buntingford.

Daphne is a show cow as well as a producer. In 1919 she won first prize at the Royal Show where she produced over 90 lb. in a day at two milkings. She was shown at the London Dairy Show in 1920 where she again won first prize in her class. Her present owner, Mr. Furness purchased her in a sale in 1921 paying for her, 1,50 guineas, equivalent to a little more than \$7,500 at the normal rate of exchange.

The Irish have their Free State. Now let us hope they will keep it free from bloodshed.

CANADIAN TESTING

During the months of October and November reports of the official tests of 49 cows and heifers were accepted for entry in the Record of Merit. The leader in the mature class is Sunnybrook Inka Mercedes, owned by Joseph Kilgour of Eglinton, Ontario, with 750 lb. milk, 32.56 lb. butter. This is the only thirty-pound seven-day record reported in the mature class. The largest milk record is that of Mercedes Canary Girl, owned by W. G. Gooderham, Toronto, Ont., with 798.9 lb. milk, 28.47 lb. butter. De Kol Plus Segis Dixie, who was recently reported with 855.6 lb. milk, 39.57 lb. butter in seven days produced 3,582.2 lb. milk, 163.63 lb. butter in thirty days. She is owned by D. Raymond, Vaudeuil, Quebec. Grace Fayne Aaggie, the great show cow of the Ottawa Experimental Farms, is credited with an official record of 21,066.5 lb. milk, 1,007.27 lb. butter in 300 days.

A record of 30.34 lb. butter, 524.6 lb. milk is reported for the senior three-year-old, Colantha Mercena Ormsby, owned by J. W. Innes, Woodstock, Ont. Colony Ianthe McKinley, the second in this class, produced 631.7 lb. milk, 27.49 lb. butter in seven days, 2,534.6 lb. milk, 109.24 lb. butter in thirty days. She is owned by the Colony Farm, Essondale, B. C.

The junior three-year-old class is headed by Raymondale Queen De Kol 2d with 440.5 lb. milk, 21.32 lb. butter. Springbank Snow Teake with 423.1 lb. milk, 21.24 lb. butter heads the senior two-year class and Springbank Snowflake with 330.1 lb. milk, 16.87 lb. butter leads the junior two-year-old class. Both are owned by T. H. Dent & Son, Woodstock, Ont.

The list of semi-official records is headed with the name of the world champion, Bella Pontiac, with 23,663 lb. milk, 1,141.25 lb. butter. She is still owned by her developer, Thos. A. Barron, of Brantford, Ont., who we understand, is moving to Goshen, N. Y. Grace Allen Ormsby is second with 24,631 lb. milk, 1,002.50 lb. butter. Wimple Abbekerk Corfield is the leader of the three-year-old class with 19,686 lb. milk, 872.50 lb. butter. She is owned by A. & S. Matthews, Westholme, B. C.

A new Canadian record for milk and butter and a world record for milk is shown for the senior two-year-old Colony Grebega Valdessa with 28,358 lb. milk, 1,111.25 lb. butter. She, as well as the second and fourth animals in the two-year-old class, are from the famous Colony Farms.

The remarkable record of 24,119 lb. milk, 1,122.50 lb. butter in 305 days is reported for Orndyke Pietertje Korndyke 2d. This is the world's record for butter in the ten months division. Her half sister, Dolly Hengerveld Burke, is second with 21,998 lb. milk, 1,091.25 lb. butter, and her record stands second in Canada in this class and division. Both are owned by R. R. Stevens, Bowmanville, Ont.

Between two evils don't choose either.

HOLSTEIN MILK FOR SILVER FOXES

During the past two or three years it has been reported that several New York State breeders have quit breeding Holsteins and have started to raise silver foxes. It is a poor rule that does not work both ways—Fromm Brothers of Merrill, Wisconsin, recently purchased twelve head of purebred Holsteins from the John Erickson Farms at Waupaca. The milk from these animals will be used to feed the foxes and for the families of the men employed on the farm. The Fromms have a national reputation for their silver black foxes and have a large ranch devoted to their industry.

The new herd will be headed by Sir Homestead Bess Ormsby, a son of Sir Pietertje Ormsby Mercedes 37th. The females include Daisy Queen Ormsby, with 16,942.7 lb. milk and 719.2 lb. butter in a year as a junior two-year-old and Aaggie Mercedes Piebe 3d, a daughter of "37th" and Aaggie Mercedes Piebe who has a record of 22,353.7 lb. milk and 1,008.53 lb. butter made in a year as a junior four-year-old. There are heifer calves from Aaggie Mercedes Piebe and Aaggie Mercedes Piebe 3d, both sired by Marathon Bess Burke. The others are closely related and of equal value.

A SATISFIED CUSTOMER

Five carloads of Holstein cattle were shipped from Watertown, Wisconsin, on December 13th by Senor Antonio Lopez of Mexico City. Senor Lopez has shipped a number of carloads from around Watertown. Nearly three years ago he came to that city and through Frank G. Lehmann secured a carload which he took home and in the course of time sold them to his neighbors. He has returned about every two months for other shipments. During 1922 he has shipped twenty-seven carloads to Mexico City, or around 550 cows. It costs between \$70 and \$80 per head to ship cattle from Watertown to Mexico.

NICE RECORD IN COLLEGE HERD

A two-year-old heifer, Purdue Segis Bakker Hengerveld owned by Purdue University of Lafayette, Indiana, recently completed a semi-official year test of 16,857.8 lb., 681 lb. butter. The herd records show that this heifer has exceeded her dam and her granddam at the same age by quite a wide margin. Her dam made 496 lb. butter in 365 days and the dam's dam made 401.5 lb. butter in the same time. It pays to use good sires.

WORSE YET

A washerwoman applied to a man for work, and he gave her a note to the manager of a certain club. It read as follows:

"Dear Mr. X: This woman wants washing."

Shortly afterwards the answer came back: "Dear Sir: I dare say she does; but I don't fancy the job."

AFTER A DRINK OF MOON

It was a nice October evening,
Last September in July;
The moon lay thick upon the ground
The mud shone in the sky.

The flowers were singing sweetly,
The birds were full of bloom.
So I went into the cellar
To sweep an upstairs room.

The time was Tuesday morning,
On Wednesday, just at night;
I saw a thousand miles away
A house, just out of sight.

The walls projected backwards,
The front was round the back;
It stood alone with others;
The fence was whitewashed black.

It was moonlight on the ocean,
Not a street car was in sight;
The sun was shining brightly
And it rained all day that night.

It was summer in the winter,
And the rain was falling fast;
A barefoot boy with shoes on
Stood sitting in the grass.

It was evening and the rising sun
Stood sitting in the night;
And everything that I could see
Was hidden from my sight.

—Homer Brew.

LITTLE OLEO IN PENNSYLVANIA

The people of Pennsylvania are getting a discriminating taste or are prejudiced, for during the present year they ate less oleomargarine, even though the price of butter kept high throughout the year in most localities. Licenses must be obtained for all public eating places, including boarding houses if oleomargarine is served with meals. The Department of Agriculture issued 1204 fewer oleo licenses this year than last.

In 1921 there were 5,484 licenses of all kinds issued and this year but 4,280. The biggest slump was in the retail dealer's licenses, for last year 5,323 were issued and this year the number was 4,169.

Only one hotel in the state had an oleo license last year and this year. Three restaurants admitted using oleo. Wholesalers slumped from seventy-five to sixty this year and while eighty-two boarding houses last year used oleomargarine only forty-seven in the entire State had licenses this year.

There are no figures showing what the private home consumption was for the reason that a housewife can use oleo without a license.—Harrisburg Evening News.

TO JOB HOLDERS, PRESENT AND FUTURE

So live, O ye would be exploiters of the Holstein-Friesian Association's resources, that you never are obliged to announce in a voice choked with emotion that you court the fullest investigation.

FROM RAISIN SELLING TO MILK SELLING

Stanley Q. Grady of Fresno, California, has taken charge of the sales activities and advertising of the Dairymen's League Coöperative Association, Inc. Mr. Grady was formerly director of sales and advertising of the Sun Maid Raisin Growers. He has had considerable experience in the coöperative selling work.

When the Sun Maid Raisin Growers' Coöperative of California had 50,000 carloads of raisins they could not sell, it was Mr. Grady who designed and originated the idea of the little red, five-cent box of raisins and supervised its advertising and distribution so successfully that it not only saved the day for the association but opened an unusually prosperous era for the raisin growers. The California raisin growers are now selling their raisins not only in the little red box, but in other kinds of containers all over the United States and Canada, and in many European countries. This advertising and selling campaign directed by Mr. Grady is acknowledged to be one of the record breaking campaigns of its kind in the history of business.

Prior to his service with the raisin growers, Mr. Grady was western manager of Sir Thomas Lipton's Tea Business and had charge of its selling activities in thirty-one states west of the Ohio. He began his career as manager of a fisheries company in Maine. Mr. Grady is a Pennsylvanian by birth and a graduate of the University of Pennsylvania. In the beginning he made salesmanship and advertising his specialty and has always been in that line of work.

FOR A HERD FOUNDATION

Rosa Segis Johanna, a member of the herd at the A & M College, Stillwater, Oklahoma, recently completed her record and will make right around 25,000 lb. milk, 1,100 lb. butterfat. This will be the highest record ever reported for an Oklahoma cow but most of the record was made in Wisconsin as she was purchased a short time before her year ended from John Zoberlin of Plymouth, Wisconsin. Rosa and her stablemate, K. S. P. Walker Aaggie, who completed a year record Thanksgiving day a little below that of Rosa Segis Johanna together with King Korndyke Echo Oakland, will form the foundation for a new Holstein herd at the state college.

BIG MILKER

Countess Goshen Pontiac No. 312810, owned by J. C. Scales, Cuyahoga Falls, Ohio, recently produced 800.2 lb. milk, 28.36 lb. butter in seven days. She previously had a slightly larger butter record from less milk.

Peck: The after-dinner nap is my favorite hour of the entire Sunday.

Heck: I thought you never slept after dinner.

Peck: I don't but my wife does.—Boston Transcript.

TILLY'S MENU

When Tilly Alcartra made her first world's record of 30,451.4 lb. milk in a year she is said to have eaten the following:

Pounds	Cost
1,829 oats at \$30 a ton	\$27.44
1,828 barley at \$23 a ton	21.02
1,829 bran at \$27.50 a ton	25.14
1,208 linseed oil meal at \$34 a ton	20.54
69 1/4 dried beet pulp at \$22 a ton	7.61
3,226 corn silage at \$2 a ton	3.23
10,122 hay at \$5 a ton	25.31
15,140 mangles at \$2.50 a ton	18.93

\$149.22

The prices given above were those that were in effect at the time the record was made.

SUGGESTED NEW YEAR RESOLUTIONS

For Scrub Bull Owners

I will not keep a scrub
They don't pay for their grub.
A purebred I'll get
That will be an asset.

For Purebred Bull Owners

I'll test out his daughters
To prove up the bull.
I'll keep up all records
And record them in full.

For the Tester

I'll try to be useful
To Dairymen every day
In promoting the industry
And making dairies pay.
I'll keep up the records
Of production and feed,
And send in reports
That will indicate speed.

DOMESTIC DIFFICULTY

One of the witnesses called upon to testify in a case in a Kentucky court, when asked to explain why he had not been present at a certain transaction wherein he was held to have an interest, stated that he had "a domestic difficulty" just about that time.

"And what was the nature of this 'domestic difficulty'?" asked the examining attorney.

"Well, sir," said the witness with some reluctance, "to tell the truth, I was in jail just then for stealin' a cow."

NO NEW POOLING PLAN

We understand that there is no foundation for the report which has appeared in some New York State papers that the directors of the Dairymen's League Coöperative Association, Inc., are considering a new pooling plan.

A FATE DESERVED

"Sir, your daughter has promised to become my wife."

"Well, don't come to me for sympathy; you might know something would happen to you, hanging around here five nights a week."—Honeycomb Briefs.

LONG'S ADVICE ON DIVERSIFICATION

At the invitation of the local Chamber of Commerce, C. M. Long, Secretary of the Illinois Holstein-Friesian Association, spoke at a meeting at Iola, Kansas, November 17th. Mr. Long contrasted the dairy business in various sections of the country and also discussed the problem of marketing. He suggested that the Iola dairymen investigate coöperative creameries. It was his opinion that there are already more condenseries in the country than can be profitably operated on account of the falling off in the war demand for condensed milk. He expressed his belief that over a period of five years the dairy farmer who sold his cream as butterfat and fed his skimmed milk to pigs and chickens, at the same time diversifying his farming and keeping the manure from his cow barns well distributed over his farm, would be in better shape at the end of the five years than the man who tied himself down to a whole milk market.

MONEY-MAKING FARMS GROW LEGUMES

In Pulaski County, Indiana, recently, four of the best paying farms were visited in a farm management tour in charge of Agent I. J. Matthews. Alfalfa is grown on each one of the four farms and the acreage in legumes runs from one-sixth to one-fourth of the total number of cultivated acres in the entire farm. On one farm the roughages are fed to grade beef cattle. On another, the roughage is fed to purebred Holsteins. On a third the hay and grain produced is marketed to steers and hogs, while the fourth man turns his roughage crops to profit by putting them through good grade dairy cows and hogs.

PROFITABLE HOLSTEIN COW

H. Mosher of Fort Scott, Kansas, has had a purebred Holstein for the past three years. She is now six years old. He showed her at the local dairy show where she took first prize. She is also a producer. In the seven and one-half months between March 1st and November 15th, she produced 14,716 lb. milk containing 460.2 lb. butterfat. The condensery paid Mr. Mosher \$215.68 for her product. He figured that her feed cost \$60.80 so that she paid him about \$27 a month while the cost of her feed was about eight dollars a month.

Mr. Dairyman

If you are in the market for a number of producing Holstein cows, purebreds or grades, or a car of real choice yearlings or two-year-olds.

Write me,

G. H. GOODFELLOW,

Eastview Farm,

Lancaster, Ontario, Canada.

Life experience in buying dairy cattle.

FROM MANKATO TO NEBRASKA

The Mankato Holstein Farms Co., Mankato, Minn., report the sale of Mankato O. K. L. King Bess No. 386664, an eight-months-old son of their senior herdsire, Ormsby Korndyke Lad 8th, and from one of the good two-year-old daughters of King Colantha Ormsby Bess, to Benjamin L. Schobert, of Springfield, Nebraska.

The dam of this young bull has a junior two-year-old record of 19.79 lb. butter and 475.1 lb. milk in 7 days. She is on year test at the present time as a junior two-year-old, and is making a very creditable record. She is a sister to Mankato Colantha Ormsby Bess, that just recently broke the Minnesota State Milk Record with 23,200 lb. milk and 817 lb. butter as a junior two-year-old.

Mr. Schobert has a herd of forty head of females, and among these are to be found a 24-lb. four-year-old, several daughters of a 37-lb. sire, and a fine string of heifers sired by a 32-lb. son of King Segis. The Mankato sire will be given an excellent chance in this good herd.

HOW PAT GOT EVEN

An Irishman got on a crowded street car, and looking into the car as he stood on the platform, saw an overdressed man accompanied by a toy dog, both occupying a seat.

Turning to the conductor the Irishman asked: "Phat koind of roights has thot dawg to a man's sate, en Oi hev paid eight cints to stand?"

The conductor stepped into the car and brusquely asked the man to remove the dog, which he did, and the Irishman took the seat, remarking to the owner:

"Thot's a foine dawg ye have." No response.

He made a second attempt to mollify the ruffled feelings of the man by remarking:

"Phwat koind of a grade of dawg is thot?"

"It's a cross between an Irishman and an ape," was the surly reply.

"Oh is thot so," came the quick rejoinder. "Sure, then, it's related to both av us."

MOST EMBARRASSING

At Ponca City, Okla., three churches occupy three corners at a street intersection. Their close proximity to each other causes some rather embarrassing confusion at times. On one Sunday, "Will There Be Any Stars in My Crown?" was sung in one church, while the other across the way was chanting "No Not One." The congregation of the third church followed closely with "That Will Be Glory for Me." While one pastor was delivering an ardent discourse upon "Degrees in Hell," the pastor across the street was urging his flock to "Meet Me There."

The term "etc." is an article stands for all the rest we don't know.

BIG TIME FOR PENNSYLVANIA BREEDERS

Plans for the Annual Meeting and Banquet of The Pennsylvania Federation of Holstein-Friesian Clubs are now complete. The banquet will be held in honor of Hon. Frank O. Lowden, president of The Holstein-Friesian Association of America, the evening of January 24th, in the Masonic Temple, Harrisburg, Pa. Other speakers will be Gifford Pinchot, Governor of Pennsylvania; Fred Rasmussen, secretary of Agriculture of Pennsylvania; Geo. E. Stevenson, one of the leading breeders of America; and John A. Bell, Jr., president of the Pennsylvania Federation of Holstein-Friesian Clubs.

Dr. John M. Thomas, president of The Pennsylvania State College, and one of the most popular banquet speakers in the Country, will act as Toastmaster.

An unusually large number of local Clubs are becoming affiliated with the State Federation which promises well for a successful and interesting meeting the morning of January 25th, at the Evangelical Building, at 9:30. There will be a business meeting with election of officers and addresses by prominent men.

The Federation is planning a Holstein Booth Exhibit with the cooperation of The National Association, and the Pennsylvania State College. This will be in connection with the State Farm Products Show of which the Holstein Meeting is really a part. This show is one of the largest in the East and is attended by thousands every year. It is hoped that many persons interested in Holsteins, both within and without the state, will attend.

Allen N. Crissey, recently appointed fieldman by the National Association expects to start his organization work at this time.

W. HUGH JONES, Secretary.

WELL PAID

"When I was a justice of the peace in the mountains of Tennessee," says a well-known Nashville lawyer, "a young mountaineer brought his sweetheart to me to get married. When the ceremony had been duly performed, the groom asked:

"Well, jedge, how much do I owe you?"

"The law allows me a dollar, but some give me a little more."

"Is that so?" asked the groom, as he pulled out a quarter, two dimes and five pennies, and dropped them into my hand. "Well, jedge, here's fifty cents; with what the law allows you that makes a dollar and a half, and you can consider yourself well paid for a few minutes' work."

GOOD ALL WINTER

Tramp—I've eaten nothing but snow-balls for three days, mum.

Lady—You poor man? What would you have done had it been summer time? —*Boston Transcript.*

THAT WILL BE HELL

The newly-appointed pastor of a negro church announced that his first sermon would be "Am Dey a Hell or Am Dey Not? An' I Will Prove That Dey Am."

The church was packed as the new parson arose to prove his assertion.

"Brethren," he said, "de Lawd made de world round like a ball."

"Amen," cried the congregation.

"And de Lawd made de world so it could go 'round and 'round."

"Amen," was the response. "And de Lawd made two axles for de world to go 'round on, and he put one axle at de North Pole and one axle at de South Pole."

"Amen," agreed the congregation.

"An' de Lawd put a lot of oil and axle grease in de center ob de world so as to keep de two axles well greased and oiled."

"Amen," said the congregation.

"An' deys a lot of sinners dig wells in Pennsylvania and steal de Lawd's oil and grease. And dey dig wells in Kentucky, Louisiana, Oklahoma and Texas and in Mexico and in Russia and steal de Lawd's grease and dem two axles is goin' to get hot. And den, that will be hell, brethren, that will be hell."

HOLSTEIN IS CHAMPION

The grand champion cow of all breeds at the first annual dairy day of Barton County, Kansas, was a registered Holstein owned by J. Glenn Axtell, who runs the County Farm.

Among the speakers at this event were Professor Fitch, head of the Kansas State Agricultural College, Dairy Department, and State Dairy Commissioner H. M. Jones.

UNIQUE DONATION

Tunis Koops of Fruita, Colorado, made a donation to the local Methodist church that is something out of the ordinary. His gift was a purebred Holstein bull calf about two months old. The calf's mother won the blue ribbon at the local show. The church will have an auction sale at which the calf will be sold.

UNIVERSITY HERD WINS PRIZES

The University of Florida exhibited 18 head of cattle from the experiment station at the recent Florida State Fair and won 21 ribbons besides getting a money prize on every individual animal. Animals of several breeds were shown and first prize was won on a junior yearling Holstein bull.

ARTHUR DANKS HONORED

Arthur Danks, manager of Tranquility Farms, was recently elected President of the Warren County Holstein-Friesian Association. Mr. Danks is considered one of the best farm managers in Warren County and is a practical as well as scientific farmer.

FOR LADIES ONLY

BY THE ASSISTANT PASTURE

A short while ago as I wuz sitten in my lye-berry browsin 'round mongst th' Potes, i axerently kame akross th' tollerin literary gem:

"Muther, May i goe out tu swim?"
 "Yes, my deerest dotter,"
 "Hang yure cloes on a hickry lim,"
 "But doant goe neer th' watter."

(Arthur unnoan)

On reedin them masterful, vitriolic lines, th' teers jes natchelly kame tu mi eyes & i xklained whith wrapture, "How Gran! How sublime: O How xcrutiatingly luvly!"

There's reel pote-ry koncealed in them lines; pote-ry ov a hi order, ekalled by no Wadsworth, No Emperson, No Long-phello, No not by one Pote—BIG OR SMALL. Be that az it may, deer frens, les not moraleys, rather, (whith due reverence) lets annaleyes.

Furst: She ast her Maws permisham tu talk her regler Satday bath; that alone consignates that she was a dootifull dotter. Since she was xpected to baythe, let it be on the authority ov sum won hyer upp.

Secondly: She wuz told to "hang her cloes on a hickry lim," this indicates caushon az well az orderliness. Hangin 'em up kept out snaiks & uther an'mals ov th' reptyle famby. Also, kept her cloes dry-enlessen it rained.

Third: The Poem speeks feelinly ov a "hickry lim." Wot's that meen? Wy, merely that her cloes when hung up wood be more saif an' no village hicks could sit on 'em & rinkle 'em up.

Forth: The reel gem however ov th' whole produckshun, lies koncealed in these strong & bewtiful, magnificent lines, "But doant go neer th' watter." How gran, how sublime, how carbolec; wot power & wot richly bewtiful sentiments iz exprest in them there fiew overpowerin words. Aint they simplee hart rendering? Note th' apparent contradiskhun—"She baythes, yet she dont baythe"—a paradox delitefully exprest, yet extremely puzzlin tu th' amphibian mind. To enable th' ignernt layman to katch th' vision i hasten tu explain that—she had on a fetchin baythin soot. Whether one piece, two pieces or "oll in pieces" th' pome does not elucidate—ennyway, it does not in the leest koncern th' reeder. Her Maw wanted her tu be dri not wet, therefor th' parental ad-monishon. "But doant goe neer the watter."

We Potes generally closes with sumphin like this:

"The Gran klimax now konfronts us." Tis this. Osker Vandergould was "soosen" along th' hi'way in hiz tin lizzie. Wen he saw th' bewtiful maiden, gracefully reposen in the sand, he gasped twice or maybe thrice, it aint so dern partickel & almost xpired. But, wy, qelay this tail longer? They were married in duetye & Maw, who gave her dotter dutch good advice, iz now okkypyin th' best frunt rume in Oskers magnificent home.

Foxy Mamma, swete dotter, blisfully happy Osker.

"O girls, aint everythin turned out just gran?"

MORL: Th' reel sekret as to how dotter landed Osker is her fair komplexshun—superconducted by drinkin Holsteen milk regler, 3 times daly, Holsteen milk as a bewtifier beats oll yure powders & loshuns.

Don't fail, tu try it gurls.

A GREAT SIRE IN VIRGINIA

The first six daughters of Homestead Superb Vale, No. 120831, to complete yearly records averaged 704 lb. of butter and 17,092 lb. milk. Only one set of daughters of any other sire have exceeded this average.

In Homestead Superb Vale, Virginia has a transmitting sire that stands second in his class of all sires in the Holstein world. Like many other sires his true worth was not known until his daughters came into milk. His present owner, Frank S. Walker of Woodbury Forest, used him a little over a year and then placed him in a grade herd for a while, afterwards selling him to a neighbor who has a purebred herd. He headed this herd for nine months, when Mr. Walker, seeing how his daughters were developing and the records they were making bought him back with four of his daughters. There are now 39 of his young daughters in the Rosni herd and about 25 cows safe in calf to him. Homestead is now being given the opportunity his worth deserves.

Homestead inherits his wonderful transmitting properties from some of the greatest producers of the breed; his daughters are of large type, well sprung ribs and great capacity. He traces back to the greatest milk bull of the breed, De Kol Burke and also to the great sire Pontiac Korndyke. On his dam side he traces twice to De Kol Creamelle, the dam of Creamelle Vale, who once held the world's year record for milk and butter.

In Homestead Superb Vale, Mr. Walker has a sire of remarkable transmitting ability. To test six two-year-olds in one year and have the lowest producing one make 615 lb. butter, this being the only one below 650 lb., to have three make over 700 lb. and one over 837 lb. is a wonderful showing. This bull should be kept in mind when thinking of the real great sires living today.

The first aged daughter of Homestead has made 1,078 lb. butter and 23,439.5 lb. milk in one year. This is the state milk record and the second highest butter record ever made in Virginia. A two-year-old daughter now on test looks good for better than 800 lb. butter.

The remarkable development of the Rosni herd is outstanding evidence that Virginia Holstein breeders are rapidly advancing in the making of foundation blood lines for this great dairy breed.

FRANK A. BUCHANAN.

According as a man spends his money depends the outcome of his income.

TOO LATE TO CLASSIFY

ALFALFA, mixed and timothy hay. Have seven cars, shipped subject to inspection. W. A. WITHROW, ROUTE FOUR, SYRACUSE, NEW YORK.

BANTAMS—EGGS—22 VARIETIES. Circular, 2 cent stamp. PENN BANTAM YARDS. DESK 19, 177 BM. DELEVAN, WISCONSIN.

"ENGLISH AND WELSH SHEPHERDS" man's best friend, always alert, watchful and fearless, a faithful companion born with herding instinct; a pup can be trained in six months. Order early for first choice. GEORGE BOORMAN, MARATHON, NEW YORK.

BABY CHICKS. Before you buy, get our free illustrated catalog. You will appreciate the reasonable prices on purebred stock. REPP & ZIEMER, 157-159 WASHINGTON MKT., BUFFALO, N. Y.

THEIR ANCESTORS

For about an hour a gentleman from Denver had been boasting about the magnificence of the Rockies to an Irish New Yorker.

"You seem to be mighty proud of thim mountains" the Irishman finally observed.

"You bet I am," the Westerner replied. "And I ought to be, since my ancestors built them."

The Irishman thought this over for a few moments and then asked, "Did you ever happen to hear of the Dead Sea in—in one of the old countries?"

"Yes, indeed," replied the gentleman from Denver, "I know all about the Dead Sea."

"Well do you happen to know that me great-grandfather killed the thing?"

NEW WASHINGTON HERD

A new Holstein herd is being started at the Prosser Irrigation Branch of the Washington State College Experiment Station. It is expected to carry a herd of from 20 to 25 purebreds. Seven animals have been transferred from the State College herd, all are sired by the bull donated to the College by J. M. Hulbert of LaConner. A young bull, Cascade Madcap Violet Fayne has been secured from the Todd herd at Yakima. He is a son of Sir Korndyke Ormsby Piebe. The present plans are to keep this bull until his daughters are about a year old then to exchange him with one of the herd bulls at State College.

ARISTOCRATIC PUSH CART

When Mike Flannigan, the contractor, got up in the world, his wife and daughters surrounded themselves with comforts and household conveniences. One Sunday afternoon an old friend visited them, and while he was there the maid wheeled into the room a vehicle containing light refreshments.

"Phwat's that thing, Mike?" asked the caller.

"Why, that's a tay-wagon," replied Flannigan.

"A tay-wagon, is ut?" rejoined the other. "Shure, I'd call it a pushcart that's broke into sassiety."

"The average woman has a vocabulary of only eight hundred words." It is a small stock, but think of the turnover. —Oakland Tribune.

The Breeder and Dairyman Exchange

Copy must reach us by the 1st or 15th of each month to appear in the current issue.

Advertisements for this department set up without display type or illustration, accepted at the rate of five cents per word, one insertion, minimum of twenty words. Three insertions, ten cents per word. Every word or abbreviation in name and address must be counted as a word.

In all cases, cash must accompany order. Other rates on application.

THE SPRINGDALE HERD

Built up during the past seventeen years on a basis of profitable production and reproduction.

OUR PRESENT HERDSIRE IS

from a 26-lb. three-year-old and was sired by King Echo Sylvia Model, a son of Champion Echo Sylvia Model eleven 30-lb. daughters, and a 28-lb. daughter of a three times 33-lb. cow. Her dam three times over 32 lb. This young bull won second place in a class of sixteen at the 1922 New York State Fair.

OUR YOUNG CALVES ARE Sired BY

WOODMONT ECHO SYLVIA CHAMPION

first prize three-year-old 1922 New York State Fair. His sire, Sir Pietje Echo Sylvia, is also by Champion Echo Sylvia Pontiac, that great son of the champion milk producer, May Echo Sylvia. His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair.

OUR YOUNG COWS ARE BY

KING TWEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44-lb. cow; regarded as one of the best young sires of the breed. His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.98 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEDE SPRING FARM are making a splendid showing under real dairy conditions.

OUR OLDER COWS ARE DAUGHTERS OF

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten-year-old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four-year-old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four-year-old. Here is large production, generation after generation.

ANIMALS FROM THIS HERD WILL MAKE GOOD ANYWHERE

YOUR CHOICE FOR \$150

OF TWO BULL CALVES--THE LARGE, STRONG KIND

Sired by KING SYLVIA JOHANNA PONTIAC (brother to Carnation King Sylvia) whose dam, Otego Valley Christmas Belle, made 40.56 lb. butter in a week, averaging 93 lb. milk a day. She is dam of three daughters, one a 25.95-lb. three-year-old, one a 14.47-lb. yearling, while the third made better than 31 lb. butter in seven days two consecutive years, each time producing 100 lb. milk in a day and has a 1,000-lb. year butter record.

PIETJE PRIDE HOMESTEAD

THE DAM of No. 1 made above 20 lb. of butter in seven days in heifer form.

This fellow's two nearest dams average better than 30 lb. butter in seven-day official work.

THE DAM of No. 2 is a first-calf heifer, daughter of our PIETJE PRIDE HOMESTEAD with over TWENTY THOUSAND POUNDS MILK and EIGHT HUNDRED POUNDS BUTTER in a year in the Merryall Barns.

Ask anything and everything you want to know about these calves. Come and see them, their dams and their sires. REMEMBER, we guarantee satisfaction.

What the Other Fellow Says About The Live Wire Auctioneer

Hearty Appreciation

I take this opportunity to express my hearty appreciation of your services at my sale. If I had the sale to hold over again you would be the only auctioneer, and if I can be of any service to you in the future, you are at liberty to call on me.

With best wishes for your success and assuring you again of my hearty appreciation, I am

Very sincerely yours,

BBMcF.J B. B. McFadden,
Apalachin, N. Y.

From the Owner of Fancher Farm Maxie

I had a sale of forty-five head of thoroughbred Holstein cattle last fall. Mr. Glenn R. Mead was one of the auctioneers at my sale, and I am pleased to recommend him as a good auctioneer and full of enthusiasm, which extends not only to himself, but to the crowd.

Yours respectfully,

A. T. Fancher,
Salamanca,
New York

Dec. 12,
1922

From Bonalevo Farm

Batavia, New York
Dec. 18, 1922

Mr. Glenn R. Mead,
East Aurora, New York
My dear Mr. Mead:

We certainly are very pleased to write you of our entire satisfaction with your work as auctioneer at our reduction sale, May 6, 1921. Should we have another sale, we will be pleased to consider you as a candidate to auction our cattle.

With kind regards, we are

Yours very truly,
R. E. Chapin & Son
By R. E. Chapin

REC:L

From the Genial Owner of Wheatfield Farms

My old friend Glenn R. Mead in more than one respect has earned his title of being "The Live Wire Auctioneer", and everybody in East Aurora who knows him agrees with this remark.

Mr. Mead is not only popular with the Breeders, but with the general list of buyers, in fact with the audience as well, and he has shown himself to good advantage at the sales we have had at Wheatfield Farms.

In every respect he is a comer sure enough and I predict for him an increasingly successful career as the years

lend power to his voice and experience to his ambition. In fact being an auctioneer I usually wish him much "Jawey" at this holiday season of good will.

Dec. 18, 1922
JCD-S

Yours very truly,
J. C. Dold,
For Wheatfield Farms

Thanks for Good Work

Mr. Glenn R. Mead,
East Aurora, New York
Dear Mr. Mead:

We want to thank you for the good work that you did at our public sale of Holstein-Friesian cattle.

We do not hesitate to say you more than earned your money, and that we received the highest price possible to get. We will be glad to say a good word for you whenever possible.

With kind personal regards,
Yours very truly,

M-H. I. S. Mabey,
Dec. 13, 1922 Williamsport, Pa.

Willingness to Work

Mr. Glenn R. Mead,
East Aurora, New York
Dear Sir:

It perhaps is a little late but I wish to let you know that as a member of the Sales committee of the recent sale of the Allegheny Steuben Holstein As-

sociation, I appreciate the good work you did for us.

Having observed you at this and two other sales this fall I can assure you that your ability, your energy, your pep and your willingness to work hard are the qualifications which with your rapidly increasing experience make you one of the most desirable of present day auctioneers.

One of our consignors recently said to me, "I think he will get bids if any man could get them."

Yours very truly,
Nathaniel H. Fuller
Friendship, N. Y.

Dec. 14, 1922

Work Was Splendid

Mr. Glenn R. Mead,
East Aurora, New York
My dear Glenn:

I am wondering how the Erie County Holstein Club is coming on. You seem to be its backbone so I ask you this question.

You know, Glenn, I have been watching you ever since you started selling Registered Holsteins and have given you some fatherly advice. I watched you carefully at the sale you had at Hornell in November and can say I never saw an auctioneer come faster. Your work was splendid.

With best wishes, I remain,
Very truly yours,

Dec. 22, 1922 C. F. Bigler,
President, New York Holstein-Friesian Association

GLENN R. MEAD

Technique of Tuberculosis Testing

By Dr. Henry W. Turner

IN the September 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN, appeared an article by Dr. Henry W. Turner of the Pennsylvania Bureau of Animal Industry, entitled "Technique of Tuberculin Test." This article dealt chiefly with the application of the Subcutaneous Tuberculin Test.

DR. HENRY W. TURNER
Pennsylvania Bureau of Animal Industry.

In the following article is outlined the Technique to be followed in administering the Intradermal and the Ophthalmic Tests. For those of our readers who are not familiar with the methods used in testing cattle with Tuberculin, it might be stated that there are three recognized Tuberculin Tests:—the Subcutaneous, the Ophthalmic and the Intradermal.

The Subcutaneous Test consists in injecting a solution of Tuberculin through the skin into the underlying or subcutaneous tissue and recording the animal's temperature at stated periods over a given length of time. A rise in temperature of a degree and one-half, or more, characterized by a temperature curve is looked upon as a reaction, or is classed as suspicious, and held for further observation and tests.

The Ophthalmic Test consists in administering the Tuberculin in the animal's eyes, either as a liquid or in the tablet form. A reaction consists in the appearance of an inflammatory condition in the eye, characterized by a discharge of pus. In applying the Ophthalmic Test only one eye is used, the other eye being held as a check, and should not show any change.

The Intradermal Test is applied by injecting a quantity of the Tuberculin between the layers of the skin, as is indicated by the name—Intradermal—between the layers of the skin. A reaction in the Intradermal test is determined by the appearance of a characteristic swelling appearing at the point where the injection is made.

"Many of the instructions and also conditions necessary for the proper application of the Subcutaneous Test, (which appeared in the issue of September 8th) are not required in making the Intradermal Test. But a physical examination should be made and the history and identity of each animal should be established and recorded before proceeding with the test. In applying

the Intradermal Test it is only necessary to confine the animal at the time of injection and when observations are to be made. The site of injection generally selected is one of the sub-caudal folds, (loose skin at the base of the tail). The skin in this region should be thoroughly cleaned with a 60% solution of alcohol and dried before the injection is made. Cleanliness is an important factor in this test, as swelling, caused by infection at the time of injection, might complicate conditions and make it impossible to give an accurate reading of the test. A record should be made of all abnormal sub-caudal folds at the time the injection is made.

In applying the test a 1 cubic centimeter glass syringe with a screw needle $\frac{1}{4}$ or $\frac{1}{2}$ inch long and 25 gauge is the most suitable. The syringe and needle should be carefully sterilized before starting the test and the needle after each injection should be disinfected in a 60% solution of alcohol. The dose used is from 2 to 5 drops of a 5% solution of powdered tuberculin in one-half of 1% carbolyzed normal salt solution. When properly injected, a nodule about the size of a small pea will appear at the point of injection. In making the injection, the operator should stand directly behind the animal and grasp the sub-caudal folds between the thumb and first finger of the left hand. With the right hand the needle attached to the syringe is slowly inserted the full length into the skin, taking care that it is between the layers of the skin and not through them. Do not have the point of the needle too close to the surface of the skin as superficial injection into the epidermis will not give as definite results as through intradermal injections. The needle should be slowly withdrawn after the injection, thus preventing any loss of tuberculin. The point of injection in any normal sub-caudal fold is the most pendant part but when the fold is loose and flabby, the injection should be made where the fold joins the under surface of the tail, as in flabby folds the reactions are diffuse and not definite. In most animals a swelling will appear at the point of injection within an hour after the tuberculin is injected. This usually disappears after the tenth or twelfth hour and has no diagnostic value. In interpretation of the results of intradermal tests, consideration must be given to the size, character, shape and general appearance of the local swelling and the observations should be made at the 72-hour and the 96-hour after injection and later if necessary. A small hard nodule not larger than a small shot grain, often appears at the point of injection but it is not to be considered as a positive reaction.

Circumscribed Swelling the size of a pea, diameter $\frac{3}{16}$ of an inch is used as a Basic Standard in reading the test. Larger swellings are reported as "P-2, P-3, P-4, etc., in accordance with the finding, meaning two or three or four times the size of a Pea.

When swelling is diffused the extent of the reaction is determined by the thickness of the fold, "2-X" should be used as a Basic Standard and signifies diffuse swelling in which the injected caudal fold is twice as thick

as the normal fold. Larger swellings should be recorded as "Thick 3-X, Thick 4-X," in accordance with the finding. So much depends upon the method pursued and the judgment of the operator, that in the hands of a careless operator or one not experienced, the results of the test may not be reliable. Some veterinarians and some operators are too prone to snap judgment. All operators should receive practical instruction before applying and interpreting the intradermal test if accurate results are to be obtained. "Experience is the best teacher."

Thermic Reactions (rise of temperature) follow the intradermal injections of tuberculin more often than is generally supposed. These reactions may occur any time between the 8th and 20th hour after the injection is made and they may have a bearing on subcutaneous tests and their notation, if recorded, would be of assistance in determining the outcome of the test.

THE ACCURACY OF THE INTRADERMAL TEST MAY BE AFFECTED BY,

1. By using a syringe or needle that has not been properly sterilized.
2. Injecting into unclean sub-caudal folds (before the field is properly sterilized).
3. Pricking the skin a number of times with the needle while attempting to inject, or unduly pinching or bruising it.
4. The use of too strong chemicals or disinfectants.
5. The use of tuberculin not especially prepared for the intradermal test.
6. Using tuberculin that has become contaminated.
7. Using tuberculin that has become too cold. (In extreme northern countries, caution should be taken against injection when the tuberculin is too cold, below 65 degrees.)
8. Making the injection into a loose, flabby fold.
9. By endeavoring to read or making careless reading of results at irregular periods.
10. Recent or repeated injections of tuberculin may produce tolerance.

OPHTHALMIC TEST

While not recognized as an official test when used alone, it is a most valuable adjunct to the other tests. It can be used at any time, or in any combination without interfering with the efficiency of the other tests, or having its own results modified by their influence.

TECHNIQUE OF THE OPHTHALMIC TEST

As in the other tests the identity of each animal must be established and recorded. Examine the eyes for any abnormal conditions, and do not apply the test to any animal which shows local inflammation of the eyes.

Ophthalmic Tuberculin is prepared both in discs and liquid form. The discs are a preparation of powdered tuberculin in sugar of milk, the liquid is a 4 to 8% powdered tuberculin in a 50% glycerine normal saline solution.

In Applying The Liquid a curved glass dropper with an outlet as small as possible is preferable; the animal's head is held by an assistant in such a position that when the operator instills the tuberculin on the eye ball it will be diffused at once over the entire surface of the

eye. Close the eyelid with the hand for a few seconds, to prevent escape of tuberculin.

In Instilling The Discs clean hands with short smooth finger nails are necessary, a disc should be placed between the thumb and first finger, the animal must be held by an assistant in such a way that the operator can with his thumb place the disc well back on the eye ball, under the upper lid, and toward the outer canthus of the eye. The hand should then be placed over the eye lid for a few seconds until the disc dissolves.

APPLICATION OF THE TEST AND HOURS OF OBSERVATIONS

In making an ophthalmic test the eye must be sensitized with 2 or 3 drops of a 4% of ophthalmic tuberculin, or one ophthalmic disc. No record of the results of this sensitization are usually made, although sometimes a distinct reaction occurs. Three or four days after the eye has been sensitized apply the diagnostic dose using either 2 or 3 drops of the 8% solution of ophthalmic tuberculin, or 2 ophthalmic discs, if these have been used.

Observations should be made at the third or fourth hour after the installation of the tuberculin, and continued every two hours until the 12th or 14th hour.

INTERPRETATION OF TEST AND CODE FOR RECORDING RESULTS

1. Animals showing no reaction shall be recorded at each observation as N-(Negative).
2. Reactions shall be recorded as follows:—Small amount of pus, F-1; much pus, or a distinct purulent discharge, P-2; abundant pus, combined with hyperemia of the conjunctiva, and swelling of the lids, P-3.

In observing the results of the test do not be confused by a slight, white mucous discharge that often occurs soon after the tuberculin has been instilled.

Observations must be made at frequent intervals as the animal often destroys the evidence of reaction by rubbing the eye.

In shipped cattle this test is unreliable, due to exposure, contagious ophthalmia, or foreign bodies in the eye.

CLEANING AND DISINFECTING PREMISES

This phase of tuberculosis eradication is too often neglected. It is the duty of the veterinarian making the test to carefully inspect the barn, and its surroundings, and to advise the owner of any defects in sanitation.

Upon the completion of a tuberculin test, where reactors have been found, the veterinarian should instruct the owner in every detail of cleaning the premises, which should be done immediately following the removal of the tuberculous animals. The disinfection should be done under official direction.

In some states disinfection is considered of such importance in the work of tuberculosis eradication that the State has trained agents who supervise the cleaning and disinfecting, and the state also furnishes an officially approved disinfectant free of charge. "Prevention is as important as Eradication."

So often herd owners will spray their barns with some strong smelling material and think they have dis-

infected it, they should have a better understanding of what disinfection means; It is the destruction of the Causative Agents of disease, and can only be accomplished through cleaning of the infected buildings, equipment and surroundings together with the spraying with chemical materials that will kill the germ of the particular disease for which it is being used.

The cleaning and disinfecting of any stable in which there has been diseased animals is of prime importance in the prevention of the recurrence of disease, it should be done in a systematic and thorough manner; remove all animals—materials—utensils and non-stationary equipment, we are now ready to start the work of cleaning and disinfecting.

The ceiling—walls—ledges and windows are cleansed of all accumulated dust and dirt in the order named, where there is manure on the walls they should be scraped and if impossible to remove it in this manner, it should be soaked with water until it can be removed easily. The stall partitions, mangers or stanchions are next to be cleaned, in the same manner, but where there are wooden mangers great care should be used, in many cases it is best to remove them, but where this is not practicable, they should be very thoroughly scraped and cleaned.

This accomplished, the floors are next. If cement they should be scraped, where the deposits are dry and

hard they too, like the walls, should be soaked with water and scraped. If wooden, all rotten or broken boards must be removed and the floors thoroughly scraped and cleansed. If dirt, three or four inches of earth should be removed or at least until you have removed all that is soiled. After the stables have been sprayed they should be refilled with fresh earth.

All the movable utensils and equipment such as manure carriers, milk stools, wheel barrows, feed trucks, boxes, measures, forks, brooms, shovels, etc., as well as all watering troughs and individual watering bowls must be cleaned and disinfected.

Add lye or washing powder to the water used for cleaning and a wire brush, similar to those used by butchers will greatly assist in removing the gummy deposits on the walls, floor mangers, stanchions and partitions. All the manure should be removed from the yards before starting to use the disinfecting materials. The materials used for disinfecting are those approved by the Federal Government, the majority of which are coal tar products. A force pump should be used in spraying the stables to obtain the best results, following the procedure mentioned in the cleaning; from the ceiling to the floor. The doors and windows of the stables, when possible, should be kept open for two or three days to permit the odor of the disinfectant to disappear.

A Little Dope About Century Sires

A CENTURY Sire is a term used by breeders of purebred Holsteins to designate a bull who has 100 or more daughters with Advanced Registry Records. There are 16 of these although the list we are giving shows 17. Pietertje Hengerveld Count De Kol is included because he really belongs on the list. He has 99 daughters in the American Official Registry and two daughters in the Canadian official list. One of these daughters is registered in the herd book of the Holstein-Friesian Association of America, the other is not, so Pietertje Hengerveld's Count De Kol really has 100 daughters with official records. We therefore believe he is entitled to be termed a Century Sire.

The first Century Sire was Hengerveld De Kol, the second Lord Netherland De Kol, and the third Paul Beets De Kol. These bulls are all descendants of the imported cow, De Kol 2d. Two are closely related, the other although he carries quite a percentage of her blood, is farther away. Hengerveld De Kol and Paul Beets De Kol were sired by two different sons of this cow. Lord Netherland De Kol traces to her through three of his grandparents, his paternal granddam being a daughter and his maternal grandsire a son of De Kol 2d while his dam's dam Daisy De Kol, is by De Kol 2d's Prince, the eldest son of the foundation animal of the De Kol family.

The only double Century Sire is King of the Pontiacs, but it is very probable that King Segis Pontiac will attain the 200 mark as he has a large number of young daughters scattered through the western states. It is likely that King of the Pontiacs will be the first sire of the breed to have 300 tested daughters as he has

a number of young daughters, but we doubt whether he has as many untested daughters as has King Segis Pontiac.

No sire has 100 daughters with long-time records. The leader in this respect is King Pontiac Champion who is in front by quite a margin, his nearest competitor being his own sire, King of the Pontiacs. The older bulls are at a great disadvantage in making comparisons on the basis of daughters that have been tested for ten months or a year as, in the earlier days of official advanced registry work, very few animals were tested for longer periods than 30 days.

In the table of sons with tested daughters, King of the Pontiacs leads by a wide margin his number being 231. His sire, Pontiac Korndyke comes next with 138. Colantha Johanna Lad is third with 111, King Segis Pontiac is fourth with 97; De Kol 2d's Butter Boy 3d is fifth with 95; King Segis Pontiac Alcartra, a son of King Segis Pontiac and a grandson of King of the Pontiacs is sixth with 94.

King of the Pontiacs again leads in number of daughters who are dams of tested daughters, his number being 119. Next to him comes Pontiac Korndyke with 112. It is evident that this gap will be widened instead of lessened as time will work in favor of the younger sire. Lord Netherland De Kol has 98, Aaggie Cornucopia Johanna Lad has 96 and De Kol 2d's Butter Boy 3d has 91.

King of the Pontiacs and his sire, Pontiac Korndyke are the only bulls that are "Century Sires" in three divisions. Colantha Johanna Lad comes third in this respect with 134 tested daughters and 111 sons who are

sires of daughters with official records. Another year will see King Segis Pontiac Alcartra with more than 100 sons who have sired daughters with official records.

A number of these bulls are closely related. The only example of three direct descendant sires, that is, sire, son, and grandson in the list is Pontiac Korndyke, King of the Pontiacs and King Pontiac Champion. King Segis Pontiac and King Segis Pontiac Alcartra are father and son. King Segis Pontiac and Pietertje Hengerveld Segis are half brothers, both being sired by King Segis. Hengerveld De Kol and Pietertje Hengerveld's Count De Kol have 100% the same blood, their sire being De Kol 2d's Butter Boy and their dams, Magadora and Pietertje Hengerveld, being full sisters sired by Milla's Pietertje Netherland from the former world's champion cow, Netherland Hengerveld. Hengerveld De Kol is the maternal grandsire of King of the Pontiacs and of King Segis Pontiac while Pietertje Hengerveld's Count De Kol is the maternal grandsire of Pietertje Hengerveld Segis whose dam, Blanche Lyons De Kol is the highest record daughter of the near-century sire. Homestead Girl De Kol's Sarcastic Lad and Aaggie Cornucopia Johanna Lad are half brothers, both being sired by Johanna Aaggie's Sarcastic Lad a son of the great Missouri and Illinois bull, Sarcastic Lad who is the sire of Colantha Johanna Lad.

Studying the pedigrees of these sires you are impressed with the fact that every one with the exception

of Tidy Abbekerk Prince, is a descendant of De Kol 2d. This cow is the dam of De Kol 2d's Butter Boy 3d and the granddam of Hengerveld De Kol, Pietertje Hengerveld's Count De Kol and Paul Beets De Kol, while she is the great-granddam of several others in the list. No other cow is so close in the pedigree of a number as is De Kol 2d, which we cannot regard as a happenstance, for a number of these sires trace through several different lines to the foundation cow of the De Kol family.

TABLE OF THE CENTURY SIRES AS SHOWN BY VOLUME 33 OF THE BLUE BOOK.

Names of Century Sires	A. R. O. daughters	Daughters with long-time records	Sons with tested daughters	Daughters with tested daughters
Hengerveld De Kol	116	9	67	85
Lord Netherland De Kol	128	1	37	16
Paul Beets De Kol	105	4	50	98
De Kol 2d's Butter Boy 3d	119	10	95	91
Homestead Girl De Kol's Sarcastic Lad	107	22	47	65
King of the Pontiacs	280	48	231	119
Pontiac Korndyke	151	13	138	112
Aaggie Cornucopia Johanna Lad	107	6	81	96
Colantha Johanna Lad	134	26	111	78
Sir Veeman Hengerveld	138	15	34	73
King Segis Pontiac	186	18	97	52
Pietertje Hengerveld Segis	122	15	70	49
Changeling Butter Boy	113	6	26	62
King Pontiac Champion	124	70	53	62
King Segis Pontiac Alcartra	120	15	94	23
Tidy Abbekerk Prince	104	6	26	66
Pietertje Hengerveld's Count De Kol	99	1	60	72

Necessity for Prompt Cooling Milk

COOLING milk and cream on the farm promptly and properly would prevent to a very great extent the enormous waste which occurs every year. Milk dealers and cheese makers often may be obliged to return to the farmer any milk or cream that is about to sour. Part of the returned milk is fed to livestock, and frequently the remainder is a total loss. In addition some of the cream that is accepted by creameries is in poor condition and cannot be manufactured into the best grades of butter.

More than 85% of all the milk and cream sold from farms in the United States is produced in sections where natural ice can be had for the harvesting. Therefore with the proper use of ice at least 85% of the milk and cream can be cooled on the farm to a temperature so low that they will reach the dealer and the consumer in good condition. To bring about a general improvement of the milk and cream supply it must be cooled promptly and efficiently every day. The most advantageous use of the cooling facilities which are available on every farm would result in great improvement in the quality of milk and cream and at little if any additional cost.

DEVELOPMENT OF BACTERIA IN MILK

Milk as it leaves the udder of a healthy cow contains only a few bacteria, but others are added by careless handling and improper methods. Bacteria multiply rapidly in warm milk and soon cause souring or other undesirable fermentation. No matter how clean the

utensils, milk will soon deteriorate in quality and contain many thousands of bacteria if it is not effectively cooled. Bacteria may get into milk from the stable air, but by far the greater number come from unclean and unsterilized utensils and the dust and dirt that fall from the flanks and udder of the cow during milking. Even though produced under the best of conditions, milk just drawn always contains a few bacteria.

Bacteria grow and multiply much more slowly in cold than in warm milk. When drawn from the cow, milk has a temperature of little above ninety degrees Fahrenheit, a temperature at which bacteria grow very rapidly. The effect of temperature upon the development of bacteria is well illustrated by two samples of milk, one of which had 280,000 and the other 16,400 bacteria per cubic centimeter at the beginning. Each sample was divided into four parts, and the eight parts were set away at certain temperatures to determine what length of time would elapse before the milk soured. The high-bacteria sample, set at a temperature of 100 degrees Fahrenheit, soured in twelve hours, while the low-bacteria sample at the same temperature kept sweet thirty-six hours. When kept at 40 degrees Fahrenheit the high-bacteria sample soured in 180 hours, while the low-bacteria sample soured in 396 hours. The high-bacteria sample represented milk of ordinary quality, while that containing the smaller number was representative of milk of a higher quality. The effect of low temperature in checking bacterial growth and multiplication is very evident.

If cooling is delayed bacteria may develop rapidly and be present in large numbers, even though the milk is eventually cooled to a low temperature. On dairy farms where only a few men are employed, milk is often kept in the barn for an hour or more before being cooled. Under such conditions it may be several hours after the milk is drawn before it is cold enough to check the growth of bacteria. This condition is especially true when the water used for cooling is at a temperature of 55 degrees Fahrenheit or higher and ice is not used. Cooling should be begun immediately after the milk is drawn from the cow if best results are to be obtained. Prompt cooling necessitates the immediate removal of milk from the barn to the place of cooling, which also is good practice because it shortens the time that the milk is exposed to the air of the barn. Since, in general, bacteria multiply more slowly as the temperature is lowered, the more rapid the drop in temperature the less time for their multiplication and growth.

As now distributed, milk is from a few to as high as 72 hours old before it reaches the consumer. There is, therefore, plenty of time for the growth and development of bacteria if conditions favor them. Milk that has not been cooled promptly spoils very quickly when warmed as frequently happens in hot weather during transit from the farm to the city. It is not uncommon also for the temperature of milk to rise ten degrees between the time it is delivered to the consumer and the time it is placed in the ice-box.

While cleanliness is the first essential in the production of milk, prompt cooling and storage at low temperatures are the most important factors in preventing souring. For best results, then, milk should be cooled immediately after milking and kept at a temperature low enough to check the growth of bacteria. Cream, likewise, should be cooled immediately after separation and be kept cold until used.

DEPARTMENT OF AGRICULTURE.

A New Member of the Penn State Herd

AMONG the beautiful Holsteins recently donated to the Pennsylvania State College herd, was Tranquillity Sadie Vale Pudmina, who was the gift of Eugene B. Bennett, formerly President of the Pennsylvania Federation of Holstein-Friesian Clubs, and a member of THE BREEDER AND DAIRYMAN Publishing Company.

Tranquillity Sadie Vale Pudmina is a daughter of King of the Sadie Vales. Her dam is Laurel Ledge Beryl Pudmina, with a seven-day official record of 21.16 lb. butter and 465.6 lb. milk. She is a daughter of Laurel Ledge Duke; a bull with two 30-lb. daughters, in fact, we believe, he was the first son of the great Colantha Johanna Lad to have a daughter make 30 lb. butter in seven-day official test. The dam's dam and her dam have good official records, the latter being a 20-lb. daughter of De Kol 2d's Butter Boy 3d.

King of the Sadie Vales is the sire of this good young cow. His daughters are making a splendid showing in the good Holstein herds on the Tranquillity & Allamuchy Farms. One of his daughters made 32.46 lb.

butter, 699.7 lb. milk in a week. She was just 5 years and 3 days old at the time of making this record. His sire, King Korndyke Sadie Vale, has a long list of good record daughters and is said to be the only bull with a 40 lb. daughter, a 40 lb. sister and a 40 lb. dam. His own dam was Sadie Concordia 4th, with 41.06 lb. butter in seven days, and his two grand dams were respectively the first 30 lb. cow and the first 37 lb. cow, both being former world champions.

The dam of King of the Sadie Vales is Sadie Vale Concordia 4th Pietje, 38.43 lb. butter and 729.7 lb. milk in seven days. Her dam was Sadie Vale Concordia 4th with 41.06 lb. butter, 691.4 lb. milk in a week and her dam was Sadie Vale Concordia 30.64 lb. butter and 694.3 lb. milk in a week, the first 30 lb. cow.

The pedigree of Tranquillity Sadie Vale Pudmina shows a wonderful combination of producing and transmitting blood lines. In the pedigree appear the names of some of the greatest cows the breed has ever

TRANQUILLITY SADIE VALE PUDMINA
Presented by Eugene B. Bennett to the Pennsylvania State College.

known, at least five different cows have held world's records over all ages and breeds and were truly the world's champions of their day, while quite a number of others have been world champions in their respective classes.

The cow herself was selected for individuality and producing capacity rather than for her splendid breeding. Mr. Bennett has always taken a deep interest in the welfare of the Pennsylvania State College, as well as in Holstein affairs, both in the Keystone State and those of national scope and importance. He is planning a Brazilian trip and will start early in February. During his tour he will visit some of the prominent herds in the country of our great Southern neighbor and will endeavor to gather, at first hand, on idea of the possibilities of Holstein expansion in that land with a view of increasing the demand for American bred cattle of the great black and white breed.

Appeal Direct to Their Customers

THAT local milk distributors are capable of advertising the goods they have to sell without any outside help is shown by a series of articles and advertisements being run weekly by the *Commercial Appeal*, Memphis, Tenn. Twelve wholesale and retail milk distributors jointly take a small advertisement in which their name appears. On December 25th this was

headed "Drink More Milk for Health's Sake." The *Commercial Appeal* cooperates by articles on milk and dairy products and the December 25th issue contained the article "The Source of Milk" and told a little about the great dairy breeds of cattle, and of goats and also told what animals were used in other lands to furnish milk and other dairy products, such as sheep in parts of France, reindeer in Lapland, mares in Central Asia, the buffalo in countries of the East and the camel in desert regions.

A Manager of Men

WHEN the Dauphin County Holstein Breeders' Club was recently organized it was felt that no better or more representative man could be found to become its first president than Hiram Billett, the manager of Bonnymead Farms which consists of some 2,500 acres at Paxtang, Pennsylvania.

HIRAM BILLET
Manager of Bonnymead Farms and President
of the Dauphin County Holstein
Breeders' Club.

Paxtang is a suburb of Harrisburg, and really joins right on to the city. The trolley cars run right by Bonnymead Farms every few minutes all day and the buildings are worth a visit, to say nothing of the good Holstein herd housed therein.

While Mr. Billett has never taken any prominent part in Holstein political affairs, either state or national, he has kept well informed and he does his own thinking. When his name was mentioned for president, there was only one dissenting voice, and that was his own. But he was elected, nevertheless.

Perhaps one reason for Mr. Billett's popularity is the esteem in which he is held by the employees on Bonnymead. The head cowman has been on the farm thirty-two years, sixteen of which have been in the cow barns around the cattle, while several others of the help have been there nearly as long.

Price and the Demand for Butter

MANY students of dairy economics believe that the relative consumption of butter and oleomargarine is largely dependent upon the relative price of these two commodities. During the war period the consumption of oleomargarine in the United States increased by leaps and bounds, while during the past year there was a great falling off. In Canada, in which until the war started, there was no oleomar-

garine manufactured, a permit was obtained to manufacture oleomargarine and when butter prices soared, a great deal of oleomargarine was eaten. Although a permit to carry on manufacturing was obtained after the war ended, oleomargarine manufacture and consumption has suffered a material decrease in the Dominion.

In an effort to feed the people, the British Government favored the expansion of oleomargarine manufacturing plants in that country, and the production capacity increased from not much more than 2,000 tons per week to a capacity of 10,000 tons per week in 1919, while the actual production rose to 6,500 tons.

The London market had depended largely on the import of Dutch margarine and Canadian, Danish, Australian and New Zealand butter. With the difficulties of transportation during the war period, these supplies were greatly curtailed and home manufacture rose in proportion.

The import of both butter and oleomargarine still increased from the declaration of peace to September, 1921, while the production of British oleomargarine dropped from 6,500 tons to 4,500 tons per week. British home production of butter for many years has been less than consumption. With the reduction in price, the use of butter has largely increased year by year since the armistice.

It was thought the oleomargarine, as it is called in that country, would continue to be used in quantity for cooking purposes, partly supplanting the use of lard, but this is not substantiated by statistics of lard imports. According to the published reports, several British margarine manufacturers are now operating at a loss and there are rumors that some of the plants are soon to be closed.

South Carolina Holstein Makes Notable Records

By I. R. JONES.

SOUTH Carolina has a new Holstein champion milk and butter producer in the yearly division over all classes. The record is especially noteworthy since the animal making it is only a senior three-year-old. This is the cow Katie Paul Sadie Vale, 460,116, owned by V. M. Montgomery, Springdale Farm, Spartanburg, S. C. Starting test at the age of 3 years, 11 months, 18 days she produced 26,488.2 lb. milk and 1,079.91 lb. butter in 365 days. The former high milk record among South Carolina Holsteins was held by the Junior four-year-old cow Butter Girl May Johanna, 398,055, owned by J. T. Willard, Spartanburg, S. C., with 22,823.8 pounds for the year, while Sunnycroft Butter Girl Corona, 323,616, owned by H. D. Jordan, Ridge Spring, S. C., was the champion butter producer with 971.05 lb. for the year.

Katie Paul Sadie Vale also has very creditable 7 and 30 day records. Tested at the beginning of the lactation period when the above record was made, she produced 648.19 lb. milk and 25.88 lb. butter in 7 days, and 2,672.4 lb. milk and 107.31 lb. butter in 30 days.

The sire of Katie Paul Sadie Vale is King Korndyke Sadie Vale Wayne, 156,049 one of the best proven

sons of that great progenitor King Korndyke Sadie Vale while her dam the well known Junior four-year-old 7 and 30 day world's champion, Katie Paul Burke 292,696 with the records of 690.5 lb. milk and 44.615 lb. butter in 7 days and 2,834.6 lb. milk and 167.955 lb. butter in 30 days. In view of the outstanding animals in the pedigree of Katie Paul Sadie Vale, her records are only as might be expected in the light of our knowledge of the ability of great animals to transmit production.

You Should Know This Chap

JUST say "Ubiko" or "Union Grains" to any good Holstein breeder in Pennsylvania and he will immediately answer "Charlie Neff." Nor is this state of affairs confined to the Keystone State, for this gentleman has many loyal friends in Southern New York as well as in the states of Virginia, Maryland and

C. R. "UBIKO" NEFF
You'll probably meet him at the Pennsylvania Breeders' meeting and banquet.

Tennessee. He is a Holstein booster of the first class, is a member of the Pennsylvania Federation of Holstein-Friesian Clubs and a charter member of the Dauphin County Holstein Breeders' Club. You are apt to meet him at any Holstein meeting or sale anywhere in his sales territory and he is a frequent visitor at Holstein events of first magnitude anywhere in the Eastern United States.

Charlie is a real salesman and at some time must have kissed the "Blarney Stone" for if you are likely to need feed and he finds it out, and he finds you, well, you might as well give him your order first as last. He "has a way with him" and then, he sells good goods.

THE BREEDER AND DAIRYMAN has tried to get a good picture of him for a year or more now, but he was too modest. But we knew we would get him sometime or

someway, if we kept on the look out, and recently, he was induced to make one of a group of Dauphin County Holstein men at a little visit to Bonnymead Farms, near Harrisburg. The photographer got busy, the engraver did his part and here is Charlie.

Pennsylvania's Secretary of Agriculture

THE appointment of Mr. Frank T. Willets as Pennsylvania's Secretary of Agriculture is very appropriate. He is well qualified for the position and well-known to Dairymen, Farmers and Grangers in the eastern United States. He is Treasurer of the Pennsylvania State Grange, Managing Editor of the *Interstate Milk Producers Review*, Director of the Interstate Milk Producers Association and a member of the National Board of Farm Organizations, Washington, D. C.

FRANK P. WILLETS
Pennsylvania's Secretary of Agriculture.

Mr. Willets was born in Berks County 66 years ago and began his agricultural career working on a farm in Chester County. He received his education at the Public School, Lincoln University and Maplewood Institute. He is Clean, Conscientious, Sincere and Capable, a man well qualified to fill the position to which he has been recently appointed. THE HOLSTEIN BREEDER AND DAIRYMAN wishes Mr. Willets success and pledges its loyal support.

Boy's Club Buying Holsteins

The Boys Agricultural Club of Kern County, Union High School, Bakersfield, California, has purchased seven head of purebred Holsteins through E. M. Morrow, secretary of the Stanislaus County Holstein Association. The club intends to purchase more cattle as a great deal of interest is being shown in Junior Club work.

Who Has a Right to Appeal?

Editor, HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dear Sir:—

I notice in the issue of *The Holstein-Friesian World* of January 6, 1923, on page 21, a brief notice of Judge Pooley's decision handed down January 3, 1923, in the George Case. *The World* suggests in the last paragraph the following: "It is probable that the Association will take an appeal to the higher courts upon Judge Pooley's decision."

I have read with considerable care, the opinion of Judge Pooley appearing in THE HOLSTEIN BREEDER AND DAIRYMAN of January 8, 1923, on page 14, and I am wondering by what method the Holstein-Friesian Association of America can legally appeal from Judge Pooley's decision to the higher courts. The decision annuls the Board of Directors as Officers of the Association. Who can appeal? Personally, I have little doubt that the vast majority of the members of the Association are heartily in accord with Judge Pooley's decision, that the increase in the number of Directors from six to nine and nine to sixteen, was illegal and against the best interests of the members of the National Association. I also believe that the "rank and file" would be in favor of discontinuing any further litigation and would welcome a return on the part of the Association to the economies of the early days during which we accumulated our large surplus fund which the mismanagement of the Association have to a great degree, squandered in inconsidered litigation.

Those of us who maintained this position at the meeting in 1921, at Syracuse, were slandered and insulted by the advocates of the Whirlwind Campaigns and gross extravagance that followed the Philadelphia Meeting. I suggest that we now follow the decree of the court as outlined in Judge Pooley's decision and hold the Special Meeting on the day, to be later announced by the court, and in the manner required by the decree and try and establish the reputation for the clean conduct of the business of the Association that we enjoyed prior to the Philadelphia Meeting in 1919.

I am only advocating the same principles that I advocated prior to the 37th Annual Meeting of the Holstein-Friesian Association at Kansas City and in fact, prior to the Special Meeting at St. Paul, Minn., and call your attention to an article of mine published in *The Holstein-Friesian World* and *The Holstein-Friesian Register* prior to the Special Meeting at St. Paul, and again to my correspondence with Prof. Elder of the Mt. Hermon School, one of the Directors ousted by Judge Pooley's decision which appears in THE HOLSTEIN BREEDER AND DAIRYMAN in the issue of May 22d, and again to an article appearing in that same issue which is as follows:

"I have before me the notice of the 37th Annual Convention of the Holstein-Friesian Association of America, to be held June 7, 1922, at Kansas City. Among the amendments offered to be voted on at that meeting is one, No. 37, which I presented in the interests of economy of the management of the Holstein-Friesian Association. Judging by the records of ex-

penditures for the past several years, thousands of dollars might have been saved in the expenses of attendance at regular and special meetings of the directors and officers of the Association, if the board was reduced from sixteen to six, and it is solely for this purpose that I offered the resolution.

The accounts of the Association show the travel and hotel costs of some 14 members of the Board of Directors in attendance at meetings June, 1919, to June, 1921, to have amounted to \$5,447.81. This is exclusive of an expenditure of \$6,645.93, by and through the Chairman of the Executive Committee. During the same two years the president was paid a salary amounting to \$24,000 and traveling expenses, hotel bills, stenographer, rent, etc., over \$11,000 additional. During this same period of time, Mr. Pollock, as director of extension service or assistant, was paid \$6,000, with some additional sum for expenses, and Prof. Rider, also received an additional \$5,000. In June, 1921, the result of the annual meeting was to discontinue the salary to the president, and to the director of extension service, Mr. Pollock having resigned some time before. I do not see why we should not properly reduce expenses by cutting down the number on the Board of Directors to the number that proved entirely sufficient for our interests in the earlier days during which we created our large surplus and reserve."

I believe the function of the National Association is to register and transfer cattle as economically as it can be done for the breeders, checking, verifying and certifying to the integrity of every pedigree. The result of continued litigation will be to exhaust the Reserve Fund and Surplus established through the 35 years of economic accumulation and when that fund is all spent, unless we permit the Officers of the Association to levy an assessment by an increased Transfer Fee to provide a fund for further litigation, litigation will necessarily stop. Perhaps there will be no peace in the Association until the fund accumulated is all dissipated. In that case, the quicker it is dissipated, the better so that we, the members, can get down to the business of registering and transferring cattle in place of exploiting the individual herds of some of our Millionaire Members.

Yours for the best interests of the Holstein-Friesian cow. From one who believes in doing all his own advertising at his own expense, rather than at the expense of the National Association by the assessment of all the members.

GEO. E. STEVENSON.

Scranton, Pa., Jan. 15, 1923.

Greatness is thrust upon some people, but the trouble is that, when so obtained, it seldom stays.

There is a difference between a wedding gown and a divorce suit.

You cannot weigh genius—the lightest literature has the heaviest sale.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

January 22, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Shall the Members of Holstein-Friesian Association Rule or Be Ruled?

IN a nutshell, that's one of the important questions to be now solved and to be so decided that no man, or set of men, shall ever again dare to tamper with the rights of the people.

The Holstein-Friesian Association of America now boasts a membership of over 22,000 breeders.

Everyone of these members paid the membership fee of \$25.00 whether he owns one cow or 500 cows. Under the Constitution and as a matter of plain simple justice, every member is entitled to have, and should have an equal voice in determining how the Association should be managed and who the association officers shall be.

The original articles of Incorporation, by which the Holstein-Friesian Association of America came into existence, among other things provides:

"The officers of this corporation shall consist of a President and four Vice-Presidents—to be designated as first, second, third and fourth; one Secretary and Editor; one Treasurer, Six Directors and one Superintendent of Advanced Registry, who shall constitute the Board of Officers of this corporation.

In 1913, or ten years ago, the Association was incorporated under the Membership Corporation Law of the State of New York, still providing for "Six Directors."

Everything went along smoothly until 1919. At that time, and under the careful guidance of Frederick L. Houghton, who had been the Secretary of the Association for a quarter of a century, cattle was bringing the best prices ever before known, there was a Reserve Fund carefully invested of \$250,000.00; The Transfer Fee was Twenty-Five cents; The Holstein cow was the

acknowledged superior of every other dairy animal known; the Association was prosperous and there was no internal dissuasion.

Men high in the regard of their fellow breeders had been regularly chosen to serve as President and each had responded to the call, because of the honor which attached to such a mark of preferment. Not one of them had ever taken a dollar from the Treasury, except for actual necessary expenses.

Mr. Gardner had handled the Department of Advanced Registry in an admirable and altogether able manner, thereby so stimulating interest in the test work that a friendly rivalry was evident everywhere, wherein each breeder was vying each with the other to produce a "Champion."

Every member of the Association was proud of his connection with such a prosperous well-managed breed organization and the Holstein Industry, other breeders of Holstein cattle looked into a future that was bright with the promise of a great prosperity.

Then came upon the Holstein business, that frightfully "Black Cloud," known as the "Philadelphia Convention of June 4, 1919."

As we look back upon the event itself and the condition prevailing at that time, it just seems to us as though the "Bacteria of sure cussedness" fastened its tentacles upon the Association and started it on the road to corporate suicide.

We recall how such veterans as Edmund A. Powell, and General Wood former Association President, together with Wm. A. Matteson, chairman of the Executive Committee and A. L. Brockway, H. L. Moyer for years Chairman of the Finance Committee sought to warn against turning the Association into a Political Sales Organization with all its entanglements and all to no avail. The "Bug" had gotten into the blood and even the serum of protest could not stay its ravages.

D. D. Aitken who had been repeatedly honored by election to the office of President, had for two or three years become more assertive, more autocratic and more domineering in the performance of his official duties.

He misinterpreted this evidence of confidence as a license to use the Association and his official position with which to create a political oligarchy of which he was to be Supreme Ruler for all time to come.

In 1918, at Milwaukee, a sharp conflict was precipitated by the proposal of J. M. Hackney, to make the offices of Secretary and Superintendent of Advanced Registry, "Appointive instead of Elective," and in this conflict the Aitken Machine suffered a sharp rebuke, and defeat, when Mr. Houghton's friends rallied to his support and asserted the right of the Membership to rule.

Before the Convention of 1919, an armistice was declared. Everyone had promised to refrain from any "Political Activity" and the Convention held under the belief that no changes in By-Laws or of Association policy would be attempted. The "Little Breeders on the Hillside" had not been aroused to action. Everything looked serene; but what happened?

Just as soon as it became evident that "the Machine" had the votes to put over their pet schemes and still smarting under the defeat administered at Milwaukee, the "political bug" became again rampant and pre-convention promises forgotten.

The Transfer Fee was raised from twenty-five cents to a dollar. The number of Directors increased from six to sixteen. D. D. Aitken voted a salary of \$12,000, \$140,000 squandered for "Extravagance" since James A. Reynolds, an Ohio Politician and a member of one year made Chairman of the Executive Committee.

Vital changes made in the By-Laws and the Association started on a mad career of "Whirlwind campaign"—Paid State Secretary's—Wholesale Extravagances—By-Laws Prostitution—Salary Grab Duplicitous—Star Chamber Diplomacy, and such a debacle of autocratic rumpacity as laid their foundation for that scandalous disregard of Membership Rights as has resulted in the recent rebuke of the Supreme Court of the State of New York and the application of the restraining hand of Justice to the management of Association affairs.

It has been necessary for a member to invoke the power of the Supreme Court to compel official regard for the law. Think of it. The Association must be put to the great expense of calling a special meeting "to elect six directors" and all because of the paid council of the Association, O. U. Kellog, whose last haul on the Association's treasury was \$15,000, yet who lacks the legal ability or the honesty of purpose to compel the Aitken aocracy to obey the law. We are held up to the ridicule of every breed organization, and membership corporation in the state by this evidence of official incompetency, or stupidity whatever way it may be viewed. We are to-day, and have been "evidently" since 1914, doing business in an illegal way, with an illegal Board of Directors elected in violation of the law, and remember—

All this time and up to 1921, D. D. Aitken, an alleged lawyer was Association president, and as far back as 1918, had his attention called to the illegality of the Association transacting business outside of the state of New York by Wm. A. Mateson, the attorney for the Association.

The Present Board of Illegal Directors are mostly the same men who were elected at Philadelphia. The Executive Committee has been subject to the Rule and Ruin policy of the "Machine" and Chairman Reynolds ever since. Every one of them have known of the serious legal questions surrounding their tenure of office and nearly everyone of them has disregarded the wise council of those having the Association's welfare at heart—they have preferred to serve the machine and as an oft quoted politician's axiom, "To H—with the people's interest."

Now, thanks to the courage of Edward P. George and the recent decision of Justice Pooley the plain breeders and dairymen, making up a vast majority of the Association Membership have "come into their own."

We must elect a New Board of Six Directors. We must wipe out all By-Laws enacted at Meetings illegally held.

We must compel an accounting of all Association funds spent by Illegal Directors. We must compel restitution of Association money illegally voted by an illegal Board.

We must resort to our true honored right of "self-expression" by scrapping the Delegate System and electing officers by the proxy system.

We must stop extravagance—promote the welfare of the Association through the smashing of the political machine. We must not allow the industry to suffer because of incompetency of its self constituted Board and we must not forget that the Holstein cow is the greatest Dairy Animal in the World regardless of all these serious happenings to the Association supposed to represent him.

There is just one way, and only one way that this can be done—Every member of the Holstein-Friesian Association of America who breeds cattle and milks cattle as a livelihood and a business, not as a "hobby", must join hands and let their voices be heard like a thunder clap from the skies, demanding that Association policies should be dictated and its affairs managed as a Breed Organization by the plain people and not a political machine by the politicians, Cow Sales Manipulation, Paid State Secretary's and "Hobby Hunters."

Obey the Law, Not Evade It

ON another page we are printing a clean and concise statement by Mr. George E. Stevenson, vice-president of the Holstein-Friesian Association of America under the heading, "Who Has A Right To Appeal?" Mr. Stevenson pictures very clearly that the illegal Board of Directors that are placed in the discard by the Pooley decision have no more legal right to appeal from Judge Pooley's decision than sixteen other members of the National Association who have never served the Association in the capacity of an illegally elected director.

It is very apparent from the many letters coming into the office of THE BREEDER AND DAIRYMAN that the illegally elected sixteen men who have assumed office of Director and who have spent thousands and thousands of dollars of the Associations' funds to protect and retain them in this illegal position are, by Judge Pooley's decision, thrown on their own resources and will have to fight their own legal battles.

Meanwhile the members will demand that the order of the court be complied with and a legal and conservative number of directors elected and the Association put in a position where it can function legally.

Who Is Quoting "Bunkum" and Putting up "Dishonest Arguments"?

IN our January 8th issue we published an article entitled, "Paid State Secretaries A Failure" in which we compared average prices received for cattle at public auction in the State of Pennsylvania where the State Paid Secretary Whirlwind Campaign Movement had never been inaugurated, with the prices received for cattle in states or group of states where the Whirlwind Campaign Paid State Secretary Movement was in operation.

It has just come to our attention that the President of the New York State Association and the President of the New England States Club are circulating propaganda to the effect that the average prices received for cattle in the State of Pennsylvania, would not have exceeded the average prices received in other states where the Paid

State Secretary Sale Organization was in operation were it not for the fact that their prices were bolstered up by the high average received for cattle at the last Brentwood National Sale held in Philadelphia, Pa.

To keep our readers informed as to any propaganda, or wild statements that may have been or might be circulated by advocates of the State Paid Sale Promoters, we will say that the average prices received for cattle at Public Auction in the State of Pennsylvania used in comparison, *Did Not include the prices received at the Brentwood National Sale.* Had these prices been included, Pennsylvania's average would have been much higher and the Paid State Secretary Movement would have been painted much blacker.

New York State Association Meets

MORE than 150 attended the annual meeting of the New York State Holstein-Friesian Association held at the Yates Hotel, Syracuse, on Tuesday, January 16th. It was moved and seconded that a credential committee be appointed and President Bigler appointed George Baxter, Lloyd Upham and Floyd Overton to ascertain the delegate vote of the representative affiliated county clubs.

Prof. H. H. Wing and W. D. Robens were expected to judge the sale cattle for the county prizes but, Mr. Robens was sick and the substitute, Mr. Abbott did not reach the Fair ground in time, so the Professor reported that he secured the help of Paul Misner and James Beiermeister. He said the cattle were fully up to the standard of the state association. Fourteen counties competed for the prizes. Tompkins County won first; Jefferson, second; Allegany, third; and Onondaga County, fourth.

Secretary Zimmer read his report for the third year of his service. There are now 1,175 members against 572 a year ago. There were 638 animals sold in public sales, under the auspices of the association during the year that brought \$127,965. The cost of securing members by paid solicitors was too expensive so that this year the county clubs would attend to this. The average attendance of the Board of Directors was nine out of a possible twelve, which was remarkable considering they came from all parts of the state. He touched on private sales, calf club work, and legislative activities and told that he and others appeared before United States Senate committee in favor of the emergency tuberculosis appropriation.

The finances of the association were not satisfactory. The state association should be able to support itself so that if the support of the National Association was withdrawn the state organization could be self-sustaining. He again called attention to the fact that public sales were speculative, and there should be a reserve fund to take care of possible losses. He advocated bill board advertising and said that the Ohio Association had given New York State a quota of fifteen head in the National Sale to be held at Cleveland. The Secretary's report was adopted.

The Treasurer's report showed of cash on hand, December 30th, \$548.17. This report was adopted and placed on file. Harvey Farrington moved that for the ensuing year the fees be cut to 25c a head for purebreds over a year old and 10c for grades, with a minimum fee

of \$5.00 for the first ten cows. Mr. Marshall seconded this and it was carried.

A resolution was passed advocating a winter show and joint meeting of all agricultural and horticultural associations in the coliseum on the state fair grounds and called for a meeting of all such societies during Farmers' Week, at Ithaca, to discuss and arrange for the requisite legislation. Carried.

Mr. David Davies called attention to the work the United States Bureau of Animal Industry was doing in an attempt to eradicate the ox-warble. He said that it is estimated the annual loss from this pest was \$3.00 per year for every bovine in the country. The Washington Department is contemplating an appropriation to conduct eradication work for three years in one county. The organization passed a resolution asking that the appropriation be made.

Prof. Bond and George Baxter were appointed a committee to wait on the New York Fair Board to protest against any exhibits of oleomargarine being allowed at the New York State Fair.

The directors elected for the ensuing year are:

Harry Yates, R. E. Chapin, R. W. Dennis, Maynard Smith, C. F. Bigler, G. M. Smith, Harvey Farrington, W. A. Follett, E. J. Chaffee, H. V. Bump, H. L. Stafford, C. B. Marshall.

The New York Holstein-Friesian Association selected the following list of names to be submitted to the National Association as nominees from which delegates are to be chosen to represent the New York breeders at the coming National Convention: Frank Campbell, S. B. Van Buskirk, Fred Blewer, W. W. Stevens, Dr. D. B. Armstrong, H. Farrington, Grant Low, Carl Schmidt, E. R. Shaeffer, H. L. Stafford, Lloyd Upham, L. Parker, A. A. Hartshorn, C. F. Bigler, Carl Amos, Floyd Overton, H. H. Wing, Henry Morganthau, Jr., Claude B. Fletcher, Francis Jones, H. V. Noyes, J. C. Dold, and Harry Yates.

Dr. Armstrong called attention to the Jelke-Good-Luck-Margarine advertising which attributed much good to the product because it was churned in milk-made from Holstein cows. He advocated a state law prohibiting misleading advertising of dairy substitutes. A committee consisting of Dr. Armstrong, A. A. Hartshorn and Prof. Wing was appointed to draw up a resolution along this line.

Tell the truth, the whole truth and nothing but the truth—and make a lot of trouble.

Don't follow the crowd if you would keep ahead of the game.

Evangelical Building, North Third and Reily Streets, Harrisburg, Penn. sylvania, where the meeting of the Pennsylvania Federation of Holstein-Friesian Clubs will be held, January 25th.

BUSY LITTLE BARNEY

UNDER the above heading appeared the following article in the *Evening Gazette*, Cedar Rapids, Iowa, under date of January 13, 1923. There comes to this office a copy of the *Holstein-Friesian World* in which W. B. Barney, former dairy and food commissioner of Iowa, is eulogized so beautifully that it readily is apparent the one-time power in Hawkeye politics has lost none of his cunning. A recent decision by Justice Pooley of the New York supreme court, hands a terrific blow to the present board of directors of the Holstein-Friesian Association of America and calls for a new deal all around, including a new election of directors. It is significant that the Barney eulogy was written a few days before this court decision was rendered. Barney is one of the directors, and the decision holds that the board at present is illegally constituted.

After calling attention to Barney's "excellent" record as a cattle man and as a state official in Iowa, the *World* proceeds to say that "his resignation was given to the governor of his state (Iowa) following a complete and unanimous exoneration from charges preferred against him for political considerations by a little group which set out to get his scalp because of his vigorous enforcement of certain provisions in the dairy laws contrary to their wishes. These charges have unfortunately been capitalized and deliberately twisted about by these destructionists from within the Holstein fold in an attempt to render his work unprofitable and to discredit the administration."

Now, the *Holstein-Friesian World* claims to champion the interests of the Holstein breeder and of the Association. For that reason it should be put right. It should know that W. B. Barney was ordered to resign from public office in Iowa, and that the order was issued by the executive council, headed by the governor. It should know that Barney pleaded with the council to give him a figurative exoneration so that things would not look so bad and that the council finally capitulated in return for Barney's agreement to resign. It should know that it was conclusively proved that Barney sold from his own herds to other Holstein breeders cattle that were shown to have been tubercular despite the fact that they were sold as tuberculin-tested and free from disease. It should know that Barney refused to make refunds to those purchasing these diseased cattle from him when he was dairy and food commissioner for Iowa, until he had been forced to do so. It should know that no "little group" set out to get Barney's scalp because of his "vigorous enforcement of certain provisions of the dairy laws," but that *The Evening Gazette* set out to get Barney out of office because of his department's flat failure to enforce the most vital provisions of the dairy laws as they relate to public health. Further, it should know that *The Gazette* accomplished the task in spite of opposition from the political clique within the Holstein-Friesian Association of America and from the powerful political machine that Barney had perfected here in Iowa.

When Barney was forced out of office he landed a

soft plum in the extension department of the Holstein-Friesian Association. THE HOLSTEIN BREEDER AND DAIRYMAN took up the fight where it had stopped in Iowa and made things unpleasant for *Busy Little Barney*. The supreme court decision in New York may throw Barney out of a job again, or it may not.

If the *Holstein-Friesian World* is so feverishly anxious to protect Holstein breeders as it pretends to be, it will refute the propaganda so obviously fed it by Barney himself and tell the truth about the fight which let to his downfall in Iowa and his job with the association.

In conclusion, the attention of the Iowa executive council is called to the use Barney has made of the "exoneration" it so generously handed him. It kicked him out of office but offered a pillow on which he might fall. Barney converted the pillow into a brick with which to make the council ridiculous.

Cows With Most Tested Daughters

THERE is quite a little interest shown in the question which cow has the most tested daughters. Any one cow cannot claim pre-eminence over her sister for there is a quadruple tie between the representatives of New York, Indiana and Wisconsin. Although Wisconsin is mentioned last, perhaps she should be first for her champion Fannie L. De Kol, long an inmate of the herd of John Hetts, Ft. Atkinson, has more daughters with semi-official records than has any of the other three cows with nine officially tested daughters. Besides the four cows with nine A. R. O. daughters there are seven others with eight daughters with short time official records. The list follows:

Name	Herd Book Number	A. R. O. Daughters	Daughters With Semi-Official Records
Fannie L. DeKol,	64 178	9	6
Beecher Wythe 2d,	87 301	9	4
Tirania Yankee 2d,	43 596	9	2
Nicola Nannette,	65 731	9	0
Daisy Grace De Kol,	98 228	8	4
Daisy De Kol Ormsby,	73 470	8	2
Aaltje Salo 5th's Netherland,	38 798	8	0
Jacoba Hartog Pietertje Pledge, ..	59 956	8	0
Araminta Hartog Belle,	77 216	8	0
Jumbo Queen,	79 555	8	0
Vera Pauline De Kol,	91 788	8	0

Some time in the near future we hope to tell more about these animals and of the performances of themselves and their daughters.

After thanking the Lord for your meal, don't find fault with the cook.

When the rye stops flowing it is to be hoped that the rock of adversity will disappear.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Jan. 22-27—Harrisburg, Pa., Penna. Farm Products Show.
Jan. 24—Harrisburg, Pa., Penna. Breeders' Banquet.
Jan. 25—Harrisburg, Pa., Annual Meeting Penna. Federation of Holstein-Friesian Clubs.
Feb. 1—Columbus, Ohio, Ohio Holstein-Friesian Breeders' Association Annual Meeting.
Feb. 1—Brookings, S. D., Annual Meeting of the South Dakota Holstein-Friesian Association.
Feb. 1—Ames, Iowa, Dairy Cattle Breeders' Associations Joint Meeting.
Feb. 6—Fond du Lac, Wis., Wisconsin Holstein Breeders' Association's Annual Meeting.
Feb. 7—Toronto, Ont., Annual Banquet of the Canadian Holstein-Friesian Association.
Feb. 8—Toronto, Ont., 40th Annual Meeting of the Holstein-Friesian Association, of Canada.
March 8—Charlottesville, Va., Virginia State Dairymen's Convention.
April 3-7—Salt Lake City, Sixth Annual Inter-Mountain Livestock Show.

OFFICERS RE-ELECTED

Approximately 150 Holstein breeders and friends gathered for the banquet and annual meeting of the county club at West Concord, Minnesota, December 13th. One of the speakers was Dr. D. E. Blecker, mayor of West Concord. The following officers were reelected for the ensuing year: T. W. Chapin, president; Jesse Fairbank, vice-president; W. P. Mann, secretary.

SAUK CLUB ELECTS OFFICERS

The Sauk County Holstein Breeders Association held their annual meeting at Reedsburg, Wisconsin, December 19, 1922. The following officers were elected: President, H. J. Sedgwick; Vice-president, E. H. Koenecke; Secretary and Treasurer, H. A. Turgasen; Directors, P. H. Walsh, La Valle; Al Brandt, Lime Ridge; Fred Kruse, Loganville; Lawrence Siebecker, Baraboo; J. Hatz, Prairie du Sac.

DISCUSS DAIRY PROBLEMS

The Lane County Holstein Breeders' Association elected T. J. Sweany, Jr., president, at their annual meeting held in the Chamber of Commerce rooms at Eugene, Oregon, December 14th. The principal speaker was H. M. Coleman, dairy specialist of the Oregon Agricultural college. His talk was followed by an informal discussion on dairy problems.

Other officers elected were: W. W. Conn, vice-president; S. B. Swango, secretary and treasurer; and Max Arp and Ralph Denton, trustees.

CONSOLIDATION IN ORDER

The River Falls Holstein-Friesian Association was organized at the City Hall, River Falls, Wisconsin, December 16th. J. L. Chapman, Sr., was elected president, and Edgar Bliss, secretary-treasurer.

The object of the association is to promote the Holstein-Friesian breed and to get the breeders to unite for that purpose. It was suggested that the River Falls association should consolidate with the associations at New Richmond, Baldwin and Roberts, and form a county organization.

COUNTY COMMITTEE FOR CALF CLUBS

There are twenty townships in Rock County, Wisconsin, and a representative man from each township will form a county committee to have charge of and advise the members of junior farm clubs. Prizes are to be offered for each breed club.

The Rock County junior club committee now consists of the following: J. A. Craig, president of the Rock County Holstein Association, chairman; Hugh C. Hemmingway, secretary of the Rock County Farm Bureau; R. T. Glasco, county agent; J. K. Arnot, rural Y. M. C. A. secretary; Lewis C. French, agricultural journalist; W. S. Daddy, banker; R. A. Buell, superintendent of schools of Milton; Leo Campbell, farmer, and W. J. Dougan, dairyman.

FORM COUNTY ORGANIZATION

About twenty farmers interested in the breed of Holstein cattle met in the Community Club rooms, Park Rapids, Minn., November 29th and organized a county association. Officers were elected as follows: E. E. Bonham, president; James Robinson, Osage, first vice-president, and Levi Stevens, Ponsford, second vice-president; Harry Freytag, secretary, and Ben Glantz, treasurer. Mr. Glantz was elected chairman of the soliciting committee and will conduct a campaign to get every breeder of Holsteins in this territory into the association.

WILL PAY STATE ASSOCIATION ASSESSMENT

The adjourned meeting of the Lake Superior Holstein Breeders Association was held in the office of the County Agricultural Agent at Ashland, Wis., on the evening of December 2d, and officers for the coming year were elected as follows: Henry Roffers, president; Chris Peterson, of Nash, vice-president; D. W. Anderson, secretary; and E. Carlson, Route No. 2, for treasurer.

It was decided to affiliate with the state association by paying the assessment, the money for which will be raised. It was also decided to attempt to get one of the association billboards, advertising dairy products placed near Ashland. Another meeting will be held in the near future.

WAUSAU CLUB MEETING

L. W. Gleason was elected president; R. E. Golisch, vice-president and A. D. Melang, secretary-treasurer at the meeting of the Wausau Holstein Breeders club, December 19th, held at the court house, Wausau, Wisconsin. Five new members were admitted.

The principal address was given by County Agent, W. J. Rogan who urged that Marathon County join the tuberculosis clean-up campaign. He said that 1,701 names were required to reach the 60% which are necessary to secure the required appropriation. Last January, there were only four counties in the state cleaned up, while now there are sixteen while Clark County has secured the necessary signatures and will be the next county to be tested.

CRAWFORD COUNTY COMES ACROSS

Crawford County, Wisconsin, contains about sixty breeders of purebred Holsteins, twenty-five of which are paid up members of the Crawford County Holstein Breeders' Association. Recently the county association decided to affiliate with the state association and will pay \$25.00 this year for the support of it. Meetings were held in the middle of December at Soldiers Grove and Prairie du Chien. One of the speakers was Field Secretary Oldham.

A committee consisting of Charles Bishop, Ferryville; L. A. Crum, Boscobel; and Joe Paulus, Bridgeport; were appointed as a committee to work in cooperation with the county agent to start a Holstein Calf club with no less than twenty-five members. Several breeders present offered to speak before the boys and girls in the schools of the county and if possible to interest them in Holstein Calf club work.

MARATHON COUNTY ADVERTISING

Harry Keller was reelected president, James Chrouser, vice-president and William Klemm, secretary and treasurer of the Stratford Holstein Breeders club at Stratford, Wisconsin, at the annual meeting held December 30th, in the directors' room of the Stratford State bank. Jacob Spindler, Herman L. Klemm and Peter Leick were chosen as directors for the ensuing year.

County Agent, W. J. Rogan urged the county-wide tuberculosis eradication campaign, and the members present voted

to help in every way possible. Mr. Rogan suggested that large banners or placards be placed on livestock cars shipped out of the county, the banners telling that the stock was from Marathon County, Wisconsin, and this suggestion was unanimously approved.

HOLSTEIN AND GUERNSEY CLUBS BANQUET

The Sparta Holstein and the Sparta Guernsey clubs held a joint banquet at Sparta, Wisconsin, December 13th, and had a fine time. The principal speaker was Dr. Healy of the State Department of Agriculture. Five-minute talks were made by a number of dairymen present. The clubs joined in a resolution deploring the action of the county board in placing the funds of Monroe County with a bank located outside the county. The secretaries were ordered to forward this resolution to the county clerk with a request that he bring it before the county board at the next meeting.

Officers for the Sparta Holstein club were elected for the ensuing year, and are as follows: President, Chas. Van der Schaaf; Vice-president, Theo. Ruetten; Secretary-Treasurer, George J. Weiner; Directors, Frank Selbach and Theo. Schlaver.

DOOR ASSOCIATION ADOPTS DISTRICT PLAN

The Door County Holstein Association was organized at the court house, Sturgeon Bay, Wisconsin, December 16th. The board of directors consists of one representative from each of the ten districts in the county and is as follows: Washington Island, Ole Erickson; Liberty Grove, Gibraltar and Baileys Harbor, Harry Schuyler; Egg Harbor, Ed. Gagnon; Jacksonport, Wm. Robinson; Sevastopol and North Sturgeon Bay, Oscar Smith; Clay Banks and South Sturgeon Bay, Julius Mikels; Nasewaupsee, Henry Schingtgen; Gardner, Jule Gigot; Forestville, John Birdsall; Brussels and Union, Rudolph Mueller.

The following officers were elected: Frank Borchert, Sturgeon Bay, president; Henry Gerlach, Sevastopol, vice-president; Frank Smith, Sevastopol, secretary; Dr. E. C. Humke, Sturgeon Bay, treasurer.

County Agent Bailey was made an honorary member of the association. Calf clubs will be encouraged, as well as cow testing associations. It is intended to promote a larger and better exhibitions of Holsteins at the county fair. The association is not limited to purebred owners.

Junior Department

Made a Winner of the Cull

Stanley Kivlin thought that he was in hard luck when he was unable to be present at the time the boys and girls belonging to the Oregon Calf Club selected their animals. Stanley had to take the one that no one else wanted.

Stanley's heifer is Canary Wayne De Kol Sadie and she was born on March 27, 1921. He fed and fitted her so well that when he showed her at the Oregon Holstein picnic more than a year ago she won a first prize ribbon. She was shown at the Dane County Fair and won in the boys and girls exhibit and then repeated her victory in the open class. She was exhibited at the 1921 Junior Livestock Exhibition and ranked third. During 1922 she was shown at the Dane County Fair and was awarded second place in the County Special Class and in the junior yearling heifer class at the 1922 Junior Livestock Exhibition. She was awarded first prize, winning for her owner a free trip to the recent Chicago International Livestock Exhibition. She has won for her 13-year-old owner more than \$60 in cash premiums.

Stanley lives with his parents on their farm about three miles north of Oregon, Wisconsin. He did the best he could with the animal he had to work with. That he made a winner of her is all the more to his credit.

You Will All Want to Meet Her

One of the many valued subscribers to THE BREEDER AND DAIRYMAN is Mrs. E. M. Rogers of South Wales, New York. Mrs. Rogers and her sixteen-year-old daughter Grace do most of the work on Echo Farm and the younger member of the family looks after a herd of fifteen head of cattle, five of which are her personal property.

Edna Parana Hengerveld, her daughter Ruby Segis Hengerveld Rag Apple and King Ormsby Lad Veeman. Owned by Grace E. Rogers, South Wales, New York.

The editor considers himself fortunate to obtain a story from the young Holstein enthusiast even though regretting that he was unable to obtain a photograph of the young lady. Miss Grace is certainly making good as a caretaker and cattle breeder as the accompanying pictures show. Like all good Holstein fans, she must have had a good mother. Miss Grace's story, in her own words, follows and we think you will acknowledge that she can write a mighty good Holstein story and evidently works with her head as well as with her hands.

MY OWN LITTLE HOLSTEIN HERD

"In late September after I was twelve years old, Mother gave me a purebred Holstein heifer calf. We thought she was a beauty. Unfortunately she only lived one month. December 4, 1918, she was replaced by Edna Parana Hengerveld No. 528750, a daughter of Sir Veeman Hengerveld No. 36158. Edna was nine days old when I received her.

She has brought

me two beautiful heifer calves. One of them, Ruby Segis Hengerveld Rag Apple No. 715867, is now a very fine yearling, the other Nellie Segis Hengerveld Rag Apple No. 783162, is ten months and eleven days younger. The sire of the calves, Barrington Segis Rag Apple No. 247296 is a paternal grandson of Rag Apple Korndyke 8th, while his dam was sired by a grandson of King Segis. I also have another daughter of Edna, a grade two-year-old.

June 30th, last, I received from Mr. W. D. Robens a four-months-old bull sired by King Ormsby Ideal No.

Empress Clothilde Cornucopia, her daughter, Jewel Segis Clothilde Rag Apple, and their owner, Mrs. Eva M. Rogers.

280526. His dam is a 22-lb. cow sired by King Korn-dyke Sadie Vale, No. 86215. Her dam was sired by Sir Veeman Hengerveld, No. 36158. His great-grand-sire is Pietertje Ormsby Mercedes, No. 44931, and the great-granddam is Spring Brook Bess Burke 2d, No. 131387 with a butter record for 365 days of 1,290.93 lb. The thirteen nearest dams of my young sire, King Ormsby Lad Veeman, No. 380755 average 30.68 lb. butter in seven days. I expect to mate him to both the cow and her daughters. I feel certain that this mating will bring excellent results. Mr. Robens is a successful breeder of long experience while I am young and a beginner. I have read several of the breed papers for the past four years and think by following the breeding lines of others I will succeed faster than I could by using my own ideas.

I gave my cow an official test beginning January 10, 1921, and she made 416.8 lb. milk, containing 14.36 lb. butter at the age of three years, one month and six days. I fed, milked and took entire care of her. I am now taking care of fifteen head of cattle, five of my own, three for mother and seven for the man we are working for.

My yearling heifer took the blue ribbon in a class of six as a senior calf at our community fair. The bull calf took red in a class of four, all older than he was. This was my first attempt at showing and I won eleven dollars prize money. We had a judge from Cornell. He said the bull was a little out of condition, owing perhaps to his long ride and change of home.

Wishing you and all the readers of THE HOLSTEIN BREEDER AND DAIRYMAN a Happy and Prosperous New Year,"

I am,

GRACE E. ROGERS.

Echo Farm, South Wales, New York.

City Boy Makes Good in Club Work

One of the Tennessee boys who won a free trip to the Chicago International Livestock Show was Lawrence Colebank of Germantown. He was the highest scorer amongst the boys' livestock judging teams which competed at the West Tennessee district fair at Jackson, September 16th.

Lawrence, who is now 17 years old, moved with his father from Memphis to the farm in 1921, and that was the first year that he had any experience in club work. At the 1922 County Fair he and his brother Andrew, aged 14, made an entry in every class in the Agricultural Department, won 60% of the first prizes and never was below second place. He has a Holstein heifer that was grand champion of the Germantown fair last Fall. Lawrence was tutored by assistant County Agent W. M. Hardy.

Juniors Influence Their Parents to Breed Purebreds

Work in purebred Holstein Calf clubs has resulted directly in the establishment of nearly a score of purebred herds around Linwood, Kansas. The boys and girls became interested through their club work and influenced their parents to start purebred herds.

Before the clubs were organized there were no pure-

bred Holsteins and very few purebred dairy animals of any kind in the community, most of the cows being of the common red variety and most of the herds headed by scrub sires; to-day there is hardly a herd in the entire community that is not purebred or high-grade Holsteins and practically every herd is headed by a purebred Holstein sire.

A Vocational Student

Paul Stouffer, a vocational student of the high school at Newville, Pa., recently completed a year's work with two registered Holstein-Friesian cows in the dairy of his father, C. E. Stouffer, Shipensburg. This work was under the supervision of Willis R. Skillman, vocational supervisor of Cumberland County. One of these cows was a mature cow, the other a junior two-year-old at the time of starting her record and the two of them produced 27,072 lb. milk in the year.

One of the animals, Belle Princess De Kol 3d, No. 300132 was born December 15, 1914, and so was a seven-year-old at the time of commencing her test. In the year she produced 15,602 lb. milk. The other animal was De Kol Queen Mooie, No. 767976, a junior two-year-old at the time she started the test, and in the year she produced 11,470 lb. milk which is certainly a creditable performance under the circumstances. She was in very poor condition at the beginning of the year and when started on test was only

Paul Stouffer and the junior project cow, Belle Princess De Kol 3d.

milking 26 lb. a day. By careful feeding and attention, Paul raised her flow of milk to 47 lb. a day and then kept her right around this mark for nearly four months.

The work of Paul Stouffer with his purebred Holstein was scored second in the county project work by County Agent Paul Eddinger and young Mr. Stouffer was awarded a cash prize and a red ribbon as a token of excellent work. Paul is now taking a course in dairying at State College and gathering a little scientific instruction which will make his practical work more interesting and profitable.

If those who know nothing would only keep it to themselves.

HOLSTEIN-FRIESIAN WORLD

How do you account for this?

POOLEY DECIDES GEORGE CASE

As we go to press comes the announcement that Judge Pooley, of Buffalo, on January 3, returned a decision in the George case adverse to the Holstein-Friesian Association. The case was argued in September last and the decision has been expected for some time. Substantially the same issues were tried in the Brady case in New York City last June, with a decision favorable to the Association on all points. It is probable that the Association will take an appeal to the higher courts upon Judge Pooley's decision.

ONE OF THE GREATEST BULLS OF THE BREED

PHOTOGRAPHIC REPRODUCTION FROM PAGE 21, HOLSTEIN-FRIESIAN WORLD, JANUARY 6, 1923.

"Bold Attempt to Throttle the Truth"

UNDER this heading we published in our September 22d issue, a confidential resolution passed by a board of "Illegal Directors" that have since been kicked out of office by Justice Pooley of the Supreme Court of the State of New York. The confidential resolution was passed at the time of the Annual Meeting at Kansas City, June 7, 1922, and in substance, "Demanded that Breed Papers Keep Facts From Members."

Of all the many outrageous assaults made upon the rights of the membership by those who assume to direct the policies of the Holstein-Friesian Association, the resolution passed at Kansas City attempting to suppress the publication by the breed papers of the truth regarding the Association's activities stands out not only as a bold, unjustified attack upon the freedom of the press; but, a still bolder demonstration of that political intrigue which has crept into our Association's affairs and of a determination to rule or ruin the Association. THE HOLSTEIN BREEDER AND DAIRYMAN continued to keep its readers informed relative to important matters that transpire in the Holstein-Friesian Association and industry.

When the Brady Injunction proceedings were brought against the Association Directors, we published a complete account of it and when Judge Donnelly rendered his decision favorable to the illegal Board of Directors and against the interests of the members, we published his decision in full and told our readers in the Editorial Columns that his decision had not decided any one of the three legal questions brought up by Mr. Brady.

When the George action was brought against the Directors we published a full account of it and when Judge Pooley rendered a sweeping decision, kicking the illegal Board of Directors out of office and turned the Association over to its members where it rightfully belongs, we also published a complete account of it and will continue to keep our readers informed.

The illegal Board of Directors that has been kicked out of office, however, have been spending the Associa-

tions funds for advertising space in certain breed papers. Is it possible that these papers are selling their birth-right for money illegally taken from the Association's treasury? One of these papers thus far has entirely refrained from publishing any account of the Supreme Court's decision declaring the Association's Directory vacant, and the other one has only a short comment which we have had photographed and are reproducing in full.

As we stated to the Directors when we published their confidential resolution, THE HOLSTEIN BREEDER AND DAIRYMAN refused their demand and served notice that it would continue to print the truth and it would continue to fight their further exploiting the Association, and their attempt to disfranchise the small breeders and dairymen. We stated then, and we will again repeat, that we are out in the open. They cannot buy space enough and their bank account is not large enough to bargain for our surrender of that duty which we owe and propose to perform for the small breeders and dairymen that constitute 90% of the membership of the Holstein-Friesian Association.

City Boy Cow Handler

A record of 1,176.55 lb. butter and 25,104.3 lb. milk has been made by the purebred Holstein Baby Piebe Johanna of Norwood II, under the care of Everett Koken, a 16-year-old boy of the Norris Farm Camp, Mukwonago, Wisconsin.

Young Koken is city born and bred and never had any experience around cattle until he came to the Norris Farm Camp. He has certainly made good.

Having ox-tail soup and calves' brains for dinner is one way of making both ends meet.

It is some salesman who can write up an old man for a million of life insurance and then marry his only heir.

Cow Testing Association Reports

TESTING IN LAWRENCE COUNTY

During the month of December, twenty-six herds containing 270 cows were tested by Gordon J. Rice, of the Westfield Association which operates in part of Lawrence County, Pa. There were thirty-one cows that made over 31 lb. butterfat, six over 50 lb. and eight that milked more than 1,200 lb. milk. The leader was a Holstein named Jewel and owned by Herb A. Freed, she making 1,996 lb. milk, 77.8 lb. butterfat in twenty-eight days. Bessie, a Holstein owned by H. Frank Freed was second with 1,789 lb. milk, and exactly 59 lb. fat. She is a twelve-year-old cow. A Jersey was third with 58.7 lb. fat.

In the Volant Association, which is also under the supervision of the Lawrence County Association, there were 264 cows in twenty-six herds tested during December, by Paul J. Stonebraker. Of this number forty-six produced 40 lb. butterfat and eighteen over 50 lb. while six milked over 1,500 lb. Holstein cows in the herd of D. B. Reynolds held the three highest places, one making 73.7 lb. butterfat from 2,235 lb. milk, another making 73.2 lb. fat and another 72.6 lb. fat. W. McMillan & Son, C. M. Hartzell and Alford Bros. all had Holsteins on the honor roll.

BOWNE HOLSTEINS LEAD

There were 300 cows tested in the Mt. Holly, Burlington County, New Jersey, Association during November. Six made better than 50 lb. butterfat for the month of November. The leader was a grade Jersey with 62.8 lb. fat; second and third were purebred Holsteins owned by Alfred Bowne of Pemberton with 55.9 lb. and 53.9 lb. respectively. Grade Holsteins were fourth and fifth while another purebred Holstein owned by Bowne was sixth with 51.5 lb. fat. The four highest milk producers were all purebred Holsteins of the Bowne herd, the first making 1,995 lb.; second making 1,740 lb.; third 1,605 lb. and fourth 1,560.

The Bowne herd was high, the twenty purebred Holsteins averaging 1,104 lb. milk, 36.5 lb. fat. There were nineteen enrolled in this association of which nine were under the accredited herd plan.

HOLSTEINS AWAY IN FRONT

The East Snyder County, Pa., Cow Testing Association completes its second month with Daisy, a grade Holstein cow, owned by D. E. Naugh at the top with 1,705 lb. milk and 64.8 lb. butterfat. Making her a total of 3,500 lb. milk, 122 lb. butterfat for the two months on test. She is six years old and freshened October 8th.

The highest average herd was that of George Gemberling of Selinsgrove,

whose nine cows milked over 12,000 lb. milk for the month. The herd consists of grade and purebred Holsteins. The Holsteins are away ahead in this association up to date. There were 197 cows tested, seventeen produced over 40 lb. fat, and five over 50 lb. Thirty-four produced over 1,000 lb. milk and sixteen over 1,200 lb. The average for the ten leading cows in the association was 1,434 lb. milk, 3.86 average test and 52.3 lb. fat. These ten consist of six grade and four purebred Holsteins. The highest milk producer was Grace Nika Netherland, No. 347652, owned by George Gemberling who produced 1,807 lb. milk for the month.

Several of the members substituted home mixed rations for ready mixed feeds and realized a saving in their feed costs. Also several began weighing their milk for each milking and feed according to production.

WM. A. MARKLEY, Tester.

IN THE RIGHT DIRECTION

The report of the Worth County, Iowa Association, for the month ending November 15th, shows a slight increase in the average production of both milk and butterfat when compared with the previous month. The highest producer was a grade Holstein owned by Hilman Gaarder of Kensett, with 52.4 lb. fat, 1,565 lb. milk. She netted her owner \$22.01 above the cost of her feed. Grade Holsteins owned by C. J. Hill, of Manly, were second and third, and the leading seven cows were all grade Holsteins.

The leading herd consisted of ten grade Holsteins owned by C. J. Hill, which averaged 33.16 lb. fat and 879 lb. milk.

During the month, O. H. Thompson of Northwood, purchased the young bull, St. Olaf Pontiac Walker Segis. He is from a cow that made 787 lb. butter in a year as a junior three-year-old, and his sire is Walker Segis Homestead, a former prize winner at the Dairy Cattle Congress and the National Dairy Show.

A PENNSYLVANIA PET

The leader in the South Franklin County, Pa., Testing Association for the month of December was the Holstein Pet, owned by W. F. Barkdoll, she producing 1,426 lb. milk, 62.7 lb. fat, her test averaging 4.4%. A Guernsey was second with 59.7 lb. fat and a Holstein, Flora, owned by Isaac S. Myers, was third with 58 lb. fat, 1,318 lb. milk, her test being 4.4% also. Thirty-three cows made over 40 lb. fat and nine over 50 lb. There were seven Holsteins and three Guernseys in the leading ten and 57 cows on the honor roll. The tester of this association is R. S. Heisey, Bachmanville, to whom we are indebted for this very complete report.

TESTING WORK SPREADING IN IOWA

The annual report of testing in the State of Iowa shows that the year between September, 1921, and 1922, was the greatest in the history of Iowa Cow Testing. The number of associations has grown from fourteen to twenty-three while five herds averaged over 400 lb. butterfat for the year. C. B. Finley and H. R. Searles who compiled the report say that this is just two and one-half times the average amount of the ordinary Iowa herd.

Of the 322 herds tested, sixty-two averaged over 270 lb. butterfat and of the 4,151 cows tested, 270 made over 350 lb. butterfat while ninety-seven made over 400 lb. butterfat and twenty reached a mark better than 500 lb. Four cows produced over 600 lb. butterfat.

The best herds show an average profit of between \$80 and \$100 per cow over the cost of feed. There were 1,221 grade and 246 purebred Holsteins; 674 grade and 77 purebred Shorthorns; 1,281 scrubs and natives; 115 purebred Jerseys and 37 purebred Guernseys.

IN WEST VIRGINIA

The leaders in the Central West Virginia Cow Testing Association, were the registered Holstein Pauline, owned by Tracy Phillips with 2,001 lb. milk, 72 lb. fat. Rosebud, another registered cow in the Phillips herd was second with 2,124 lb. milk, 67.9 lb. fat. The grade Holstein Queen, owned by Claud Maxwell, was third with 1,557 lb. milk, 54.4 lb. fat. November showed the highest records of any other month since the organization of the association, September 9, 1921. Milk is selling in Clarksburg for \$3.65 per 100 lb. and butter at 60 cents a lb.

High-class producing re-actors bred on a share basis.

NEW YORK STATE TESTING

The December report of the Dairy Improvement Association in the State of New York shows that for the previous month, as far as records have been compiled, the leader will again be the great grade Holstein owned by Sam Barber of Scottsburg. She made 87.5 lb. fat from 2,083 lb. milk. The second cow is a Holstein owned by Dale Brothers of the First Niagara Association with 1,950 lb. milk and 72.2 lb. fat. There is a tie for third position between a Holstein owned by J. B. Harbeck of Western Allegany Association and a cow in the dairy of Westlake and Dann of the Chemung Association. Each has 70.4 lb. fat to her credit. The Harbeck cow produced 2,013 lb. milk while the other has only 1,329 lb.

The October reports are all in and the four leading cows are grade Holsteins with a registered cow in fifth position. The leader rejoices in the name of "Jim." She is a five-year-old owned by Baird and Burrell of Chester and is credited with 87.8 lb. fat and 1,596.5 lb. milk. Sam Barber's grade Holstein, Aaggie, is second with 87 lb. fat and 2,175 lb. milk although it is eight months since she freshened.

Ellen, owned by R. Beecher of Livonia is in third position with 75.6 lb. fat and 1,978 lb. milk "TT" owned by Don Warner of Geneseo is fourth with 75.6 lb. fat and 1,644 lb. milk. The purebred cow in fifth position has to her credit 75.1 lb. fat and 1,789 lb. milk and is owned by A. Roy of Wellsburg. The leader is in the Orange Association, the next three are enrolled in the Livingstone Association and Roy's herd is a member of the Chemung Association.

MADE A DANDY START

The Dakota County Cow Testing Association, Minnesota, finished their first month on December 1st. This Association has two testers. The Eastern Association had 281 cows with an average

production of 670 lb. milk and 207 lb. fat. The leader was a purebred Holstein owned by A. J. Reideil of Farmington, with 1,524 lb. milk and 67.05 lb. fat.

The Western Association tested 343 cows with an average of 791 lb. milk and 28.4 lb. fat. The high cow was a grade Holstein and a member of the herd of Thelander Bros., of Lakeville, with 1,650 lb. milk and 69.3 lb. butterfat. The Thelander Bros' herd of grade Holsteins was high with an average of 445 lb. fat.

SCHUMAN COWS SHOW PROMINENTLY

During the month of November, the leading cow in the Buckhorn, Iowa, association was a grade Holstein owned by Ed. Schuman with 55 lb. fat. Grade Holsteins had the lead in four positions. The Schuman herd consisted of 7 cows and averaged 28.8 lb. fat, while the average for the entire association of 200 cows was exactly 19 lb. fat.

During December there were 215 cows tested and they averaged 460 lb. milk and 196 lb. fat. The leader was a Holstein owned by Charles Martens with 49.4 lb. fat. A Schuman cow was second with 48.9 lb. fat and a Holstein owned by Geo. Blake was third with 47.8 lb. fat. Holsteins and Guernseys ranked high in testing this month. The herd of E. P. Kier numbers 17 head, and contains Holsteins, Guernseys and grades. They lead with an average of 31 lb. fat. The nine-cow dairy of Ed. Schuman was second with an average of 28.6 lb. fat.

BYRON HOLSTEINS TEST HIGH

The highest producer in the Byron, Wisconsin Cow Testing Association in the thirty days ending January 1st, is a registered Holstein owned by E. H. Korner, Fond du Lac. She produced 1,851 lb. milk, 77.7 lb. butterfat, her milk averaging 4.2%. A grade Holstein was second with 1,722 lb. milk, 74 lb. butterfat, the milk average being 4.3% and a registered Holstein, owned by John P. Kometer, Oakfield, was third with 1,482 lb. milk, 65.2 lb. fat, her milk averaging 4.4%. Notice the percentage of fat of the milk given by these three cows in test association work. A registered Guernsey was fourth with 62.9 lb. fat.

The honors for highest average herd went to the sixteen grade Holsteins owned by O. P. Schwefel with an average of 1,064 lb. milk, 37.17 lb. fat. The twelve-cow grade Holstein dairy of Frank Willis was second with 1,050 lb. milk, 36.44 lb. fat. The tester of this association is Alfred Miller.

DIAMOND CUT DIAMOND

Pat—Say, Pete, why do you always have holes in your shoes when your father is a cobbler?

Pete—Well, why does your baby brother have only one tooth when your father is a dentist?

A GOOD SEXTETTE

Six Holstein cows on the Blockville Farm, Glencoe, Minn., were recently tested under the supervision of H. R. Shepherd, reports Chas. E. Walker of the Biscay Holstein Breeders' Association. Pauline Fobes Beets De Kol made 501.5 lb. milk, 28.127 lb. butter; Jessie Fobes Pietertje made 554.3 lb. milk, 26.6 lb. butter; Jessie Fobes Anna De Mar made 540.6 lb. milk, 25.94 lb. butter; and the senior two-year-old Jessie De Mar Ormsby made 406.8 lb. milk, 19.38 lb. butter or nearly 60 lb. a day; the junior three-year-old Queen Pietertje Ormsby Canary produced 426.2 lb. milk, 22.36 lb. butter, averaging 61 lb. milk a day; the senior three-year-old Flossie Beets Hengerveld De Kol produced 470.6 lb. milk, 19.16 lb. butter.

NEW MARINETTE RECORD

A new high record for Marinette County, Wisconsin, has been made by Nijerk Korndyke Pietertje Pet, a twenty-five months old heifer owned at Beechwood Farms, Crivitz, Wis. This heifer was started in test November 29th, and in seven days made 381.3 lb. milk, 18.12 lb. butter. Seven days later she again went in test and in this seven days she made 467.7 lb. milk, 21.20 lb. butter. She had very little fitting for test. Her owner, W. B. Sanderson, believes that she could have made a better test. She is a daughter of Pabst Korndyke Admetus the former senior herdsire of Beechwood Farms and is the first daughter to be officially tested. There are eleven of her half-sisters in the herd which will be tested as they freshen.

MONTESANO COWS ARE GOOD

Twenty-five of the 237 cows tested in the Grays Harbor, Oregon Association, during November, produced between 40 and 50 lb. butterfat, 9 produced between 50 and 60 lb., while one made over 70 lb. The average production was 801.6 lb. milk, 29.7 lb. fat. Fifteen Holsteins owned by W. J. Berns, Montesano, averaged 1,013 lb. milk, 36.1 lb. fat, while fifty-four Holsteins owned by R. B. Arland, also of Montesano, averaged 937 lb. milk and 32 lb. fat. The leading small herd consisted of 8 Holsteins owned by A. A. Seifert of Elma, with an average of 954 lb. milk, 35.1 lb. butterfat.

HAGGLOF HAS GOOD COWS

During the month of December, 183 cows were tested in the Thurston County, Washington Association, although there were 259 enrolled. Of this number 46 made over 40 lb. fat in the month, while the average production per cow was 31.58 lb. fat. The leader was the well-known grade Durham cow owned by John Hagglof, she making 82.2 lb. butterfat. Iris Cynthia Jewel, also a member of the Hagglof herd, was second with 67.5 lb. fat. Mr. Hagglof had a number of other purebred Holsteins that made a good showing.

WHY PILE ON A TAX

The comparative prices of young heifers in Dane County, Wisconsin, is said to be \$110.00 for grades and \$125.00 for purebreds, or these were the figures for which a number of Illinois patrons purchased twelve head through Arthur Alling, secretary of the Dane County Holstein Breeders' Association. The entire consignment was purchased from around Oregon, from members of the County Breeders' Club.

While this fact may be seized upon by enemies of the purebred business to indicate that there is no extra profit in raising purebreds, still the facts in the case are that the purebreds realized \$15 a head more than did the grades, and aside from the cost of registering and transferring, the raising of the purebreds would not cost any more than it would to bring grades to the same age. Advocates of a heavy transfer fee will find very little inspiration in this report.

DAIRYMEN TO HEAR GOOD SPEAKERS

Breeders and Dairymen who attend the Meetings connected with the Pennsylvania Farm Products Show at Harrisburg, January 23d to 27th, will have an opportunity to listen to C. W. Larson, chief of the dairy division of the United States Department of Agriculture. He will deliver an address on "Opportunities in Dairying." L. B. Cook, manager of the Beaver Dairy Association will talk on "Higher Prices for Milk." Robert W. Balderson, secretary of the Pennsylvania Dairy Council will discuss "Milk Legislation," while E. B. Fitts, of the dairy extension department of the State College will speak on the subject "Increasing the Efficiency of the Dairy Herd."

The Pennsylvania Breeders and Dairymen's Association have certainly provided a strong and appealing program.

ROCK COUNTY ACTIVE

During the last half of December four carloads of Holstein cattle were shipped out of Rock County, Wisconsin, two carloads containing sixty-two grade cows went to Carlos E. Ramives, Fortunato Cucraro, Mexico. The average price was a little over \$75.00 a head. One carload was shipped to Riverton, Wyoming, and another carload containing twenty-six head went to a point in central Illinois. During the week ending December 24th, 106 head were sold from in and near Rock County.

A Mexican firm has contracted with F. B. Green & Son of Evansville for regular shipments of dairy cattle.

As soon as the area test is made in Rock County it is planned to put into effect a complete system of listing all livestock in the central agricultural office.

Pat (looking at the large grapefruit)—My! Mike, it wouldn't take many of them oranges to make a dozen, would it? Mike—No, siree!

SCHROEDER SELLS HIS HOLSTEINS

C. W. Anderson, Burbank, California, has purchased the interest of E. C. Schroeder in the big Holstein herd which they owned jointly and will continue the business alone. This herd is made up largely of daughters and granddaughters of Sir Pietertje Ormsby Mercedes, and includes sixteen daughters of the old sire, two of which are from Spring Brook Bess Burke 2d. It also includes fifteen daughters of Sir Pietertje Ormsby Mercedes 37th, while most of the cows are bred to this bull, who himself arrived in California early in December. In the Anderson herd there are six cows with year records of over 1,000 lb. and a number with records ranging from 800 to 1,000 lb. It is planned to continue testing the cows for long-time records.

Mr. Schroeder is one of the de facto board of the Holstein-Friesian Association of America. He was elected in 1920 to serve four years, but as far as we know, has not attended any of the meetings of the de facto board of directors during the past eighteen months, apparently having lost interest in its deliberations, actions and law suits.

MERCER BREEDERS ENDORSE AREA PLAN

A meeting of cattle owners of Mercer County held at Mercer, January 3d, endorsed the area plan of Tuberculosis Eradication and will launch a movement to have all the animals in the county tuberculin tested. This is the first movement of this kind in Pennsylvania which has heretofore gone solidly against the area plan. Mercer County contains about 37,000 head of beef and dairy cattle.

STEVES CHANGING HERD-SIRES

F. W. Steves & Son of Green Plains Stock farm, Menomonee, Wisconsin, have sold their former herdsire, Cloverlawn Johanna Piebe 11th to H. D. Hanson of Sleepy Eye, Minnesota, and have purchased in his place King Pietertje Ormsby Piebe 37th from Hargrove & Arnold. The purchase was made last summer, but as the Iowa owners wanted to include this animal in their show herd which did so well in the great fairs last fall, he was not shipped until recently.

WHOA! NANCY

Nancy Mercedes De Kol 2d, No. 134-437, owned by S. H. Shelton of Yates Center, Kansas, became the mother of seven calves during the past four years. This included three sets of twins. Nancy is eleven years of age and her owner claims that she has earned him an average of \$350 a year for the past four years. Her owner reports that she has produced 96 lb. milk in a day and made 32 lb. butter in a week, and that he has refused \$1,000 for her.

Woman never wants the last word; she wants to keep right on talking.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.

GOOD HOLSTEINS HERE

The December report of the Cumberland County, Pennsylvania Cow Testing Association shows that the high cow for fat production is a Holstein owned by J. B. Meixel of Boiling Springs, she making 80.2 lb. fat from 2,105 lb. milk and having an average test of 3.93%. The highest producing animal for milk was a Holstein owned by David Gible of Mechanicsburg, with 2,341 lb. milk, 60.9 lb. fat. The registered Holstein herd of I. V. Otto of Boiling Springs, made a good showing.

During the month 28 herds containing 275 cows in milk and 65 dry cows were tested. Forty-two cows produced over 40 lb. fat and 19 over 50 lb., while 38 exceeded 1,200 lb. milk. The tester, A. A. Raudabaugh, reports that during the past eighteen months, eight bulls have been purchased by members of the Association from other members of the Association and that the dams of these bulls were among the highest producers shown in the herds. Seven dairymen who were not members of the Association purchased bulls from members on the merits of the records made by the dams.

The December report makes the best showing of any in the five months of the fourth year's work of this Association, being highest, both in milk production and butterfat.

GOOD TEST RECORDS

The herd of Mike Babylon consisting of 28 Holsteins averaged 1,087 lb. milk and 45.2 lb. butterfat in the Orange County, California Testing Association. During the month of November, 790 of the 800 cows enrolled were tested. The individual leader was owned by C. S. Walker with 2,045 lb. milk and 114.5 lb. butterfat. A Babylon cow was second with 1,905 lb. milk and 105.3 lb. fat, while a cow of the Plavan and Stringer herd gave 2,145 lb. milk and 93.8 lb. fat.

Herd under the Accredited Plan

KATY GERBEN

Born December 7, 1902, died December 12, 1922, aged 20 years and 5 days—these figures represent the beginning and the end of the life of the famous Nebraska dairy queen, Katy Gerben. She was born in the University of Nebraska herd and there she died and during her life she did more to advertise the dairy business in her native state than has any other Nebraska cow.

During her lifetime she produced fourteen calves, 173,004 lb. milk and 5,605 lb. butter fat, or figured on the 80% basis, 7,006 lb. butter. A short time before her death she weighed 1,400 lb. so that during her lifetime she produced 123 times her own weight in milk and five times her weight in butter. As a three-year-old her record of 18,573.4 lb. milk, 775.55 lb. butter was a world's record in class at time of making. She was still giving milk at the time of her death, the cause of which was old age.

For more than seventeen years Katy Gerben has been one of the outstanding figures on the campus of the University of Nebraska. She was the pet and pride of the agricultural students who were always eager to show her to visitors and to sing her praises. Her splendid records made year after year have induced many Nebraska farmers to seriously take up dairying and the raising of purebred Holsteins. Her sons have headed some of the best herds in the state. Her daughters and granddaughters have made splendid records not only in the University herd, but also in other hands. The University of Nebraska bred and developed her, tested her and gave her the opportunity to make herself famous, and she in turn made the University famous wherever American bred Holsteins are known.

SIX MONTHS' PROGRESS

The Crystal Lake, Iowa Association, was started July 1, 1922, with 26 members, having about 400 cows of which 195 were Holsteins, 64 Guernseys, 135 Shorthorns and Red Polls and 7 Jerseys. The herd of Sam Gooden was high during July, August and September with an average of 31 lb. fat per cow. The E. R. Ostrander herd was high in October with an average of 32 lb., while the Martin Thompson herd was high in November with an average of 43 lb. Thompson furnished the individual leader during the previous months with 57, 67 and 50 lb. butterfat. They were all Holsteins.

THE BREED SHOWS WELL

There were 278 cows tested during November in the Clark-Scott, Indiana Association, reports H. H. Hubbard, the official tester. Of this number 22 exceeded 40 lb. fat for the month and 7 gave 50 lb. or better. The leader was a purebred Holstein owned by Clark Dellinger, she making 1,404 lb. milk and 58.9 lb. fat with an average test of 4.2%. Three of the seven leaders were purebred animals, two being Holsteins and one a Jersey.

GETTING SPOTTED

In 1919 Henry Hatisohl of Linn, Kansas, attended the Kansas National Livestock Show and there purchased eight three-year-old Holstein heifers. The first year he had them they earned him an average net profit of \$87.41, and each produced from 300 to 381 lb. butter fat.

At the end of the year at the annual meeting of the community creamery, at Linn, Mr. Hatisohl told of what the cattle had done for him and the manager of the creamery verified his statements from the creamery books. The local bank offered to assist other dairymen if they wished to buy similar animals and orders were at once given for 93 cows and representatives were appointed and purchased them from Wisconsin. Since that time another carload has been purchased and as a result, E. A. Montgomery of the Kansas State Farm Bureau told at the County Farm Bureau meeting that the farmers around Linn were rapidly getting rid of their scrubs and the herds were spotted black and white.

UNDER THE MOSER PLAN

Many of the Holstein breeders of Texas are increasing their herds, reports J. T. Orr, president of the Holstein-Friesian Breeders' club. Nearly a quarter of a million dollars worth of Holsteins have been imported into Dallas county under the Moser plan, in which the cattle have to pay for themselves. The Moser plan is named after C. O. Moser, secretary of the Texas club, a dairy expert and a practical farmer. Mr. Orr himself, is a prominent breeder and farmer of Dallas county.

The Holsteins were brought into the county during the period from December, 1917, until April, 1920. Thirty herds arrived, and the movement spread from Dallas into surrounding counties. The A. & M. college received requests for Holsteins from many parts of the state, and orders were given for carload shipments.

Traders began operations on a big scale and some of them exploited their innocent patrons by inducing them to purchase inferior animals. To combat this state of affairs, the Texas Holstein-Friesian Breeders' club was organized.

ADVERTISING IN LOUISIANA

A young Holstein cow owned by L. J. Heintz of St. Tammany parish near Covington, Louisiana, gave 1,138 lb. milk, averaging 3.3% during the thirty days from November 4th to December 4th. She produced 37.55 lb. butterfat while the cost for her feed was \$12.00. The performance of this cow is attracting much attention around Covington, and is already causing quite a number of the farmers to inquire into the producing and earning capacity of purebred Holsteins.

Pete—"Shut up! You don't know nothing! Why, you don't even know that Columbus discovered America."
Pierre—"I didn't know it was lost."

THE FIRST FIFTY HEAD

The first fifty head of cattle, which were sold at the Third Annual State Breeders' Sale, held at the New York State Fair Grounds, Syracuse, New York, January 17th, brought \$938.50, an average of \$187.70. These fifty head included calves. The sale was held under the management of the New York Holstein-Friesian Association.

FRANK BOONE DISPERSAL

At the Frank Boone dispersal sale at Cheney, Kansas, November 17th, seventeen purebred Holstein cows averaged \$151.20. The top price was \$327.50 for a three-year-old with a calf ten-days-old at her side. A yearling heifer brought \$137.50. There were thirty-nine head of stock registered or eligible for registration. In the number were five young bulls and nine calves under three months of age.

The sale had been postponed from the first to the seventeenth of November on account of bad weather. Buyers came from Pawnee, Reno, Pratt and Sedgwick counties and purchased thirty-three head, one cow and five calves were all that remained in Kingman County. The Boone herd was a real good one and won a number of prizes in the Cheney County Fair last October.

STEPHENSON COUNTY CONSIGNMENT SALE

The Stephenson County Consignment Sale held at Freeport, Illinois, consisted of purebred and grade cows and a number of bulls and heifer calves. The average prices were as follows: Purebred cows, \$165.82; grade cows, \$91.35; heifers, \$83.60; heifer calves, \$54.28; bulls of serviceable age, \$143.50. The top price was \$265 obtained for a bull consigned by Ray Angle, Dakota, and purchased by H. D. Bowen. The animal was from an untested dam and was an excellent individual. The next highest price for a male was \$250. This animal was from a 26-lb. dam and was not as good an individual as the sale topper. He was consigned by Howard Swaney of Ridot, and was purchased by J. W. Frankenberger. Yearling heifers sold low; heifer calves sold high. Animals from herds under Federal supervision brought 74% more than cattle from herds not under Federal supervision, although the animals were all tuberculin tested and a sixty- to ninety-day retest was guaranteed. The sale was managed by C. M. Long, field secretary of the Illinois Holstein-Friesian Association. The auctioneer was Edgar Eells.

INTERMOUNTAIN LIVESTOCK
SHOW

The sixth annual Intermountain Livestock show will be held in North Salt Lake, Utah, April 3d-7th, under the auspices of the Livestock Committee, Salt Lake City, Chamber of Commerce. Admission to the show is free while the railroads give reduced round trip fares from all points in the Intermountain district. Expert judges will be secured.

A new feature of the exposition will be the special awards for the boys' and girls' judging contests. Entrants must be between the ages of 10 and 18. The Intermountain Livestock Show is attended by farmers from points hundreds of miles distant and has done much for the livestock and dairy industry in the territory in which it operates.

PROSPECTIVE WINNERS

The prize junior calf at the 1922 Wisconsin State Fair was Jessie Mercedes Elgin, daughter of Witt Mercedes De Kol, owned by the Funk Brothers of Janesville. The day before Christmas this cow dropped twin heifer calves. They were sired by Beauty Johanna Korndyke Vale whose dam has a seven-day official record of 700 lb. milk and 28.96 lb. butter.

EASILY EXPLAINED

She—Sometimes you appear really manly and sometimes you are quite effeminate. How do you account for it?
He—It's hereditary, I suppose. One-half of my ancestors were males and the other half females.

TRACY GETS NEW HERDSIRE

J. R. Tracy & Sons, owners of Purity Farm, Platteville, Wis., recently purchased a new herdsire, Juliana Lilith Mutual, from Wilfred Helmemstein of Blue Mounds, Wis. This bull is four years old and weighs nearly 2,500 lb., is from a 1000 lb. cow while his sire is from a cow with a 20 lb. record and is a son of the great century sire, King Segis Pontiac, the only century sire from a 37-lb. cow.

Juliana Lilith Mutual will be bred to the daughters of Bairdland Segis Sir Prize and to the many good record cows on the Tracy farm, an account of which will be found on page 753, November 22d issue of THE BREEDER AND DAIRYMAN.

MURPHY ACCEPTS POSITION

Lawrence F. Murphy, Hartford, Wisconsin, is now manager of the Meadow Spring Stock Farm at Peebles, of which F. H. Boyle is proprietor.

Mr. Murphy and his family, consisting of his wife and two children, for the past six years has owned and conducted the Badger Stock Farms. A number of large records have been made in that herd including that of 32.91 lb. butter in seven days on the junior two-year-old, Pietertje Ormsby Mercedes Frisby. This record was world's record in class at time of making.

PROFITABLE PURCHASE

Helen Rag Apple Johanna was purchased by Roy J. Hiller of Janesville, Wis., from a consignment of Archie Reed, Jr., to the last sale of the Rock County Holstein Association. She was then an untested cow but was a large animal showing lots of dairy qualities. Mr. Hiller thought he would try to make an official test although he had no previous experience. He started Helen on test and the first seven days she made 29.47 lb. butter.

MORE PIGS NEXT SPRING

More than 200,000 replies to questionnaires sent out by the United States Department of Agriculture, indicate a probable increase in Spring pigs. These questionnaires were distributed and gathered by rural mail carriers in all sections of the United States where pigs were produced for market. This is only the second survey of this kind. It indicates that the number of sows bred to farrow during the first six months of 1923 will be 13% more than the number of sows which actually farrowed in the spring of 1922, but the actual number will depend largely on the relative price of hogs and corn.

The probable increase in farrowings in the spring of 1923 over 1922, compares with an increase of 22.8 per cent in the spring of 1922 over 1921 in the 11 Corn Belt states. The spring pig crop of 1922 in the Southern States was about the same as in 1921. Comparisons for other states are not available.

The number of litters farrowed in the United States in the fall of 1922 shows an increase of 18.6 per cent over the fall of 1921. An increase of 27.8 per cent is shown for the eleven Corn Belt States as compared with an intended increase in these states of 49 per cent in the number of sows to be bred for all farrowing, as reported last May. The survey shows that in the Corn Belt states, 6.1 pigs per litter were saved in the fall of 1922 as compared with 5.0 pigs saved from the 1921 fall litters. For the entire United States a saving of 6.1 pigs per litter in the fall of 1922 as compared with 6 pigs per litter in 1921 is shown.

The department points out that increased production does not necessarily mean an over-supply or decline in prices. Total receipts of hogs at all public stockyards during the first 11 months of 1922, were 5 per cent more than in 1921. During the last four months of 1922, the increase totaled nearly 20 per cent. The

number of hogs slaughtered under Federal inspection during the same period was 7.7 per cent more than in 1921, and the total carcass weight of pork and lard resulting from this slaughter shows an increase of 461,246,000 lb. for the 11 months. Despite these increases cold storage holdings of pork and lard averaged considerably less than during 1921 and prices showed a substantial advance over 1921. The department's explanation for this situation is that improved industrial and economic conditions resulted in an increased consumptive demand and a much freer, current movement of pork and lard into trade channels.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe a single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prizes in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address THE NATIONAL SPOTTED POLAND-CHINA RECORD, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

NEW YORK STATE TESTING

The December report of the Dairy Improvement Association in the State of New York shows that for the previous month, as far as records have been compiled, the leader will again be the great grade Holstein owned by Sam Barber of Scottsburg. She made 87.5 lb. fat from 2,083 lb. milk. The second cow is a Holstein owned by Dale Brothers of the First Niagara Association with 1,950 lb. milk and 72.2 lb. fat. There is a tie for third position between a Holstein owned by J. B. Harbeck of Western Allegany Association and a cow in the dairy of Westlake and Dann of the Chemung Association. Each has 70.4 lb. fat to her credit. The Harbeck cow produced 2,013 lb. milk while the other has only 1,329 lb.

The October reports are all in and the four leading cows are grade Holsteins with a registered cow in fifth position. The leader rejoices in the name of "Jim." She is a five-year-old owned by Baird and Burrell of Chester and is credited with 87.8 lb. fat and 1,596.5 lb. milk. Sam Barber's grade Holstein, Aaggie, is second with 87 lb. fat and 2,175 lb. milk although it is eight months since she freshened.

Ellen, owned by R. Beecher of Livonia is in third position with 75.6 lb. fat and 1,978 lb. milk. "TT" owned by Don Warner of Geneseo is fourth with 75.6 lb. fat and 1,644 lb. milk. The purebred cow in fifth position has to her credit 75.1 lb. fat and 1,789 lb. milk and is owned by A. Roy of Wellsburg. The leader is in the Orange Association, the next three are enrolled in the Livingstone Association and Roy's herd is a member of the Chemung Association.

MADE A DANDY START

The Dakota County Cow Testing Association, Minnesota, finished their first month on December 1st. This Association has two testers. The Eastern Association had 281 cows with an average

production of 670 lb. milk and 207 lb. fat. The leader was a purebred Holstein owned by A. J. Reideil of Farmington, with 1,524 lb. milk and 67.05 lb. fat.

The Western Association tested 343 cows with an average of 791 lb. milk and 28.4 lb. fat. The high cow was a grade Holstein and a member of the herd of Thelander Bros., of Lakeville, with 1,650 lb. milk and 69.3 lb. butterfat. The Thelander Bros' herd of grade Holsteins was high with an average of 445 lb. fat.

SCHUMAN COWS SHOW PROMINENTLY

During the month of November, the leading cow in the Buckhorn, Iowa, association was a grade Holstein owned by Ed. Schuman with 55 lb. fat. Grade Holsteins had the lead in four positions. The Schuman herd consisted of 7 cows and averaged 28.8 lb. fat, while the average for the entire association of 200 cows was exactly 19 lb. fat.

During December there were 215 cows tested and they averaged 460 lb. milk and 196 lb. fat. The leader was a Holstein owned by Charles Martens with 49.4 lb. fat. A Schuman cow was second with 48.9 lb. fat and a Holstein owned by Geo. Blake was third with 47.8 lb. fat. Holsteins and Guernseys ranked high in testing this month. The herd of E. P. Kier numbers 17 head, and contains Holsteins, Guernseys and grades. They lead with an average of 31 lb. fat. The nine-cow dairy of Ed. Schuman was second with an average of 28.6 lb. fat.

BYRON HOLSTEINS TEST HIGH

The highest producer in the Byron, Wisconsin Cow Testing Association in the thirty days ending January 1st, is a registered Holstein owned by E. H. Korner, Fond du Lac. She produced 1,851 lb. milk, 77.7 lb. butterfat, her milk averaging 4.2%. A grade Holstein was second with 1,722 lb. milk, 74 lb. butterfat, the milk average being 4.3% and a registered Holstein, owned by John P. Kometer, Oakfield, was third with 1,482 lb. milk, 65.2 lb. fat, her milk averaging 4.4%. Notice the percentage of fat of the milk given by these three cows in test association work. A registered Guernsey was fourth with 62.9 lb. fat.

The honors for highest average herd went to the sixteen grade Holsteins owned by O. P. Schwefel with an average of 1,064 lb. milk, 37.17 lb. fat. The twelve-cow grade Holstein dairy of Frank Willis was second with 1,050 lb. milk, 36.44 lb. fat. The tester of this association is Alfred Miller.

DIAMOND CUT DIAMOND

Pat—Say, Pete, why do you always have holes in your shoes when your father is a cobbler?

Pete—Well, why does your baby brother have only one tooth when your father is a dentist?

A GOOD SEXTETTE

Six Holstein cows on the Blockville Farm, Glencoe, Minn., were recently tested under the supervision of H. R. Shepherd, reports Chas. E. Walker of the Biscay Holstein Breeders' Association. Pauline Fobes Beets De Kol made 501.5 lb. milk, 28.127 lb. butter; Jessie Fobes Pietertje made 554.3 lb. milk, 26.6 lb. butter; Jessie Fobes Anna De Mar made 540.6 lb. milk, 25.94 lb. butter; and the senior two-year-old Jessie De Mar Ormsby made 406.8 lb. milk, 19.38 lb. butter or nearly 60 lb. a day; the junior three-year-old Queen Pietertje Ormsby Canary produced 426.2 lb. milk, 22.36 lb. butter, averaging 61 lb. milk a day; the senior three-year-old Flossie Beets Hengerveld De Kol produced 470.6 lb. milk, 19.16 lb. butter.

NEW MARINETTE RECORD

A new high record for Marinette County, Wisconsin, has been made by Nijerk Korndyke Pietertje Pet, a twenty-five months old heifer owned at Beechwood Farms, Crivitz, Wis. This heifer was started in test November 29th, and in seven days made 381.3 lb. milk, 18.12 lb. butter. Seven days later she again went in test and in this seven days she made 467.7 lb. milk, 21.20 lb. butter. She had very little fitting for test. Her owner, W. B. Sanderson, believes that she could have made a better test. She is a daughter of Pabst Korndyke Admetus the former senior herdsire of Beechwood Farms and is the first daughter to be officially tested. There are eleven of her half-sisters in the herd which will be tested as they freshen.

MONTESANO COWS ARE GOOD

Twenty-five of the 237 cows tested in the Grays Harbor, Oregon Association, during November, produced between 40 and 50 lb. butterfat, 9 produced between 50 and 60 lb., while one made over 70 lb. The average production was 801.6 lb. milk, 29.7 lb. fat. Fifteen Holsteins owned by W. J. Berns, Montesano, averaged 1,013 lb. milk, 36.1 lb. fat, while fifty-four Holsteins owned by R. B. Arland, also of Montesano, averaged 937 lb. milk and 32 lb. fat. The leading small herd consisted of 8 Holsteins owned by A. A. Seifert of Elma, with an average of 954 lb. milk, 35.1 lb. butterfat.

HAGGLOF HAS GOOD COWS

During the month of December, 183 cows were tested in the Thurston County, Washington Association, although there were 259 enrolled. Of this number 46 made over 40 lb. fat in the month, while the average production per cow was 31.58 lb. fat. The leader was the well-known grade Durham cow owned by John Hagglof, she making 82.2 lb. butterfat. Iris Cynthia Jewel, also a member of the Hagglof herd, was second with 67.5 lb. fat. Mr. Hagglof had a number of other purebred Holsteins that made a good showing.

WHY PILE ON A TAX

The comparative prices of young heifers in Dane County, Wisconsin, is said to be \$110.00 for grades and \$125.00 for purebreds, or these were the figures for which a number of Illinois patrons purchased twelve head through Arthur Alling, secretary of the Dane County Holstein Breeders' Association. The entire consignment was purchased from around Oregon, from members of the County Breeders' Club.

While this fact may be seized upon by enemies of the purebred business to indicate that there is no extra profit in raising purebreds, still the facts in the case are that the purebreds realized \$15 a head more than did the grades, and aside from the cost of registering and transferring, the raising of the purebreds would not cost any more than it would to bring grades to the same age. Advocates of a heavy transfer fee will find very little inspiration in this report.

DAIRYMEN TO HEAR GOOD SPEAKERS

Breeders and Dairymen who attend the Meetings connected with the Pennsylvania Farm Products Show at Harrisburg, January 23d to 27th, will have an opportunity to listen to C. W. Larson, chief of the dairy division of the United States Department of Agriculture. He will deliver an address on "Opportunities in Dairying." L. B. Cook, manager of the Beaver Dairy Association will talk on "Higher Prices for Milk." Robert W. Balderson, secretary of the Pennsylvania Dairy Council will discuss "Milk Legislation," while E. B. Fitts, of the dairy extension department of the State College will speak on the subject "Increasing the Efficiency of the Dairy Herd."

The Pennsylvania Breeders and Dairymen's Association have certainly provided a strong and appealing program.

ROCK COUNTY ACTIVE

During the last half of December four carloads of Holstein cattle were shipped out of Rock County, Wisconsin, two carloads containing sixty-two grade cows went to Carlos E. Ramives, Fortunato Cucarar, Mexico. The average price was a little over \$75.00 a head. One carload was shipped to Riverton, Wyoming, and another carload containing twenty-six head went to a point in central Illinois. During the week ending December 24th, 106 head were sold from in and near Rock County.

A Mexican firm has contracted with F. B. Green & Son of Evansville for regular shipments of dairy cattle.

As soon as the area test is made in Rock County it is planned to put into effect a complete system of listing all livestock in the central agricultural office.

Pat (looking at the large grapefruit)—My! Mike, it wouldn't take many of them oranges to make a dozen, would it? Mike—No. siree!—

SCHROEDER SELLS HIS HOLSTEINS

C. W. Anderson, Burbank, California, has purchased the interest of E. C. Schroeder in the big Holstein herd which they owned jointly and will continue the business alone. This herd is made up largely of daughters and granddaughters of Sir Pietertje Ormsby Mercedes, and includes sixteen daughters of the old sire, two of which are from Spring Brook Bess, Burke 2d. It also includes fifteen daughters of Sir Pietertje Ormsby Mercedes 37th, while most of the cows are bred to this bull, who himself arrived in California early in December. In the Anderson herd there are six cows with year records of over 1,000 lb. and a number with records ranging from 800 to 1,000 lb. It is planned to continue testing the cows for long-time records.

Mr. Schroeder is one of the de facto board of the Holstein-Friesian Association of America. He was elected in 1920 to serve four years, but as far as we know, has not attended any of the meetings of the de facto board of directors during the past eighteen months, apparently having lost interest in its deliberations, actions and law suits.

MERCER BREEDERS ENDORSE AREA PLAN

A meeting of cattle owners of Mercer County held at Mercer, January 3d, endorsed the area plan of Tuberculosis Eradication and will launch a movement to have all the animals in the county tuberculin tested. This is the first movement of this kind in Pennsylvania which has heretofore gone solidly against the area plan. Mercer County contains about 37,000 head of beef and dairy cattle.

STEVES CHANGING HERD-SIRES

F. W. Steves & Son of Green Plains Stock farm, Menomonie, Wisconsin, have sold their former herdsire, Cloverlawn Johanna Pieve 11th to H. D. Hanson of Sleepy Eye, Minnesota, and have purchased in his place King Pietertje Ormsby Pieve 37th from Hargrove & Arnold. The purchase was made last summer, but as the Iowa owners wanted to include this animal in their show herd which did so well in the great fairs last fall, he was not shipped until recently.

WHOA! NANCY

Nancy Mercedes De Kol 2d, No. 134-437, owned by S. H. Shelton of Yates Center, Kansas, became the mother of seven calves during the past four years. This included three sets of twins. Nancy is eleven years of age and her owner claims that she has earned him an average of \$350 a year for the past four years. Her owner reports that she has produced 96 lb. milk in a day and made 32 lb. butter in a week, and that he has refused \$1,000 for her.

Woman never wants the last word; she wants to keep right on talking.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won Grand Championship over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year. A good investment. Subscribe today.

GOOD HOLSTEINS HERE

The December report of the Cumberland County, Pennsylvania Cow Testing Association shows that the high cow for fat production is a Holstein owned by J. B. Meixel of Boiling Springs, she making 80.2 lb. fat from 2,105 lb. milk and having an average test of 3.93%. The highest producing animal for milk was a Holstein owned by David Gible of Mechanicsburg, with 2,341 lb. milk, 60.9 lb. fat. The registered Holstein herd of I. V. Otto of Boiling Springs, made a good showing.

During the month 28 herds containing 275 cows in milk and 65 dry cows were tested. Forty-two cows produced over 40 lb. fat and 19 over 50 lb., while 38 exceeded 1,200 lb. milk. The tester, A. A. Raudabaugh, reports that during the past eighteen months, eight bulls have been purchased by members of the Association from other members of the Association and that the dams of these bulls were among the highest producers shown in the herds. Seven dairymen who were not members of the Association purchased bulls from members on the merits of the records made by the dams.

The December report makes the best showing of any in the five months of the fourth year's work of this Association, being highest, both in milk production and butterfat.

GOOD TEST RECORDS

The herd of Mike Babylon consisting of 28 Holsteins averaged 1,087 lb. milk and 45.2 lb. butterfat in the Orange County, California Testing Association. During the month of November, 790 of the 800 cows enrolled were tested. The individual leader was owned by C. S. Walker with 2,045 lb. milk and 114.5 lb. butterfat. A Babylon cow was second with 1,905 lb. milk and 105.3 lb. fat, while a cow of the Plavan and Stringer herd gave 2,145 lb. milk and 93.8 lb. fat.

Herd under the Accredited Plan

KATY GERBEN

Born December 7, 1902, died December 12, 1922, aged 20 years and 5 days—these figures represent the beginning and the end of the life of the famous Nebraska dairy queen, Katy Gerben. She was born in the University of Nebraska herd and there she died and during her life she did more to advertise the dairy business in her native state than has any other Nebraska cow.

During her lifetime she produced fourteen calves, 173,004 lb. milk and 5,605 lb. butter fat, or figured on the 80% basis, 7,006 lb. butter. A short time before her death she weighed 1,400 lb. so that during her lifetime she produced 123 times her own weight in milk and five times her weight in butter. As a three-year-old her record of 18,573.4 lb. milk, 775.55 lb. butter was a world's record in class at time of making. She was still giving milk at the time of her death, the cause of which was old age.

For more than seventeen years Katy Gerben has been one of the outstanding figures on the campus of the University of Nebraska. She was the pet and pride of the agricultural students who were always eager to show her to visitors and to sing her praises. Her splendid records made year after year have induced many Nebraska farmers to seriously take up dairying and the raising of purebred Holsteins. Her sons have headed some of the best herds in the state. Her daughters and granddaughters have made splendid records not only in the University herd, but also in other hands. The University of Nebraska bred and developed her, tested her and gave her the opportunity to make herself famous, and she in turn made the University famous wherever American bred Holsteins are known.

SIX MONTHS' PROGRESS

The Crystal Lake, Iowa Association, was started July 1, 1922, with 26 members, having about 400 cows of which 195 were Holsteins, 64 Guernseys, 135 Short-horns and Red Polls and 7 Jerseys. The herd of Sam Gooden was high during July, August and September with an average of 31 lb. fat per cow. The E. R. Ostrander herd was high in October with an average of 32 lb., while the Martin Thompson herd was high in November with an average of 43 lb. Thompson furnished the individual leader during the previous months with 57, 67 and 50 lb. butterfat. They were all Holsteins.

THE BREED SHOWS WELL

There were 278 cows tested during November in the Clark-Scott, Indiana Association, reports H. H. Hubbard, the official tester. Of this number 22 exceeded 40 lb. fat for the month and 7 gave 50 lb. or better. The leader was a purebred Holstein owned by Clark Dellinger, she making 1,404 lb. milk and 58.9 lb. fat with an average test of 4.2%. Three of the seven leaders were purebred animals, two being Holsteins and one a Jersey.

GETTING SPOTTED

In 1919 Henry Hatisohl of Linn, Kansas, attended the Kansas National Livestock Show and there purchased eight three-year-old Holstein heifers. The first year he had them they earned him an average net profit of \$87.41, and each produced from 300 to 381 lb. butter fat.

At the end of the year at the annual meeting of the community creamery, at Linn, Mr. Hatisohl told of what the cattle had done for him and the manager of the creamery verified his statements from the creamery books. The local bank offered to assist other dairymen if they wished to buy similar animals and orders were at once given for 93 cows and representatives were appointed and purchased them from Wisconsin. Since that time another carload has been purchased and as a result, E. A. Montgomery of the Kansas State Farm Bureau told at the County Farm Bureau meeting that the farmers around Linn were rapidly getting rid of their scrubs and the herds were spotted black and white.

UNDER THE MOSER PLAN

Many of the Holstein breeders of Texas are increasing their herds, reports J. T. Orr, president of the Holstein-Friesian Breeders' club. Nearly a quarter of a million dollars worth of Holsteins have been imported into Dallas county under the Moser plan, in which the cattle have to pay for themselves. The Moser plan is named after C. O. Moser, secretary of the Texas club, a dairy expert and a practical farmer. Mr. Orr himself, is a prominent breeder and farmer of Dallas county.

The Holsteins were brought into the county during the period from December, 1917, until April, 1920. Thirty herds arrived, and the movement spread from Dallas into surrounding counties. The A. & M. college received requests for Holsteins from many parts of the state, and orders were given for carload shipments.

Traders began operations on a big scale and some of them exploited their innocent patrons by inducing them to purchase inferior animals. To combat this state of affairs, the Texas Holstein-Friesian Breeders' club was organized.

ADVERTISING IN LOUISIANA

A young Holstein cow owned by L. J. Heintz of St. Tammany parish near Covington, Louisiana, gave 1,138 lb. milk, averaging 3.3% during the thirty days from November 4th to December 4th. She produced 37.55 lb. butterfat while the cost for her feed was \$12.00. The performance of this cow is attracting much attention around Covington, and is already causing quite a number of the farmers to inquire into the producing and earning capacity of purebred Holsteins.

Pete—"Shut up! You don't know nothing! Why, you don't even know that Columbus discovered America."
Pierre—"I didn't know it was lost."

THE FIRST FIFTY HEAD

The first fifty head of cattle, which were sold at the Third Annual State Breeders' Sale, held at the New York State Fair Grounds, Syracuse, New York, January 17th, brought \$938.50, an average of \$187.70. These fifty head included calves. The sale was held under the management of the New York Holstein-Friesian Association.

FRANK BOONE DISPERSAL

At the Frank Boone dispersal sale at Cheney, Kansas, November 17th, seventeen purebred Holstein cows averaged \$151.20. The top price was \$327.50 for a three-year-old with a calf ten-days-old at her side. A yearling heifer brought \$137.50. There were thirty-nine head of stock registered or eligible for registration. In the number were five young bulls and nine calves under three months of age.

The sale had been postponed from the first to the seventeenth of November on account of bad weather. Buyers came from Pawnee, Reno, Pratt and Sedgwick counties and purchased thirty-three head, one cow and five calves were all that remained in Kingman County. The Boone herd was a real good one and won a number of prizes in the Cheney County Fair last October.

STEPHENSON COUNTY CONSIGNMENT SALE

The Stephenson County Consignment Sale held at Freeport, Illinois, consisted of purebred and grade cows and a number of bulls and heifer calves. The average prices were as follows: Purebred cows, \$165.82; grade cows, \$91.35; heifers, \$83.60; heifer calves, \$54.28; bulls of serviceable age, \$143.50. The top price was \$265 obtained for a bull consigned by Ray Angle, Dakota, and purchased by H. D. Bowen. The animal was from an untested dam and was an excellent individual. The next highest price for a male was \$250. This animal was from a 26-lb. dam and was not as good an individual as the sale topper. He was consigned by Howard Swaney of Ridot, and was purchased by J. W. Frankenberger. Yearling heifers sold low; heifer calves sold high. Animals from herds under Federal supervision brought 74% more than cattle from herds not under Federal supervision, although the animals were all tuberculin tested and a sixty- to ninety-day retest was guaranteed. The sale was managed by C. M. Long, field secretary of the Illinois Holstein-Friesian Association. The auctioneer was Edgar Eells.

INTERMOUNTAIN LIVESTOCK
SHOW

The sixth annual Intermountain Livestock show will be held in North Salt Lake, Utah, April 3d-7th, under the auspices of the Livestock Committee, Salt Lake City, Chamber of Commerce. Admission to the show is free while the railroads give reduced round trip fares from all points in the Intermountain district. Expert judges will be secured.

A new feature of the exposition will be the special awards for the boys' and girls' judging contests. Entrants must be between the ages of 10 and 18. The Intermountain Livestock Show is attended by farmers from points hundreds of miles distant and has done much for the livestock and dairy industry in the territory in which it operates.

PROSPECTIVE WINNERS

The prize junior calf at the 1922 Wisconsin State Fair was Jessie Mercedes Elgin, daughter of Witt Mercedes De Kol, owned by the Funk Brothers of Janesville. The day before Christmas this cow dropped twin heifer calves. They were sired by Beauty Johanna Korndyke Vale whose dam has a seven-day official record of 700 lb. milk and 28.96 lb. butter.

EASILY EXPLAINED

She—Sometimes you appear really manly and sometimes you are quite effeminate. How do you account for it?
He—It's hereditary, I suppose. One-half of my ancestors were males and the other half females.

TRACY GETS NEW HERDSIRE

J. R. Tracy & Sons, owners of Purity Farm, Platteville, Wis., recently purchased a new herdsire, Juliana Lilith Mutual, from Wilfred Helmeinstein of Blue Mounds, Wis. This bull is four years old and weighs nearly 2,500 lb., is from a 1000 lb. cow while his sire is from a cow with a 20 lb. record and is a son of the great century sire, King Segis Pontiac, the only century sire from a 37-lb. cow.

Juliana Lilith Mutual will be bred to the daughters of Bairdland Segis Sir Prize and to the many good record cows on the Tracy farm, an account of which will be found on page 753, November 22d issue of THE BREEDER AND DAIRYMAN.

MURPHY ACCEPTS POSITION

Lawrence F. Murphy, Hartford, Wisconsin, is now manager of the Meadow Spring Stock Farm at Peebles, of which F. H. Boyle is proprietor.

Mr. Murphy and his family, consisting of his wife and two children, for the past six years has owned and conducted the Badger Stock Farms. A number of large records have been made in that herd including that of 32.91 lb. butter in seven days on the junior two-year-old, Pietertje Ormsby Mercedes Frisby. This record was world's record in class at time of making.

PROFITABLE PURCHASE

Helen Rag Apple Johanna was purchased by Roy J. Hiller of Janesville, Wis., from a consignment of Archie Reed, Jr., to the last sale of the Rock County Holstein Association. She was then an untested cow but was a large animal showing lots of dairy qualities. Mr. Hiller thought he would try to make an official test although he had no previous experience. He started Helen on test and the first seven days she made 29.47 lb. butter.

MORE PIGS NEXT SPRING

More than 200,000 replies to questionnaires sent out by the United States Department of Agriculture, indicate a probable increase in Spring pigs. These questionnaires were distributed and gathered by rural mail carriers in all sections of the United States where pigs were produced for market. This is only the second survey of this kind. It indicates that the number of sows bred to farrow during the first six months of 1923 will be 13% more than the number of sows which actually farrowed in the spring of 1922, but the actual number will depend largely on the relative price of hogs and corn.

The probable increase in farrowings in the spring of 1923 over 1922, compares with an increase of 22.8 per cent in the spring of 1922 over 1921 in the 11 Corn Belt states. The spring pig crop of 1922 in the Southern States was about the same as in 1921. Comparisons for other states are not available.

The number of litters farrowed in the United States in the fall of 1922 shows an increase of 18.6 per cent over the fall of 1921. An increase of 27.8 per cent is shown for the eleven Corn Belt States as compared with an intended increase in these states of 49 per cent in the number of sows to be bred for all farrowing, as reported last May. The survey shows that in the Corn Belt states, 6.1 pigs per litter were saved in the fall of 1922 as compared with 5.9 pigs saved from the 1921 fall litters. For the entire United States a saving of 6.1 pigs per litter in the fall of 1922 as compared with 6 pigs per litter in 1921 is shown.

The department points out that increased production does not necessarily mean an over-supply or decline in prices. Total receipts of hogs at all public stockyards during the first 11 months of 1922, were 5 per cent more than in 1921. During the last four months of 1922, the increase totaled nearly 20 per cent. The

number of hogs slaughtered under Federal inspection during the same period was 7.7 per cent more than in 1921, and the total carcass weight of pork and lard resulting from this slaughter shows an increase of 461,246,000 lb. for the 11 months. Despite these increases cold storage holdings of pork and lard averaged considerably less than during 1921 and prices showed a substantial advance over 1921. The department's explanation for this situation is that improved industrial and economic conditions resulted in an increased consumptive demand and a much freer, current movement of pork and lard into trade channels.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

BIG PRODUCERS PAY BEST

The records of the Holland Patent Association, which operates in Oneida County, New York, have been analyzed by the State College of Agriculture at Ithaca. There were 14 herds enrolled which contained 288 cows, all over four years of age and the period considered was the year from June, 1921, to June, 1922.

The figures show that the cows producing less than 150 lb. butterfat made milk at a cost of \$1.76 per hundred lb., while those producing more than 350 lb. made milk at a cost of only \$.89 a hundred.

In commenting on the figures, the college states that most of the dairymen in the Association sell fluid milk, although some find a direct market in the city. The value of the product for each dairy is figured at the actual amount received, whether it was sold for fluid or market milk. With the exception of one herd of Jerseys, all of the cows were either purebred or grade Holsteins.

It is also pointed out that while the feed costs increased slightly with the increased production, the value above the cost of feed greatly increased, indicating that high producing cows make the best use of their feed and return the most profit.

DAIRYING BRINGS PROSPERITY

V. K. Lovett of Lineville, Iowa, purchased 22 head of Holstein cows around Waterloo, Wis. While Waterloo is a great dairy center with evidence of prosperity on every hand, he believes that his home district has better conditions and that the Holstein cow properly handled will do even better in her southern home.

WHO CAN BEAT THIS?

The Farmers' Association of Hamilton County, Indiana, boasts a member who has just renewed his membership at the age of 98 years, 9 months. His name is Clark Millikan and he lives near Sheridan. He is reported as being a progressive farmer and says he intends to always be a booster if he lives to be 150 years of age.

COUNTY LEADER

A purebred Holstein owned by Otto Kohlway, Grafton, Wis., has made a new milk and butter record for Ozaukee County. In seven days she produced 665.3 lb. milk, 29.41 lb. butter. Her best day was 100.2 lb. milk.

RINGLING BUYS HERD

R. T. Ringling, owner of the Ringling ranches at White Sulphur Springs, Montana, has purchased the entire herd of twenty-six purebred Holstein cattle owned by Ray Holloway of Bozeman. The average price was approximately \$250 a head.

Wilma—Will you buy me an ice cream sundae?

Bill—I don't think I'll be here Sunday.

Mining German Potash

Good Healthy Crops

It has long been known that *German Potash Salts* prevented certain plant diseases, as well as greatly increased the quantity and improved the quality of crops.

Scientific investigation now shows us that not only *Potash* but also *Magnesia* is required to prevent certain plant diseases.

The *German Potash Salts* contain *Magnesia* as well as *Potash*.

If you insist on having your fertilizer contain from 5 to 10 per cent of *Potash*, derived from *Genuine German Potash Salts*, you will secure at the same time enough *magnesia* to prevent plant diseases due to *magnesia* hunger.

For *Tobacco*, and for those *Fruits* which are injured by *Chlorin*, the fertilizer should carry 10 per cent of *Potash*, derived from *Sulfate of Potash* or from *Sulfate of Potash Magnesia*.

Use the latter if your tobacco leaves are not sound.

POTASH PAYS

TWO MORE FOR KING TWEED SPRING FARM

The list of A. R. O. daughters for King Tweede Spring Farm, and the average of his list as two-year-olds, was further increased by recent records made on two of them at Springdale Farm, in the herd of B. F. Jones & Son, South Montrose, Pa.

These heifers are full sisters. Their dam is a daughter of Tobe Rag Apple Korndyke bought by McAnulty and Winship at the Susquehanna County Sale last September. As the grand dam is sired by King Segis Hengerveld De Kol Burke, the heifers exemplify the results of years of careful breeding in the Jones herd.

Tobe Korndyke Pontiac Lass, No. 684718 at the age of 25 months, made 20.01 lb. butter from 485.2 lb. milk. She milked as high as 73.2 lb. in a day.

Tobe Tweede Pontiac Lass, No. 605-577, at the age of 38 months, made 28.29 lb. butter from 532.6 lb. milk. She milked 80.1 lb. in a day. Last year at the age of 25 months, she made 21.46 lb. butter from 453.5 lb. milk. Her two records at the average age of 32 months, average 24.88 lb. butter, 493.1 lb. milk, a pretty high mark for average as a two-year-old.

The sire now is owned in the herd of Abner S. Deysher, of Reading, who purchased him in the first Brentwood sale. He is siring some fine calves. He now has 15 A. R. daughters and with the exception of two whose records were made five and ten months after calving, the entire list averages over 20 lb. butter and 450 lb. milk at an average age of less than three years.

BIG RECORD AT BLOOMINGDALE

Matador Hengerveld Bess, the splendid daughter of Matador Segis Walker, owned by Bloomingdale Farms, Somerville, N. J., has finished her year's work and in 365 days produced 26,667.5 lb. milk and 1,034.6 lb. fat, equivalent to 1,293.2 lb. butter on the 80% basis. She thus becomes the highest year record daughter of her sire. When fresh she made a seven-day official record of 656 lb. milk and 31.65 lb. butter as a six-year-old, her milk averaging 3.86%. We are assured by her owners that Matador Hengerveld Bess had just ordinary care and attention while making this record. She was not pushed or over worked at any time and is in as fine condition today as when she started on test. She was bred July 31, 1922, to King Model, the splendid senior herdsire at Bloomingdale Farms.

H. C. REINHOLD TO SELL "SHAWANO FARMS"

The news that H. C. Reinhold, prominent breeder of Holsteins, intends to dispose of "Shawano Farms," his fine 96-acre dairy farm located at Jamison, Bucks County, Pa., will come as a surprise to his many friends. This property is one of the best in its section and is

completely equipped to produce certified milk. At present Mr. Reinhold has a fine herd of 35 head of stock on this farm which is very conveniently situated, being only 22 miles from the great Philadelphia market. He has spared no expense nor trouble to make his establishment modern and up-to-date in every way. All of the twenty fine buildings have running water, electric lights, cork brick floors, and are ceiled with North Carolina lining. Even the employees have been taken care of with a building containing stationary porcelain wash stands and shower baths. Mr. Reinhold has topped off this achievement by building an attractive 10-room frame bungalow and a new hip roof barn which is modern in every way. This complete dairy barn, an announcement of which is carried in the classified columns, is indeed a credit to its owner and to the Holstein industry.

A THIRTY-POUND DAIRY

How would you like to have a milking herd made up entirely of cows with 30-lb. seven-day butter records?

The Rev. Nelson L. Browning of Hemet, California, has such a herd although he has only two cows and he made the official records on both of these. Bess Hartog Pietertje De Kol, No. 459632 at the age of 3 years, 10 months and 13 days made a seven-day official record of 30.997 lb. butter and 484.4 lb. milk. Segis De Kol Bess, No. 403729 produced in seven-day official test, 31.64 lb. butter from 558.4 lb. milk.

Mr. Browning who takes his recreation in the form of working on the farm and with his small but high-class dairy, purchased these two animals, and he and his wife cared for them when they made their official tests.

WINTER FEEDING RATION

The New York State College of Agriculture recommends the following mixture for feeding with corn and silage and mixed hay containing about one-half clover. As oats are now cheaper than wheat bran in New York State and the East, they are included in the ration which is a very good one for general winter feed. It has an approximate analysis of 21% protein; 9% fiber; and 5% fat.

200 lb. wheat bran
400 lb. ground oats
400 lb. hominy
600 lb. gluten feed
200 lb. cottonseed meal 43%
200 lb. linseed oil meal

BAD COMPANY

A negro who had an injured head entered a doctor's office.

"Hello Sam! Got cut again, I see."

"Yes, sah. I done got carved up wid a razor."

"Why don't you keep out of bad company?" said the physician, after he had dressed the wound.

"Deed I'd like to; but I ain't got 'nuff money to git a divorce."—*Everybody's Magazine*.

THE REAL THING

A benevolent old gentleman was taking a stroll through the park one day when he encountered a couple of ragged youngsters.

"Mister," the elder accosted him, "my brother does some fine imitations. Give him a dime and he'll imitate a chicken for you."

"What will he do?" asked the old gentleman, with a smile, "Will he cackle?"

"Cackle nothing!" retorted the urchin indignantly. "He doesn't do any cheap imitations like that. Give him a dime, mister, and he will eat a worm."

In public life abuse is a greater power than silence. Many a man has been kicked into prominence.

THE SPRINGDALE HERD

Built up during the past seventeen years on a basis of profitable production and reproduction.

OUR PRESENT HERDSIRE IS

from a 26-lb. three-year-old and was sired by King Echo Sylvia Model, a son of Champion Echo Sylvia Model eleven 30-lb. daughters, and a 28-lb. daughter of a three times 33-lb. cow. Her dam three times over 32 lb. This young bull won second place in a class of sixteen at the 1922 New York State Fair.

OUR YOUNG CALVES ARE Sired BY

WOODMONT ECHO SYLVIA CHAMPION

first prize three-year-old 1922 New York State Fair. His sire, Sir Pietje Echo Sylvia, is also by Champion Echo Sylvia Pontiac, that great son of the champion milk producer, May Echo Sylvia. His dam, Butter Boy Empress, made 30.27 lb. butter in seven days, has milked 100 lb. in a day and was first prize aged cow, first in the A. R. O. class and Grand Champion at the 1921 New York State Fair.

OUR YOUNG COWS ARE BY

KING TWEDE SPRING FARM

His sire is Spring Farm King, full brother to the former World Champion and first 44-lb. cow; regarded as one of the best young sires of the breed. His dam, Dressie Lady Pontiac, has a record of 30.04 lb. butter, 614.8 lb. milk made in seven days and is full sister to the 33.08 lb. cow Dressie Princess Pontiac. Their sire is Spring Farm King Pontiac. Daughters of KING TWEDE SPRING FARM are making a splendid showing under real dairy conditions.

OUR OLDER COWS ARE DAUGHTERS OF

TOBE RAG APPLE KORNDYKE

Son of Christmas Tobe, 2d, 31.66 lb. butter in seven days and former World Champion ten-year-old. She is also the dam of Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in thirty days as a senior four-year-old, both being World Records when made. She in turn is dam of Geraldine Rag Apple Korndyke, 30.21 lb. butter in seven days, also as a four-year-old. Here is large production, generation after generation.

OF TWO BULL CALVES--THE LARGE, STRONG KIND

Sired by KING SYLVIA JOHANNA PONTIAC (brother to Carnation King Sylvia) whose dam, Otego Valley Christmas Belle, made 40.56 lb. butter in a week, averaging 93 lb. milk a day. She is dam of three daughters, one a 25.95-lb. three-year-old, one a 14.47-lb. yearling, while the third made better than 31 lb. butter in seven days two consecutive years, each time producing 100 lb. milk in a day and has a 1,000-lb. year butter record.

THE DAM of No. 1 made above 20 lb. of butter in seven days in heifer form.

This fellow's two nearest dams average better than 30 lb. butter in seven-day official work.

THE DAM of No. 2 is a first-calf heifer, daughter of our PIETJE PRIDE HOMESTEAD with over TWENTY THOUSAND POUNDS MILK and EIGHT HUNDRED POUNDS BUTTER in a year in the Merryall Barns.

Ask anything and everything you want to know about these calves. Come and see them, their dams and their sires. REMEMBER, we guarantee satisfaction.

The Holstein Breeder and Dairyman

VOL. II

HARRISBURG, PA., FEBRUARY 8, 1923

No. 3

The Pennsylvania Federation of Holstein-Friesian Clubs

By W. Hugh Jones, Secretary

MR. President, Ladies and Gentlemen, Holstein Breeders, I have been selected to perform a duty in explaining to you the objects of the Pennsylvania Federation of Holstein-Friesian Clubs. I know you are anxious to hear more important speakers than I, but I hope that you will remember what I say

for the importance of the matters that I bring to your attention.

The plan of organization is one of Federation, just as the name implies. The members pay their dues to the Secretary of the Local Club who turns in One Dollar to the Secretary of the Federation, making a dual membership in the State Organization and in the Local

W. HUGH JONES
Re-elected secretary of the Pennsylvania Federation of Holstein-Friesian Clubs at the annual meeting, January 25th.

Club. The working unit of our Federation is the County Club, the State Organization endeavors to co-ordinate the work of the Local Association and do work covering a wider field than the Local Association can cover.

A program of work was adopted by the Directors which we are endeavoring to follow. This program is divided naturally, into four parts, Organization, Education, Coöperative and Legislative.

In the line of Organization, we want to organize new Local Clubs and Federate those already organized. We want to assist local clubs in their organization. We believe that a number of persons working together along a certain line will obtain much better results than the same number of persons working separately. The same is likewise true of a number of Clubs working together.

Along the line of Education, we have supplied information to the breed and other papers in regard to the merits of the Holstein cow. We have provided

Educational Exhibits and Booths. Most of the credit for this is due to the Local Clubs.

Along the line of coöperation a great deal has been done particularly in the Local Clubs. We believe that it is a waste of time, money and energy for two organizations to do the same work. We therefore endeavor to coöperate our efforts with all existing agencies that are working towards the same ends that we desire to accomplish. We have done what we could to assist the work of the County Agents. We have done what we could to assist the Extension Department of State College and have received great benefit from their work. Where we find an assisting Agency doing our work, we are willing to leave the field entirely to them except where we can help more effectively.

The Legislative part of our program is very important just now as our Legislature is in session. We stand for an adequate appropriation for Tuberculosis Eradication. We think reasonable indemnities should be paid. A good many people think this is only a form of graft on the part of the Dairymen. This is not so. We believe that, while the livestock resources of the Commonwealth are held in private ownership, they really belong to the people of the State. Disease in its attacks destroys animal resources and thereby works irreparable loss and injury to the whole people of the State. It is, therefore, to the interests of the whole people to protect this portion of their Commonwealth as well as the other natural resources. Another reason why we should make earnest efforts to eradicate disease is the menace which it constitutes toward the health of the people.

We also stand for ample appropriations for the Pennsylvania State College. We believe the College is the Cap-Stone of our Educational system, that the poorer people of the state should have an equal chance with the rich for obtaining higher education. There is no institution within the State that will provide this so well as the Pennsylvania State College. Some of us know what it means to work our way through College. For many it would be absolutely impossible to obtain the Education they desire without the free tuition that State College gives.

We think it would be a great help along Educational lines to establish a State Fair. The people of the state in attending the fair could see the marvelous development of our Agricultural products including cattle. It would educate them to the value of these products and bring an appreciation and knowledge of the efforts of

the farmer and dairyman in the development of our State and the feeding of its people.

We would like to see Legislation against filled milk. We consider filled milk an imposition on the public and a positive menace to the health of the people. It does not contain the vitamins that science has demonstrated are essential to human health.

It is more expensive to neglect some things than it is to provide for them. Among these are the Education

and the Health of the people. In advocating these things in the Legislative portion of our program, we believe we are standing for principles that are for the interests of the whole people of this great Commonwealth. We hope to deserve and to receive the support of the Local Clubs and the Holstein Breeders throughout the State.

Speech at the banquet of the Pennsylvania Federation of Holstein-Friesian Clubs, Masonic Building, Harrisburg, Pa., January 24, 1923.

More Cows or Better Care, Which?

By H. M. Jones, South Dakota Extension Dairy Specialist

A GREAT many farmers undertake dairying on too large a scale, that is, they try to keep more cows than they are prepared to handle. Not long ago a certain farmer was milking thirty cows. He was getting ten gallons of cream per week and declared that he was making money. Let us see whether he actually was.

Ten gallons of cream usually contain about 25 pounds of butterfat. He was getting 100 pounds of butterfat per month, which at that time was worth about \$35. Thus each cow yielded just a little over one dollar per month gross income. The value of feed used was undoubtedly more than this amount.

When this was called to his attention he replied that his profit was represented by a calf from each cow once a year which he sold as beef. This failed to allow anything for labor, but he got around that by saying that labor cost him nothing as he had a large family.

If this man would reduce his herd to say 12 or 15 cows and give them special care, he would have a much larger gross income and probably a net income instead of the loss which he sustains at the present time. It would not even be necessary for him to dispose of his poorer cows. If he wants an income from feeding steers, and has the feed to carry them through, all good and well, let him keep the entire 30 head. But if he keeps his 12 or 15 milk cows separate, and gives them the proper feed and care, he will be making more money with less labor and at a lower feed cost.

A great many farmers in other states as well as South Dakota are in the same predicament as that of the man just described, trying to milk more cows than they are equipped to handle. It goes without saying that individual cows which are losing money should be weeded out as rapidly as they are detected. It is also true that even fairly good cows should be turned dry when their presence in the milking herd cuts down its efficiency.

What is the proper size of dairy herd for the average South Dakota farm? That depends upon the size of the farm and the amount of feed and labor available. It is generally conceded that any herd, to be highly profitable, should contain at least twelve cows. If the herd is any smaller than this, the milking is usually added to both ends of the day's work, an unsatisfactory arrangement. When there are twelve or more cows, milking becomes a regular part of the day's work. On the average South Dakota farm, however,

it is found that the number of dairy cows should not exceed fifteen unless labor is very plentiful.

The history of a cow-testing association in Virginia shows that one member started with 31 cows. After one year of testing, he cut his herd to 20 cows and with the additional feed and care which he was thus able to provide, his 20 cows produced more butterfat than his original 31. The third year he reduced his herd still further to only 10 cows. They produced almost as much as the original herd. The fourth year he increased the herd to 20 cows and their production was more than twice as great as that of the original herd.

Reducing the herd, however, is useless unless accompanied by better feeding and care of the cows retained. A dairy cow is an animal that produces most economically when fed to her full capacity, and this is usually impossible on an overstocked farm. Feed, care, and water are of far more value to a dairy herd than increased numbers of cows.

The average dairy herd in South Dakota is small, about 6 cows, and therefore, less efficient than it might be. Many herds are too large and as a result equally inefficient, being more than the owner can handle properly. A great many herds just the right size are more profitable than the others. Nearly all of them have room for improvement in the matter of feed and care.

Great progress has been made along lines of dairy improvement. Higher producing cows have been secured in many instances. Poor producing cows have been sent to the scrap heap. Better feed and care have been bestowed in these and other cases. The results have been very good but there are still thousands of herds needing the readjustment in numbers which will make them truly efficient.

Salting the Cows

By George Leslie

JUST suppose that you sit down to dine, with some rare roast beef, baked potatoes and a salad on the table. You taste of the beef and potatoes, find them flat on your palate and automatically reach for the salt shaker, expecting to find it in its accustomed place at your right hand. It isn't there, and inquiry elicits the information that the cook has already salted the dinner and you are to eat it "as is."

Or, say your first mouthful of beef is much too salt for your taste. Are you going to enjoy it, or eat it at all? You are not; and will probably inform the world in general and the cook or your wife in particular that you'll have your salt shaker on the table where you can use it as you want, or there will be trouble in three volumes and heavy type.

This being so, why not give your dairy cattle the same choice as to seasoning their daily ration? If a mixed commercial grain is being used in your barn, there will be one tenth or one quarter of one per cent of salt in it, according to the manufacturers' ideas of what is needed, which means that in a hundred pound bag of grain there is from 1 3-5 oz. to 4 oz. of salt. When that bag of grain is fed to eight to ten cows in an ordinary dairy herd, what can the individual cow get as seasoning for her ration? about what you got in your flat dinner and she cannot lay down the law to get a salt shaker when she wants it, as you can.

If the grain is salted in the barn, a lot of salt may get in one cow's grain and less in others' and none at all in some of it. In fact it is not the best practice to salt the cow's feed. Put a smooth salt brick where she may help herself. She will take it or leave it according to the requirements of her system just as you wish to do and insist on doing when getting your own "three squares" a day.

As the content of salt varies in soils and in water, both in wells and in streams, neither dry nor green roughages nor drinking water is always the same so far as this most necessary mineral constituent is concerned.

Aside from the question of pleasing the palate, the cow must have salt in varying amounts as has been proven (if indeed it needed proof) by experimental work. Work done at the Wisconsin Experiment Station showed that a dairy cow needed 3-4 oz. of salt per day for 1,000 lbs. of body weight, and 2-3 oz. for every 20 lbs. milk she made, as an average requirement.

An adequate allowance of salt means that the cow will—if she can get it—drink plenty of water and that has its direct influence on milk production.

This was brought directly to our attention a few weeks ago. A man who had been milking cows for at least twenty years had been getting poor production and did not know where to look for improvement. He and did not know where to look for improvement. He was discussing the matter with a man who had advised a change of grain to tempt their appetite. "At the same time" said he, "I'd give them a good lot of salt in the grain—mix it in so they'll have to eat it. I think they need it, as their coats don't look good to

me." This advice was followed, a lot of salt was given the cows in the new feed and up came the production, a whole 40-quart can a day for the herd. Fine and dandy! This lasted for a few weeks, but gradually the cows came back down to the low production, on exactly the same feed.

Discussing the matter, with a fairly plain explanation already in mind, we learned that the cows were all driven out daily into a field through which ran a brook at which they were watered. The weather had been raw and rainy and as the owner said, the cows would not drink much, generally. When the extra salt ration was being fed, they "drank a lot more" and had to be driven in, where before they had stood around waiting to be allowed to get through. I am mixing them a good ration" said the owner. "How about the salt?" we asked. "Oh, we give them a little, now and then." So we harked back and by comparing times and yields and rations found that the increased yield was coincident with the heavy salt allowance, which caused the cattle to consume a great deal more water every time they were allowed to get at it; and that when, owing to the lack of a regular supply of even a small amount of salt, they refused to drink plenty of water, the milk flow went back to its low level and stayed there.

These cows evidently had not enough of either salt or water and when an excess of the former made them take a greatly increased amount of the latter, the effect was immediately shown in the milk yield.

If salt is where the cattle can take it when inclined to, in the form of a salt brick for "best results, they will keep a good working supply of water and salt in their systems (always provided water too, is before them in the barn) and show the benefit in the pail.

Too little salt affects the appetite and general health adversely; too much purges or leads to digestive disturbances. Keep a salt brick before her and let the cow "salt her own."

Dairyman's League Contract Held Legal

THE Dairymen's League Coöperative Association Inc., has won another victory in the courts of law against dairymen who decline to live up to the pooling contract they had signed. The League brought an action against Merle Holmes and George Holmes and sister of Afton, Chenango County, New York for breach of contract. This was tried before Judge Louis Martin in the Supreme Court at Utica, New York, and resulted in a jury verdict in favor of the Coöperative Association. This is the first decision to establish the fact that the pooling contracts offered by the League when once signed are legal and binding and are enforceable.

The League brought action last July against Holmes Brothers to recover damages for violation of contract.

The Holmes Brothers had transferred their farm to their sister which the League claimed was done for the purpose of evading the terms of the pooling contract.

The defendants claimed that they had never really signed the contract, that the Association had not delivered their certificate of indebtedness, that the Association was a monopoly in restraint of trade, that the provisions of the contract regarding damages were illegal, that the League was conducting a business and making deductions in New York State on account of Plants located in Pennsylvania, New Jersey and elsewhere, that the contract was obtained by duress, that the Association had improperly deducted considerable sums of money more than authorized by the statute under which it was doing business because the defendant was not a member.

During the trial the defense waived the question of monopoly in restraint of trade. The evidence brought out the fact that the contract had not been signed by the defendants but that they had authorized a Mr. Gurnsey to sign it for them and that their business had been operated under it for nearly a year and that they had been furnished with a copy of the contract and were familiar with its provisions.

The Court held against the defendants as a matter of law on all contentions of the plaintiff except as to the question as to whether or not the contract which they had authorized Mr. Guernsey to sign had been sufficiently ratified by them and as to whether or not they had had sufficient notice of the clauses relating to default and damages.

The jury brought in a verdict on January 27th in favor of the League.

In the course of the trial the counsel for the League consented that the jury might deduct from the amounts of damages claimed the amount of the certificate of indebtedness for the year 1921 and for the amount of the check for April milk which amounts had been withheld by the Association in view of the violation of the contract. The amount of the verdict was \$228.16.

New Zealand 30,000 Pound Cow

COWS with records of 30,000 lbs. of milk in a year are getting to be quite common. A recent issue of the BREEDER AND DAIRYMAN carried an account of Brookside Colantha, the British Friesian champion and now we are informed that a New Zealand cow, Alcartra Clothilde Pietze has produced 31,350 lb. milk and 1,145 lb. butter fat in a year or 1,431.25 lb. butter on the 80% basis.

This great record was made under the supervision of the Department of Agriculture of the Dominion of New Zealand. She was milked only three times a day and the whole of the year she ran on pasture day and night. Nearly all of her food consumed during the year consisted of grass, eaten while at pasture. The test commenced from the day she calved and she is due to calve again within a month of the completion of the year. Her owner is Mr. Vernon Marx of Mangatoki, Taranaki. Alcartra was not always held in the high esteem she is at the present time, for her breeder sold her after she was fresh for \$215.00 and she had a heifer calf which was sold for \$30.00. We understand prices have gone up since that time.

City of Bridgeport Records

CLOTHILDE Queen Pontiac Hartog, 654746, one of the good cows in the City of Bridgeport herd freshened at the age of two years seven months and twenty-six days. She has completed a 365 day record of 20,043 lb. milk and 805 lb. butter.

The Sire of "Queen" was King Hengerveld Lockspur Pontiac 219558 and her dam was Clothilde Hartog Queen 245360.

Rye Hill Korndyke Konigen 587733 freshened at the age of two years, three months and four days. She has just completed a 365 day record of 22,718 lb. of milk and 810 lb. butter, which we believe makes her State Champion for both milk and butter in the Junior two-year-old class.

Rye Hill Korndyke Konigen made a number of splendid records when she was fresh producing 593 lb.

RYE HILL KORNDYKE KONIGEN
22,718 lb. milk and 810 lb. butter in a year as a junior two-year-old. Connecticut State Champion for both milk and butter, owned by Department of Public Charities, Bridgeport, Connecticut.

milk in seven days, 2,427.3 lb. milk in thirty days and 9,361.2 lb. milk in 128 days. She became the Champion of New England in the Junior two-year-old class for seven and thirty day milk production.

Rye Hill is a granddaughter of Ormsby Korndyke Lad, being sired by his 1,000 lb. son, Ormsby Korndyke Lad Son 221147. Her dam was Homer Aaggie Konigen Netherland 347316, an untested cow.

Rye Hill is not only a producer but is a show cow of quality. She was Grand Champion Female at the Connecticut State Fair, Hartford, 1922.

The City of Bridgeport Farms are owned by the Department of Public Charities of Bridgeport, Connecticut, and are under the supervision of the well-known Holstein enthusiast, Angus P. Thorne.

DID NOAH DO IT?

It was a hot day on the border. The regiment had been ordered to move, and for more than an hour a soldier had tried to get his mule into a box car. The chaplain came along and began to laugh at the soldier's discomfiture. The poor soldier turned as he wiped his perspiring brow and said: "Chaplain, how did Noah ever get two of these things into the ark?"—

Pennsylvania Breeders Hear Good Speakers

THE Annual Meeting and Banquet of the Pennsylvania Federation of Holstein-Friesian Clubs was held at Harrisburg, January 24th and 25th. The Banquet was tendered in honor of President Frank O. Lowden and was held on the evening of the 24th in the Masonic Temple. The business meeting was held

on the 25th in the Assembly Room at the Evangelical Building.

The Banquet was a grand affair. Covers were laid for 263 guests. A score or more breeders who arrived late, were unable to find accommodations at the tables and retired to the balcony where they remained to enjoy the musical and literary programs.

Prominent speakers were on the program. Dr. John M. Thomas, president of Pennsylvania State College, presided as

DR. JOHN M. THOMAS
President of Pennsylvania State College,
Toastmaster at the Pennsylvania
Breeders Banquet at Harrisburg,
January 24th.

Toastmaster. Hon. Gifford Pinchot, governor of Pennsylvania; Hon. Frank O. Lowden, president of the Holstein-Friesian Association of America; Hon. Frank Willets, secretary of Agriculture of Pennsylvania; Mr. George E. Stevenson, vice-president of the Holstein-Friesian Association of America and Mr. W. Hugh Jones, secretary of the Pennsylvania Federation of Holstein-Friesian Clubs, were the speakers. Music was furnished by the Municipal Orchestra and the Susquehanna County Holstein Quartette.

Mr. Hugh Jones was the first to speak and gave a forceful talk, outlining the purposes of the State Federation. We are publishing his speech on another page of this issue.

Following Mr. Jones remarks, President John A. Bell introduced Dr. John M. Thomas who, after a few appropriate remarks relative to the dairy situation in Pennsylvania, mentioned the fact that Pennsylvania is a great dairy state. The annual value of Pennsylvania Dairy products is \$100,000,000; it ranks seventh in the total number of dairy cows; fourth in the amount of milk produced and third in the value of dairy products. Following these brief remarks Dr. Thomas called upon Governor Pinchot to give the address of welcome which was brief but to the point. While Governor Pinchot did not commit himself in any way relative to appropriations for State College or for the payment of

indemnity for tubercular cattle, he assured those present that he was in sympathy with the further advancement of Agricultural education and appreciated the great work that was being accomplished at State College, laid particular stress on the value and necessity of a more efficient organization to market farm products and said he approved of the tuberculosis eradication work that was being carried on in the state.

President Lowden, the next speaker, after briefly outlining his connection with the Holstein-Friesian Association, gave a conclusive talk in the interests of cooperative marketing, citing the work being accomplished by the Farm Bureau Federation and his own experience as a member of a cotton growers organization in Arkansas where the growers organized with a view of cooperative marketing. He stated that the members of the organization received 6c per pound or \$30 per bale more for their cotton than that paid to the independent growers, due to more efficient methods in grading, handling and marketing the cotton crop by the organization experts.

Mr. Frank G. Willets, Pennsylvania's new Secretary of Agriculture also spoke with reference to cooperative marketing. Mr. Willets is Treasurer of the Inter-state Milk Producers Association of Pennsylvania and has had a wide experience in cooperative marketing of milk. He feels that the marketing problems are real problems for the farmers and dairymen of Pennsylvania and stated that one of the projects of the Department of Agriculture during his administration that would receive particular attention, would be perfecting a more efficient marketing organization for Pennsylvania farmers and dairymen.

Mr. Fred Rasmussen, former Secretary of Agriculture, was the next speaker. He is an expert on dairy farming and an admirer of the Holstein cow. In his talk he brought out the fact that the value of dairy products produced in Pennsylvania were greater than the value of any other Agricultural product, that the value of dairy products was twice the value of all cattle; twice the value of all hogs; twice the value of all sheep; that of the total number of dairy cows in Pennsylvania only 5% were purebreds and there was ample opportunity for the breeders of purebred Holstein cattle to expand and develop within the borders of their state. He advocated diversified farming, compared the dairy cattle that were found in the northern tier counties of Pennsylvania with the dairy cattle in the more fertile, strictly crop-growing counties in the southern part of the state and brought out the fact that the character of the cows that were on farms in the northern counties, were much superior on an average than cows found in the wheat, corn, tobacco, and alfalfa growing counties in the southern part of the state.

Mr. George E. Stevenson owner and founder of Origin Farms, a man who is widely known as an interesting and capable speaker, was the last to appear on the program, and gave a very comprehensive talk along the lines of breeding and developing dairy cattle. He not only told of his experiences in breeding with a view of eliminating the horns but also his experi-

ence in trying to maintain a high fat percentage in the milk.

One of the most enjoyable features of the Banquet program, were selections rendered by the Susquehanna County Holstein Quartette led by Dr. Thompson, President of the Susquehanna County Holstein club. We are reprinting the words of three of the selections rendered by the Quartette as we believe the songs would bear repeating at similar gatherings and would be enjoyed and received with an equal amount of applause.

"SMILES"

There are cows that make you happy,
There are cows that make you swear,
There are cows that steal away the profits
As the clippers steal away the hair:
There are cows that make a splendid record
And bring you fame in seven days
And We'll tell the world you've got to hand it
To the Holstein, The cow that pays.

I been working in the cow barn
Since the break of day,
I've been working in the cow barn,
Throwing down the hay:
Grooming every cow and heifer,
Combing out each tail,
Don't you hear those calves a bawling."
"Master, wash that pail."

"LITTLE LIZA JANE"

I got a cow thats black and white, Little Liza Jane,
Milk her morning, noon and night, Little Liza Jane.

Chorus:

Oh, you Holstein, Holstein-Friesian Cow,
Oh, you Holstein, Holstein-Friesian Cow.

Harrisburg girls are smooth as silk, Little Liza Jane,
All brought up on Holstein milk. Little Liza Jane,

Guernsey milk is nice and rich, Little Liza Jane,
Gives the babies all the itch. Little Liza Jane,
Jersey milk is full of fat, Little Liza Jane,
You can't get rich on only that. Little Liza Jane.

Holstein milk is the best to drink, Little Liza Jane,
Makes muscle to work and brains to think, Little Liza Jane.

The Business Meeting was held in the Evangelical Building on January 25th and was called to order by President John A. Bell who briefly summarized the work of the Federation for the past year. Mr. Bell expressed his gratitude to the breeders for their support and coöperation and commended with high praise, the valuable services rendered to the Federation by Secretary W. Hugh Jones.

To proceed more rapidly with the business meeting, the calling of the roll was dispensed with. The reports of the Secretary and Treasurer was read, and approved. The Treasurer's report showed a balance of \$728.07 on hand as against \$403.95 last year.

Mr. Allen Crissey, the Extension representative for Pennsylvania, New Jersey and Delaware addressed the meeting. Mr. Crissey said that he was employed to do Extension work and was ready and willing to coöperate with the members of County and Local Clubs in any way that he could to further advance the Holstein breed and the breeders' interests, and that he would like to have the representatives from the various local clubs who were present at the meeting, confer with him with a view of arranging a schedule so that he could visit

their counties or clubs at an early date and talk to the breeders relative to the work which he had outlined.

Dr. Quinn in charge of the Federal Tuberculosis Eradication work in Pennsylvania and Dr. Bruner, who represented the Bureau of Animal Industry of Pennsylvania, spoke regarding the work being done in Pennsylvania toward tuberculosis eradication. It developed that the Federal Government set aside \$100,000 last July to pay indemnity on cattle slaughtered in Pennsylvania to prevent the spread of tuberculosis and that the breeders were unable to avail themselves of this fund owing to the fact that the State Legislature had failed to provide an equal amount to comply with the agreement between the State and Federal Government. The money appropriated by the last legislature to pay indemnity on tubercular cattle has been depleted and cattle to the value of \$175,000 had been slaughtered for which no indemnity has been provided. It is hoped, however, to have the present Legislature which is now in session, pass a Deficiency Appropriation bill of \$235,000, \$175,000 to go towards paying indemnity for cattle that have been slaughtered and \$60,000 to pay indemnity on cattle that may be slaughtered previous to June 1st, when the regular appropriation, if made should be available.

In the discussion that followed Dr. Quinn's and Dr. Bruner's remarks, Mr. George E. Stevenson offered the following resolution which was passed unanimously.

RESOLVED That the President of the Federation of Holstein-Friesian Clubs of Pennsylvania appoint a committee of one or more members to prepare a statement of the condition of the plan of the Federal Bureau of Animal Industry and the State Livestock Sanitary Board for the eradication of bovine tuberculosis and append thereto a statement of the necessity of a suitable appropriation to meet obligations of the state for past pledges and promises to breeders of cattle for indemnity. Said Committee to work in harmony but not necessarily in conjunction with committees of other breeding organizations. Said Committee to be instructed to seek a hearing with the Secretary of Agriculture and Governor Pinchot for the purpose of persuading the Governor of the necessity of fulfilling former promises made by the administration in past years.

It was the sentiment of those present that an effort should be made to add a dairy cattle exhibit to the State Farm Products Show. Prof. Fitch of State College suggested that if the breeders desired such an exhibit and would provide the cattle that it would be up to the show management to find a place where the cattle could be exhibited. The matter was finally disposed of by a motion directing that the President appoint a committee to confer with the joint Show Committee relative to the advisability of staging a show of dairy cattle in connection with the State Farm Products Show.

The Federation went on record by resolution as being opposed to daylight saving time and as favoring legislative action compelling the use of standard time throughout the state.

A resolution was introduced and passed unanimously, voting \$300 to the Secretary to partly reimburse him for his services during the year 1922.

The officers elected for the ensuing year were as

follows: Mr. John A. Bell, President, Mr. C. E. Bennett, Vice-president; Mr. W. Hugh Jones Secretary; Mr. Frank Keene, Treasurer. The Directors elected to serve for two years were: S. T. Witmer, H. H. Blair, H. E. Robertson, Wm. Fairchild, S. F. Zook, and John H. Shirk.

At the choosing of the President for the Federation, there was a contest between John A. Bell, Jr., president of the Federation and George E. Stevenson, vice-president of the Holstein-Friesian Association of America. It was not a matter of contest between two men but rather the principles for which they stood. Mr. Stevenson represented the interest of the breeders and dairymen, being in favor of conservative yet progressive management of the National Association Affairs, a Fifty Cent Transfer Fee and a Small Directorate, as against the Dollar and a Half Transfer Fee and the Present Extravagance Policies that have been pursued during the last four years.

Mr. Stevenson was represented at the Meeting by the majority number of votes. The Meeting was continued until 1:30 without intermission. Many of those present were anxious to get away and attend other meetings and immediately after the first ballot had been taken for President, they left the room. It was afterwards found necessary to discard the votes cast in the first ballot owing to the fact that several delegates who voted failed to sign their names on the ballot and the second ballot was taken after many of the delegates had left the Meeting, particularly those who were in favor of Mr. Stevenson.

Mr. Stevenson's principles represent the sentiment that prevails among the breeders generally not only in Pennsylvania but in all the leading Holstein States, a sentiment that is rapidly crystallizing and will exert itself in the near future in bringing about a radical change of the methods that are being pursued in the National Association.

Pennsylvania Bank Buys Community Sire

THE Butler County National Bank is one of a number of Pennsylvania Banks that are endeavoring to better the welfare of patrons by coöperating in agricultural education.

It is some fifteen years ago since a Chicago bank first assisted in the promotion of agriculture in Washington County, Pennsylvania, by paying the expenses of a county agent. Ten years ago the first county agent came to Butler County and from the very beginning of agricultural extension work in the county the Butler County National Bank has assisted financially, realizing that the more the farmer prospers the better will be business conditions in the whole district. Prosperity means better homes, better living conditions and best of all—better educated boys and girls—the future citizens.

The Butler County National Bank has done considerable work in financing boys' potato clubs and also in financing the importation and growing of disease-free seed potatoes. These potatoes were sold to the farmer for cost, plus freight charges. Orders received by the bank were passed on to the growers without charge

although the bank did considerable advertising at its own expense, calling attention to the desirability of disease-free seed.

Working in connection with the Farm Bureau, this bank in 1920, financed the purchase of two carloads of purebred Holsteins. Twenty-five of the leading dairymen of the county were interested and the dairymen appointed a committee who with County Agent Wiggins, Professor A. A. Borland and R. R. Welch of State College, purchased the cattle. The cows were bought at prices ranging from \$275 to \$700 each. All expenses were paid by the bank and the cows were sold to the farmers at the price that they were purchased for plus a nominal freight charge.

A short time ago the bank management came to the conclusion that a high-class bull, which would be available for service in the many small herds around Butler, was needed and the purchase of such an animal would be a profitable investment. Mr. Wiggins with the assistance of the dairy extension department of State College secured Winterthur King Ormsby Daidee. This bull was born January 14, 1922, and was sired by King of the Ormsbys who needs no introduction to the readers of the BREEDER AND DAIRYMAN. We will just say that he was by Sir Pietertje Ormsby Mercedes from Spring Brook Bess Burke 2d, a cow that has made over 1,000 lb. butter four different years. A full sister to the King of the Ormsbys has three different years produced over 1,000 lb. butter in 305 days. The dam of the bank herdsire is Haidee Fannie Pietertje. This cow, two different years, has made better than 29 lb. butter in seven days and she has a year record made as a five-year-old of 965.15 lb. butter, 22,276.2 lb. milk. She is a daughter of Sir Pietertje Ormsby Mercedes, while her dam, Haidee 5th Fannie has a seven day record of 21.92 lb. butter, 520.3 lb. milk. Haidee Fannie Pietertje is full sister to Haidee Fannie Ormsby, 622.8 lb. milk, 34.30 lb. butter in seven days and over 22,000 lb. milk and more than 1,000 lb. butter in 317 days.

Winterthur King Ormsby Daidee will be housed on the farm of C. A. Powell, near Renfrew. He will be used only on cows in herds that are under the accredited herd plan while the service fee will be nominal. Butler County dairymen have a wonderful opportunity for, in the veins of this bull, runs some of the best producing blood known to the Holstein breed, and his two nearest dams have year records that average 1,128.04 lb. butter with an average fat test of 3.82%.

Local Bull Sales

BY REID MURRAY

IN order to improve the livestock of a county through the pure bred sire there is a plan of Local Bull Sales that is working out very satisfactory in several parts of Wisconsin.

These local bull sales are usually held under the auspices of the County Breed Association, and are held on the farms of local breeders. Usually from 12 to 15 bulls are offered at these sales, which are called to start at 1 P. M.

The County Breed Association often selects a committee on arrangements for each local sale. This committee gets the bulls listed, makes arrangements for

local advertising, and makes plans for the "ring" and platform for selling. This committee which is usually composed of the leading men in the locality also spend considerable time in getting their neighbors to be present.

Among the first of these sales were the ones held in Ozaukee County some years ago. Last year Waupaca and Winnebago County Associations held very successful sales. This season Crawford County has held two sales, one averaging \$74, and the other \$84. Winnebago County has held two this fall one averaging \$71 and the other over \$123 with the top \$245.

THE ADVANTAGE OF LOCAL BULL SALES

1. They give the people of the community a chance to buy herd sires without going to the trouble and expense of going long distances from home.
2. They give the local people an opportunity to buy bulls from herds they are familiar with as to the health conditions of the herd; and also the conditions under which the records if any were made.
3. If held every year, they give the local people a source of supply for their herd sires year after year.
4. They very materially increase the percentage of pure bred sires in the counties.
5. They create a greater interest in the breed in the locality.
6. They offer the new pure bred breeders an excellent method of selling their surplus pure bred sires.
7. Where a limited number of blood lines are represented in a county, the whole county becomes representative of these bloodlines. This allows a county to become famous for any family, or families selected.

SOME SUGGESTIONS FOR LOCAL OR COMMUNITY BULL SALES

1. All bulls offered should be of good type and good representatives of the breed.
2. All bulls offered should be in good condition of flesh.
3. As many as possible of the bulls should be of serviceable age or nearly so.
4. It is advisable to get catalogs out for each sale. These can be mimeographed and be of the less expensive kind.

Advertise Merits of Cheese—Consumption Depends on Quality and Purchasing Power of Consumer

By H. L. RUSSELL

Dean, Wisconsin College of Agriculture

WISCONSIN'S production of cheese, both American and foreign types (Swiss, Limburger and brick) is so largely in excess of home consumption that the development of markets outside of the state becomes imperative. As is so frequently the case, a brisk market is dependent on general economic conditions. For instance, when cotton is king in the South, cheese moves freely in this direction, but 10-cent cotton greatly reduces consumption in this section through the reduction of the buying power of the people.

Under ordinary trade conditions, fully 40 per cent of our American product finds an outlet in the southern trade.

The per capita use of cheese in the United States is exceedingly low, only about 3.8 lb. per capita; whereas European nations like Switzerland, the United Kingdom and Germany, it runs from 10 to 25 lb., or even more, per capita.

Again as with butter, the problem of increased consumption depends in no small measure on quality. The recent regulation made by the Wisconsin state department of markets requiring the grading of the product should be helpful.

The institution of the trade brand "Mello-Creme" by the Wisconsin Cheese Producers' Federation is a step in the right direction. If the California Fruit Growers' Exchange finds it advantageous to pay a million dollars to advertise the merits of "Sunkist" oranges to the American people, the dairy interests of Wisconsin can well consider whether they cannot take a leaf out of the experience of this coöperative enterprise to develop more thoroughly their business.

The use of domestic made "foreign cheese types" has been greatly stimulated during and since the war. The United States used to import from 10 to 20 million lb. Swiss cheese yearly; in 1921 only a little more than two million lb. were imported. The substitution during the war of the domestic for the imported product has revealed the fact to the American consumer that he was not so dependent upon the imported product as he thought he was for quality of product.

Important to Cattle Owners

THE recommendation made at the recent annual meeting of the United States Livestock Sanitary Association are likely to have an important bearing on the livestock industry and the control of tuberculosis in cattle.

In the requirements for a herd to become accredited there was a change made which probably will be approved by cattle owners. This is for a herd in which some of the cattle have previously reacted or shown evidences of infection. The final test for accreditation has been a combination of all three methods, the subcutaneous, intradermic and ophthalmic. It is now recommended that the final test shall be a combination of two tests instead of three, one of which must be the subcutaneous.

The rule that an accredited herd in which not more than one reactor is found at a second test may be reinstated to the list if the entire herd passes a clean test in not less than four months from day the reactor is removed from the herd and farm and the premises cleaned up was approved and stands.

The area system of eradication was approved although difficulty in carrying out the area plan was recognized. A "modified" area is suggested. Such modified areas will be largely in the southern states or in far western states where there is very little tuberculosis. If on the first area-wide test less than 2% of the animals show tuberculosis infection, the district can be classified as a "modified" area and animals may be shipped from that district without a retesting previous to shipment.

Washington Gets World's Dairy Congress

IT is officially announced that the World's Dairy Congress will be held at Washington, D. C., from October 2d to 5th.

The World's Dairy Congress represents the first united effort of the vast dairy industry of the United States in an industry which has its roots in \$47,000,000,000 worth of farms and handles per annum more than 44,000,000,000 quarts of milk, for which in its various forms the consumers pay upwards of \$4,000,000,000.

President Harding has invited the official representatives of all nations to confer on the program of milk production and distribution.

The international aspects of the Congress and the proximity of the Government departments were the determining factors in deciding the location for the Congress sessions. From Washington, the delegates will go by special train to the National Dairy Show at Syracuse, N. Y., October 6 to 13, 1923. Unusual facilities are available there for the display of the American dairy industry—its cattle, its remarkable mechanical equipment, its products, its influence on national health—as well as of that of foreign countries.

For Western Stockmen

COLONEL W. B. GREELY, chief of the Forest Service has announced that there will be no increase in fees charged for grazing livestock on the national forests during 1923 and 1924.

For the first ten years after the national forests were placed under the supervision of the Department of Agriculture, only a nominal charge was made for permits to graze livestock. It was soon realized that the charge for Government range must be based upon its fair commercial value, and a moderate increase was made in grazing fees in 1918 and again in 1919. At that time five-year permits were given the stockman using national forest ranges. It was announced that the various ranges would be carefully appraised and fees affixed accordingly for a new five-year period, beginning in 1924, and that the new fees would be announced early in 1923. It is realized that there should be a marked increase in the grazing charges made in many national forests, but owing to the disorganized condition of the livestock industry of the west which is suffering from the economical collapse following the war, aggravated by unfavorable climatic conditions in a number of western states; the forester has recommended and the Secretary of Agriculture has approved the postponement of the readjustment fees until the grazing season of 1925.

"Yesterday," said Jabson, "I refused a poor woman a request for a small sum of money, and in consequence of my act I passed a sleepless night. The tones of her voice kept ringing in my ears the whole time."

"Your softness of heart does you credit," said Mabson. "Who was the woman?"

"My wife."

Dear Lord, I ask for nothing for myself—only please give mother a son-in-law.

Letters to the Editor

LUCAS, OHIO.
January 4, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

Enclosed find One Dollar (\$1.00) to pay for two years' subscription to THE HOLSTEIN BREEDER AND DAIRYMAN.

I am heartily in favor of your principles of honest records, honest advertising and honest sales. There are entirely too many men looking for large salaries who do not add anything to the value of the Holstein-Friesian cow.

OHIO BREEDER.

Dear Editor:—

Will you put this question up to my fellow New England Holstein breeders for answer?

Ralph Waldo Emerson was a product of New England and that's why we put this question up to the men who breed black and white cattle in that historic atmosphere.

Biographers credit Emerson with being a philosopher as well as a poet. Among the many interesting things told about this New England character, is the story wherein he says, "If you but make a better mousetrap than someone else, the world will be the trapway to your door."

We believe that Emerson told a great truth when he made this facetious reference to a really modern principal of business and it is this thought of Emerson and the mousetrap which, applied to recent Association history, prompts this inquiry.

Is the Holstein cow the greatest dairy animal in the world? If so, by what standard of merit or of comparison can you make such a claim.

If she IS the greatest and the best cow in the World why not apply the logic or the philosophy of Emerson, and why spend thousands upon thousands of dollars to advertise her milk and her manifold merits to men who already have discovered these great truths and are classified as "Breeders of Holstein Cattle."

Why wont the "world be the pathway to your door." Surely, cows are of as much importance as mousetraps. Surely, the world is just as keenly interested in the foster mother of mankind, as in any mechanical device to catch mice.

Of course, we believe it is worth while to let the world know why or in what particular your mousetrap excels the other fellow's mousetrap, even though it be the same color, same design, and catches mice in the same way.

If the spring of your trap is a little more sensitive—if it acts the one one-thousandths part of a second faster—if there is some little feature of your trap that gives it a more seductive appearance thereby enhancing the chances of a good catch any one in the market for mousetraps ought to know about it.

We have found that students of heredity as applied to the breeding of livestock usually form conclusions based upon their knowledge of the production of show ring inheritance represented in the pedigree of an animal plus the individuality of the animal itself.

In other words, if we have the best mousetrap in the world, "the world will be the pathway to our door." It isn't necessary to resort to by-law violations to bolster up our Holstein breed of cattle along the lines which has been so recently suggested by the action of the Board of Directors.

Each individual knowing the value of his particular "mousetrap" will tell the world about its superior qualities, and in that way advertising will pay the individual and help to blaze a pathway to that particular breeder's door.

ONE-TIME ACTIVE BREEDER.

Little Dorothy (watching mother vote)—"You voted for the man you loved best, didn't you?"

Mother—"Why, dear?"

Dorothy—"Because you put a kiss after his name."

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1.) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

February 8, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Anent Aitkens \$24,000.00 Salary Grab

MANY of our readers will remember that during the Syracuse meeting of the Holstein-Friesian Association of America in June, 1921, G. S. Van Gorder of Pike, New York, filed the following letter with the Board of Directors requesting that they bring an action in favor of the association and against D. D. Aitken to recover the \$24,000.00 unlawfully taken by him from the Treasury as salary:

"To the President and Directors of the Holstein-Friesian Association of America.

As a member of the Association and also on behalf of other members, I hereby request and demand that such officer and directors cause an action to be brought in a Court of competent jurisdiction in the name of the Association and in its behalf against D. D. Aitken and James A. Reynolds and the other directors to compel the repayment into the Treasury of the Association of the twelve thousand (\$12,000) dollars unlawfully paid said Aitken as a salary, as President, for the year ending June 1, 1920, and twelve thousand (\$12,000) dollars unlawfully paid said Aitken as "Director of Extensions" for the year ending June 1, 1921, and against James A. Reynolds for the repayment into the Treasury of the Association of the Twenty-five hundred (\$2,500) dollars unlawfully paid him "for services rendered" for the year ending June 1, 1920; also for any sums paid to him for or on account of similar reasons for the year ending June 1, 1921.

(Signed)

G. S. VAN GORDER.

Pike, Wyoming County, New York, May 24, 1921."

This request, as we understand it, was a condition precedent to the bringing of such an action by any

member of the association. Of course the request was ignored, as was to be expected, by the Board of Directors.

Now that Judge Pooley has decided that the Philadelphia meeting at which Aitken was voted such salary, was illegal, we are wondering whether Mr. Van Gorder contemplates bringing such an action. As we understand the legal situation, any member of the association can now bring such an action, even if Mr. Van Gorder does not.

Precisely the same situation exists as to James A. Reynolds, the chairman of the Executive Committee.

Your Interests Will Be Protected

WHEN Judge Pooley hands down his court order directing when and in what city in the State of New York the Special Meeting of the Holstein-Friesian Association shall be called to elect a legal board of six Directors, we predict that an effort will be made on the part of the illegal Board of Directors that have been ousted from office by the Pooley decision, to have the case appealed in the name of the Association and thus, if possible, secure the Association's funds to fight their legal battles. However, we believe that any attempt to further use the Association's funds in fighting personal legal battles, will be met by sweeping protest from the membership generally and legal action will be taken if necessary to bring about a compliance with the law and place the Association in a position where it can function legally. The Association can comply with Judge Pooley's decision at the small cost of calling a Special Meeting in the State of New York and electing six directors whose legality to hold office and transact association business will be unquestioned. With this short and inexpensive way out of the present difficulty, why should the Association appeal and continue to pay large sums of money to fight the legal battles of an illegal Board of Directors?

The membership of the Holstein-Friesian Association should keep in mind that Judge Pooley's decision is not against the Association, but against the sixteen men who have been serving the Association illegally as Directors. The Association cannot be held responsible for illegal acts committed by an illegally constituted Board.

Mr. G. W. Davidson of Brentwood fame and who has a national reputation in the Holstein fraternity, is not the only man of means and influence that the "Rule and Ruin" group has failed to make a monkey of and use as a Cat's paw in forwarding their interests, a thing which they evidently tried to do at the Kansas City convention when they elected him as an illegal director, an office which he refused to accept.

There are other men of means and influence, men who have made it their business to become thoroughly acquainted with the deplorable situation that has befallen the Holstein industry and are willing to give of their Time, Money and Influence to place the industry on a Firm Business foundation, Managed by the Breeders for the Breeders in an Economical and Efficient Manner.

It is inferred that everyone of the sixteen directors who were ousted from office by Judge Pooley's decision

and whose tenure of office has been characterized by Increased Fees and Gross Extravagance, may be brought before the courts individually to answer for their illegal acts and be called upon to restore to the Association treasury, money which has been illegally expended.

Plain Farmers and Dairymen

THE BREEDER AND DAIRYMAN believes that Edward P. George of Chaffee, New York in bringing proceedings against the Directors of the Holstein-Friesian Association to compel a "House-cleaning" and an observance of the law performs a real service to the association and one which every member, who like Mr. George owns a farm, is a farmer, breeds cattle, milks them, and follows the business of breeding and dairying, owes Mr. George a debt of gratitude. It requires courage to defy entrenched powers and dare to do right regardless of threats and slanderous invectives. It requires backbone and stamina to demand respect for the law and it must be gratifying to know that he has been sustained by the Supreme Court of the state of New York.

Farmer (to artist working by the roadside). "H'm"! You know I never could do that, ain't got no patience.

NON-POOLERS MILK MAY BE REFUSED

A far reaching decision involving the pooling plan for marketing milk or other farm raised products, was handed down January 15th by Referee James H. Merwin in the case of Barns v. Dairymen's League Coöperative Association and Borden Farm Products Company. This action was brought in United States Supreme Court sitting in Utica on April 1st and the summing up was early in October. The plaintiff, a farmer who supplied milk to the Borden Company at its plant at Westmoreland, N. Y., sought an injunction restraining the Borden Company from refusing to take his milk and charging conspiracy on the part of the Borden Company and the Dairymen's League Coöperative Association to fix the price of milk and to refuse to take his milk unless he join the pool.

During the hearing the methods and policies of the Coöperative Association were exhaustively gone into, and a large quantity of reports, extracts of minutes, etc., were introduced in evidence.

The decision consists of 28 pages of typewritten manuscript and in it Referee Merwin goes deeply into the milk situation from both economic and legal standpoints. The opinion declares that there has been no black listing or boycotting and that the Borden Company have a legal right to purchase milk of any individual or group of individuals that it wishes.

This is a very important decision because while similar decisions have been rendered in the western states where the coöperative movement is very strong, it is the first important decision in the eastern states which has gone into the coöperative marketing extensively. Therefore the results are likely to be far reaching.

Old Dobbin had his faults, but you didn't have to pour hot water on him to get him started on a cold morning.—

Straight from the Shoulder Talk by E. P. George, Chaffee, New York

MY reply to your letter will be very brief as I have little to say. I have always been kept very busy on my farm trying to make both ends meet, educate my children and be able to say "Good Morning" to my banker and the man I buy feed from.

In September, 1913, I went down to the central part of New York State and bought four registered Holsteins cows for something like \$700. I also bought a registered bull. At that time, everyone seemed bent on seeing how much they could do for the breed and the Association. When I went to the Grange Meeting, County Fair or the Town Meeting, folks were talking about

Holsteins and it looked to me as if there was a great future ahead of the Holstein industry. I read the Holstein papers and in one year paid a certain breed paper \$1,200 for advertising.

As a partial reward for my first investment in pure-breds, I sold in May, 1918, the progeny of the four cows which I first purchased, for \$4,960 and as I stated above, the outlook for the Holstein breeders seemed to be one of prosperity, at least good wages for the work put in on the cattle.

At that time the Association seemed to be running along smoothly, doing extension work, meeting expenses, and setting aside a surplus on a 25c Transfer Fee. I always received prompt and courteous answers from Mr. Houghton when I wrote to him for advice.

Then came the annual meeting in June, 1919, at Philadelphia. Increased fees, increased number of directors, Law and By-law violations, and a new and altogether different policy pursued by those in control. New fangled ideas of "Extension Work" were sprung upon the members and something like \$140,000 was spent in one year. Then came law-suits, lawyers' fees, court expenses and a lot of foolish talk such as was enough to make the Holstein cow hang her head in shame because of being called dishonest by the very men who lived off of her bounty and profited by her greatness.

Regarding Judge Pooley's decision, I have nothing

to say except that it is just what I expected it would be. If the affairs of the Holstein-Friesian Association were being handled by an illegal Board of Directors and in an illegal manner as was openly charged, I thought that it was high time that someone called a halt and put us back on the right road. "Set Our House in Order."

Judge Pooley seems to have made a few points pretty clear. *The Road Is Now Open to Abide by The Law* because *We Now Know* what the Law is. If the Association's members want to be law-abiding, if they want to stop extravagance, if they want to have a say in electing officers, if they want to put the Association management back into the hands of its members and have it do the things it has a right to do legally according to the law, Judge Pooley's decision points the way. Right never harms anybody. Law was made to respect.

Justice is bigger than any man or set of men who try to dodge its plain directions. The Holstein cow ought to have friends enough to *Compel Respect for Her Many Outstanding Qualities*, and I believe her Best Friends are the Farmers and Breeders who sit down on milking stool, with pail between their knees, and get to know her superior qualities through close contact; and, I believe that they are the men who can be trusted to manage the Association created to protect her good name.

HOLSTEIN MEN PROMINENT IN DAIRY ASSOCIATION

During the Farmers' short course at Purdue University, the Indiana State Dairy Association and the Indiana Holstein-Friesian Breeders' Association, as well as a number of other breed associations held their annual meeting.

At the meeting of the dairy association, Dr. E. B. Haskins of Indiana, federal representative in charge of bovine tuberculosis eradication told of the work thus far accomplished in Indiana. He reported that 12,572 herds, representing almost 100,000 head of cattle had passed two clean tests and that there were 15,812 herds under supervision with more than 2,000 on the waiting list.

The association indorsed the Voigt bill prohibiting the interstate shipment of filled milk; requested that butter be used in the state institutions instead of oleomargarine; urged the dairymen to feed more legumes to their dairy cows; and endorsed the milk campaign now being carried on.

Officers for the year were chosen as follows: President, B. B. Morgan, Chesterton; Vice-President, L. M. Ice, Mt. Summit; Secretary-Treasurer, E. A. Gannon, Purdue; Executive Committee, Charles E. Weidener, South Bend; B. H. Scranton, Rising Sun; N. E. Parsons, Pittsboro; E. C. Pickens; representative on experiment station advisory board, W. O. Mills, Mooresville.

Mr. Morgan, who is a well-known Holstein breeder was further honored when the State Holstein Association met, by being named secretary-treasurer. Charles Weidener of South Bend was elected president and C. W. Newman of Culver, vice-president.

LIVESTOCK STATISTICS

Figures show that the United States has but one-sixteenth of the world's population, but it has one-sixth of the world's livestock, approximately as follows:

- One-half of the world's 9,000,000 mules,
- One-third of the world's 169,000,000 swine,
- One-fifth of the world's 100,000,000 horses,
- One-seventh of the world's 492,000,000 cattle.
- One-ninth of the world's 465,000,000 sheep.

She—"Do you believe in clubs for women?"

He—"You bet, Clubs, Sandbags or any old thing."

The Merryall Herd

ALITTLE more than a year ago a representative of the BREEDER AND DAIRYMAN inspected Merryall Farm and its producing herd of cattle. At that time we were much impressed with the ideal location of this establishment, situated as it is, on the banks of a tributary of the Susquehanna River and backed by picturesque hills and mountains. A much-traveled automobile road runs right past the main barns and trolley cars pass the door. The slope of the land insures good drainage and the mountains in the background are the source of a never-failing water supply. Nature has furnished the ideal situation for a high-class dairy establishment.

The Merryall herd now consists of fifty head of purebred Holsteins. The herdsire King Sylvia Johanna Pontiac has grown and developed considerably during the past year. His first crop of calves are now coming and they show the splendid constitution, straight back, well-sprung ribs and dairy conformation of their sire.

King Sylvia Johanna Pontiac is a son of King Echo

MERRYALL LILITH HENGERSVELD
22.78 lb. butter, 549.7 lb. milk in seven days; 175.26 lb. butter, 4,393.8 lb. milk in sixty days, as a three-year-old.

Sylvia Johanna who was by Avon Pontiac Echo from the 37-lb. cow Belle Model Johanna 2d. The dam of King Sylvia Johanna Pontiac is Otego Valley Christmas Belle, a cow that produced 651.02 lb. milk, 40.51 lb. butter in seven-day official test and is the dam of three A. R. O. daughters, one of which, two different years has made over 30 lb. butter in seven days and has records of 730.8 lb. milk, 32.56 lb. butter in a week and more than 1,000 lb. butter in a year.

The females in the Merryall herd show high-class type and conformation but while possessing these desirable characteristics the chief aim their breeder has kept before him has been production measured by everyday work at the pail. While official and even long time tests have been practiced from time to time and high records have never been entirely lost sight of, the herd has been handled from the dairyman's standpoint, that is, that the cows must pay their way, must pay for their feed and care and at the same time earn a surplus upon which their owner and his family could live.

The animal that brought the most fame to the Merryall herd is Lilith Gem Kolkkluff, who with a daughter

and other near relatives was sold some years ago to become a member of the Pennsylvania State College herd. In this herd she has made splendid records year after year and is credited with producing 22,247 lb. milk, 851 lb. butter in a year, carrying calf eight months of the time she was on test. She has a number of descendants in the herd of which a granddaughter, Merryall Lilith Hengersveld as a three-year-old has made official records of 22.78 lb. butter, 549.7 lb. milk, in seven days, 4,393.8 lb. milk, 175.26 lb. butter in sixty days.

TITUSDALE BEAUTY VEEMAN
26.94 lb. butter, 515.8 lb. milk in seven days.

A member of this herd that is well worth looking over is Titusdale Beauty Veeman. She has an official record of 515.8 lb. milk, 26.94 lb. butter made in seven days at just six years of age. This cow is a very fine individual and she has transmitted this splendid trait to

PIETJE PRIDE HOMESTEAD
21,161.5 lb. milk, 807.29 lb. butter in a year, the first cow to complete a record in Merryall Herd.

her daughters of which four are in the Merryall herd. She was sired by King Korndyke Hengersveld Veeman, who was by King Korndyke Pontiac Artis from a 30-lb. daughter of Sir Veeman Hengersveld and has combined in his pedigree some of the best producing blood lines known to the Holstein breed. Titusdale has a creditable long-time record as have quite a number of other members of the herd. Another member of this herd is Pietje Pride Homestead, a daughter of Pietje Vander Lei Lad. With no previous preparation Pietje

presidents; Frank A. Keen, treasurer, and Howard Jones secretary.

A special prize of \$5.00 and the cup offered by the Holstein-Friesian Association at the show for the best sample of Holstein milk was awarded to Edgar T. Hicks of East Goshen, whose sample scored 97.3.

IOWA COUNTY HAS SALESMAN

The Iowa County Holstein Breeders' Association held their annual meeting at Dodgeville, Wisconsin, January 4. It was decided to spend \$25.00 in advertising county Holsteins. It was voted to send the State Association the sum of \$35.00 which would pay membership fees for all the members of the county association.

The secretary of the county association was instructed to act as field man to place prospective buyers of Holsteins in touch with those who had cattle to sell and he will get a percentage of all sales made through him.

W. O. Treweek will have his railroad fare paid to the annual meeting of county delegates to be held at Fond du Lac, February 14.

Officers were elected for the ensuing year as follows: President, W. O. Treweek, Dodgeville; vice-president, Will McGill, Avoca; secretary, J. Roy Gordon, Mineral Point; treasurer, Walter Hodgson, Arena.

ENDORSE TUBERCULOSIS ASSOCIATION

About fifty attended the Hillsdale County Holstein Breeders' Association meeting, January 5, at Hillsdale, Michigan. Talks were made by J. G. Hayes, of the Extension Department of the Michigan Agricultural College and by L. H. Matthias, County director of the Boys' and Girls' club work. A committee was appointed, consisting of J. M. Williams of North Adams and Elisha Bailey of Pittsford, to act with Mr. Matthias selecting calves for calf clubs. A resolution was adopted that the secretary instruct the state representative Floyd W. Rowe of Camden and state senator, B. E. Brower of Jackson that the association heartily supported statewide bovine tuberculosis eradication plans. The next meeting will be held in February at a date to be set by the directors. The officers of this organization are: J. I. Post, Adams, president; Howard Marshall, Pittsford, secretary; J. M. Williams, North Adams, treasurer.

JOIN WITH STATE ORGANIZATION

The Fayette County Holstein Breeders' Association was formed at a meeting in Maynard, Iowa, January 16. Around 200 were in attendance.

Paul Stewart was elected president and John Wilkinson, vice-president, while county agent Clyde Combs was elected secretary-treasurer. A semi-districting plan was used to name the directors. There were one from each district and several chosen at large. The seven directors are: Fred Ross, Fred Pieplow, Art Eitel, Walt Turner, Art Doty, George Sauerbry and Le Grand Gleim. A constitution and set of by-laws were put into form. It was decided that the county organization should cooperate with the Iowa Holstein Breeders' Association in a joint membership plan; 20% of the fees to go to the state association; membership fees were set at 50c a head for purebreds and 25c for grades.

At a meeting of the directors a sale committee consisting of Paul Stewart and LeGrand Gleim were appointed and they will select another man to act with them. A calf club committee was also chosen. The principal talks were made by J. P. Eves, Field Secretary of the Iowa State Dairy Association, his assistant Fred E. Ferguson and C. B. Finley, head of the Dairy Department of the Iowa Extension Service.

BROCKWAY AGAIN HEADS AGRICULTURAL SOCIETY

The New York State Agricultural Society held its two day session at Albany. The attendance was light but the program was strong and the speakers high class.

Governor Al Smith spoke on Tuesday evening and intimated that he wished to do away with the present Farms and Markets Commission, and in its place put a high class man.

Speaker Machold spoke on farm credits and showed that he was against extension of farm loans. Practically all of those who took part in the discussion agreed with him and a resolution was adopted, requesting that Congress should not pass the Farm Credit Bills, now pending before it. A. L. Brockway of Syracuse the well-known Holstein breeder was reelected president. The other officers are as follows: Chas. H. Baldwin, secretary; Harry B. Winters, treasurer; Peter G. Teneyck, E. R. Eastman, Geo. W. Sisson, Henry Burden, W. A. Parson, W. P. Schanck, S. J. Lowell, J. A. D. Findlay, vice-presidents; J. J. Dillon, R. W. Thatcher, Thos. E. Cross, W. H. Manning, F. J. Riley, executive committee.

THE MINNESOTA STATE ASSOCIATION

The Minnesota Holstein Breeders' Association held their annual meeting at the University Farm, St. Paul, January 4 in connection with the annual meetings of the state dairy and beef cattle associations. State wide campaign will be made to place a purebred sire on every farm. The campaign will be started in Blue Earth County announces J. C. Marlow of Mankato, chairman of the committee in charge.

The organization passed a vote of thanks to the Minneapolis Tribune its publisher and its dairy correspondent for the time and cooperation spent in promoting the better dairying campaign in the Northwest.

The Legislature is asked to pass a bill to provide for a uniform system of assessing purebred livestock, the figures set by the Holstein association are a valuation not to exceed \$150 per head or double the valuation of grade stock. The association endorses the Voigt filled milk bill and also urged the Minnesota legislature to forbid the manufacture and sale of filled milk in the state.

Dean W. C. Coffey said that agriculture was not suffering from over production but from under consumption. It was disorganized because foreign trade which absorbed the 15% surplus food production in the past is now practically cut off. Addresses were also made by Prof. F. W. Peck of the University Farm Extension Service and H. A. Kirkpatrick, Hennepin County Agent.

The officers and directors elected for the coming year are: E. T. Winship, Owatonna, president; J. C. Marlow, vice-president; Robert Geiger, Minneapolis, secretary-treasurer; J. B. Irwin, Minneapolis; C. E. Ovestrud, Northfield; J. M. Hackney, St. Paul; Dr. Christopher Graham, Rochester, W. S. Moscrip, Lake Elmo, C. L. McNelly, Mankato, V. S. Culver, Austin, Axel Hansen, Savage; P. O. Holland, Northfield; Chas. R. Wright, Fergus Falls; E. J. McManon, North St. Paul; Hugo Schroeder, Owatonna, C. L. Spaulding, Warren; directors.

Secretary Geiger's report shows that there were more than 700 members and associate members enrolled in the association during 1922 of which 401 are paid up for 1923. It is expected that the joint county-state association membership with one fee paying membership dues in each will increase the state association membership.

REORGANIZE INDIANA ASSOCIATION

The Indiana Holstein-Friesian Breeders Association was reorganized during the week of the farmers' short course at Purdue University. The membership fee was reduced to \$3.00 and plans made for an active campaign for the organization of county clubs. It is expected to hold a state association sale during the year.

The officers elected were Chas. Weidener of South Bend, president; C. W. Newman, Culver, vice-president; B. B. Morgan, Chesterton, secretary-treasurer.

NIAGARA COUNTY, NEW YORK

At the annual meeting of the Niagara County Holstein Club held at Lockport, New York, January 11, R. N. McClay of Appleton was elected president to succeed Supervisor Frank Campbell of Wilson. Wm. Richards of Lockport will be vice-president and Elton Seward of Gasport is secretary-treasurer. The club authorized the president to appoint a committee of three to conduct a membership drive.

TETON VALLEY HOLSTEIN BULL ASSOCIATION

By F. R. CAMMACK,
Idaho Field Dairyman

Idaho has taken another important step in the development of dairying by the distribution of ten bulls of excellent breeding throughout the Teton Valley, whereby the butterfat production of their future herds will be greatly increased.

The Teton Valley Holstein Bull Association was recently organized. The officers are C. R. Kimball, President; Leo Pickett, Vice-president; Dr. Milton H. Knudsen, Secretary and J. H. Jensen, Treasurer. Dr. Knudsen accompanied by the writer, selected the ten Holstein bulls from Idaho Holstein herds. This Association ties with Franklin County, Idaho, for the honor of being the largest Bull Association west of the Mississippi River. The success of the Association is especially due to the spirit of cooperation exhibited by the farmers of the community. Mr. C. B. Walker, President of the First National Bank at Driggs; Dr. M. H. Knudsen, Principal of the High School at Driggs; D. L. Fourn, County Agricultural Agent of Teton County, and H. A. Mathieson of the U. S. Department of Agriculture, also deserve credit for its success.

Plans for the association were started in November during the Institute meetings addressed by the writer. Teton Valley is one of the promising dairy sections of Idaho. One thousand dollars per day is the amount now being paid the farmers of the Valley for their dairy products. Most of the milk is sold to the two cheese factories operating there.

SEGIS VEEMAN MERCEDES, NO. 381361
Junior champion at Idaho State Fair, 1922. Purchased by the Teton Valley Bull Association.

The great improvement in dairying that will follow the use of these bulls can hardly be over estimated when it is realized that cows producing 100 lb. butterfat return a net profit of \$10 over feed cost and 400 lb. butterfat cows return a net profit of \$106 over feed cost. These figures are averages compiled from thousands of herds in the United States. The bulls are all backed by cows producing over 400 lb. of butterfat. The following is a compilation of their qualifications and official records of their ancestors.

Pioneer Veeman Walker Segis, whose dam, Boomer Topsy Veeman Segis, has a record of 575 lb. butterfat and 19,000 lb. milk (not officially reported) in ten months in the aged cow class. The maternal grand sire, Hengerveld King Segis, has a 31 lb. butter dam. The paternal grand dam, Daisy Pioneer Clyde, holds the Idaho record of 98.75 lb. butterfat, 2811.5 lb. milk in 30 days in the aged cow class. A full sister is on test and has approximately 500 lb. butterfat as a two year old.

Lord Palmyra Segis, 367.713, whose sire's dam, Hollywood Lilith Palmyra Evelina, 346.238, had made 1,144.8 lb. butter, 29,031.9 lb. milk. The dam's dam, Butter Boy Pontiac Dekol, 29,031.9 lb. milk. The dam's dam, Butter Boy Pontiac Dekol, has a record of 1,072 lb. butter and about 26,000 lb. milk. The dam was not tested due to udder trouble. Regardless of this, the three nearest dams average well over 600 lb. of butterfat.

Colantha Alba Bonheur, 367.712, whose sire, McKinley Bonheur Ragapple, is a grandson of Queen De Kol Bonheur Pontiac

with 1,270 lb. butter and 31,140 lb. milk. This bulls dam, Alba Clyde Colantha, 260.727, made 591 lb. butterfat, 14,300 lb. milk in 10½ months and died when starting on official test. Her sire's dam, Daisy Pioneer Clyde, made 98.75 lb. butterfat, 2811.5 lb. milk in a 30 day official test. This bull won first in his class at a county fair and at the Idaho State Fair.

Sir Ormsby Gem Segis whose sire, is a grandson of Queen Dekol Bonheur Pontiac, who made 1,270 lb. butter, 31,104 lb. milk. The dam, Sadie Gem Ormsby 2d, 211.081, finished with approximately 800 lb. butter and 18,000 lb. milk (not officially reported). Her sire's dam, Pontiac Clothilde De Kol 2d, made over 1,000 fat.

Segis Veeman Mercedes, 381.361, whose sire is a grandson of Daisy Pioneer Clyde, who made 98.75 lb. butterfat, 2811.5 lb. milk in a 30 day official test. The dam, Edna Lyons Mercedes, 522.246, has a record of 550 lb. fat, 17,000 lb. milk (not officially reported), as a junior three year old. This bull was junior champion at the Idaho State Fair in 1922.

Segis Pontiac Bonheur 2d. This bull's sire is a great grandson of King Segis Pontiac. The sire's maternal sister, Queen De Kol Bonheur Pontiac, made 1,270 lb. butter and 31,140 lb. milk. The dam, Lula Homestead Doede, is on test with approximately 300 lb. fat in five months (not officially reported) and shows promise of making a creditable record as a three year old. This cow's sire is Buffalo Duke Doede, a maternal brother of Duchess Skylark Ormsby, with 1,205 lb. fat. (former world record).

The six above named bulls were bred by and purchased from Aloys Schuler, a prominent Holstein Breeder of New Plymouth, Idaho, whose herd is on official test.

Boomer Bonheur Palmyra, 385.102, is a paternal grandson of Judge Segis, 80.912, (dam 119 lb. butter in 30 days) through Hollywood Segis Palmyra, 280.096, whose dam, Hollywood Lilith Palmyra Evelina, 346.238, made a record of 1,144.8 lb. butter, 29,031.9 lb. milk as a four year old cow. Her dam, Hollywood Adventuress Evelina, made 874.96 lb. butter, 19,954.9 lb. milk and her dam in turn made 941 lb. butter as a four year old cow. The dam's sire is a grandson of King Segis 10th and a son of Daisy Pioneer Clyde, with a 123 lb. butter 30 day record. The dam's dam is a granddaughter of King Segis 10th and a daughter of Queen De Kol Bonheur Pontiac, whose record is 1,270 lb. butter and 31,140 lb. milk. This bull was bred by and purchased from H. R. Boomer, Pioneer Holstein Breeder of Payette County, Idaho.

Prince Palmyra Pietertje De Kol, 390.266. The sire, Hollywood Lilith Palmyra Devries, 247.532, is backed by Lilith Queen Pauline, 26.135 lb. milk and 1,077.2 lb. and has several half sisters with records of over 800 lb. butter. The dam, Princess Babbie Walker Violet, 51.663, has a record of 470 lb. butterfat (587.5 lb. butter) as a three year old in the cow testing association and will go on official test. Her grand dam, Viola Shadeland, has an official record of 690 lb. butterfat. This bull was bred and purchased from Alfred Records one of the leading Holstein breeders of the Boise, Valley.

Soldene Hengerveld Romona, 385.390. The dam, Pietertje Hengerveld Mercena Sue 3rd, has a record of 8,923 lb. milk, 318 butterfat in 295 days as a two year old. Her sire, Segis Walker Hartog, is a proven son of King Segis 10th. The sire of the bull, Sir Florence Hengerveld Soldene, 282.711, has splendid backing. The dam made 18,786 lb. milk and 786 lb. butter as a three year old and the grand dam produced 27,235 lb. milk, 1,146 lb. butter.

Hengerveld Walker Pride. The dam, Gertrude Walker Pride of the Valley, 493.514, has a record of approximately 400 lb. butterfat as a two year old. She is a daughter of the proven son of King Segis 10th, Segis Walker Hartog, and the sire of the bull is Sir Florence Hengerveld Soldene, 282.711, with records of 786 lb. and 1,146 butter, made by the dam and grand dam, respectively.

These two bulls were purchased from the Inter-mountain Institute, Weiser, Idaho, one of the large prominent herds of the Northwest.

It is absolutely certain that these bulls will make a great improvement in the quality of the future herds of Teton Valley and this Valley should become a source for good foundation Holstein cows in the due course of time.

WESTERN LIVESTOCK NATIONAL

The Holstein-Friesian exhibits at the seventeenth annual National Western Stock Show in Denver were of the usual high quality seen at this great Colorado event. All entries came from herds inside the state and were judged by Professor J. B. Fitch, of the Kansas State Agricultural college. The grand champion bull was the two-year-old King Pontiac Parthena Champion, one of the finest bulls ever seen at Denver. The junior championship was fought out between two bull calves from the Lindquist herd and finally went to a senior calf. The female classes showed much quality, the grand championship going to Zwingara Segis Clothilda, owned by the Modern Woodman herd.

An exhibition that attracted much attention was made by the Lindquist herd and consisted of a pyramid of milk cans to show the production of a member of that high class herd.

Exhibitors—Arkansas Valley Sugar Beet and Irrigated Land Company, Holly, Colo.; G. M. Banks, Denver, Colo.; L. L. Berkey, Haxtun, Colo.; Colorado and Utah Coal Company, Denver, Colo.; Colorado State Home, Denver, Colo.; Colorado Agricultural college, Fort Collins, Colo.; James Gibson, Mt. Morrison, Colo.; Sam Hanson, Denver, Colo.; C. W. Henry, Greeley, Colo.; Casper Hofman, Denver, Colo.; E. J. Lindquist, Denver, Colo.; Modern Woodman sanitarium, Woodmen, Colo.; R. E. Parker, Aurora, Colo.; Mrs. Emma Schneider & Son, Denver, Colo.; Ben F. Simpson, Denver, Colo.

Aged Bull (four shown)—1, Lindquist on Colantha Chief; 2, Parker on Denver Johan Sir Lulu Segis; 3, Colorado Agricultural college on King Gerben Lincoln.

2-Year-old Bulls (four shown)—1, Woodmen on King Pontiac Parthena Champion; 2, Arkansas Valley Sugar Beet on Avoca Lodge King Johanna; 3, Lindquist on Lindale Duchess De Kol Lad.

Junior Yearling Bull (four shown)—1, Schneider & Son on Avoca Lodge Duchess Echo Lad; 2, Hofmann on King Creamelle Waldorf; 3, Arkansas Valley Sugar Beet on Paramity Rag Apple De Kol.

Senior Bull Calf (five shown)—1, Lindquist on Lindale Henderveld Korndyke Lad; 2, Lindquist on Lindale King De Kol; 3, Arkansas Valley Sugar Beet on Paramity Johanna Posch.

Junior Bull Calf (six shown)—1, Lindquist on Lindale Colantha Sarcastic Lad; 2, Woodmen on Woodcraft Changeling De Kol; 3, James Gibson, Morrison, on Denver Pontiac Leeman.

Senior Champion Bull—Woodman on King Pontiac Parthena Champion, grand champion bull.

Junior Champion Bull—Lindquist on Colantha Chief, reserve.

Aged Cow (ten shown)—1, Woodmen on Swingara Segis Clothilda; 2, James Gibson, Morrison, on Milanhurst Lenore; 3, Colorado and Utah Coal on Thayerlawn Gem Buckeye Ursula.

3-Year-Old Cow (five shown)—1, Woodmen on Kansas Star Cora; 2, Mrs. R. C. Douglas, Fort Logan on—; 3, Arkansas Valley Beet Sugar on Paramity Maplecrest Zuyder Zee.

2-Year-Old Heifer (eight shown)—1, Colorado State Home on Duchess Colorado Ormsby Jane; 2, Parker on Western Johanna Ormsby Lass; 3, Woodmen on Kansas Star Lady Bonheur II.

Senior Yearling Heifers (three shown)—1, Arkansas Valley Sugar Beet on Paramity De Kol Augusta; 2, Colorado State Home on Alta Ormsby Barnes Walker; 3, Colorado Agricultural college on Cragdale Mead De Kol.

Junior Yearling Heifers (three shown)—1, Arkansas Valley Sugar Beet on Paramity Korndyke Ormsby; 2, Colorado Agricultural on Cragdale Belle Skylark; 3, Woodmen on Woodcraft Changeling Johanna.

Senior Heifer Calves (nine shown)—1, Schneider & Son on Western Winifred Top; 2, Woodmen on Woodcraft Lady Flora; 3, James Gibson, Morrison, on—.

Junior Heifer Calves (eleven shown)—1, Simpson on Movy Paul Johanna; 2, Henry on Cragdale Valentine Skylark Ormsby; 3, Woodmen on Woodcraft Changeling Pontiac.

Senior Champion Female—Woodmen on Zwingara Segis Clothilda.

Junior Champion Female—Simpson on Movy Johanna.

Grand Champion Female—Woodmen on Zwingara Segis Clothilda.

Reserve Champion Female—Simpson on Movy Paul Johanna. Aged Herd (three shown)—1, Woodmen; 2, Arkansas Valley Sugar Beet; 3, Colorado Agricultural college.

Young Herd (two shown)—1, Arkansas Valley; 2, Woodmen.

Calf Herd (four shown)—1, Lindquist; 2, Woodmen; 3, Simpson.

Get of Sire (five shown)—1, Woodmen; 2, Lindquist; 3, Arkansas Valley.

Produce of Dam (five shown)—1, Simpson; 2, Lindquist; 3, Arkansas Valley.

TICK ERADICATION PAYS

In 1916, the cattle belonging to the college herd at College Station, Texas, were so badly infested with ticks and so poor in condition, as reported by William Sim, beef cattle herdsman of the college, that they could hardly be used for class work. The animal husbandry department decided that something should be done, and accordingly dipping was begun the following year, although the cattle could not be entirely freed of ticks as the surrounding county was tick-infested. In 1919, the county passed a dipping law and the college herd was freed of ticks in 1921.

As soon as dipping operations began in this herd an improvement was noticed. The breeding herd, according to Mr. Sim, has been handled in the same way each year for the last 11 years, and mature females have increased in weight 200 to 250 pounds since dipping began. Young stock on pasture has increased in weight accordingly.

Even more striking are the figures for yearling steers. In 1916, this age of steers weighed in March at the Fort Worth market, 1,000 to 1,250 pounds. In March, 1922, at Fort Worth, steers of the same age and handled the same way as the 1916 steers has been handled weighed from 1,400 to 1,650. This shows an increase for the tick-free steers of 400 pounds each. Figured at the average sale price of \$15 per hundred pounds, which the college received for its steers, this means that the cattle ticks were costing this herd \$60 per steer.

If such a figure, or even an approximate figure, is applicable to the entire cattle industry, it can be seen what an enormous toll the cattle tick exacts from Southern cattlemen each year. Compared with such a total, the money spent in eradicating the tick dwindles to insignificance.

The total amount of money spent for the fiscal year 1922 by the Federal Government, the State of Texas, and the 150 counties doing dipping work, was less than \$495,000. During that time the State of Texas made more than 27,000,000 dippings, and freed approximately 3,000,000 cattle of ticks, all of which it is hoped will be released from quarantine at an early date. This makes the cost per dippings less than 2 cents, and the cost per head for the season's dipping 16½ cents.

The above comparison of figures takes no account of the improvement in the quality of herds that usually takes place when the tick is gone and better breeding animals can be brought in from tick-free areas. In the fall of 1922 the Texas Agricultural and Mechanical College entered show animals at the American Royal Livestock Show at Kansas City, and the International Livestock Exposition at Chicago, and won its share of prizes in competition with colleges and universities from the United States and Canada.

FLOYD OVERTON PRESIDENT

Floyd C. Overton of Adams was elected president of the Jefferson County Holstein-Friesian Association at its annual meeting held January 12 at Watertown, New York. He was also chosen delegate to the convention of the state organization. Geo. N. Smith of Watertown was approved as director of the northern district of the state association. The other officers elected were E. B. Johnson of Chaumont, vice-president; Clarence Mather of Watertown, treasurer; Claude B. Fletcher of Evans Mills, secretary.

CREDITABLE DAIRY RECORDS

Cowles & Backhaus of Oakfield, Wis., have a nice herd of purebred Holsteins which they are handling in dairyman style. Fred C. Backhaus has charge of the cattle and has achieved quite a local reputation by the records made in his first attempt to officially test his animals. While no sensational records were made yet the cows and heifers did remarkably well considering that they had no previous preparation. Pine Bend

Pine Bend Grace 481 lb. milk, 17.49 lb. butter in seven days as a senior two-year-old. Owned by Cowles & Backhaus, Oakfield, Wis.

Grace was brought into the barn in October from pasture where she had run all summer. This senior two-year-old was put into test without any previous preparation and steadily gained under the feed and care she received as the first week she was in test made 16 lb. butter in seven days and on the last day of her test was producing at the rate of 19½ lb. Her seven day record as reported is 481 lb. milk, 17.49 lb. butter. Her best day is 70.9 lb. milk.

Pine Bend Mabel, another member of the Ideal Farm herd made 365 lb. milk, 16.17 lb. butter. Beauty Ota De Kol Colantha 2d, a seven-year-old, had lost two quarters but as the tester was there she was put in test and produced 379 lb. milk, 15.84 lb. butter reaching 57.4 lb. milk in a day. Several other members of the herd also made creditable records.

The Ideal herdsire is King of the Pontiacs Ladoga, a very typy individual sired by the great King of the Pontiacs.

PASTEURIZE CREAMERY BY-PRODUCTS

There has been considerable discussion and publication recently relative to the pasteurization of skim milk, whey and buttermilk returned from creameries to be fed to hogs in the State of Wisconsin. Our readers will be interested in the following statement by Mr. C. P. Norgord, commissioner of Agriculture, Madison, Wisconsin:

"The Wisconsin Experiment Station investigated the spread of tuberculosis from creameries in Dane County to herds of patrons. They compared the spread of tuberculosis by creameries where milk was separated and the skim milk sent back to different farms with those where the milk was separated on the individual farms. In the creameries that separated, the percentage of tuberculosis was 34.5 while in eight other creameries that did not separate, the percentage was 8.5. It stands to reason that the milk from a highly-infected herd containing a heavy seeding of tubercle bacilli is distributed throughout the milk, skim milk and whey coming from all other herds. When the farmers take home their skim milk or whey, therefore, they also take home with them in this product a seeding of tuberculosis germs originating from the infected farm. As a consequence, the hogs and calves drinking the skim milk or whey become infected and often the entire herd of cattle and hogs become tuberculous."

The condition prevails in some other States, the same as in Wisconsin, and there has been a continuous increase of tuberculosis in swine in these States. Although these States have pasteurization laws, they are observed more in the breach than in the enforcement. Inasmuch as it will take many years

to reduce bovine tuberculosis in some States to a degree that will cut down the percentage of swine tuberculosis, it will be highly advisable to see pasteurization practiced as extensively as possible at creameries and other dairy stations from which products are sent back to the farm.

JOURNAL OF THE AMERICAN VETERINARY MEDICAL ASSOCIATION.

BERKS FARM LOSES GREAT SHOW COW

Hazelwood Ormsby Posch 2d, the great show cow owned by Abner S. Deysher, of Berks Farm, Reading, Pa., died suddenly December 24, 1922. This great cow was born March 2, 1912, on the Pacific Coast and during her life she made a wonderful reputation as a show animal. Starting as a junior heifer calf she won first prize in her class and was junior champion at the Washington State Fair, at the Dairy Cattle Congress, Waterloo, Iowa, and at the National Dairy Show in 1912; first at Washington, Idaho, and Oregon State Fairs in 1915; first at the Pacific International and grand champion at Oregon and Washington State Fairs in 1920.

Hazelwood has a number of official records. Like many show cows she was a big milker but rather low tester. As a junior three-year-old, she made 20.25 lb. butter, 497.7 lb. milk in seven days. As a four-year-old, she again made a twenty-lb. seven-day official record and continued on test for ten months produced 666.66 lb. butter, 16,399.9 lb. milk. As a seven-year-old she increased this to 23.69 lb. averaging practically 85 lb. milk a day. As an eight-year-old, she made 24.88 lb. butter, 655.1 lb. milk, while at her last freshening in the Berks herd she produced 25.48 lb. butter, 717.3 lb. milk in seven days, reaching 106 lb. milk her best day. She was due to freshen again January 1, 1923.

The last time this great cow was exhibited was at the show connected with the Brentwood Sale, March, 1921, and here she

HAZELWOOD ORMSBY POSCH 2D

Famous show cow, died December 24th, in the Berks Farm Herd.

was first-prize winner in her class and champion of the show. Those who saw her at Brentwood and have since looked her over on the Berks Farm will regret her decease which is a great loss to her owner, Mr. Deysher and his Superintendent, Mr. Berry.

OGDEN'S FOURTH ANNUAL STOCK SHOW

The Fourth Annual Stock Show was held at Ogden, Utah, January 2d-5th, and was very successful. Exhibits came from the herds of C. S. Potter, Ogden; Harold Nelson, Woods Cross; Utah State Industrial School, Ogden; Utah School for the Deaf and Blind, Ogden; and Delbert Cook, Willard.

The awards were:

Bulls, three years or over: Ancel Hatch on Posch Ogden.

Bulls, two years; 1st, Harold C. Nelson on King Copia Rag

Apple of Cherry Creek; 2d, Industrial School on King Bess 9th.

Bull, one year; 1st, C. S. Potter on Sir Pontiac Gladi. Senior bull calf; 1st, Potter on Lomondview Dutchland Matador; 2d, Hatch on Posch Ogden 2d; 3d, Deaf and Blind School on Deandbee Cafeteria De Kol.

Junior bull calf; 1st and 3d, Nelson on Persa Homestead Lad and Sir Concordia Homestead Copia; 2d, Potter on Lomondview Korndyke Sir Matador.

Cow, three years or over: 1st and 2d, Deaf and Blind School, on Maplemont Artis Beets and Waldorf Pieter Pontiac; 3d, Industrial School on Lady Beryl Cloverdale.

Cow, two years; 1st and 2d, Potter on Gypsy Korndyke Hanna and Gypsy Sadie De Kol; 3d, Nelson on Lady Persa Rag Apple of Cherry Creek.

Senior yearling heifer: 1st, Deaf and Blind School on Deandbee De Kol Artis; 2d, Nelson on Lady Netherland Fytje; 3d, Potter on Lomondview Pontiac.

Junior yearling heifer: 1st, Hatch on Wisconsin Posch Hazel; 2d, Deaf and Blind School on Deandbee Johanna 2d; 3d, Potter on Aaggie Korndyke Willowbridge.

Senior heifer calf: 1st, Hatch on Alcartra Edna Posch; 2d, Potter on Lomondview Colantha Banostine; 3d, Nelson on Queen Netherland Copia.

Junior heifer calf: 1st, Potter on Lomondview Duchess Ormsby De Kol; 2d and 3d, Deaf and Blind School on Deandbee De Kol Poinsettia and Deandbee Pilgrim Posch 2d.

Aged herd: 1st, Nelson.

Young herd: 1st, Deaf and Blind School; 2d, Potter; 3d, Nelson.

Calf herd: 1st, Nelson; 2d, Potter; 3d, Deaf and Blind School.

Senior and Grand Champion male: Posch Ogden. Junior champion male: Persa Homestead Lad.

Senior champion female: Gypsy Korndyke Hanna.

Junior and grand champion female: Lomondview Duchess Ormsby De Kol.

ONONDAGA COUNTY SMOKER

About 200 attended the smoker at the Yates Hotel, Wednesday, given by the Onondaga Breeders' Club for the entertainment of their visiting friends. Treasurer Fitzpatrick of the Dairymen's League said that the League was doing about \$60,000,000 worth of business yearly for the past two years. He touched on the certificate of indebtedness which he said was now selling around 80c on the \$1.00; that the League owned \$4,000,000 worth of property, and that the fiscal year ends March 31st, so that the year's figures were as yet not in shape.

Ed. Chaffee of the Onondaga Coöperative Milk Association explained the work of that organization. He said there were 350 original organizers, that they handled an average of 70,000 lb. milk a day, the maximum was 117,000, and were paying an average of 43¢ per quart. At present they owned one-half million dollars worth of property; there were fifteen directors and 404 members that they had an indebtedness of \$200,000, of which \$10,000 was retired last April; 90,000 had been bought up since which was not due until next October; they paid no large salaries and owned seventeen routes now. The milk was retailed at 13c. Work was financed on a revolving plan that did not operate at a profit; he corroborated part of Mr. Fitzpatrick's statement that much of the trouble in coöperative association came from overpaying when the organization was new. Cooling stations are being established in the outlying districts; that they only handled grade B milk now but a grade A milk plant will be operated later.

Harvey Farrington spoke for the Board of Directors and said that a resolution should be sent to Albany, asking for prompt payment of tuberculosis indemnities. An emergency appropriation should be voted to pay indemnities now due and likely to be due July 1st. This resolution commended the present State Bureau of Animal Industry. Resolution was to be sent to the State Grange, the Governor and Lieutenant Governor and Chairman of the Agricultural Committees of the Assembly and Senate.

Jack Houck in a few well chosen words expressed the thanks of the visiting members for the entertainment that had been given and the meeting closed with Community singing.

LIME AND PHOSPHORUS ARE VITAL TO DAIRY ANIMALS

Lime and phosphorus, although they are found in relatively small quantities in feeds, have a great deal to do with milk production and building up the body of the unborn calf. If the cow does not have enough of these elements in her ration she will draw on the supply in her body for a time, and heavy producers commonly do this. Therefore, it is a good practice to feed cows well when they are running low in milk yield and when they are dry, so that they may store up these elements as well as others in their bodies for use when the large demand is made.

The common view is that dry cows need only enough feed for maintenance, but experiments have shown that this is not true. The cow is a milk-manufacturing plant, and, like many factories, she must have a reserve supply of materials to draw on when heavy demands are made. A cow that has been well fed when dry and has stored up this reserve is able to produce more on full feed than a cow that was given only a maintenance ration during that resting period. In this way a cow can utilize her capacity the year round, although she may not be giving milk all the time.

In keeping up the necessary lime and phosphorus supply it is well to keep in mind the fact that certain feeds are richer than others in these elements. The feeds that contain the most lime are the legume hays, which include cowpea, alfalfa, soy bean, the clovers, and some others. Of these mentioned cowpea hay contains the most lime, and the others are named here in the order of their richness in lime. The lime content of hay depends to a great extent on its quality. Leafy alfalfa hay contains more lime than coarse stemmy hay.

The common dairy feeds that contain the most phosphorus are wheat bran, cottonseed meal, standard wheat middlings, and linseed meal, in the order given. Less common feeds that are high in phosphorus are, in order, sesame-oil cake, rice polish, buckwheat middlings, rice bran, sunflower-seed cake, rapeseed cake, buckwheat bran and malt sprouts.

No grain or other concentrate contains anywhere near so much lime as the legume hays; and no kind of roughage contains phosphorus in quantities comparable to those found in the concentrates mentioned above. Grass hays, corn silage, and corn products with the possible exception of those made from the germs are low in both lime and phosphorus.

JOURNAL OF THE AMERICAN VETERINARY MEDICAL ASSOCIATION.

THE MIGHTY HAVE FALLEN

The Syracuse Sale Pavilion, the scene of a number of sensational cattle sales during the past nine years, has finished its career as a sale pavilion.

During its existence, several great dispersal sales have been held within its walls. The two greatest were the Dollar Sale and the dispersal of the herd owned by Stevens Brothers Company. Buyers from the Pacific Coast attended sales in this Pavilion and several carloads of sale cattle have been shipped from Liverpool to points west of the Rockies, while shipments went to Texas, Georgia, Louisiana, and other Southern States. Many herds in New England, New York, and the surrounding territory to-day include among their inmates bulls or females that have passed through the sale ring in this building.

The Syracuse or Liverpool Sale Pavilion, it went by both names, was erected in the fall of 1913, and immediately jumped into popularity. In the Spring of 1915, sales were held here every few weeks, at one time there being three two-day consignment sales in four weeks. The final event was the dispersal of the herds owned by Ward W. and Ralph J. Stevens on January 10-11, 1923.

Man (in drug store).—"I want some consecrated lye. Druggist—"You mean concentrated lye."

Man—"It does nutmeg any difference. That's what I camphor. What's it sulphur?"

Druggist—"Fifteen scents. I never cinnamon with so much wit."

Man—"Well, I should myrrh, myrrh. Yet I ammonia novice at it."

Cow Testing Association Reports

IN WISCONSIN

O'Connor, a four-year-old grade Holstein, owned by Arnold Roesler of the Dale-Hortonville Association was the leader for both milk and fat production during December.

She produced 81.8 lb. fat from 1,860 lb. milk. Second was Lulu, a seven-year-old grade Holstein, owned by Otto Meyer, with a production of 65 lb. butterfat, 1,627 lb. milk. Third high cow was an eight-year-old grade Holstein, Niger, owned by V. Raprager. She is credited with 59.6 lb. butterfat from 1,491 lb. milk.

Forty-eight cows in the Clinton Association produced more than 40 lb. fat while four herds averaged more than 31 lb. The high cow of the 362 tested was a grade Holstein owned by the Rock County Farm, she producing 1,604 lb. milk, 72.2 lb. fat. Second high cow was owned by Ward & Sons with 15,566 lb. milk, 64.2 lb. fat.

W. J. Ward & Sons had the highest average, their twenty-three cows producing an average of 42 lb. fat, 1,274 lb. milk. The County Farm was second with twenty-eight cows with a production of 1,045 lb. milk, 36.9 lb. fat.

Seventeen grade Holsteins, owned by Louis Schaez, carried off the herd honors in the Shirley-Denmark Association for the month of December. Their average was 985 lb. milk, 37.3 lb. fat. A member of this herd was high cow for the month having a credited production of 1,765 lb. milk, 67.1 lb. fat. Thirty cows produced more than 40 lb. butterfat.

The Association was reorganized December 1, 1922, with twenty-eight members enrolled. Twenty-one of these have purebred sires.

A grade Guernsey led the La Grange Association for the month of December with the production of 76.6 lb. butterfat from 1,277 lb. milk. The second cow in butterfat production but first in milk production was a grade Holstein owned by L. Phelps with 69.3 lb. fat from 1,825 lb. milk. High herd was owned by Mr. Phelps and consisted of sixteen grade Holsteins with a production of 46.7 lb. butterfat from 1,255 lb. milk. Four hundred and fifty cows were tested and of this number 102 produced more than 40 lb. fat.

The first month's testing in the Ladoga Association ended December 30th, with 340 cows tested, 33 of which produced more than 40 lb. butterfat. A purebred Holstein owned by Ed. H. Braatz was the leader, she producing 65.3 lb. fat from 1,674 lb. milk. Next to her came a purebred Holstein owned by J. A. Weber & Son with 56.7 lb. fat from 1,491 lb. milk.

The high producing herd was owned by L. J. Pinkerton, and consisted of eleven grade Holsteins which averaged 1,063 lb. milk, 36.1 lb. fat for the month.

Laura, a registered Holstein, owned by Louis Wais, Kewaunee led the 663 cows tested in the Kewaunee County Association during December. She produced 1,662 lb. milk, 59.3 lb. fat. Eleven of the cows tested produced more than 50 lb. fat during the month. E. F. Zillmer is the tester.

Julie, a purebred Holstein, led the Central Rusk Association for December, she having a production of 1,680 lb. milk, 60.5 lb. fat. She was owned by Flunker Bros. There were 274 cows tested.

Forty-eight cows in the Prairie Farm Testing Association produced 40 lb. butterfat or more during December. The leader was Blacky, a grade Holstein, owned by the Burr Oak Stock Farm with 1,326 lb. milk, 65 lb. butterfat to her credit. The value of her product at 59 cents a pound was \$35.75. The cost of her feed was \$9.14 leaving a profit above feed cost of \$26.61.

Twelve Holsteins in the herd of Martin Berg carried off high herd honors, producing an average of 818 lb. milk, 34.44 lb. fat.

Lucy, a purebred Holstein owned by John Brittnacher led the 326 cows tested in the Greenleaf Association during the month. This cow produced 57.2 lb. butterfat from 1,429 lb. milk. She was followed by a grade Holstein owned by Henry Neinhaus with 56.2 lb. fat from 1,338 lb. milk. The five highest producing cows were Holsteins grade and purebred. There were 326 cows tested of which 21 produced more than 40 lb. butterfat and seven more than 50 lb. High herd was owned by Mr. Neinhaus with an average production of 753 lb. milk, 30.5 lb. butterfat.

A herd consisting of 25 grade Holsteins, owned by F. P. Blair of Mukwonago, produced to average 1,164 lb. milk, 39.1 lb. fat and led the East Troy Association for the month of December. H. Wedel, also of Mukwonago, had the second high herd. This herd consisted of 23 grade Holsteins and averaged 1,114 lb. milk, 39 lb. fat for the month. High cow was owned by Mr. Wedel. She was a grade Holstein and produced 2,055 lb. milk, 76.8 lb. butterfat. The average of the 493 cows tested during the month was 800 lb. milk, 28.9 lb. fat. Eighty-two of these made more than 40 lb. fat and fourteen two-year-olds made more than 30 lb. butterfat.

The faster we run into debt the more we get behind.

"MEAD'S THE MAN!"

A 256 COW DAIRY AND ITS AVERAGE

During the month of December, 2,898 cows were tested in the Stanislaus County Association under the supervision of M. L. Gorow. The average production in this great California association was 26.5 lb. butterfat and 648 lb. milk.

In the division consisting of herds containing 40 cows or more, the leader for production is the grade Holstein herd owned by Kaiser Bros. This 62-cow dairy averaged 901 lb. milk, 32.6 lb. fat. The S. Newman Co. Haile Dairy consists of 256 grade Holsteins and these average 768 lb. milk, 29.8 lb. fat, a splendid showing for so large a herd. The 80-cow grade Holstein dairy owned by Coito Bros. averaged 807 lb. milk, 29.6 lb. fat and the 72 grade Holsteins owned by Gonzales & Co. averaged 756 lb. milk and exactly 29 lb. fat.

The division consisting of herds containing between 15 and 40 cows is headed by the registered Holstein herd of F. W. Looney. These 16 cows averaged 1,219 lb. milk, 41.8 lb. fat. The 22 registered Holsteins of the Six Bros. Dairy averaged 983 lb. milk, 34.6 lb. fat.

The high cow in the Association for fat production is a grade Guernsey with exactly 80 lb. of fat from 1,708 lb. milk. Registered Holsteins are second and third. Delmar K. owned by J. Chapman produced 78.1 lb. fat, 2,170 lb. milk and Sissy C. V. owned by J. A. Pelanda produced 76.1 lb. fat, and 1,938 lb. milk. Another registered cow owned by Mr. Pelanda is in eighth position with 66.6 lb. fat, 1,287 lb. milk, while the registered Holstein cow Daisy of the F. L. Hogue Co. is tenth with 60.9 lb. fat, 1,830 lb. milk.

ILLINOIS COW TESTING

A registered Holstein owned by the Rock River farms at Byron heads the Illinois Associations for the month of December with a production of 1,981 lb. milk, 85.2 lb. fat. Twenty Associations report their leader. In nine instances these are purebred Holsteins and in six cases grade Holsteins, certainly a splendid showing for the breed. The list of the ten highest producing cows in the state includes seven registered Holsteins and two grades, the other being a purebred Jersey in second position with 84.7 lb. fat. A Rock River purebred is third with 2,105 lb. milk, 84.2 lb. fat. A purebred owned by Eugene Nagel is fourth with 2,604 lb. milk, 83.3 lb. fat, she being the reported leader for milk production. Rock River cows are sixth and tenth, a registered Holstein owned by H. C. Labrec is eighth with 72.9 lb. fat and another owned by A. D. Cornue is in ninth position with 72.5 lb. fat. Purebred Holstein herds show up prominently in the herd list.

"It's a wonderful comfort to live in a civilized country where all you have to do to make people behave themselves and be good is to pass another law."—St. Joseph News-Press.

GOOD PENNSYLVANIA RECORDS

The Central Poor District of Luzerne County, Pa., owns a real good herd of purebred Holsteins. Some of their animals were shown at a number of fairs last fall and won considerable prize money and ribbons. A number of very creditable records have been made in this herd during the past few months.

Bessie Hartog Kuperus Segis produced

HILLSIDE DORIS ORMSBY

432.3 lb. milk, 20.34 lb. butter in seven days; 1,824.7 lb. milk, 81.65 lb. butter in thirty days at twenty-one months' old. State record for age. Owned by the Central Poor District of Luzerne County, Pennsylvania.

443.2 lb. milk, 23.24 lb. butter in seven days as a three-year-old. The junior two-year-old Retreat Clothilde made 381.4 lb. milk, 17.70 lb. butter in seven days. Retreat Pontiac, another junior two-year-old, made 368 lb. milk, 16.52 lb. butter in a week. Prilly Aaggie Pontiac, an eight-year-old cow, made 471.8 lb. milk, 22.96 lb. butter. The senior two-year-old, Fairmont Lyndon Alcartra made 21.4 lb. butter, 373.5 lb. milk in a week and in thirty days produced 1,751.7 lb. milk, 91.29 lb. butter. Alcartra Johanna Pietje Maid produced 527.6 lb. milk, 19.29 lb. butter in seven days as a five-year-old. Two real good records were made by yearling heifers. Hillside Pontiac Lily produced 392.4 lb. milk, 15.23 lb. butter while Hillside Doris Ormsby produced 432.3 lb. milk, 20.34 lb. butter in seven days, 1,824.7 lb. milk, 81.65 lb. butter in thirty days all of which are Pennsylvania state records for age as this heifer was only twenty-one months, eighteen days old at the time she freshened. She is a daughter of King Pontiac Maple Knoll Ormsby.

There are a number of good records being made at the present time. Ballard Farm Clothilde Segis 2d is on test now milking better than 90 lb. a day and has made over 26 lb. butter in seven days. Highland Pelham De Kol, a four-year-old is milking around 100 lb. a day, has made over 25 lb. butter in a week and is increasing every day. Korndyke Segis Elena Dichter is in test as a four-year-old and has exceeded 23 lb. in seven days. There are a number of other good ones which will be put on test from time to time as they freshen and we hope to tell about them in the future issues of the BREEDER AND DAIRYMAN. Under the care of Herdsman J. O. Vaughan we know they will be given an opportunity to make the records they are evidently capable of making.

Buy your umbrellas when the sun is shining, they usually go up when it rains.
—U. of Notre Dame Juggler.

MICHIGAN BREEDER TO DISPERSE HERD

Away back in the fall of 1900 now more than 22 years ago, Ernest E. Butters of Coldwater, Mich. purchased a purebred Holstein female and the next year added another. From these two cows he has built up a real good herd.

One of the original cows was Neeltje Dale 2d De Kol. Mr. Butters showed her at the Sheboygan County fair held at Plymouth, Wis. in the fall of 1905. The judge was that splendid Holstein breeder, W. J. Gillett, the breeder and developer of the former world champion Colantha 4th's Johanna. Mr. Gillett awarded this cow three champion prizes, placing her as the best Holstein, as the best cow of any breed and first for giving the most milk at the fair. That Neeltje Dale 2d De Kol was possessed of considerable individuality is also evidenced by the fact that one of her daughters defeated the famous Minerva Beets at the central Wisconsin state fair in 1914. Any animal that could win first position over the wonderful old champion Minerva must certainly have been possessed of individuality of a high order and come from a great family.

In the present herd is Neeltje Terzool Segis a granddaughter of the foundation cow. This granddaughter as a three year old produced 99.4 lb. milk in a day and in 7 days made 28.46 lb. butter and 633.5 lb. milk. She has two sons in the herd.

The present herd sire is Paul Pietertje Wayne Prince a son of Beauty Walker Pietertje Prince 2d and Aaggie Wayne Pauline De Kol 2d. This cow made a splendid record of 761.9 lb. milk, 30.18 lb. butter in a week. She produced more than four times this amount in 30 days, for which her totals are 3,218.5 lb. milk, 122.37 lb. butter.

Every member of the present Butter's herd with the exception of the herd sire is descended from the two foundation animals purchased 22 years ago. The ideals of individuality and production

have been kept strictly in mind while the owner has realized that freedom from disease is imperative in the list of requirements. The herd is free from contagious abortion and has passed four tests for tuberculosis without a reactor. It is a pity that such a herd has to be dispersed, but it will be, for Mr. Butters has set the date of March 7th for a sale at his farm at Coldwater.

THE INTER-MOUNTAIN LIVE STOCK SHOW

The sixth Inter-Mountain Live Stock show is scheduled to be held in the Salt Lake Union Stock Yards, April 3d to 7th. This is a show that draws its patronage from a long distance and we doubt if any other show in the United States or anywhere in the world can equal it in the respect of average number of miles traveled by the visitors who attend, they coming from Colorado, Wyoming, Nevada, Idaho, Montana and Nebraska, besides the home state of Utah.

The pavilion for live stock is well-lighted and well-ventilated, and is a building 350 ft. long by 130 ft. wide inside measurement. The car load lot exhibits features of nearly all shows in the middle western states, are not housed in this building, which is reserved for breeding stock. Some splendid individuals have been exhibited at previous shows and it is expected that the 1923 event will be "Bigger and better" than its predecessor. Here is an opportunity for the Holstein-Friesian Association of America to extend the breed popularity by adding to the premium list and so help to bring out larger and better exhibits of purebred Holsteins, for such help when given to struggling breeders and shows on the Holstein "frontier" is worth many times the same amount of money and energy given to well-established exhibitions in densely populated Holstein centers.

Never hit a man when he has you down.

GATES' HEIFER SETS NEW HIGH MARK

A remarkable record has just been closed by Crestmont Ormsby Alcartra, owned by that well-known Pennsylvania breeder, Harry C. Gates of Canton. Freshening as a junior three-year-old this heifer has made over 22,000 lb. milk and 960 lb. butter in ten months. The exact figures are not yet reported from the office of the Superintendent of Advanced Register. The heifer is due to freshen again in April, well within the time enabling her to qualify in the ten months' division.

This is not the first time Crestmont Ormsby Alcartra has had her name in print. As a junior two-year-old she produced 15,883.1 lb. milk, 722.98 lb. butter in 305 days, carrying calf 180 days of the time she was on test. She is the state champion of Pennsylvania in the 305-day division of the junior two-year-old class. Her full sister, Crestmont Duchess Ormsby as a junior three-year-old produced 18,243.1 lb. milk, 806.65 lb. butter, carrying calf exactly 200 days. This great record is displaced for the state championship by that of the new world champion. The pair of full sisters averaged in their ten months' tests as junior three-year-olds no less than 883 lb. butter and more than 20,000 lb. milk which is not equalled by any other pair of junior three-year-old full sisters in the world. These heifers are daughters of Fairmont Duchess Ormsby, a daughter of Pledge Spofford Calamity Paul. Their sire is King Pontiac Alcartra Wayne, the head of the Crestmont herd, a bull whose daughters are making a splendid showing, both in the dairy and in test work. The full sisters were born less than a year apart, as the older heifer was dropped October 28, 1917, and the younger one October 9, 1918. We know our readers will join with us in congratulating Mr. Gates, the breeder and developer of the new champion.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address THE NATIONAL SPOTTED POLAND-CHINA RECORD, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

**The Best of
Wisconsin Holsteins!****A Bull Calf That Will Improve
Your Herd.**

He is nicely and evenly marked, good in every way, from a 23 lb. four-year-old full sister to Lady Jewel De Kol Colantha, 32.56 lb. butter, 830.5 lb. milk in a week, the Wisconsin Champion for milk production.—See the *Holstein Breeder & Dairyman*, issue December 22d, 1922.

Also a few young females, all sired by Edenvale Roy Pietertje No. 245651, our handsome grandson of old Sir Pietertje Ormsby Mercedes.

Our stock is always worth the money we ask for them, and we will let you be the judge.

J. W. LAWTON & SON,
MAPLE PARK STOCK FARM,
Established 1906. VIOLA, WIS.

KING ARTIS WACONDA

King Artis Waconda, the handsome bull which stands at the head of Sam Witmer's herd at Union Deposit, Pa., is closely related to many of the greatest producers known to the Holstein breed. His dam, Waconda Clothilde Artis, is a former world's champion as her record of 792.05 lb. butter, 18,795.5 lb. milk, which was made in a year when she was a junior three-year-old, was world's record at time of making. This great cow has three different years exceeded 25 lb. in a week, each time averaging better than 70 lb. milk a day. As an eight-year-old, she produced 30.16 lb. butter, 549 lb. milk in seven days. She is splendidly bred being by De Kol Clothilde Artis, who has a long list of high record daughters including the 42-lb. cow, Tietje Queen De Kol. This sire was one of the best transmitting sons of De Kol 2d's Butter Boy 3d.

The sire of King Artis Waconda is King Korndyke Sadie Vale, Jr., a son of King Korndyke Sadie Vale from Aaggie Cornucopia Paul 31.03 lb. butter, 624 lb. milk in seven days as a ten-year-old. This cow has a number of large records and she has four tested daughters, one of which, Aaggie Cornucopia Paul 2d, is one of the only two cows that have four daughters each with year records above 1,000 lb. butter. She is the only cow to have four 1,000-lb. daughters that have each made over 20,000 lb. milk in a year and the records of her four daughters average over 25,000 lb. milk, and practically 1,100 lb. butter.

The blood of world champions flows in the veins of King Artis Waconda. As said above his dam was a world champion in her class. Many of his near relatives have made world records in their respective classes. Among his ancestry occur the names of no less than five great cows who have been world champions over all ages and breeds.

WELL KNOWN TO DAIRYMEN

The new secretary of the Commonwealth of Pennsylvania, Professor Clyde L. King, is well known to dairymen in Pennsylvania, Maryland and nearby states. During the war, Professor King was food administrator for the Philadelphia district. Afterwards he was appointed arbitrator to settle disputes arising between the producers, distributors and consumers of the milk supplied to the City of Baltimore.

The Maryland State Dairymen's Association handles 60% of the daily supply of Baltimore milk which averages 5,000 gallons a day. Milk is retailed at 13 cents a quart which is below the charge in nearby cities. Professor King will devote one day a month straightening out any disputes that may arise in this district.

A poor hard-up farmer asked "Why is that fellow's milk average so high?" The record's alright, It's in plain black and white, You can do it yourself if you try.

SOUTH CAROLINA TESTING

A splendid record is reported for Polly Fellingha Posch, owned by V. M. Montgomery, Spartanburg. On seven-day official test she made 587.6 lb. milk and 31.52 lb. butter while during the month she produced 2,518.2 lb. milk and 108.1 lb. fat equivalent to 135.13 lb. butter. She exceeded the previous South Carolina champion, Katie Paul Sadie Vale, by nearly 4 lb. fat while there is only one South Carolina cow, Anne Johanna Spofford, that has a larger seven-day record. The second largest record reported is on Cedardale Alice Korndyke Posch, another member of the Montgomery herd. She has 2,556.3 lb. milk, 86.8 lb. butterfat to her credit and is a mature cow. A Guernsey is third with 74.2 lb. fat and Cedardale Alice Clothilde De Kol 2d, of the Montgomery herd is in fourth place with 2,413.5 lb. milk and exactly 71 lb. fat. Mr. Montgomery has sixteen cows in the honor list. J. T. Willard also of Spartanburg, has eight and the Clemson Agricultural College is represented by a senior two-year-old with 43.6 lb. fat in the seventh month of her lactation period. The South Carolina report shows that during November, ninety-three cows were tested of which 39 were Holsteins. The report has a list of Holstein records certified during the year from July, 1921, to July, 1922, and this list gives the increase above the age requirements. Figured on this basis, the most creditable record is that of Model Gladi Fayne, owned by H. D. Jordan of Ridge Springs, which as a senior three-year-old produced 21,277.9 lb. milk, 744.31 lb. butter which was 140.9 percent increase above her requirements. Space will not permit of giving the entire list at this time although we would like very much to do so.

Animals from the herds of H. D. Jordan, Mr. Willard, St. J. A. Lawton of Charleston, and the Clemson Agricultural College are represented in the division for yearly work while the Jordan and Lawton herds as well as that owned by B. A. Baxley of Blackville make a fine showing in the 305 day division. A report of the South Carolina class champions for butter production is also given.

HOME BREW RECIPE

Chase a frog for ten miles and gather up the hops. To these add half a pint of shellac, ten gallons of water, four pounds of tanbark and four gallons of home-made soft soap. Strain through the heel of an I. W. W. sock to keep it from working. To each pint add a grasshopper to give it a kick.

GOOD RECORD AT DIXON

Molly Hengerveld Towanda, owned by Harry Wood has completed her year record at the Illinois testing plant with the production of 846.8 lb. butter, 22,648 lb. milk. She is a junior three-year-old and is a very nice individual.

The real business of life is self-improvement, but very few people are engaged in it.

CANADIAN TESTING

There were forty Canadian Holstein-Friesian cows and heifers whose tests were accepted in the Record of Merit during December. The leader was Countess De Boer 2d with 542.4 lb. milk, 31.59 lb. butter. She is owned by David T. Thompson of Cainsville, Ontario. No senior four-year-old was reported and only two junior four-year-olds, of which Agassiz Mechthilde Sylvia of the Experimental Farms, Agassiz, B. C. and she has 707.3 lb. milk, 27.21 lb. butter to her credit. Raymondale Duchess, owned by D. Raymond of Vaudreuil, Quebec, led the senior three-year-old class with 484.0 lb. milk, 26.50 lb. butter while the junior three-year-olds were led by May Teake Colantha 2d with 453.9 lb. milk, 23.10 lb. butter. Her owner is Wm. Stock, Tavistock, Ont. Only one 20-lb. two-year-old is reported and she is Dewdrop Franci Fayne with 394.2 lb. milk, 20.21 lb. butter. Her owner is Joseph Barnett, Currie's Crossing, Ont. The junior two-year-old leader is Korndyke Lass Vee-man, with 411.4 lb. milk, 18.43 lb. butter to her credit and her owner is Neil McGugan, Shedden, Ont.

The long time division is led by Hengerveld Dutchland Daisy with 20,402 lb. milk, 976.25 lb. butter in 365 days. She is owned by Geo. Ellacott of Monkton, Ont. Second to her is Jemima Johanna of Llenroc, with 21,876 lb. milk, 906.25 lb. butter. Jemima is one of the good daughters of the former Canadian champion Jemima Johanna of Riverside and is owned by W. C. Houck of Chippawa, Ont., and Buffalo, New York. York Maid Hartog, owned by T. W. Craig, Brantford, Ont., led the four-year-old class with 19,210 lb. milk, 842.5 lb. butter and the three-year-old leader is Pontiac Atlas Franci 3d with 22,181 lb. milk, 978.75 lb. butter. This heifer is the largest producer reported during the month both for milk and butter. Her owner is J. J. Fox, Guelp, Ont. The two-year-old leader, Beaverland Pietje Pauline, has 19,540 lb. milk, 803.75 lb. butter to her credit. She comes from the Colony Farm, Essondale, B. C. and in the United States would be called a junior two-year-old.

Some fine records are reported in the 305-day division. The leader of the mature class is May Middleton, owned by W. G. Brown, London, Ont., with 690 lb. butter from 17,093 lb. milk. The four-year-old leader is owned by Fred Cowan, Huntingdon, Que. Her name is Della Maud and her marks are 16,095 lb. milk, 703.75 lb. butter. Abbeckerk Elsie, owned by Francis Worrell of Milner, B. C. is the three-year-old leader with 13,149 lb. milk, 572.5 lb. butter.

Splendid records are reported in the junior two-year-old class in which the first three heifers all exceed the best record previously reported in Canada. Jane De Kol of Glen Rae, owned by R. R. Stevens of Bowmanville, Ont., made the great record of 803.75 lb. butter from 19,082 lb. milk. Second was Juliet Abbeckerk, with 713.75 lb. butter from 15,924 lb. milk, followed by Epworth Toitilla Wayne with 708.75 lb. butter from 16,037

lb. milk, and fourth was Epworth Toitilla Walker with 627.5 lb. butter from 16,410 lb. milk. The last three heifers are owned by G. A. McCullough of Navan, Ont.

FRANKLIN COUNTY HOLSTEIN-FRIESIAN BULL ASSOCIATION

By F. R. CAMMACK

Idaho Extension Field Dairyman.

The Franklin County Holstein-Friesian Bull Association has recently purchased Boomer Lilith Segis Lad, No. 392739, whose sire, Hollywood Segis Palmyra, No. 280096, is a son of Hollywood Lilith Palmyra Evelina, No. 346238, with a record of 1,144.8 lb. butter as a four-year-old. The dam, Segis Walker Pietertje Lad Baroness, has a very creditable record and her sire, Segis Walker Pietertje Lad, is a three-quarters brother of Segis Pietertje Prospect, world record milk cow, with 37,000 lb. milk and 1,448 lb. butter in a year.

The purchase of this bull in this association makes the Franklin County Holstein-Friesian Bull Association again the largest bull association west of the Mississippi River.

This Association was organized in May, 1922, and they plan to purchase more bulls because of the success with which the Association is meeting to date.

This bull was purchased from H. R. Boomer, prominent Holstein breeder of Payette, Idaho.

**HOLSTEINS LEAD IN
CHEMUNG**

The purebred Holstein Mont Airy De Kol owned by Jesse Dalrymple, holds first place for milk production in the Chemung, New York Dairy Improvement Association with 17,093 lb. She also holds the record for butterfat at 565 lb. or 678 lb. butter at a feed expense of \$141.84 for the year.

One cow, De Kol, owned by Geo. P. Wood has appeared on the Honor Roll ten months in succession with over 1,200 lb. milk each month.

CHILBLAIN REMEDY

Chilblains are a source of trouble to many who live on the farms. One of the reasons is cold floors. Another is that heavy shoes and thick socks are worn and the feet first get overheated and then chilled. The following receipt is given by Dr. Royal M. Copeland, Health Commissioner of New York City, who was elected Senator for the Empire State at the last November election: Iodine crystals, 5 grains; collodion, 1 ounce; ether, 2 drachms. Paint this mixture on the chilblains every day. This will stop the itching and protect the skin.

"Niggah, shoot yoh dollar, and give us a little Ford action."

"Boy, what do yo-all mean by Ford action?"

"Shake, rattle and roll, niggah; shake, rattle and roll."

BERKS FARM MAKES THIRTY-POUND RECORD

The many friends of Abner S. Deysher will be pleased to learn of the first thirty-lb. record made in the Berks Farm herd. Mr. Deysher has been a liberal bidder at many of the great sales and the Berks herd contains a number of animals that have been the tops of some of the best advertised sale events during the past few years. While a number of good records have been made in the herd it was not until Mr. Deysher secured the services of Clark F. Berry his present superintendent that the animals were given the care of an experienced herdsman.

The first animal to attain the coveted thirty-lb. mark was L. H. C. Annetje Princess Alcartra who has been a member of the herd for a couple of years. She is royally bred, her sire being King Segis Pontiac Alcartra, a century sire himself and son of King Segis Pontiac and the former world's record senior three-year-old, K. P. Alcartra. The dam of the new 30-lb. cow is Tidy Abbekerk Princess Annetje, who herself has a seven-day official butter record of 30.92 lb. and is a daughter of the century sire Tidy Abbekerk Prince. The pedigree of L. H. C. Annetje Princess Alcartra contains the names of some of the greatest transmitting sires and producing cows ever developed in the Holstein breed. Mr. Deysher is to be congratulated upon owning two daughters of this cow both by the Berks Farm herdsire King Tweede Spring Farm. Other good records are in progress in the Berks herd which will be reported in subsequent issues of THE BREEDER AND DAIRYMAN.

WHERE OUR FOOD COMES FROM

That 90% of all that is eaten in eastern cities is produced west of Pittsburgh was the statement made by Interstate Commerce Commissioner J. B. Campbell at the annual dinner of the Spokane Merchants Association. Mr. Campbell is a lawyer, runs an irrigated orchard in the Spokane Valley and also a general farm on the banks of the Little Spokane River. Commissioner Campbell disagrees with the idea that production must be cut in order that better prices may prevail at the farm and says that we should instead establish a higher standard of living and more capable distribution.

MUSSER PROGRESSING

The well-known dairy specialist, Karl B. Musser, who for some time has been fieldman for the American Guernsey Cattle Club, has been appointed Associate Secretary of the National Guernsey Association and since November 15th, owing to the illness of Wm. B. Caldwell, secretary and treasurer, Mr. Musser has been acting treasurer. He formerly was Dairy Extension Specialist of the State of Washington.

When the Desert of Sahara gets tired of being dry all she needs to do is to pass a Prohibition law.—*New York Tribune.*

Mining German Potash

Good Healthy Crops

It has long been known that *German Potash Salts* prevented certain plant diseases, as well as greatly increased the quantity and improved the quality of crops.

Scientific investigation now shows us that not only *Potash* but also *Magnesia* is required to prevent certain plant diseases.

The *German Potash Salts* contain *Magnesia* as well as *Potash*.

If you insist on having your fertilizer contain from 5 to 10 per cent of *Potash*, derived from *Genuine German Potash Salts*, you will secure at the same time enough *magnesia* to prevent plant diseases due to *magnesia* hunger.

For *Tobacco*, and for those *Fruits* which are injured by *Chlorin*, the fertilizer should carry 10 per cent of *Potash*, derived from *Sulfate of Potash* or from *Sulfate of Potash Magnesia*.

Use the latter if your tobacco leaves are not sound.

DAIRY INFORMATION

An additional printing of 10,000 copies of the Handbook of Dairy Statistics which was issued a few months ago by the Dairy Division of the Department of Agriculture, has been found necessary in order to meet the demand for information of this kind. The handbook is of pocket size and contains 135 tables giving statistics on dairy production and trade throughout the world.

The Department has prepared three circulars which by graphs and charts illustrate the material contained in the handbook. One shows the imports and exports of cattle by the United States for the past seventy years and shows the progress of dairying in this country compared with the relative progress made in other countries. Another circular shows the trend of the butter industry in the United States and other countries and shows the flow of the butter trade from country to country. The third circular is along similar lines, but relates to the cheese industry.

"Mr. Shepherd, your daughter has promised to marry me."

"Humph; she said she'd get even with me when I refused to get her a Pekinese pup."

STANTON HERD TO BE DISPERSED

The herd of Walter H. Stanton will be dispersed February 22d at Troy, Pa. This is a high-class herd consisting of some twenty registered cattle. In it there are two cows and they have each made over 26 lb. butter in a week, each animal averaging over 70 lb. milk a day during the week of her test. Each of these two great cows have two daughters that will be in the sale. Another animal in the herd has given 614 lb. milk in the seven days, making 22.41 lb. butter and she has produced over 18,000 lb. milk in a year. A daughter of this cow will be offered, as well as seven granddaughters of a 26-lb. cow and two granddaughters of a 30-lb. three-year-old. The Stanton herdsire is sired by a son of a 30-lb. three-year-old, and is from a cow that made 27.90 lb. butter and 662 lb. milk in a week. This herd is backed by large records and famous lines of breeding. As Mr. Stanton is a good caretaker and a high-class dairyman, the herd is one that is bound to please possible purchasers. The sale will take place on Washington's birthday, February 22d, and is well worth the attention of the readers of the BREEDER AND DAIRYMAN.

THE BENNETCH DISPERSAL

On March 5th on the farm at Richland, Pa., will occur the dispersal of the well-known herd owned by M. H. Bennetch. This is one of the best known herds in Pennsylvania. It is sold federally tuberculin tested and subject to a 60-day retest privilege. The herd contains about fifty animals of which twenty are fresh or close springers. There are eighteen heifers bred in September and December, as well as six calves between four and six months of age. The blood lines behind the Bennetch animals are famous for production. The herd contains eight granddaughters of the well-known Bloomingdale herdsire King Model. These heifers are sired by a son of a 31-lb. cow. There are a number of granddaughters and grandsons of Radium who was the Grand Champion bull of the 1921 New York state fair. Daughters of this sire are making splendid records and it will be recalled that he is from the same dam as the wonderful May Echo Sylvia, the only cow that ever produced 1,000 lb. milk in seven days.

Those in search of young bulls will have an opportunity to select from a number of good ones ready for service. One of the bulls that will be offered is from a cow that made 30 lb. butter in seven days, as a three-year-old, and in this sale there will be five grandsons of Spring Farm King whose daughters are making fine records. The Bennetch herd is noted for individuality and production, and we are assured that the individuality of the offerings is of the very highest. Those who like light colored animals should certainly plan to attend this sale, as practically everything in the herd is more white than black. The Backus Pedigree Company of Mexico, New York, are handling the advertising for Mr. Bennetch and to them requests for catalogs should be addressed.

A CHALLENGE FROM COLONEL PERRY

The irrepressible Colonel D. L. Perry of Columbus, Ohio, is as full of youth and energy as ever. The Colonel has been devoting more of his time to his Poland-China hogs than he has to selling Holsteins during the past two or three years. But the pep that served him so well at many great Holstein and Jersey sales cannot be repressed, even on the farm, and in the February issue of the

National Poland-China Journal, the Colonel is out with the following sweeping challenge:

"I have six gilts farrowed June 13, 1922, by Eureka Bond, out of Queen Prospect.

"I will wager any number of dollars from one hundred to two hundred that they are the best six gilts from any one sow in Ohio. Gilts to be eligible must be farrowed any time from May 1 to July 1, 1922.

"To be judged by Secretary Brown or any other man who my competitors and I may agree upon, the loser to pay the expenses of the judge whoever he may be. The awards to be made on the farms where the pigs are owned. Expenses to include traveling and hotel bills of said judge. Now, come on. I think I have the winner. This challenge to hold good until March 1st."

COL. D. L. PERRY, PERRYDALE FARM, Columbus, Ohio.

SOURCE OF STRENGTH

Mother entered the room just in time to see four-year-old Verna knock her older brother down. "Verna, how could you do such a thing?"

"The Lord gave me strength," Verna proudly replied.—Toronto Telegram.

"Why did you quit your last place? Wasn't your work congenial?"
"Lady, no work is congenial."

BORN TO BE A DIPLOMAT

Born to be a diplomat was the man whose father had been hanged and who answered the following query in a questionnaire.

"Is your father dead? If so, how did he die?"

"My father was taking the principal part in a public function, when the platform gave way."

Crestmont Ormsby Alcartra

a daughter of King Pontiac Alcartra Wayne has just made over 22,000 lb. milk and 960 lb. butter in ten months as a junior three-year-old, the World's Record. She is due again in April.

No Mistake! a son or grandson of King Pontiac Alcartra Wayne would make you a profitable herdsire.

Let me price one to you.

FIFTY REGISTERED HOLSTEINS

MONDAY, MARCH 5, 1923

FEDERAL TUBERCULIN TESTED HERD

at my farm, Richland, Penna.

SOLD SUBJECT TO A 60 DAY RETEST

I WILL SELL IN THIS SALE:—

20 fresh or close springers
6 calves from 4 to 6 months of age

18 heifers bred in Sept. and December
8 granddaughters of King Model by a son of a 31-lb. cow.

I will also offer several granddaughters and grandsons of Radium who is from the same dam as the world's record milk producer, May Echo Sylvia.

ALSO a few well bred young bulls, ready for service, including a son of a 30-lb. three-year-old and five grandsons of Spring Farm King through his best proven son.

This is a herd of genuine high class individuals—light in color and the big straight backed kind with two good ends and a good middle. The kind that are noted for "Individuality and Production."

Write for catalog and be sure to attend this important Pennsylvania sale.

THE NEW SPRINGDALE HERD-SIRE

The great problem that periodically confronts the breeder is that of securing a new herdsire worthy to mate with the females already in the herd. This problem is all the more formidable when previous herdsires have been of a high character.

The Springdale Herd owned by B. F. Jones & Son of South Montrose, Pa., has been in existence for the past seventeen years and has been headed by a succession of high class sires. Some of the older animals of the herd are daughters of Tobe Rag Apple Korndyke whose dam, Christmas Tobe 2d, produced 31.66

lb. butter in seven-day test which was a world's record for a ten-year-old cow at time of making. This great cow transmitted her producing capacity to her descendants for her daughter Lady Tobe De Kol made 36.59 lb. butter in seven days, 141.24 lb. butter in thirty days, as a senior four-year-old, world's record in class at time of making, and she in turn was dam of a 30-lb. four-year-old.

The successor to this sire was King Tweede Spring Farm son of Spring Farm King and the 30-lb. cow, Dressie Lady Pontiac. Daughters of this bull although still young are making a splendid showing in official work and his offspring inherit his high class individuality.

The young things in the Springdale herd are sired by Woodmont Echo Sylvia Champion, a grandson of Champion Echo Sylvia Pontiac. This bull was the first prize three-year-old at the 1922 New York State Fair and his dam the 30-lb. Butter Boy Empress was the first prize aged cow and grand champion at the 1921 New York State Fair. She has milked 100 lb. a day so combines individuality of a high order with immense producing capacity.

When the Jones' needed a new herd bull they searched long and carefully and finally decided upon a very handsome young sire that was the second prize bull calf at the 1922 New York State Fair, in a class of sixteen. This bull was sired by King Echo Sylvia Model, another son of Champion Echo Sylvia Pontiac. A wealth of high records and splendid producing cows are back of this sire. The young bull was from A. Beauty Lyons who, as a junior three-year-old, made 26.13 lb. butter, 570.5 lb. milk in seven days. Her sire was Colantha Pietertje Lyons, a son of King Lyons from a daughter of Buttercup Clothilde Pietertje, 32.9 lb. butter in a week, foundation cow of wonderful producing and transmitting strain. King Echo Sylvia Model the sire of Jones' new herd bull, is splendidly bred, his seven nearest dams having official records that average 35.49 lb. butter in a week, 141.81 lb. butter in thirty days. His first five daughters were sold at public auction at an average age of less than six months and the price they brought averaged over \$1,000. These five heifers went to different parties. Four of the five made over 20 lb. butter in seven days and the fifth one made 19.46 lb., the five averaging 21.29 lb. butter at an average age of 2 years, 3 months, 28 days, while the seven-day records show a daily average milk production of practically 60 lb. In the herd of the A. A. Hartshorn Holstein Company, a two-year-old sister to these heifers has just made 25.19 lb. butter in the first seven days of her test, while another heifer has made over 20 lb. butter in seven days in her first lactation period. These heifers show fine individuality and we are assured the 25-lb. heifer is a show animal of rare quality.

The sisters of A. Beauty Lyons are also making records. A senior four-year-old produced 29.12 lb. butter in seven days from 693.7 lb. milk averaging over 99 lb. a day; another three-year-

old that made 25.77 lb. butter in seven days when fresh is due to freshen right away and is expected to make around 30 lb. butter in a week. A. Beauty Lyons comes in part of the strains of breeding that produced the wonderful champion milk cow Segis Pietertje Prospect. She was sired by a grandson of Buttercup Clothilde Pietertje while the dam of Segis Pietertje Prospect was a granddaughter of this great old cow. The dam of Segis Pietertje Prospect was sired by Beauty Pietertje Prince while the dam of A. Beauty Lyons was sired by a son of Beauty Pietertje Prince and Beauty Pietertje Prilly so that the young Jones' bull carries considerable of the blood that flows in the veins of Segis Pietertje Prospect. His dam was a granddaughter of King Lyons who carries considerable of the blood of King Segis while Segis Pietertje Prospect was a granddaughter of the famous Moyerdale herdsire.

How Do You Like the Dam of My New Herd Sire?

CORNUCOPIA PLUM JOHANNA 2d
731.06 lb. butter in 305 days. Pennsylvania State record in senior four-year-old class. Her dam made 1,056.78 lb. butter in a year and has five daughters that average 18,723.1 lb. milk, 918.35 lb. butter in long time test.

Dispersion Sale of a 22-Year-Old Herd

March 7, 1923, on the Farm at

Coldwater, Michigan

My herd of 35 head representing 22 years of breeding and selecting purebred Holsteins. Every animal except the herdsires are directly descended from my two foundation cows. Both were show cows, as well as producers, desirable traits transmitted to their descendants, one of which beat Minerva Beets in the show ring.

A granddaughter, Neeltje Terzoc Segis, and two of her sons are in the sale. She produced 99.4 lb. of milk in a day, 633.5 lb. milk, 28.46 lb. butter in 7 days as a three-year-old. Her sons are by Paul Pietertje Wayne Prince (also to be sold) whose dam produced 117 lb. milk in a day and averaged 107 lb. for 30 days. She made 30 lb. butter in 7 days, 122 lb. in 30 days. Thirteen daughters of this grandly bred sire will be offered.

The herd is free from contagious abortion, and has passed four clean Tuberculin tests. All animals sold subject to 60-day retest privilege.

A Typical Dairy Cow

CHARLOTTE LYONS KORNDYKE

Charlotte Lyons Korndyke, one of Berks Farm foundation cows, produced in seven days as a seven-year-old 28.80 lbs. of butter and 687 lbs. of milk, milking 101.6 lbs. her best day.

Her record for thirty days is 113.82 lbs. of butter and 2,575.4 lbs. of milk.

This great cow is a granddaughter of the 33 lb. bull, Cornucopia Korndyke Pontiac with 55 A.R.O. daughters, 7 above 30 lbs. including one with 36 lbs. at three years, and 11 A.R. sons. This bull is sired by Pontiac Korndyke, the only bull to head a combination of three direct generations of Century sires. He has to his credit 151 A.R.O. daughters, 21 above 30 lbs., and 138 A.R. sons.

The sire of Charlotte Lyons Korndyke is Sir Cornucopia Pontiac Korndyke with 21 A.R.O. daughters. His dam is Roxie Pauline with 28.03 lbs. of butter and 517.90 lbs. of milk as a seven-year-old. Among the other noted sires in Charlotte's pedigree you will find Lilith Pauline DeKol's Son with 30 A.R.O. daughters and 22 A.R. sons, Lyons Hengerveld Count DeKol with 23 A.R.O. daughters and 13 A.R. sons and Star Farm Lyons Cornucopia with 21 A.R.O. daughters.

Only a few richly bred bulls left, come and look them over; they are the kind that you like to own.

BON LACTA HERD

DISPERSAL SALE

STARTING AT 10:00 A. M.

WEDNESDAY, MARCH 14, 1923

50 REGISTERED HOLSTEINS 50
SUNBURY, PENNSYLVANIA

GREAT PRODUCERS

Note what will be sold in this sale:—A two-year-old daughter of a 30 lb. two-year-old, fresh in November—her sire from a 33 lb. cow with 107 lb. of milk a day for 7 days. Her daughter by Alcartra King Sylvia, junior herdsire at Avondale Farms—he is from Tilly Alcartra former world's yearly milk producer, and by Carnation King Sylvia the \$106,000 son of May Echo Sylvia (consider the establishments back of her.)

A daughter of Prince Quality whose four direct maternal dams average 1,150 lb. of butter and 28,500 lb. of milk in yearly tests (here is a gem that will start you right.)

Several young cows with A.R.O. records including a nearly 18 lb. two-year-old.

A number with excellent cow testing association records—a real herd of great producers, including many other well bred animals.

18 fresh cows in the sale. 8 due in April and May.

HERD SIRE TO BE SOLD King Lunde Pontiac Korndyke 53d, a very superior individual—a full brother to Grand Champion at New York State Fair in 1919; from a 29 lb. cow that twice made over 28 lb. and milked 663 lb. of milk. His sire is a real good son of King of the Pontiacs from a 30 lb. cow that averaged 100 lb. of milk a day for 100 days. With this bull will be sold 24 of his daughters—a real nice lot of straight individuals, of good growth and certain to develop into great producers. Come to this sale, and buy this great bull and get your share of his progeny.

THE BON LACTA HERD

An Aggregation of Holstein Beauties

THE Bon-Lacta herd and farms are owned by J. Harris Lenker, well known in Pennsylvania Holstein circles and a former director of the Pennsylvania Federation of Holstein-Friesian Clubs. Mr. Lenker is engaged in the coal and hardware business in Sunbury and associated with him are his two sons.

J. HARRIS LENKER
A Pennsylvania breeder with a host of friends.

One of these sons has been attending to the farm and herd although he was also required in the town business. In speaking of this, Mr. Lenker laughingly said that he was perfectly willing to let "Ed" spend two days a week on the farm, believing that it would be good recreation for him and at the same time a profitable investment of time and money, but as the herd grew it required all of the young man's time and they had found it impossible to secure help that would profitably manage a high quality Holstein herd. Notice that we say profitably. The Lenker herd is being run on the breeder and dairyman plan; that is, the animals must return a profit from the proceeds of their milk.

Just before the war some very fine official records were made by two-year-old heifers at this establishment, ranging from 15 to 19 lb. of butter in a week. Our readers know what this means when we say that there was no preliminary fitting, that all young Mr. Lenker knew of making records was gained by reading and from observation on a few farms he visited and that it meant starting right from the bottom. Under these conditions the records were very creditable and are an indication of the true capacity of the herd under

dairy conditions as it was not given the feed and care bestowed upon animals in many establishments.

The Lenker herd was enrolled for several years in the North Branch Cow Testing Association. Lenker animals ranged very high in the lists. One cow produced 2,600 lb. milk in a month, and another 2,400 lb. and these were the highest records credited to any cows in the association. During the year commencing May 29, 1920 and closing May 29, 1921, the herd average was 10,629.6 lb. milk and 360.7 lb. fat. This is for animals of all ages, and the monthly dairy average was 16.3 cows. Several records were made by mature cows of between 14 and 16,000 lb. Lilly Calamity Butter Boy Sir Clyde produced 507.8 lb. fat and 13,611 lb. milk and several others produced between 400 and 500 lb. fat. Pauline Hengerveld Segis, a daughter of King Segis Hengerveld 2d, produced 11,069 lb. milk in 266 days which is an average of 41½ lb. milk a day for practically nine months.

Mr. Lenker has occasionally made purchases at high-class sales and at the Brentwood sale last spring, purchased three good young heifers which are now fresh. Two of the heifer calves in the herd are from his Brentwood purchases. At this great sale, he bought Sylvia Inka, whose dam, the 30-lb. two-year-old Roycroft Inka Echo is a double granddaughter of Avondale Pontiac Echo. This two-year-old produced 208.71 lb. butter and 4,195.1 lb. milk in 60-day official test. Her heifer calf is sired by Alcartra King Sylvia, whose dam is the wonderful producer and former world champion, Tilly Alcartra. Another of the Brentwood

FAIR OAKS LOVERSE DE KOL AND HER TWIN CALVES

purchases is Ferndale Sadie Vale Cloverleaf. Her sire is a son of King Korndyke Sadie Vale from a 27-lb. daughter of Sir Veeman Hengerveld. Her dam is a 21-lb. cow that produced more than 500 lb. milk in the week. Ferndale has a very nice heifer calf sired by Prince Quality, whose four nearest dams average 761.5

lb. milk, 30.53 lb. butter in a week and 1,150 lb. butter, 28,500 lb. milk in a year.

The present herdsire is King Lunde Pontiac Korndyke 53d, No. 294031. This animal is a real show bull. His picture does not do justice to his type and individuality, as it was taken by an amateur, in fact was one of the operator's first attempts to photograph livestock, consequently the bull was badly posed. He is straight as a line, and is said to be fully as good as his full brother, the 1919 New York State Fair grand champion. Both bulls were sired by King Lunde Pontiac Korndyke, who was the son of the famous King of the Pontiacs and Lunde Korndyke, one of the greatest show cows and producers of her day. This cow was owned by a small farmer in Oswego County, New York, who was induced to put her in official test. In

PAULINE HENGERVELD SEGIS
11,069 lb. milk in 266 days, an average of 41½ lb. a day for practically 9 months.

seven days she produced 30.82 lb. butter, 745.40 lb. milk. In thirty days she made 124.02 lb. butter and 3,270.3 lb. milk. She was continued in test and in 100 days she produced 10,191.9 lb. milk, an average of 101 lb. milk a day for the 100 days. This was the world's milk record at the time of making. In the full year, she produced 26,192.7 lb. milk, 1,090.91 lb. butter. In reporting this record, Superintendent Gardner did her the honor of pointing out that, had she had the feed, care and opportunity that had been given many high record cows, she would have made an even greater showing. She produced 122 lb. milk in a day. During a visit of the official tester after she had been in milk five months she produced 105 lb. milk in 24 hours, striking evidence of her capacity and persistency. With that she was a wonderful show cow and was one of the best daughters from the standpoints of individuality and production of that great old sire, Korndyke Queen De Kol's Prince.

The dam of King Lunde Pontiac Korndyke 53d is Greenwood Johanna Spofford. Two different years, this cow made over 28 lb. butter in a week and averaged over 90 lb. milk a day. As a five-year-old, she produced 28.19 lb. butter and 663.8 lb. milk in a week, and averaged better than 90 lb. milk a day for 30 days. The next year she produced 29.01 lb. butter and 646.2 lb. milk and in 30 days made 116.82 lb. butter, 2,646 lb. milk. As a junior four-year-old, she has a seven-day record of nearly 25 lb. butter and nearly 100 lb. in 30 days, averaging over 70 lb. milk a day. She was from

a good A. R. O. cow and was by a son of Ybma 3d's Pledge Clothilde 30.38 lb. butter, 643.9 lb. milk in a week, one of the first cows to make a 30 lb. official seven-day butter record. In the Lenker herd there are 27 daughters of this bull. They have inherited the conformation and breed type of their sire, and the promise they show indicates they have also inherited the producing capacity of their sire's nearest female ancestors.

The Lenker herd has been run under state and Federal supervision with the aim of placing them on the accredited herd list. The cows are large and are of great capacity. From the record standpoint, it is a great pity that they have not had the opportunity to show what they really could do in official test, but as Ed. Lenker remarked, "It is difficult for one man to superintend all the work on a farm of 300 acres; to keep the books; to attend to the outside business and at the same time milk and feed a string of cows four times a day, as well as keeping track of the feeding and production of a general dairy." He observes that a small breeder who has to look after all the farm and herd transactions is severely handicapped when pitted against professional herdsman who have only to look after a limited number of charges and do not have to trouble their heads about feed or extra labor, as that

KING LUNDE PONTIAC KORNDYKE 53d
The four-year-old Head of the Lenker herd. His dam and sire's dam have records averaging 29.92 lb. butter, 695.8 lb. milk in seven days; 120.42 lb. butter, 2,958.15 lb. milk in thirty days.

is always provided on request by the owner or farm manager.

Although perhaps it is digressing from the subject, this criticism of the present advanced register systems is growing among the smaller breeders in all the dairy breed associations, and is a question that requires deep and careful study on the part of the directors of the various breed associations, as similar criticism has been voiced by men high in the United States Dairy Division and by prominent educators and scientists at state Experiment Stations.

While this is not a story for the purpose of advertising, as an article on the Lenker herd has been contemplated by THE BREEDER AND DAIRYMAN for the past year on account of its individuality and the manner in which it has been handled, yet it is not out of place here to say that owing to pressure of other business and the difficulty of finding competent help, the herd is to be dispersed and will be sold on the premises, March

14th. At that time, readers of THE BREEDER AND DAIRYMAN will see that in telling this story, we have understated, rather than overstated the individuality, breeding and producing capacity of the animals in this Pennsylvania breeder's high-class establishment. In using for the cover illustration of this issue, a barn-

yard scene showing some of the milkers in the herd, we believe we are only giving credit where credit is due. The picture was selected from a number taken early in February of this year, and from it some idea of the class and character of the animals can be gained. The Lenker Herd is truly an aggregation of bovine beauties.

Sexauer Cow Closes Great Record

THE new year brought the acceptable news to Sexauer & Sons, Belvidere, Ill., that their great cow Sonoma Johanna Champion had completed a year record of 1,074.01 lb. butter, 28,294.8 lb. milk at the testing plant at Dixon. This is the highest year record as yet made at the plant and is the second highest milk record in the state. Sonoma Johanna Champion has made a splendid record. She reached a total of 20,000 lb. milk by the last of August; early in September the weather was hot and she dropped on her milk production but came back in October and again reached 80 lb. in a day. She is one of a three generation group in the Sexauer herd that has made

SONOMA JOHANNA CHAMPION
1,074.01 lb. butter, 28,294.8 lb. milk in a year at the Illinois Testing Plant. Owned by Sexauer and Sons, Belvidere, Ill.

state Holstein history. Her dam Sonoma Kantje Colanthus, as a six-year-old, made 847.81 lb. butter from 20,766.1 lb. milk in 305 days and she in turn is a daughter of Sonoma Kantje Alexander who has a 305 day record of 907.5 lb. butter, 22,493.3 lb. milk, and is the Illinois state champion milk producer in the ten months' division and also holds the state championship for butter production in 305 days for a mature cow.

Sonoma Johanna Champion produced 107 lb. milk in a day, 31.52 lb. butter from 607.1 lb. milk in seven days. She produced 147 lb. butter and over 3,000 lb. milk in 30 days and on the last day of her test which was Sunday, January 7, milked a trifle over 60 lb.

The Sexauer herd is one of high quality and the great Sonoma family are not the only good ones composing it. They have a granddaughter of Colantha Sir Korndyke Clothilde that has 980 lb. butter and over 23,000 lb. milk in a year as a three-year-old and a number of other cows that are fully capable of equaling or exceeding these marks if given the opportunity.

The Sexauer herd consists of fifty head. The herd-sire is by Sir Bess Pietertje Piebe, a son of Sir Pietertje Ormsby Mercedes 37th, while his dam is Juma

Longfield Homestead, who produced 24,655.5 lb. milk, 1,035.66 lb. butter in a year as a senior four-year-old and is the champion of Illinois in that division.

The Sexauer herd led the state for association prize money won last year, being awarded more than \$80 for the production of three cows. Owing to the heavy expense of testing and the low prices record stock are

bringing the Sexauers are not doing official testing at home this season. As James Sexauer, one of the firm, is a district director of the Illinois Holstein-Friesian Association and is a great advocate of the testing plant, Sonoma Johanna Colantha was sent to the plant as a representative of the herd and under the care of Joe

Treacy she made her splendid record, which reflects great credit upon the testing plant, and upon the Sexauer Herd which is one of the best in the State of Illinois.

Sam had passed through a harrowing experience. He had seen no less a thing than a ghost.

"Ah'd jes' come outer de cow pen, whah Ah'd been milkin' de cows," he said, "an' Ah had a bucket o' milk in mah hand."

"Lawd!" interrupted one of his auditors, "'At suttinly must of been terrible! Did'n' yo' shake wid fright, Sam?"

"Ah don' know what Ah shook wid. But when Ah got home Ah foun' all de milk gone, an' two poun's o' butter lef' in de bucket."

Paying Teller—But, madame, you will have to be identified before I can cash this check for you. Fair Caller (blushing furiously)—Oh, I just hate to do it, and George would be dreadful angry, but I have a love letter here which describes me fully, if you would care to see it.

Purebred Dairy Bulls Pay

By H. M. Jones, *South Dakota Dairy Specialist*

A COW is like a machine in many respects. The difference in the capacity of machines is illustrative of the great variations in producing ability which exists between dairy cows. What causes this difference? The chief causes are the surroundings amid which the cow happens to be placed and the characteristics which she inherits from her ancestors.

A great many cows are handicapped in their production by poor feeding and care, but there are also a great many whose production is not limited by feed and care but rather by their utter lack of a tendency to produce milk and butterfat. Some cows have a strong tendency to use their feed for putting flesh on their back. Others have an equally strong tendency to use their feed for the manufacture of milk. These tendencies come from the characteristics of a long line of ancestors.

A cow will usually inherit the characteristics of one animal more strongly than those of another. In general, she inherits one-half of her characteristics from her two parents, one-fourth from her four grandparents, one-eighth from her eight great-grandparents, and so on. Full sisters may carry the characteristics of entirely different animals, and hence the difference which has been known to be found among animals of almost identical breeding.

Animals are most likely to resemble in appearance and producing ability their nearest ancestors, and for this reason great importance is attached to the merits of the dam and sire used. It is often a poor policy to invest heavily in the hope of building up a dairy herd quickly, although the purchase of a few good cows for foundation stock is very commendable. Thus the only avenue left, and one which offers the greatest possibilities for herd improvement, is the good dairy sire.

Results from the use of purebred dairy sires have been very satisfactory. At almost the same time (1907) the Iowa Experiment Station and the South Dakota Experiment Station started experiments to secure definite data as to the value of the purebred dairy sire as a means of increasing the production of the herd. Their findings have been essentially the same and are strongly in favor of the purebred herd header.

State	Dam's Butterfat Production	Daughter's Butterfat Production	Percent Increase
Iowa	171.57	261.25	52
South Dakota	165.06	260.06	57

These two stations, working independent of each other, arrived at practically the same conclusion, namely, that the use of purebred dairy sires on scrub or grade cows results in over 50 percent increase in production the first cross. Iowa found that one purebred cross increased the milk production 64 percent. South Dakota found an increase of 67 percent. The above figures

are the average for five cows in 21 lactation periods in the case of Iowa; nine cows in 28 lactation periods in the case of South Dakota. Both stations used Holstein, Guernsey, and Jersey sires on the same cows. The averages are for all breeds.

It must not be inferred that all purebred sires will increase the production of the offspring. Some will not. "Papers" are not enough. Producing ability and type must go with them. Of six purebred bulls used in the dairy herd of the University of Missouri, three got daughters producing from 8 to 29 percent less than their dams; the other three got daughters producing from one to 68 percent more than their dams. The dams were exceptionally good cows. Any of these bulls might have proven an asset to many an average herd. The actual value of a bull can be properly determined only by the performance of his daughters.

Cow testing association reports from Wisconsin show that cows sired by purebred bulls produce annually from 49 to 85 lb. more butterfat each than do cows sired by grade or scrub bulls.

In spite of the preponderance of evidence in favor of using the purebred dairy sire, the vast majority of dairy herds are still headed by grades and scrubs. The census of 1920 reveals the fact that on 43,406 farms in South Dakota reporting dairy cattle, there are only 1,544 purebred dairy bulls in use. Thus there is a but one purebred dairy sire for each 28 farms reporting dairy cattle. There is but one purebred dairy bull to every 300 dairy cows. The balance are grades and scrubs.

In that great dairy state of Wisconsin, authorities estimate that two-thirds of their 1,800,000 dairy cows are bred to grade and scrub sires. Denmark, Switzerland, and the Netherlands have learned their lesson. They insist upon using only purebred bulls. The average yearly milk production of cows in the various countries is as follows: Netherlands, 7,585; Switzerland, 6,950; Denmark, 5,666; United States, 3,412.

As the number of purebred dairy bulls in use is increased, the milk production of the average cow in the United States may be expected to approach more nearly the averages attained in foreign countries where purebred sires are the rule.

European Cooperative Marketing

COÖPERATIVE agricultural marketing is the favorite theme of one or more speakers at every large gathering of farmers no matter what branch of the agricultural industry they are engaged in. Nearly every speaker at the recent Pennsylvania breeders' meeting touched on this theme and at practically every gathering of the allied agricultural associations, meeting in Harrisburg, that week one or more of the speakers touched on this subject.

In a desire to find out for the farmers of America what is being done in other countries, the United States Department of Agriculture delegated the well-known

When a Breeder Writes a Business Letter

By DR. GEORGE H. CONN

ONE of the tasks the breeder of purebred farm animals usually finds difficult is to write letters.

The Holstein breeder is no different than the rest and ordinarily this one feature of his business causes him no little amount of worry. It is not that the writing of letters is such a hard task, but most breeders do such odd jobs in evenings and on holidays, and not infrequently on Sundays. The most successful breeders realize the importance of this feature of their business, even more than the beginner is apt to. No doubt a considerable portion of a man's success or his failure often depends upon this one thing.

The large business man has always recognized the value of personal calls both in making sales and in buying goods. The small breeder is not financially able to provide a traveling salesman for his animals and the size of his business will not warrant the expense. Hence the average breeder must depend upon the most common and the cheapest medium for making sales of his product and for buying his supplies, and that is the letter. It is apparent that the art of letter writing is an important one.

Every breeder who expects to advertise and sell his animals to the general public should have an office. To the small breeder this usually means a small room upstairs or occasionally an office may be fitted in the barn or some out-building. This office need not be pretentious but it should be comfortable and more or less private so that records and the like may be kept safely and so that there will be little disturbance at busy times.

The furniture should be ample to keep all records safely and to carry on the correspondence successfully.

A desk is one of the first requirements, but a small table, solid and strong, will take the place of a desk; two or more comfortable chairs and a few good livestock pictures are about all the fixtures you need, aside from a file for your letters and a typewriter, which is by far the most important item next to the individual himself in the handling of the correspondence.

WHY USE A TYPEWRITER?

In the first place the use of a typewriter looks more businesslike and, since they are in such common use to-day, it does not look business like to write in long-hand. The typewritten letter has considerable influence on the one that receives it for it is an indication that any dealings with the writer will be carried on in a business like manner. With a typewriter there is no danger of making mistakes in the interpretation of a letter, due to inability to decipher some of it. We have talked to many business men who receive letters from all sources and also with editors and managers of farm papers who deal largely with farmers and breeders, and they tell us that they are frequently compelled to throw letters in the waste basket because of the fact that no one within reach can make out the contents or the name of the writer. The use of a typewriter adds to the appearance of your letters and this frequently means more than we ordinarily realize. It also enables the writer to make and keep a very presentable copy of all important correspondence.

agricultural economist, Chris L. Christensen, to study economic conditions in eleven European countries.

Some of the greatest strides in dairying in northern Europe the last decade, have been made in Finland through the production of standardized, quality dairy products. Payment on a quality basis for whole milk delivered has been introduced, and is a common practice in the coöperative dairies. Coöperation has won high favor with the Finnish farmer the last decade, 80 per cent of the Finnish butter exported being handled by one large central coöperative export society.

Grain production in Finland was stimulated under war conditions, but the swing is now back to animal products due to the drop in 1922 grain prices, as in other Scandinavian countries. Before the war 70 per cent of the Finnish farmer's income was derived from livestock products and 14 per cent from grain and hay production. In 1919-20 the proportion was 57 per cent from livestock products and 30 per cent from grain and hay.

Among the best developed coöperative organizations in German agriculture is the Rural Coöperative Village Bank. With sixty years of experience this system is still regarded as the main pillar that supports the German agricultural coöperative system. Despite the war the Rural Coöperative Village Banks have continually increased in number, steadily piling up large reserve funds. The depreciated mark, however, has practically wiped out these savings.

In southern parts of the German Republic there is another form of agricultural coöperation known as the Coöperative Grainary, and which freed the economic position of the Bavarian farmers in pre-war times. During the war and after, the Coöperative Grainary has been an organ of the government, as normal grain selling business has been practically eliminated.

Danish coöperative methods are world famous. During Mr. Christensen's stay in Denmark, he met agricultural economists from all over the world who had been delegated to study the coöperative methods of the Danish farmer.

The sound, economic organization on which the new agricultural industry of Denmark—the most highly organized agricultural industry in the world—has been built the last forty years is the result of the coöperative ideals practiced by the Danish farmer. The agricultural producers there have brought new prosperity to the whole Kingdom through the efficiency of their coöperative enterprises in production, quality of production and distribution.

Mr. Christensen investigated agricultural coöperative marketing activities in Sweden, Norway and Finland, and certain phases of agricultural coöperative activities in Germany, Czecho-Slovakia and Switzerland and is now preparing a report on Danish agriculture, its organization and the coöperative movement.

I was in a department store and beside me stood a colored man waiting for his package. He spied some silk pajamas on the counter. "What's dese?" he asked. "Pajamas" replied the salesman. "What's Dem" was his next question. "You wear them at night," answered the salesman. "Would you like some?" "No Boss" said the negro, "I'm married now and I don't go out nights no mo'."

The one inflexible policy for the breeder to adopt in handling his correspondence is promptness. Long delay in answering letters is hardly ever justifiable and there can be no question that whoever has written you is expecting an answer. It is a good plan to make it a point to answer every letter the day it is received if it can be done. If possible nothing should prevent it unless information must be sought from other sources.

We have always taken note of the fact that letters that were answered the same day they were received are the ones easiest answered. Letters that are laid aside are frequently overlooked for some time. It requires just as much time one day as another to answer a letter, so why put it off?

It often happens that answers to advertisements are received after the animals have been sold. It is good business and should always be the policy of the advertiser to answer the letter just as promptly as though he still had the animal for sale. Do not think that because you have nothing for sale that you should not answer a letter. It may be that you will have something later and if you do and you have failed to answer an inquirer's letter at another time, he will not likely write you again. If you should know of another breeder that might supply your inquirer with what he wants, it will always pay you to write him to that effect.

WRITING THE LETTER

The actual task of writing the letter that may mean the success or failure to sell a high-priced animal is not the easiest work in the world. In the first place you must anticipate the things about your animal that the buyer is most interested in and then your work is to write the letter in such a way that it leaves no doubt in the inquirer's mind on those particular points.

Broadly speaking such letters should contain a clear description of the animal, the price and terms of sale. Breeding and photo should be supplied if possible. Under no circumstances should exaggerations be made and all statements should be conservative. Never make a statement in a letter that you can not substantiate. It is always advisable to keep copies of all letters of any importance, as this frequently clears up a misunderstanding.

When you make a statement in a letter that you know is justified, never attempt to explain too much, as this often weakens the effect of this letter. It generally is an indication that the statement is open to question. A statement that needs explanations as to why it was made should not have been made.

It so happens that when one has attained unusual success in his breeding operations, he is frequently written to for information of one kind and another relative to his business methods, his sales or perhaps his show experiences, etc. This information is sought from many sources, but if all indications are that it is made in good faith, you cannot afford to overlook it. Letters of this character should always be answered and often lead to very profitable business transactions. Most persons when writing a letter do so for a purpose which cannot be safely overlooked by the breeder who expects to be successful. Common courtesy demands an answer to all correspondence sent in good faith, and business success makes it imperative.

Never forget that your letters are your representatives and that the impression your letters make on those who receive them is a barometer on your business ability, and is the only indicator that the receiver has of yourself and your business. If you send a good letter it will invariably make a good impression, while if you send a poor one the opposite may be expected.

The art of letter writing cannot be mastered in a day, a week or a year for each letter is a study unto itself, but it is one factor that the Holstein breeder should cultivate more in the future than he has in the past.

The 1922 Crop and Livestock Values

ACCORDING to estimates of the United States Department of Agriculture, the crops and livestock produced on the farms of this country during 1922 had a gross farm value of \$14,310,000,000. This is an increase of nearly \$2,000,000,000 over the 1921 gross value of farm products which was \$12,402,000,000.

The total for 1922 is made up of \$8,961,000,000 for crops, and \$5,349,000,000 for animal products. In 1921 crops were valued at \$6,934,000,000 and animal products at \$5,468,000,000.

The figures are too high for there is a duplication in the crop and animal product estimates on account of part of both being used to produce animal products. Milk is used to grow calves fodder and grain is fed to animals. The value of the crops is figured once and then to this is added the value of the animal at the end of the year. While the department recognizes this, it has not yet been able to ascertain the amount of this duplication.

Crop prices nearly all show an increase, except in the case of fruits, beets, clover seed, rye, potatoes sweet and Irish, and some other vegetables. Prices of animal products generally declined. The price of veals, dairy cattle, horses and mules, and dairy products being down, as well as eggs and poultry with the exception of turkeys. The prices of sheep, lambs and swine increased, and wool prices nearly doubled.

Animal products values lagged behind crop values during the ten-year period and show less fluctuation. The peak was reached in 1919 when an increase of 125 per cent over 1913 was shown. The subsequent decline in values of animal products was less precipitous than in the case of crop values, but the 1922 figure shows an increase of only 44 per cent above 1913 as compared with an increase of 46 per cent in crop value.

The purchasing power of the 1922 crop value in terms of other products was 89.9 as compared with 100 in 1913. The purchasing power of the 1921 crop value is placed at 70.3 as compared with 100 in 1913. The purchasing power of animal products in 1922 was 88.5, and in 1921 it was 91.5 using 100 in 1913 as a base in both instances.

An Italian fruit vender became annoyed by his many customers and prospective customers persistently pinching the fruit which he had on display, causing it to become bruised and less salable. In order to stop such practice, he placed the following notice on his stand.

"If you must pincha the fruit, please kindly pincha the cocoanut."

Uniform Rules Needed

THE Holstein-Friesian Association of America was represented February 5th, at Washington, D. C., by Secretary F. L. Houghton, Brattleboro, Vermont, M. H. Gardner, superintendent of Advanced Registry, Delavan, Wis., and W. L. Duntley, of Brattleboro. The occasion was a conference of representatives of the five great dairy cattle breed associations called by Dr. C. W. Larson, chief of the Dairy Division of the United States Department of Agriculture. Dr. Larson and his associates wish the dairy cattle associations to suppress destructive rivalry and to work together in every way possible to develop the dairy industry and purebred dairy cattle business. The Ayrshire Brown Swiss, Guernsey and Jersey breed associations were each represented by their president and secretary and several of them by other representatives as well. Resolutions passed suggested that there should be more widespread testing for production records among breeders of purebred cattle; uniform rules for governing sales of purebred cattle, both public and private; that superior sires should be recognized in counties and states; pointed to the need of means for lowering the cost of herdbook office work and closer and uniform supervision of production records. The representatives agreed that there should be some way of making the exhibition of cattle at the fairs more educational; emphasized the need and support of tuberculosis eradication by the area method and agreed there should be some definition of the scope of the work of field representatives of breed associations.

The delegates will recommend to their respective associations that each appoint three men who will be ready to assemble at the call of Chief Larson to discuss details of the concentration and coördination of the field work of the various associations. Another committee will be appointed in an effort to harmonize rules governing official testing. These committees will meet again before May so that they will be able to report at the annual meetings of the breed associations which take place in May and June. Mr. R. R. Graves, who is in charge of the breeding investigation of the Dairy Division, was in attendance and offered a number of suggestions for consideration. These suggestions were so greatly appreciated that the delegates passed a motion requesting Mr. Graves' assistance at future meetings.

The Way of the Purebred Business

PROFESSOR J. S. COFFEY of the Ohio State University, is one of the many breeding experts and students of breed history who is advising that the present is an opportune time to start breeding purebreds. The following, which is only too true, is credited to him.

"There is an old saying among stockmen to the effect that it is a good time to go into the livestock business when animals are cheap and a good time to go out when they are high. In practice, however, this theory never works out. When prices are high the old breeder feverishly replenishes his stock while the young breeder and the novice pay a high price to get a start. As a rule, about the time the beginners get their start and are

ready to reap the benefits of high prices, those prices no longer exist. As a result the beginner not only suffers financial loss but discouragement as well. He loses his enthusiasm for the game; his stock depreciates in merit, and finally in despair he quits.

Just now our prices should be on a sound basis. Certainly poor purebreds sell cheaply, but the best sell well. While the latter sell at a good figure, they do not sell out of the reach of beginners. This was not true three or four years ago. At that time the best either went to old established breeders who had made a pile at sales or to some wealthy speculator who thought he could bulge his coffers a little more by dabbling in the business."

Children Need Dairy Foods

THE Oklahoma Farmer says "The children's bureau of the United States Department of Labor has been investigating the nutrition and care of children in a mountain county of Kentucky. The results are not surprising. For instance, 'Many of the children having a diet which consisted largely of milk and unbolted cornmeal were found, on examination, to be well nourished, but the other foods available in the community so failed to supply the essentials of growth that undernourishment frequently resulted when the quantity of milk was small.'

Translated into the American language, this means that the youngsters who had plenty of mush and milk are getting along all right. The mush is made of real cornmeal—ground corn without anything taken away from it—the only kind of cornmeal that's worth a whoop for making cornbread, mush and ponhoss.

The investigation also revealed what experience taught our ancestors several thousand years ago, "In this district when milk is lacking, decreased in amount, or changed to skim milk or buttermilk the effect is 'disastrous.'"

It is a crime against the future of humanity for a family to live on a farm and not have a cow to supply milk for the children."

It is equally a crime, against the innocents themselves, against the community and nation and against humanity, to attempt to raise children and not allow them to have an adequate supply of nutritious, necessary, life-sustaining and growth-promoting dairy products. EDITOR, HOLSTEIN BREEDER AND DAIRYMAN.

Mrs. Black had come to call, and throughout her visit Muriel kept her eyes intently upon her father's arm.

Finally she exclaimed:

"Father, your arm is still on, and Mrs. Black has been here and hour!"

"What do you mean?" asked her male parent.

"You said she would talk a man's arm off in half an hour, and I wanted to see her do it," replied Muriel in disappointed tones.

Old Lady—"What's that awful smell?"

Farmer—"That's the fertilizer we're putting on the field yonder."

Old Lady—"For the land's sake."

Farmer—"Yes'm."

Why Discriminate

A BILL has been introduced in the Legislature of California by Senator L. L. Dennett, of Stanislaus County, which provides that all cattle sold for dairy purposes must be guaranteed free from tuberculosis and other infectious diseases. This is equivalent to requiring a tubercular certificate with each dairy animal sold, and also means that any animal carrying the germs of infectious abortion cannot be disposed of except for beef. It would be possible to keep infected cows in a dairy but the owner would be unable to sell them.

At this writing the bill stands a good chance of becoming a law in California. Considerable public sentiment has been worked up in its favor and it has the unanimous support of the beef cattlemen of the state who have declared war on beef coming from tubercular dairy herds. The author of the bill owns a dairy herd and represents the leading dairy county of the state.

The information we have at the present time does not tell how much or how far such a law would apply to beef cattle. We know of no reason why such a law should not apply to transactions among beef cattle sold for other purposes than slaughter. Infectious abortion and tuberculosis are capable of working fully as great ravages among beef herds as they are among dairy herds and the movement of beef cattle around the state is quite as likely to spread disease as are similar movements of cattle belonging to the dairy breeds.

Encouraging News for Dairymen

THERE is good news in the February report of H. C. Taylor, chief of the United States Bureau of Agricultural Economics. Mr. Taylor states that the amount of butter in cold storage on February 1st was less than half the amount that was in storage on February 1st a year ago, the figures for 1922 being 35,047,000 lb. while on February 1, 1923, there was 16,079,000 lb. in storage, there is a decrease of nearly 19,000,000 lb. while the five-year average was 35,657,000 lb. There is less than half as much butter in cold storage now than the average amount on February 1st of the last 5 years. Figures of the bureau are very comprehensive, as they receive reports from practically all the firms owning products in cold storage. The reports were received for 15,999,000 lb. and the other 80,000 lb. is estimated.

The reports on cheese in storage are not so promising, viewed from the producers' standpoint, yet the amount of American cheese now held in cold storage is considerably less than the five-year average. On February 1, 1923, there were 26,745,000 lb. of American cheese in cold storage warehouses, while a year ago there were only 21,430,000 lb., showing an increase during the year of 5,315,000 lb. The total on February 1, 1923, is considerably less than the five-year average which is 32,369,000 lb.

We do not have the February 1st figures for condensed or powdered milk held in warehouses, but if the stocks are depleted to the same extent as are the stocks of butter and cheese, it looks as if 1923 will bring better prices for milk. Figures compiled all over the United States show a material increase in the amount

of butter and milk consumed per capita. We cannot say whether this has had anything to do with the smaller stocks in storage, we think not, but it is an encouraging sign and one that will be welcomed by owners of dairy cattle.

Tuberculin and Tuberculin Testing

IT was away back in 1890 that the great scientist, Robert Koch, first made and studied tuberculin and found that if he injected it into the tissues of a tubercular animal it had the effect of causing a rise of temperature, while it had no such effect upon animals free from tuberculosis.

Tuberculin testing has been practiced largely in this country, especially since livestock owners have placed their herds under joint Federal and State supervision, which means under the joint supervision of the United States Bureau of Animal Industry and the Veterinary Department of the state in which the herd is kept. In this coöperative work, from July 1, 1917, to August 31, 1922, a period of five years and two months, approximately 5½ million cattle have been tested in the United States.

The three most popular methods of tuberculin testing are the subcutaneous, the intradermic and the ophthalmic. During the period from October 1, 1920, to August 31, 1922, in 23 months, cattle were officially tested in the United States by the various methods, 427,067 subcutaneous, 2,807,516 intradermic and 6,509 ophthalmic. Records have been kept of this work and close study has been given to the results obtained.

There is also a variation of the intradermic test which is known as the intrapalpebral test. In this test a minimum dose of tuberculin is injected into the layers of the skin of the lower eyelid. The results obtained from this test when properly conducted are reported to be very good, but because of the very delicate nature of the operation and the difficulty in properly restraining animals to administer this test, it is not recommended for general use.

THE BREEDER AND DAIRYMAN issues of September 8, 1922, and January 22, 1923, contained comprehensive articles on the various tests written by Dr. Henry W. Turner of the Pennsylvania Bureau of Animal Industry. A circular along similar lines as Dr. Turner's articles has been written by Doctors L. B. Ernest and Elmer Lash, veterinary inspectors, Tuberculosis Eradication Division, of the Bureau of Animal Industry. This publication is named circular 249 and is entitled "Tuberculin Testing of Livestock." It gives considerable information regarding the three principal methods of tuberculin testing, lists the advantages and disadvantages of every test, and gives considerable information regarding the use of combinations of these tests. There are also papers on the nature of tuberculin, some information regarding tuberculin testing of swine and poultry and advice on the post-mortem examination of reacting cattle. This circular is illustrated with photographs and charts and consists of 28 pages. It is of particular interest to dairymen who wish to inform themselves regarding the technique of testing for tuberculosis, and should be in the library of every livestock owner. It can be obtained from the Department of Agriculture, Washington, D. C.

Run Your Own Association

SCRANTON, PA.

February 19, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Evangelical Building,
Harrisburg, Pa.

Dear Sirs:—

I am just now in receipt of a copy of Judge Pooley's Court Order directing a special election to be held in the State of New York within the next ninety days, at which every member of the Holstein-Friesian Association of America shall be permitted to vote either in person or by proxy for six new Directors, the Order having declared the present Board of Directors illegal. This opinion was clearly outlined in Judge Pooley's preliminary opinion of January 3d. I believe the best interests of the Holstein-Friesian Association will be served by obeying this order without further appeal on the part of the Association or its officers, who are now declared to illegally hold their positions. I would suggest that when the notices in pursuance of this Order are sent out together with the blank form for voting by proxy that a printed card be enclosed reading something like the following:

To the Proxy Committee of the Holstein-Friesian Association of America.

I, the undersigned, member of the Holstein-Friesian Association of America, have sent my proxy vote to _____ of _____, to be voted at the special election to be held in pursuance of the Order of the Supreme Court of New York in accordance with Judge Pooley's decision of January 3d and February 15, 1923. In delegating my proxy to the above, he is at liberty to vote it for what he believes to be the best interest of all the breeders of Holstein-Friesian Cattle, but I hereby indicate my ideas as follows:

- I prefer a Board of only six Directors.
- I prefer Mr. _____ President.
- I prefer Mr. _____ Vice-President.
- I prefer Mr. _____ Treasurer.
- I prefer Mr. _____ Secretary.
- I prefer Mr. _____ Supt. of A. R.
- I prefer a transfer fee of 25c—50c \$1.00—\$1.50.

(Cross out all but the one you prefer.)

I am not in favor of a \$12,000 annual salary for the President or the Extension Agent.

I am not in favor of an extravagant Extension Service involving unlimited expense.

(Note: If in favor of the last two cross out the word "not.")

Respectfully submitted,

Date: _____

It has been stated in my presence by a member of the present Board of Directors that the reduction of the transfer fee to 50c at the Syracuse Meeting in 1921 was a camouflage to conceal the real purpose underlying the action of those who held the majority of proxies at that meeting. My reply was that I thoroughly believed that there was a very strong demand of the breeders of Pennsylvania for a reduced transfer fee

from the \$1.00, fixed at the Philadelphia meeting. I am still of that opinion and I believe that the breeders of the entire country are entitled to have the cold cut facts laid right before them prior to this special meeting, for as I now read Judge Pooley's decision, the increase of the transfer fee to \$1.00 at Philadelphia was illegal, and the increase at Kansas City by the illegally selected delegates was clearly illegal, so our transfer must be either 25 cents or 50 cents instead of \$1.50. Any further appeal on the part of the Association will simply exhaust the reserve and surplus to which I called attention in your issue of January 22, 1923. Let's stop the wasting of money in this ill-considered litigation and get the Association back to the fundamental principles under which it was originally conducted.

Yours for the best interest of the Holstein Breeder.

Ed. E. Stenman

SCHENECTADY, N. Y.
February 12, 1923.

Dear Editor:—

It has been with great interest that I have read in your paper about the doings of some of the officials of the Holstein-Friesian Association of America. I have been a member now for over twelve years and it used to be a great pleasure to go to the Annual meeting where everybody expressed their views and we had men that filled the offices that milked their own cows for a living, and not try to see how much money they could get out of the Association. I could see it coming more every year that I attended the meetings and I certainly admire Edward P. George for the good work he has done.

If it could only be made a real honest to goodness business again, the Holstein cow will take care of herself in a short time. I am glad you are coming out with the facts because I haven't been to a meeting in quite a few years because it got so there was no use of an ordinary farmer going, it seemed to me as though it was all cut and dried before, and they could get along without us. Now if our Board of Directors are not legal, how about the transfer increase? I don't think that is legal either and I say put it down to twenty-five or fifty cents again if the Association can thrive on it and let some of those fellows that have been sitting down in their office with nothing on their desks but their feet, get out and milk a few cows.

I have bred some good ones, the best one made around 35 lb. butter in seven days. And if this thing could only get cleaned out so that we could all work together I would be willing to try my luck again. But the way it has been, it would be of no use to try and sell cattle.

I will tell you this. Yours, for the betterment of the Association, the breed will take care of itself.

Yours respectfully,

BREEDER.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

February 22, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Extension Work or Propaganda

THE members of the Holstein-Friesian Association and the breeders of purebred Holstein cattle have had all manner of senseless schemes tried out at their expense during the past four years, under the pretense of Extension Work.

All of these so-called plans for Extension Work have only been schemes to spend the breeders' money to pay salaries and traveling expenses of a group of Professional Organizers and Promoters to tour the country and spread propaganda favorable to the extravagant administration of what has proved to be an illegal Board of Directors who were holding office illegally and *Knew It*.

Every breeder is familiar with what took place at the Philadelphia Meeting in 1919 when the Aitken hand-picked Board of Directors assumed office and voted Mr. Aitken a \$12,000 salary and unlimited expenses as President, in direct violation to the by-laws. Every breeder knows how well the steam roller worked at Philadelphia when the transfer fee was increased to \$1.00, when the proposed amendment to the by-laws provided for an increase from 25c to 50c. Every breeder knows how the Aitken political element tried to suppress the fact that they had voted Mr. Aitken a \$12,000 salary in direct violation to the by-laws and increased the fee from 25c to \$1.00 when they were supposed to increase it to 50c. They knew full well that this sentiment would crystalize in a definite action against them unless they were successful in spreading false propaganda to cover up the true conditions.

Therefore in the Fall of 1919 we see Mr. Aitken with his crop of paid organizers taking the money that had been collected through increased fees to do Extension Work and using it in salaries and traveling expenses, touring the leading Holstein states on his famous whirl-

wind campaign, trying to build up a political organization to assure their continuance in office. Aside from building up a political organization with his whirlwind campaigns, he put forth a concerted effort to extract additional sums of money from the breeders' pockets aside from that in which they were paying in increased transfer fees, to support his political organization after it was once established.

As confirmation we submit as evidence his own words spoken June 1, 1920 at St. Paul, Minnesota, before the assembled members of the National Association.

"We have.....entered into an extensive propaganda of state organization for the conduct of the breeders collectively, have interested the breeders of the different states in a state organization for the purpose of representing the breed in that state and have at the present time a large number of the leading states with men employed to give their entire time and attention to the interests of our industry, the expense of which is paid by the state organization through funds furnished by the members."

"As a House That Is Built Upon the Sands is Sure To Fall" we see after four years, the whirlwind campaign Paid State Secretary Movement discarded as a complete failure.

But the machine to spread propaganda continues, under the direct supervision of Mr. Fred Koenig who acted as Publicity Agent for the Aitken Whirlwind Campaign outfit.

Notwithstanding the fact that the Transfer Fee was increased to \$1.50 which should provide ample funds to do legitimate Extension Work if rightfully expended, Mr. Koenig proposes to get additional sums from the breeder in a way which we believe is unjust and unreasonable, as was the Aitken scheme. In other words, after the Association has provided a fund to do Extension Work, Mr. Koenig, or those whom he represents, like Mr. Aitken, evidently propose to expend the greater part of this money in carrying on their propaganda as they have during the past four years and are appealing to the breeder to contribute an additional sum of \$134,000 to purchase 2,000 billboards to be placed along the public highways to advertise the Holstein Cow and Holstein Milk. Mr. Koenig and his associates have conceived the *ridiculous idea* of placing a tin cow in the fence corner by the roadside, painted and dolled-up to look like a Chewing Gum, Palm Olive Soap, Lip Stick, Face Powder or Chesterfield Cigaret advertisement, and infer that this artificial cow with its gawdy trimmings is going to be effective in drawing prospective customers to purchase real Holstein cows and assist in creating a market for Holstein milk.

No doubt this kind of advertisement will appeal to the same class of people that are attracted by the advertisement of Chewing Gum, Lip Stick, Face Powder and Chesterfield Cigarets, but we believe the majority of the dairy public who would be interested in Holstein cows to the extent of purchasing purebreds, would much prefer to see the cow herself or a herd of real Holsteins grazing on the hillside or meadow-land with a well-kept farm-stead and dairy buildings as a background.

We believe that the Holstein breeders who are, using

the popular phrase, "Day by Day in Every Way Growing Better and Better" are the men who have laid the foundation for their breeding operations on economical milk production. They are the ones who find Holstein cattle profitable to keep and nothing will go farther towards advertising and selling purebred Holsteins than to demonstrate this fact to the prospective customer.

THE HOLSTEIN BREEDER AND DAIRYMAN believes that the Holstein-Friesian Association of America could more profitably spend money in advertising the superior merits of the Holstein cow as an economical producer of milk than to willfully throw money away in an advertising campaign to "sell billboards."

And further, we do not believe that any group of men should be retained in office who try continuously and persistently to exploit the Holstein cow and the Holstein industry for their own personal gain under the pretense of doing Extension Work.

For the Small Breeder and Dairyman

A SERIES of articles now appearing in THE BREEDER AND DAIRYMAN carries nearly 100% good advice for the man who owns cows. These articles are written by H. M. Jones, who is Dairy Extension Specialist of the State of South Dakota.

While these articles are written primarily for the farmers of South Dakota they are applicable over much of the territory in which subscribers of THE BREEDER AND DAIRYMAN reside. Owners of well-established Holstein herds,—men who have been in business a number of years may not need the message the articles convey but the man who is thinking of starting in the dairy business, the man with the small herd of dairy cattle, the man who is building up a purebred Holstein establishment does. The man who has only a few cows will find this series of articles practically worth their weight in gold.

Mr. Jones is doing a great work in his own state in which the dairy industry is growing by leaps and bounds. We are accustomed to think of South Dakota as a pioneer land and a great wheat state. It comes somewhat of a shock to find out that while retaining her position as one of the greatest grain growing states in the Union, South Dakota is rapidly forging to the front as a dairy state and has already distanced in magnitude of production, many of her sister states who pride themselves upon their large and numerous dairy establishments.

Teacher—Charlie, you're so stupid. Why don't you study? Haven't you a Bible at home?

Charlie—It ain't up ter date. It's an old edition.

Supreme Court Orders Special Election to Elect a Board of Six Directors

Election to be Held Within 90 Days in New York State Under the Supervision of the Court. Voting to be in Person or by Proxy

Delegate System Scrapped as Illegal, Void and of no Effect

It will be recalled that the Holstein Breeder and Dairyman printed for the benefit of its readers a decision handed down by Supreme Court Justice Charles A. Pooley, in the action brought by Edward P. George, of Chaffee, New York, against the men who were serving as directors of the Holstein-Friesian Association of America, under the provision of the General Corporation Law of the state of New York, claiming that the Association had no legal directors; that the Association was not entitled to have but six directors; that the amendment of the By-Laws taking away from the membership the right to vote for officers by proxy, and substitute the delegate system was illegal, and asked that a new election be held within the state of New York for the election of six directors according to the law.

By referring to the issue of THE BREEDER AND DAIRYMAN of February 8th, the position of Mr. George can be ascertained by his letter to us which we printed in full and in which he says: "If the affairs of the Holstein-Friesian Association were being handled by an illegal Board of Directors and in an illegal manner as was openly charged, I thought that it was high time that someone called a halt and put us back on the right road. 'Set Our House in Order.'"

Judge Pooley seems to have made a few points pretty clear. *The Road Is Now Open to Abide by the Law* because *We Now Know* what the Law is. If the Association's members want to be law-abiding, if they want to stop extravagance, if they want to have a say in electing officers, if they want to put the Association management back into the hands of its members and have it do the things it has a right to do legally according to the law, Judge Pooley's decision points the way. Right never harms anybody. Law was made to respect.

Justice is bigger than any man or set of men who try to dodge its plain directions. The Holstein cow ought to have friends enough to *Compel Respect for Her Many Outstanding Qualities*.."

The order which has been made by Judge Pooley and which has been entered, reads in part as follows:

"And upon reading and filing said above recited affidavits, the answer of the Holstein-Friesian Association of America and those persons assuming to act as its directors, verified September 19, 1922, the stenographer's minutes of the proof taken December 11,

1922, the said findings of fact and conclusions of law, and the proposed findings of fact and conclusions of law of said Association with the rulings thereon, and due deliberation having been had,

Now, on motion of Penney, Killeen & Nye, Attorneys for the applicant, Edward P. George, it is

ORDERED that this court has made and does make said findings of fact and conclusions of law hereto annexed and they are hereby made a part of this order, and the proposed findings of fact and conclusions submitted by said Association having been ruled upon are as so ruled upon made a part of this order, it is

FURTHER ORDERED that an election of six directors of the Holstein-Friesian Association of America be held within the State of New York, under the supervision of this court and that such election be had within ninety days from the time of the service of a copy of this order with notice of entry upon the attorneys for the Holstein-Friesian Association of America and the persons assuming to act as directors of such association, viz; W. S. Moscrip, W. G. Davidson, John A. Bell, Jr., H. W. Norton, Jr., Delancy B. Armstrong, George A. Fox, Thomas E. Elder, W. H. Mott, W. B. Barney, H. V. Noyes, James A. Reynolds, Fred Pabst, Fred F. Field, G. Watson French, Rudolph J. Schaefer and E. C. Schroeder, and it is

FURTHER ORDERED that at such election that members of said defendant shall be entitled to vote in person or by proxy."

CHARLES A. POOLEY, Justice, Supreme Court.

Granted, February 15, 1923. James V. Walsh, Special Deputy Clerk.

THE HOLSTEIN BREEDER AND DAIRYMAN feeling that its thousands of readers would like to know the basis of Judge Pooley's decision, secured a copy of the "Conclusions of Law" found by Judge Pooley, and upon which the above mentioned order was based. These "Conclusions of Law" make mighty interesting reading and we are deeply interested to know what excuse or alibi certain Holstein-Friesian publications will offer their readers when they find that a Justice of the Supreme Court, after the fullest consideration and in spite of the best efforts of the high-paid lawyers that have been drawing thousands of dollars from the Holstein-Friesian treasury has found that its Board of Directors are an illegal body, that they have violated the law and illegally sought to take away from the membership the right to vote in person or by proxy for

those chosen to serve the Association as its officers. The "Conclusions of the Law" are seventeen in number. Those which are of the greatest importance to the membership are as follows:

CONCLUSIONS OF LAW

1. The legal number of directors of the Holstein-Friesian Association of America is six.

2. That the number of directors of the Holstein-Friesian Association of America was never legally increased from six to nine.

3. That the number of directors of Holstein-Friesian Association of America never was legally increased to sixteen.

4. That each and every one of the sixteen persons now assuming to act as directors of the Holstein-Friesian Association of America, to wit; W. S. Moscrip, W. G. Davidson, John A. Bell, Jr., H. W. Norton, Jr., DeLancey B. Armstrong, George A. Fox, Thomas E. Elder, W. H. Mott, W. B. Barney, H. V. Noyes, James A. Reynolds, Fred Pabst, Fred F. Field, G. Watson French, Rudolph J. Schaefer and E. C. Schroeder, was illegally elected as such director.

5. That the provision in the By-laws of the Holstein-Friesian Association of America contained in Article I, Section 6 (b) of the by-laws of said Association set forth in findings of fact No. 14 and adopted at the annual meeting of the said Association held without the State of New York, to wit at Chicago, Illinois, in June, 1914, did not and does not entitle the said association to hold an annual assembly or convention outside the State of New York and such by-law does not comply with or bring said association within the provisions of Section 44 of the Membership Corporations Law.

6. That the by-laws adopted at the annual meeting of the Holstein-Friesian Association of America at Philadelphia, June 4, 1919, amending Article II, Section 1, of the by-laws of the defendant to provide as follows, to wit:

"The officers of this corporation shall consist of a president, vice-president, secretary, treasurer, superintendent of Advanced Registry and a Board of sixteen directors which shall be classified into four classes. The term of office of all the directors of one class only shall expire each year, and the term of office of each class shall be four years."

amending Article II, Section 1-B of the by-laws of the said association to read as follows, to wit:

"There shall be ten directors elected at the annual meeting in June, 1919,—one for one year; one for two years, four for three years and four for four years. The present directors whose terms expire A. D. 1920 and A. D. 1921, shall continue to serve the balance of the term for which they were elected."

and amending Article II, Section 1-C, as follows, to wit:

"After June, 1919, at each annual meeting there shall be elected four directors to serve for a term of four years."

were and are, and each of said by-laws was and is illegal, null, void and of no effect.

7. The resolutions, set forth in finding of fact No. 26 above, adopted at the annual meeting of the Holstein-Friesian Association of America held at Philadelphia, Pennsylvania, June 4, 1919, attempting to increase the number of directors of said association to sixteen, was and is null, void and of no effect.

8. That the filing by the Holstein-Friesian Association of America of the certificate signed by James Reynolds, Rudolph J. Schaefer, G. Watson French, Fred F. Field, John A. Bell, Jr., Henry F. Dupont, Horace W. Norton, Jr., William B. Barney, E. C. Schroeder, George E. Van Hagen and Fred Pabst as directors of said association, in the office of the Secretary of State at Albany, N. Y., July 16, 1919, and the filing of a duplicate of said certificate in the office of the County Clerk of Onondago County, August 4, 1919, were ineffective to increase the number of directors of said association to sixteen.

9. That the making and acknowledgment by David D. Aitken and Frederick L. Houghton, president and secretary respectively, of the annual meeting of the Holstein-Friesian Association of America, held at Philadelphia, in the State of Pennsylvania, June 4, 1919, of a certificate certifying that a resolution was adopted at the said annual meeting whereby said association determined to change the number of its directors to sixteen, and the filing of said certificate in the office of the Secretary of State at Albany, N. Y., September 21, 1921, and the filing of a duplicate of said certificate in the office of the Clerk of Onondago County, N. Y., were and are ineffective to increase the number of directors of said association to sixteen and did not validate or legalize the attempted increase by said association to sixteen directors.

10. The annual meetings of the Association held at Chicago, Illinois, June 2, 1914, at Detroit, Michigan, June 7, 1916, at Worcester, Massachusetts, June 6, 1917, at Milwaukee, Wisconsin, June 5, 1918, at Philadelphia, Pennsylvania, June 4, 1919 and at St. Paul, Minnesota, in 1920 were irregular and illegal.

11. That the by-laws of the Holstein-Friesian Association of America, adopted at the special meeting of the association held at St. Paul, Minnesota on or about October 10, 1921, providing for representation by delegates at annual conventions of said association were and are illegal, void and of no effect.

12. That the by-laws referred to in conclusion of Law No. 11 deprive Edward P. George of his right to vote at the annual meetings of the association in person or by proxy which right to vote in person or by proxy cannot be taken from him by any action of the said association without his consent and he has not so consented.

Granted, February 15, 1923. Chas. A. Pooley, Justice, Supreme Court.

We learn from clippings that have come to the office of THE HOLSTEIN BREEDER AND DAIRYMAN that the illegal Board of Directors who have been conducting the Association's affairs in an illegal manner have already started out to plunge the Association into still further extravagance by taking an appeal from the decision of Judge Pooley and in having, as is claimed, employed a former Governor of the State of New York

to act as counsel for the Association. We do not know by what authority this illegal Board of Directors assumed to go ahead and spend further thousands and thousands of dollars of the Association's money in senseless litigation, and we believe that the breeders and dairymen who are being taxed through exorbitant transfer fees to provide money for paying fat fees to lawyers will give expression to a righteous wrath when the proper time comes and in no uncertain way.

We have always been a staunch believer in the axiom of Abraham Lincoln to the effect that "You can't fool all the people all the time." Paid propaganda fostered and broadcasted by the paid representatives of an illegal Board will soon lose its power to direct public opinion because the public, and we mean the plain breeders and dairymen who make up the rank and file of the Association are having their eyes opened to the fact that this "Paid propaganda" all emanates from a single source, and serves no other purpose than to enable a political clique to exploit an association which was organized to do a great good and has been side-tracked through political manipulation. The Supreme Court has handed the Holstein-Friesian Association a terrific wallop. We might just as well look the matter square in the face, and equally true we might just as well put the responsibility right where it belongs, and that is on the shoulders of the self-constituted leaders who have tried to perpetuate themselves and their illegal acts in violation of the express provisions of the law. It ought to be an easy matter for an Association and its officers to *obey the law* just as well as for an individual to obey the law. No one gets into trouble who obeys the law. No one needs lawyers to defend them when they obey the law. Honest men with honest purposes understand that the law was made to be obeyed, and most men who for any reason, show a contempt for the law usually find out that it doesn't pay to "monkey with the buzz-saw."

THE HOLSTEIN BREEDER AND DAIRYMAN had hoped that the decision of Justice Pooley in the George case would result in the real progressive intelligence of the Association membership so asserting itself as to stop the further exploitation of the Association and its funds by men who have been discredited in so many ways as to make their usefulness to the Association absolutely null and their further connection with the Association's affairs, a matter of grave concern to the future of the industry. We had hoped to see some strong minds among the rank and file of the Association membership assert themselves and insist that the Holstein-Friesian Association should do the things it was intended to do, that wholesale extravagance should cease; that men should serve faithfully for the honor of being servants, and that a decent respect should be compelled for the rights of the men who, as members of the Association and as breeders of Holstein cattle, have labored faithfully in its interests for the common good of all. If the right of the rank and file are to be further disregarded, the Association exploited, and its resources squandered, we are surely facing a perilous situation so far as the Association's affairs are concerned.

Champion Over All Breeds

THE tremendous record of 1,681.25 lb. butter is claimed for Agassiz Segis May Echo, a five-year-old purebred Holstein, owned by the Dominion Experimental Farms at Agassiz, British Columbia. While making this great record, Agassiz is credited with 30,886 lb. milk. This record exceeds by approximately 93 lb. fat the record of the previous champion, Bella Pontiac.

During the time this cow was on test she was kept in a box stall in the barn and in hot weather was allowed the use of a shady paddock. Her best day's milk production was 121½ lb. She finished her test on Wednesday, January 24th, and on the previous day she was giving right around 63 lb. a day.

The new champion first freshened at the age of two years, five months, two days and in a strictly official test produced 442.7 lb. milk, 18.60 lb. butter in a week. Continued for a year she made 19,302 lb. milk, 842.50 lb. butter. No other record was credited to her until she freshened this time at the age of five years, ten months, eleven days when she produced 36.65 lb. butter, 798.4 lb. milk in a week and in thirty days made 139.96 lb. butter, 2,887.1 lb. milk.

Breeders of Holsteins owning animals carrying May Echo blood will particularly welcome the new champion as her sire, May Echo Champion, is full brother to the famous May Echo Sylvia, the world champion for seven-day milk production. We understand that the new world's champion is registered in the Canadian Holstein-Friesian Herd Book and is not in the American registry. It is quite an honor to our Canadian brothers to develop the cows standing first and second for year production.

Agassiz Segis May Echo is reported as gaining weight during her test and weighing about 100 lb. or more now than she did when she started her year test. She was milked and fed by G. C. Harper, the chief herdsman at the Farms who certainly deserves credit for her successful handling.

Dairymen's League Counsel Honored

JOHN D. MILLER of Susquehanna, Pa., vice-president and general counsel of the Dairymen's League Coöperative Association, was on February 15th elected president of the National Milk Producers' Federation. Mr. Miller will succeed Milo D. Campbell, who resigned when President Harding made the long delayed appointment of a farmer representative to be a member of the Federal Reserve Board and selected Mr. Campbell for that honor.

Bobby wanted a donkey—and he had seen the donkey in a nearby field.

"What would happen if I stole that donkey?" he asked his father.

"You would get six months in prison, replied his father.

Bobby thought a while and then said:

"You wouldn't forget to feed it while I was away, would you father?"

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Feb. 28—Baltic, Ohio, Consignment Sale, Ohio Holstein-Friesian Ass'n.
March 8—Charlottesville, Va., Virginia State Dairymen's Convention.
April 3-7—Salt Lake City, Sixth Annual Inter-Mountain Livestock Show.
Oct. 2-5—Washington, D. C., World's Dairy Congress.
Oct. 6-13—Syracuse, N. Y., National Dairy Show.

MEMBERSHIP CONTEST

The Lucas County Holstein club had a membership contest. The members were divided into two teams, one under the leadership of R. E. Ansted and the other under Ray F. Donnan. The Donnan team lost and entertained their competitors at a dinner which was held at the home of John G. Myers at Berkey, Ohio, January 27th.

BANK AIDS SIRE CAMPAIGN

At the request of the Nicollet County Holstein Breeders' Association, the Citizens State bank of St. Peter, Minnesota, voted to loan money at 5% for the purpose of purchasing purebred sires. The plan is for a number of men with small dairies to club together and form a "bull ring." The Citizens State bank is the first institution in Nicollet County to financially aid this proposition.

FAVORS AREA PLAN

The McLeod County Holstein Breeders' Association held their annual meeting at the court house, Glencoe, Minnesota, January 16th, and instructed the Board of Directors to draw a resolution favoring the area plan of tuberculin testing. Copies of this resolution will be sent to Senator Bonniwell and Representative Welch.

A. C. Howe retired from the presidency and W. W. Graupmann was elected in his stead. H. W. Brinkmann is vice-president, N. W. Uhlis, secretary. The other directors are: Messrs. Harpel, Mielke and Phillips.

WILL PAY SALARY TO SECRETARY

At the annual meeting of the Green County, Wisconsin Holstein Breeders' Association, it was decided to increase the membership fee from \$2.50 to \$5.00 per year. The new fee will cover the cost of membership in the county association and provide for a small salary for the secretary. Officers were elected as follows: President, Fred C. Coldren; First Vice-President, Albert Babler; Second Vice-President, Fred C. Marty; Secretary, John W. Keating; Treasurer, H. W. Haberman; Directors, Iver Ellingson, J. H. Roderick, G. P. Hoesly, C. W. Chambers, Theo. Bayerhoffer and Henry C. Elmer.

ALL JOIN STATE CLUB

The Washington County Holstein Breeders at their recent annual meeting commended the action of the Portland Chamber of Commerce in recognizing the problems of agriculture in Oregon and for the steps that body has taken to assist in placing Oregon agriculture on a well-established basis. The principal speaker was Frank Connell, president of the Oregon Holstein Breeders' Association, who talked on the advisability of a Holstein field man in the northwest. The members present voted to join the state association in a body. A committee was appointed to continue Holstein calf club work in the county.

W. N. Hathorn of Laurel was reelected president; Robert Warrens of Forest Grove, vice-president; O. T. McWhorter of Hillsboro, secretary-treasurer; A. J. Evers of Verboort and J. F. Peerenboom of Roy, directors.

WILL SEEK ADVICE

H. W. Colley of Jefferson was elected president of the Marion County Holstein Breeders' Association at its annual meeting held January 20th, in the Chamber of Commerce rooms Salem, Oregon.

E. Werner of Silverton was elected vice-president and E. Finley, secretary; Frank Durbin of Salem and E. Finley of Jefferson were named on the executive committee.

It is planned to advertise surplus stock collectively. Men of prominence will be invited to visit the herds and give advice on breeding and judging. The members believe that the present purebred bull law requires too much red tape. The present requirement is that all bulls shall be registered before they are sold, and a registry certificate shall go with the animal to show that it is purebred. While the members of the organization favor the prohibition of the sale of scrub bulls, they think they should be able to sell purebred bulls without its being necessary to wait so long before obtaining permission to ship.

WILL MEET FOUR TIMES A YEAR

The Holstein Breeders of Northern Dunn and St. Croix, met at Boyceville, Wisconsin, January 24th. There were twenty-two in attendance. Resolutions were adopted to support the county clean-up of bovine tuberculosis; to boost calf club work; to encourage cow testing associations; to support the Dunn County fair and to hold the annual Holstein sale, as well as a local grade cow and purebred bull sale. The association plans to meet four times a year instead of six.

Officers for the present year are: President, John Schultz, Jr., Boyceville; Vice-President, O. T. Gregerson, Boyceville; Secretary-Treasurer, E. T. Radtke, Downing. The Directors are: A. R. Schutz, Boyceville; Frank Gillis, Glenwood City, and Ben Anderson of Boyceville.

WANTS A QUARTER MILLION DOLLARS

At the recent meeting of the Trumbull County of Holstein Breeders' club the question of a spring sale was discussed. It was resolved to have a sale and the date will be announced early in February. A resolution was adopted favoring an appropriation of \$250,000 for tuberculin testing in Ohio this year. This is in line with a similar resolution passed by the Executive Committee of the County Farm Bureau, January 13th. A plan for a Semi-Official Testing Circle was presented by E. M. Clark and Guy W. Miller, and was accepted. A membership committee was appointed, consisting of L. W. Pierce and W. B. Davis.

A. V. Case of Green County was elected president; Thomas Fell of Kinsman, vice-president; Elmer Partridge of Gustavus, secretary, and L. W. Pierce, Champion, treasurer.

INTERESTED IN FIELDMAN

N. H. Colman, superintendent of Oregon official testing was the principal speaker at the annual meeting of the Lane County Holstein Breeders' Association at Eugene. There are about thirty men in Lane County with purebred Holstein herds, but the association has never been very active. With the prospect of a northwestern field man, there is more interest being taken. A membership campaign will be inaugurated and information gathered regarding country-wide calf club work for boys and girls. It is planned to make a big show of Holsteins at the county fair next fall.

T. J. Sweaney, Jr., of Creswell was elected president; W. W. Conn, one of the older breeders of the county, vice-president; and C. V. Swango of the Wild Rose Dairy farm at Coberg, secretary. The board of directors consists of the officers with Max Arp and Ralph Benter.

A COMPREHENSIVE PROGRAM

The Calumet County Holstein Breeders' Association have an extensive and comprehensive program. There are eight points contained in the resolutions passed, and they are as follows:

- (1) A county membership campaign for 500 members.
- (2) Establishment of a Holstein cow testing association.
- (3) Establishment of Calumet County as a tuberculosis-free area.

- (4) Establishment of junior Holstein clubs.
- (5) Promotion of a county show herd.
- (6) Coöperation with the county fair association to add appropriate premiums on grade Holstein cattle, junior Holstein clubs and official records.
- (7) Promote sales of surplus Holstein cattle.
- (8) Conduct of a "drink more and eat more dairy products" campaign.

LONG MAKES MUNIFICENT OFFER

The Dunn County Holstein Breeders' Association held one of the best meetings in its history at the Masonic temple at Eau Claire, Wis., January 27th.

The association decided to hold a joint meeting with the county Guernsey and Jersey Breeders' clubs in an effort to boost the area tuberculin test campaign. It is planned to hold a sale some time in the spring and about half of those present signified their intention to consign.

A munificent offer was made by C. Y. Long of Downsville, who will give a calf to any boy or girl in the county who will join a calf club and pay for the registration and transfer of the animal. Mr. Long promised that he would do this for the next five years.

The invitation of Anton Jacobson for the association to meet on his farm for the annual get-together and picnic to be held some time this summer was accepted. Forty dollars was appropriated for prizes at the county fair, half the amount to go to the calf club classes and half to open classes.

RICHLAND COUNTY WANTS SHOW HERD

The Richland County Holstein Breeders' Association at its ninth annual meeting planned to exhibit a show herd next fall. An effort is being made to obtain Jack Nisbet of Richland Center, who is now a student in the Wisconsin college of agriculture to take entire charge of the county show herd. Last fall he showed Richland County Holsteins and Ayrshires at Wisconsin fairs, and at the National Dairy show he had charge of the N. C. Schmidt Brown Swiss herd which carried away a number of ribbons and prizes.

An effort will be made to have every farmer in the county who has Holsteins or even a purebred Holstein sire to become a member of the county organization.

Boys' and girls' calf clubs will be encouraged, the Richland Center Kiwanis club will lend its aid in furthering this work. Glen Keys was reelected president. Charles Brace is vice-president, P. J. Bremmer, director, and A. A. Thompson was reelected secretary-treasurer.

IDAHO LIKES STATE HERDS

President H. A. Padgham of Gooding was reelected at the annual meeting of the Idaho Holstein-Friesian Association held at Boise, January 20th. T. J. Killin was elected vice-president, and R. H. Musser, secretary-treasurer. Directors are: Herman Weik, Notus; E. R. Evans, Weiser; Carl E. Johnson, Idaho Falls; R. T. Davis, Weiser, and William Parkhurst, Richfield.

The report of acting Secretary F. R. Cammack told that the state Holstein-Friesian exhibit at the Pacific International Livestock show last fall was awarded third place and it is planned to send another herd in 1923.

Resolutions favoring the continuation of state testing for tuberculosis and the payment of indemnity for reactors were passed. The association also went on record as favoring the increase of bull associations in the state and favoring the development of more calf clubs. Dr. J. D. Adams and W. A. Sullivan of the State Department of Agriculture spoke on the eradication of tuberculosis, while F. R. Cammack, field dairyman of the University Extension Division spoke on the development of bull associations and official testing.

THE RACINE COUNTY ASSOCIATION

The Racine County Holstein Breeders' Association held their annual meeting at Burlington, Wisconsin, January 27th, voted to affiliate with the state association and to join in the special campaign to boost Wisconsin Holsteins and their milk products. The association went on record as favoring calf club

work and supporting a proposal to award prizes to calf clubs and members at the county fair, and also favored "any desirable movement" for eradication of tuberculosis among cattle.

A drive for membership is scheduled for the near future, and a talking point will be made of the fact that now the county body is affiliated with the state organization, one fee will pay membership dues in each organization. Any possessor of a grade herd with a purebred sire is eligible for membership.

The officers for the ensuing year are: Harvey Nelson, Union Grove, president; J. C. Cook, Burlington, secretary and treasurer; Reuben Klotfanda, vice-president for Caledonia township; George Ela, vice-president for Rochester; Clinton Skewes, vice-president for Yorkville; De Grove Bull, vice-president for Mount Pleasant; Floyd Beaumont, vice-president for Dover; Walter Lewis, vice-president for Waterford; George W. Draught, vice-president for Norway; Joseph L. Walker, vice-president for Raymond; William Robers, vice-president for Burlington.

OPPOSE INDEMNITY REDUCTION

The Black Hawk County Holstein Breeders' Association elected Orville L. Hamer of Waterloo, Iowa, president at the annual meeting which was held in that city, January 27th.

Thomas Hansen, Cedar Falls, was made vice-president and W. W. Hotchkiss, Waterloo, was elected secretary, Fred Wheeler, La Porte City, Fred Miller, John Cunningham and W. D. Hostrop, Waterloo, and Art Hansen, Cedar Falls, will constitute the Board of Directors in 1923.

The breeders passed a resolution opposing any reduction in compensation for cattle reacting to the tuberculin test on the ground that it was unfair to the livestock industry. A sale bulletin will be issued at least every three months and will be sent to county agents in Iowa and to other parties who may know of someone desiring to purchase Holsteins.

The committee appointed a year ago to investigate the possibilities of a county or state plan for testing for tuberculosis gave a partial report, suggesting that the time is scarcely opportune on account of the expense. The committee will continue in force and is to report any new angles of the proposition. Talks were made by County Agent A. A. Burger, the well-known Holstein breeder Peder Pederson of Cedar Falls and J. P. Eves, field secretary of the Iowa State Dairy Association. The breeders present freely discussed the addresses and the views advanced.

WILL ADVERTISE HOLSTEIN MILK

There was a good attendance at the sixteenth annual meeting of the Waukesha County Holstein Breeders' Association. There was a discussion of purebred breeding and plans were made for arranging sales during the ensuing year. This, with the report of the secretary and treasurer, took up the forenoon. The secretary's report said that during the year, purebred Holsteins were sold at the pavilion to the amount of \$236,000.

Secretary William Baird presented the subject of the sale of grade Holsteins enrolled in cow testing association work. Reid Murray said that in many of the northern counties, the sales had been very gratifying and grade Holsteins were proving to be money makers. The consensus of opinion was that Waukesha County could afford to have some sales of grade cattle, and it was suggested that the grades and purebreds should be sold on the same day. The matter was left to the Board of Directors.

After the banquet, which was held at the Methodist church, C. M. Long of Illinois spoke on "How to get a Better Price for Holstein Milk." A. J. Cramer in charge of the Wisconsin Cow Testing associations gave an address on the "Value of Cow Testing Work," and Reid Murray, secretary of the Wisconsin Livestock Breeders' association spoke on the opportunities for Holsteins in Idaho. The association plans to carry out a campaign to advertise Holstein milk as the highest quality of milk for human consumption.

At the directors' meeting F. J. Southcott, manager of Hollywood farms was reelected president; Fred Klussendorf, vice-president; L. V. Garvens field secretary, and W. L. Baird, secretary and treasurer. This is Mr. Baird's tenth consecutive term as secretary.

HOLSTEIN BULL ASSOCIATION IN BANNOCK COUNTY

By F. R. CAMMACK, IDAHO FIELD DAIRYMAN

Bannock County Dairymen, realizing the importance of dairy development and particularly the necessity of using a good sire have completed the organization of a bull association consisting of two divisions—the East Bannock Association and the Grace Association. Mr. Arthur G. Peterson of Lund, Idaho, is the Secretary of the East Bannock division and Mr. Fred M. Cooper is Secretary of the Grace division. Credit is particularly due to the coöperation of the farmers and also to the assistance of H. A. Mathieson, U. S. D. A., C. C. Gray, Club Agent, and J. W. Thometz, County Agricultural Agent of Bannock County.

The following bulls were selected by A. G. Peterson, C. C. Gray and F. R. Cammack:

De Kol Walker Johanna Burke—This bull's sire, Garfield Johanna Burke, is backed up by very fine records and his daughters are on official test and will undoubtedly make him a proven bull. The dam, Queen DeKol Walker Bonheur, is on official test and gives promise of making a creditable record. She made 357.6 lb. fat and 11,815 lb. milk as a three-year-old in the cow testing association. She is backed up by Queen DeKol Bonheur Pontiac, 1,268 lb. butter, 31,119 lb. milk, and her sire's dam, Daisy Pioneer Clyde, made 123 lb. butter in 30 days. This bull was bred by and purchased from R. T. Davis, a prominent Holstein breeder of Weiser, Idaho.

Boomer Segis, 385103—This bull is a son of Hollywood Segis Palmyra, whose sire, Judge Segis, is well known and is one of the leading bulls of the breed, and whose dam has 1144.8 lb. butter, 29,031.9 lb. milk, and she in turn has several splendid

COLANTHA LOU SEGIS QUOQUE

Placed third at the Pacific International Livestock Show, Portland, 1922. She is half-sister to King Aaggie Segis Boy, one of the bulls purchased by the Bannock County Bull Association. Owned by Thomas J. Killen, Boise, Idaho.

yearly records back of her. The dam's sire is a three-fourths brother of Segis Pietertje Prospect, world record milk cow, 37,370 lb. milk, 1448 lb. butter. The dam's dam, Queen Persons, has a 30 day butterfat record of 61.82 lb. and 2015.2 lb. milk. This bull was bred by and purchased from H. R. Boomer, pioneer Holstein breeder of Payette County, Idaho.

King Aaggie Segis Boy, 386462—This bull is a grandson of King Segis 10th. His sire's get was first at the Idaho State Fair and won eighty at the Pacific International Livestock Show. The sire, King Cornucopia Segis Ormsby, will soon be a proven sire. The half sister, Colantha Lou Segis Quoque, was third at the Pacific International Livestock Show this year. The dam, Quoque Aaggie Segis Ormsby, has made 218 lb. fat in four months on official test. Her dam has also made a good Advanced Registry record. This bull was bred by and purchased from T. J. Killen, Boise, one of Idaho's leading Holstein breeders.

Sir Lady Smith Walker Soldene—This bull's dam, Lady-smith Walker Hartog, made 10,583.7 lb. milk and 311.36 lb. butterfat in 10 months as a junior two-year-old. Her dam, Mercena Mable Hartog, has a record of approximately 700 lb. butterfat and is a daughter of Segis Walker Hartog, a proven son of King Segis 10th. The sire, Sir Florence Hengerveld Soldene, has a record of 786 lb. butter on the dam and 1146 lb. butter on the grand-dam and other excellent records back of

him. This bull was bred and purchased from the Intermountain Institute, Weiser, one of Idaho's excellent Holstein herds.

These bulls will help to develop profitable dairying in Bannock County and the organization of this association is another step forward in Idaho's dairy development. These communities will undoubtedly become well known Holstein communities.

DAIRY ASSOCIATION OFFICERS RE-ELECTED

At the annual meeting of the World's Dairy Congress Association recently held in Washington, D. C., all the officers were re-elected. The association was incorporated a few months ago under the laws of the District of Columbia, and these laws required the meeting which is the first annual meeting held since the association was formed at the 1921 National Dairy Show.

The officers of the association are: president, H. E. Van Norman, president of the National Dairy Association; senior vice-president, Robert Scoville, president of the American Guernsey Cattle Club; treasurer, Henry N. Brawner, Jr., of the Chestnut Farms Dairy, Washington, D. C.; honorary president, Henry C. Wallace, Secretary of Agriculture; honorary vice-president, C. W. Larson, Chief of the Dairy Division, U. S. Department of Agriculture, and B. H. Rawl, ex-Chief; seven executive committeemen, Mr. Van Norman, Mr. Scoville, Fred Rasmussen, president of the Pennsylvania-Maryland Joint Stock Land Bank, Harrisburg, Pa.; W. C. Davis, president of the National Association of Dairy Machinery Manufacturers; F. P. Willits, Secretary of Agriculture for Pennsylvania; Loton Horton, president of the Sheffield Farms Company, New York City, and J. A. Walker, vice-president of the Blue Valley Creamery Company, Chicago.

THINGS STIRRING IN THE DAIRYMEN'S LEAGUE

The two week period from February 12th to February 28th is a critical time in the Dairymen's League Coöperative Association, for during this period the members have their annual opportunity to serve notice that they wish to withdraw from the association. A few months ago, there was unrest and dissatisfaction among the members, but owing to the better prices being paid for milk the past few months, a condition of satisfaction more generally prevails. Last year there were something like 3200 cancellations during the February period, but during the month the League received more new contracts than it did cancellations. The League is, at the present time, the fourth largest manufacturer of canned milk in the United States, and during the year 1922, manufactured approximately 1,800,000 cases of condensed and evaporated milk. As a manufacturer of ice-cream, the League stands third, nearly 450,000 gallons of ice-cream being manufactured last summer in the Auburn, Carthage and Milton plants.

SILVER CUPS AWARDED

At the annual meeting of the Cumberland County Holstein-Friesian Association, two silver cups were presented to W. Shaeffer of Huntsdale and I. V. Otto of Boiling Springs for high records made in their herds during the past year. The assembled breeders listened to an address by A. M. Crissey, Holstein Extension Man of the district of Pennsylvania, New Jersey, and Delaware. A. A. Raudagaugh was appointed publicity director.

The officers were reelected for the ensuing year. They were: President, W. S. Kerr; secretary, R. L. Shenk; treasurer, I. V. Otto; W. A. Woods, of Huntsdale was elected delegate to the national convention to be held at Cleveland in June.

I think the first virtue is to restrain the tongue. He approaches nearest to the Gods, who knows how to be silent even though he is in the right.—Cato.

News Item, Miss Brown is under the doctor's care, but she is expected to recover.

THE OHIO ASSOCIATION MEETING

The annual meeting of the Ohio Holstein-Friesian Association was held February 1st, in Townshend Hall, Columbus. The report of the Secretary, E. M. Clark, was verbal. He announced that five sales were held under the auspices of the state association last year and that they expected to sell 110 head in June.

Mr. Clark believes that the expense would be too high for the sale committee to inspect all the cattle that were promised for the June sale and that it was up to representatives of each state association to look after the individuality of the animals consigned. This has been the custom during the years there have been coöperative national sales. C. M. Long, field secretary of the Illinois Association, gave an address as did Prof. Oscar Erf of the Ohio Agricultural College, who talked on a bill before the Ohio Legislature which would regulate the use of scrub bulls in the state.

The Treasurer's report showed that during the last six months of 1922, \$1,054.75 had been received from the national association as transfer fee refund. The state sale showed a profit of \$694.59 but the other sales under association auspices showed a loss of \$163.03. The balance on hand February 1, 1922 was \$3,915.70 and the balance on the closing day of 1922 was \$4,404.

The following is the report of Treasurer H. O. Frederick. The accounts were audited by F. I. Ellenberger of the Farmers' National Bank.

Receipts or Cash Dr.

Balance on hand February 1, 1922	\$3,915.70
Membership	10,936.10
State Sale	27,899.65
Other Sales	1,045.68
Miscellaneous	26.00
Signs	1.00
Nat'l Ass'n (\$5.25 prize money; six months' transfer fee refund.)	1,054.75
Total	\$44,878.88

Disbursements or Cash Cr.

State Sale	\$27,205.06
Other Sales	1,208.71
Fair Premiums, Boys' and Girls' Club Work	336.88
Publicity	1,251.43
Expense—Field Secretary	1,334.81
Office	1,819.43
Officers and Directors	438.87
Rent and Light	356.00
Membership Campaign	62.22
1923 National Sale	46.47
Salaries	4,495.62
Rebate to County Clubs	1,247.63
Rebate, Membership	71.75
Rotary Fund	600.00
Balance on hand December 31, 1922	4,404.00
Total	\$44,878.88

At the afternoon session, J. M. Kelley talked about ninety minutes on advertising milk and he received considerable applause. Other speakers were Prof. G. C. White, Storrs, Conn., and Dr. C. W. Gay.

A Nomination Committee recommended the reelection of the board of officers, this was done. They also recommended ten names as Ohio delegates to the annual meeting of the Holstein-Friesian Association of America, providing the courts allowed such a meeting to be held in June, at Cleveland.

The meeting of the Ohio Holstein-Friesian Association was part of the program connected with the meeting of the Ohio State Dairymen's Association. The state Jerseys, Ayrshire, and Guernsey Associations met at the same time and a joint dairymen's banquet was held on the evening of January 31st. We notice in the program of the Ohio Milk Producers' Association that addresses were given on the subjects, "Feeding, High Producing Holsteins" by Representative Perry L. Green and on "Increasing the Dairymen's Income" by Senator G. L. Kryder.

Monthly Comparison of Association Business

THE ASSOCIATION'S FISCAL YEAR

The fiscal year of the Holstein-Friesian Association of America ended December 31st and the year's report is now available. As usual it presents an interesting study. The total earnings for the month of December show quite a gain over the earnings of the corresponding month last year, and even exceed those for December, 1920. The earnings for the year 1922, despite the increase of transfer fees at the Kansas City convention, are only \$2,264.50 above the total for the year 1921.

During December, 1922, there were 10,619 registrations. This is more than the totals for December 1921 or 1920. The total for the year, however, falls slightly short of last year, there being 2,422 less.

The membership applications show a gain over the previous month, and also the corresponding month of 1921. The total number of members added during 1922 was 1,440 or 120 a month. The number of members added in 1921 was 1,656, and in 1920, 3,119.

There was a jump in transfer earnings, which averaged in 1922 about two-thirds as much as they brought the association in 1920, and about \$260 a month more than they averaged in 1921. The total for the year is \$123,167.25 against \$119,910.25 in 1921.

The transfer record will be eagerly scanned. There was practically 10,000 less certificates issued than there was during 1921. During December 1922, there was 9,159 transfer certificates issued against 10,229 during December, 1921, and 11,931 during the corresponding month of the previous year. While there is a gain over the November business, it is not as great a gain as is shown by the comparative reports of November and December in the two previous years. December usually shows a gain over November in the amount of transfer certificates issued. There was a gain of 2,262 in 1922; 2,630 in 1921; 3,283 in 1920.

Except for the fact that the increased transfer tax transfers a larger sum from the pockets of the breeders to the coffers of the association, the advocates of a high transfer will find little comfort in the year report. It shows a decreased transfer activity compared with the previous year in five of the seven months since the change was made, and one of the months showing an increase was June, when the change was made. In anticipation of a raise in fee applications were rushed to the Secretary's office, during the closing days of May and the first week in June, and these applications were the ones for which transfer certificates were issued that month.

BEEF AT WHOLESALE PRICES

In these days of high freight rates and low prices for farm grown products it behooves farm families to study where to cut expenses. On many farms too large a proportion of the food is purchased in small quantities at high retail prices. In many instances these prices are higher than the dweller in the city has to pay for commodities of equal quality.

In older days, a fat animal was killed in late fall or early winter, and the meat dried or salted. Little fresh meat appeared on farm tables during the summer months. To-day, in many places, things are quite a little different and in many dairy sections where milk is sold for shipping purposes, few hogs are raised and oftentimes these are sold alive, while cows and heifers culled from the herd and discarded herdsires are disposed of to a shipper who sends them on to the city abattoir. Except for setting hens killed after the brooding season and surplus cockerels slaughtered in the fall, no home grown meat is consumed while the butchers' bills have to be met from the proceeds of the milk checks.

The agricultural college teachers and extension specialists have, by advocating the canning of meats, endeavored to remedy these conditions and at the same time, allow for the satisfying of the human craving for variety in food. Receipts for canning, corning and drying beef are given freely on application by the domestic economy divisions of our great state colleges. The extension service of the Texas College of Agriculture, in a late issue of its *Farm News*, gives a number of receipts and some good advice. We take pleasure in passing this information along to readers of THE BREEDER AND DAIRYMAN.

"CORNERED BEEF: Pieces commonly used for corning are the plate, rump, cross-ribs and brisket, the cheaper cuts. The loin, ribs and other fancy cuts are more often used fresh and,

since there is more or less waste of nutrients in corning, this is well. The pieces for corning should be cut into convenient sized pieces, say five or six inches square. It should be the aim to cut them all about the same thickness so that they will make an even layer in the barrel.

Meat from fat animals makes choicer corned beef than that from poor animals. When the meat is thoroughly cooked it should be corned as soon as possible as any decay in the meat is likely to spoil the brine during the corning process. Under no circumstances should the meat be brined while it is frozen. Weigh out the meat and allow eight pounds of salt to each 100 pounds; sprinkle a layer of salt one-quarter of an inch in depth over the bottom of the barrel; pack in as closely as possible the cuts of meat, making a layer five or six inches in thickness; then put on a layer of salt, following with another layer of meat; repeat until the meat and salt have all been packed in the barrel, care being taken to resalt enough for a good layer over the top. After the pack has stood over night add, for every 100 pounds of meat, four pounds of sugar, two ounces of baking soda, and four ounces of saltpetre dissolved in a gallon of tepid water. Three gallons more of water should be sufficient to cover this quantity. In case more or less than 100 pounds of meat is to be corned, make the brine in the proportion given. A loose board cover weighted down with a heavy stone should be put on the meat to keep all of it under the brine. In case any should project the meat would spoil and cause the brine to deteriorate.

It is not necessary to boil the brine except in warm weather. If the meat has been corned during the winter and must be kept into the summer season, it would be well to watch the brine closely during the spring, as it is more likely to spoil at that time than at any other season. If the brine appears to be ropy or does not drip freely from the finger when immersed and lifted, it should be drained off and new brine added, after carefully washing the meat. The sugar or molasses in the brine has a tendency to ferment, and, unless the brine is kept in a cool place, there is sometimes trouble from this source. The meat should be kept in the brine twenty-eight to forty days to secure thorough corning.

DRIED BEEF: The round is commonly used for dried beef, the inside of the thigh being considered the choicest piece, as it is slightly more tender than the outside of the round. The round should be cut lengthwise of the grain of the meat in preparing for dried beef, so that the muscle fibers may be cut crosswise when the dried beef is sliced for table use. A tight jar or cask is necessary for curing. The process is as follows: To each 100 pounds of meat weigh out five pounds of salt, three pounds of granulated sugar, and two ounces of saltpetre; mix thoroughly together. Rub the meat on all surfaces with a third of the mixture and pack it in the jar as tightly as possible. Allow it to remain three days, when it should be removed and rubbed again with another third of the mixture. In replacing put at the bottom the pieces that were on the top the first time. Let stand for three days, when they should be removed and rubbed with the remaining third of the mixture and allowed to stand for three days more. The liquid forming in the jars should not be removed, but the meat should be repacked in the liquid each time. The meat is ready to be taken from the pickle, and should be smoked and hung in a dry attic or near the kitchen fire where the water will evaporate from it. It may be used at any time after smoking, although the longer it hangs in the atmosphere the drier it will get. The drier the climate in general, the more easily meats can be dried. In arid regions good dried meat can be made by exposing it fresh to the air, with protection from flies.

PICKLING MEAT: Authorities differ in regard to the formula to be used in the pickling of meats. The following recipe is often used for tongue and small pieces of meat:

- Cured Tongue:
- 2 gallons of water.
- 3 pounds of salt.
- 1 ounce saltpetre.
- 1-2 cup of sugar.

Rub part of the salt into the meat, dissolving the remainder of the salt, the sugar, and the saltpetre in the water. Boil, skim, and strain to remove all impurities. Cool thoroughly before adding meat. Place a weight over the jar to keep the meat under the brine. Keep in a cold place and the tongue will be cured and ready to cook in four or five days.

GOOD RECORDS IN DAIRY HERD

Fred Lehman of Carlisle is one of the good Pennsylvania dairymen who handles a herd of Holsteins from the dairymen's standpoint; that is, profit and production first. He recently made up his mind to put a couple of his animals in official test. One of the cows made 663 lb. milk in a week and another made 108 lb. in a day and in the week made 707 lb. milk and over 30 lb. butter.

We hope to give the particulars in an early issue, but we are passing on the news now just to show the quality of some of the Pennsylvania herds that have been handled from the dairyman's standpoint, and will just say that Mr. Lehman's milking dairy usually consists of eight or ten cows.

AGED JERSEY PRODUCER

Jersey breeders are feeling quite pleased over the record of Snip Wauger Second. This cow was born August 25, 1908. She began her test October 22, 1921 when nearly 13 years and 2 months old and she produced in a year, 18,226 lb. milk and 941.11 lb. butterfat equivalent to 1,176.39 lb. butter on the 80% basis. She is owned by Hugh W. Bonnell of Youngstown, Ohio, who we are informed, is her caretaker. Mr. Bonnell is a practical breeder and dairyman whose sole sources of revenue are his farm and his dairy herd.

THE LATEST THING IN FOOD

Patron (crossly)—Say, waiter, what are those black specks in my cereal?
Waiter (after a close inspection)—Dunno, sir, unless it's some of them vitamins everyone is talking about now.—Life.

Sunday Golfer—"Something has put me off my game this morning caddie."
"It's them church bells, mister. They hadn't ought to be allowed."

AN OPPORTUNITY TO SECURE MAY ECHO BLOOD

An opportunity to secure a grandly bred May Echo bull will be offered to prospective buyers March 7th, when the high-class herd owned by Harrington Farms, Inc. will be sold at the Farms near Syracuse, New York. This bull is Sir Riverdale Lyons May Echo whose four nearest dams have seven day official records averaging over 700 lb. milk and almost 31 lb. butter. His sire is a son of the wonderful transmitting cow, May Echo Verbele, 29.89 lb. butter in a week, the dam of May Echo Sylvia and granddam of the new World Champion, Agassiz Segis May Echo, 1,681.25 lb. butter in a year. The dam of this bull is Riverdale May Echo Lyons, a 31 lb. daughter of old May Echo, 31.34 lb. butter in seven days, 1,042 lb. butter in a year. Needless to say May Echo is the granddam of May Echo Sylvia.

The Harrington herd consists of 50 head of registered Holsteins and a number of high grade cows and heifers. The females are nearly all due to freshen in May and April by Sir Riverdale Lyons May Echo. In this herd there are animals with remarkable pedigrees. There are two daughters of Sir Johanna Lady Korndyke, whose dam, Pontiac Lady Korndyke, was the first cow to make 38 lb. butter in seven days. The sire of this bull is a son of Pontiac Gladi, the first junior four-year-old to make 32 lb. butter in a week. Daughters of this bull are making splendid records. There are three cows, big, straight handsome animals sired by Johanna King Korndyke. This bull is from Fairview Sadie Vale Korndyke and was by Johanna King Segis, a great sire, and a maternal brother to Johanna McKinley Segis, both being from Johanna De Kol Van Beers, the second cow to make a 40 lb. seven day official butter record. A number of the animals in this herd are of May Echo breeding. They are large and straight. Opportunity seldom offers a chance to get such animals bred to such a bull and soon due to freshen.

The Harrington herd has been under state and federal supervision for the past three years and a recent test of the entire herd showed only one reactor. Each animal that will be offered has had three or four clean tests. The customary 60 day retest privilege will be given.

The Harrington Farms are located only four miles from the center of Syracuse, Stop 2 on the South Bay trolley line is right in front of the establishment. The well-known Holstein breeder, Clarence F. Hunt, is the manager of this establishment. This fact is a guarantee of the individuality of the animals to be offered for Mr. Hunt for many years has had the reputation of being one of the best judges of Holstein-Friesian cattle.

THE MCKELVEY DISPERSAL

Owing to the McKelvey Bros. purchasing 40,000 acres of timberland in Fulton County, an enterprise that will require the entire time of Mr. F. R. McKelvey, this high-class and well-known herd will be dispersed at Covedale, Pennsylvania, on March 15th. When building this herd the McKelvey Bros. took considerable time in selecting their foundation stock and spent a lot of money for high class individuals whose blood lines appealed to them. This herd has the reputation of being one of the best if not the best, from the standpoint of individuality of any in Central Pennsylvania.

The senior herd sire is King Diona Konigen, whose seven nearest dams have official seven day records averaging 37.61 lb. butter, 681.5 lb. milk. His dam is a 35.94 lb. daughter of the 37 lb. cow, Diona Konigen Pietertje and his sire is King Segis Pontiac Konigen whose daughters are making such wonderful milk and butter records for both official and long time tests at Dutchland Farms.

The junior herd sire is King Walker Echo Sylvia whose dam Leila De Kol Walker produced 24.61 lb. butter in seven days averaging exactly 70 lb. milk a day for the week. His sire is Champion Echo Sylvia Pontiac, a bull with eleven daughters that have each made over 30 lb. butter in seven days, a number of them as two and three year old heifers. Many believe this sire to be the best son of the 41-lb. cow May Echo Sylvia, the wonderful champion milk producer and the only animal that has made 1,000 lb. milk in a week. There are 20 daughters of King Walker Echo Sylvia in this sale.

Owing to the fact that the time of Mr. F. R. McKelvey will be completely occupied by the supervision of his timberland this will be an absolute dispersal without reserve. Every animal must go. The animals are tuberculin tested and the usual 60 day retest privilege will be given.

The sale will be held within one block of Covedale station. Covedale is on the Petersburg branch of the P. R. R. which runs from Altoona to Huntingdon and has good train service. Mr. F. R. McKelvey resides at Hollidaysburg and requests for catalogs should be addressed to him there.

SCHROEDER CATTLE TO BE DISPERSED

A famous herd will be scattered on February 27th and 28th, when the aggregation of great record cows owned by C. W. Anderson of Burbank, California will be sold at public auction. Probably many of our readers will be surprised at this statement, not knowing the Anderson herd, but when we explain that this is really the E. C. Schroeder herd which some time ago was shipped from Minnesota to California and then sold to Mr. Anderson, they will understand better what will be thrown on the market. Old Sir Pietertje Ormsby Mercedes 37th will not be included in the sale, but there are 13 daughters of this bull and 11 daughters of his sire, Sir P. O. M., while most of the females are bred to "37th". Some of the best producing blood known to California breeders flows in the veins of animals in the Anderson herd that were never owned by Mr. Schroeder. C. L. Hughes is authority for the statement that the entire herd was recently tuberculin tested without finding a reactor.

We are without any information regarding what Mr. Schroeder is doing or intends to do. It will be remembered that this gentleman is listed as one of the board of directors of the Holstein-Friesian Association of America, although he has not attended a meeting of the Board for considerably more than a year. In this connection we may suggest that when Judge Pooley sets the date for the special meeting to be held at New York state to elect a legal board of directors that some provision should be made in the by-laws whereby a director absenting himself from board meetings for a certain length of time, six months or a year, be automatically retired from the board, and that a new man to take his place be elected at the next annual meeting. It certainly seems only right that after a director ceases to take active part in the management of a great breed association, he should, in justice to the other directors, and the general membership, resign his position.

OLDEST HERD IN DANE COUNTY

The oldest purebred Holstein herd in Dane County, Wisconsin, was begun in 1884 by John Tasher, then of Mt. Vernon, who purchased a purebred Holstein bull. The present herd contains exactly 99 head of purebreds.

The present owner of the farm is Werner Tasher of Mt. Horeb, who became a member of the National Association in 1909. Jacob Slapfer, who operates one of the farms has a half interest in 39 head of stock, but the major part of the herd remains on the old farm under the management of Mr. Tasher.

In 1886, two years after he purchased the bull, John Tasher bought two purebred cows, and in 1893 Werner Tasher

and his brother made the last purchase of purebred females added to their herd when they bought two heifers. Since that time only herdsires have been purchased. The Tasher herd is a member of the Vernon Cow Testing Association, which was organized recently but has shown prominently in other associations in previous years.

OLD BUT TRUE

Tobacco is a dirty weed.

I like it.

It satisfies no normal need.

I like it.

It makes you thin, it makes you lean, It takes your hair right off your bean, It's the worst darn stuff I've ever seen.

I like it.

THREE HUNDRED-POUND DAUGHTERS

They have quite a producing cow in the Dean Beeman Holstein herd at Woodland, Cal. This cow is now thirteen years old and has three different daughters that have each produced over 100 lb. milk in 24 hours. One of her daughters, Capunista, has an official record of 650.5 lb. milk, 31.74 lb. butter made in seven days and a 305-day record of 19,213.9 lb. milk, 807.45 lb. butter. Jacobina, another daughter as an eight-year-old produced 535.5 lb. milk, 33.25 lb. butter in seven days and in 296 days made a record of 21,339.5 lb. milk, 818.96 lb. butter. Johanna Hengerveld Capuna, as a senior four-year-old produced in 305 days, 18,642.1 lb. milk, 784.85 lb. butter. One daughter of this cow has given 116 lb. milk in a day and while making a 31 lb. seven-day butter record produced 716 lb. milk. Jacobina has two two-year-old daughters that have each made over 21,500 lb. milk and 839 lb. butter in year test.

L. W. BARDSLEY

L. W. Bardsley of Tulare, Cal., died at home January 22d, at the age of 53 years. He had had an attack of influenza from which he never recovered. Mr. Bardsley was born in the east and came to California with his parents when only six years old. He owned a herd of high-class registered Holsteins and became a member of the Holstein-Friesian Association of America in 1917. He was prominent in his community, was supervisor of his county, was a director in the Tulare Mercantile Co. and in the Dairymen's Cooperative Creamery and was vice-president of the Tulare Board of Trade. He was also prominent in a number of fraternal organizations being a member of Masons, Odd Fellows, Woodmen of the World, and Redmen.

They don't call 'em flappers any more. The new name is Easter Eggs, so called because they are hand-painted outside and hard-boiled inside.

TESTING IN THE WESTERN STATES

The January monthly *News Letter* issued by the western office of the United States Dairy Division shows that during December the Washington associations took the lead for high average with an average production of 30.26 lb. butterfat for 2,855 cows enrolled in 10 associations. As there were 613 animals on the honor roll it can be seen that one in every 4.7 cows achieved the honor list. The Idaho associations were second with an average of 29.89 lb. fat for 622 cows. The 17 California associations had 19,931 cows enrolled with an average of 29.33 lb. fat. Colorado is fourth with an average of 28.71 lb. fat for 1,240 cows with Arizona, Nevada, Utah and Oregon following in the order named. In the eight western states there were 28,378 animals in the associations of which 4,179 produced 40 lb. fat in the month.

In the division for herds of over 15 cows, first place is taken by a herd of 18 registered Holsteins owned by F. T. Pellissier, Whittier, California enrolled in the Los Angeles Association. A registered California Jersey herd is second. The 29-cow Holstein herd of G. U. Clark, Hanford, California, with an average of 44.7 lb. fat, is third. A Guernsey herd is fourth and Holstein herds, grade or purebred, occupy the next six places.

While the herds of 15 or less cows are not so important, owing to the smaller size, it is always interesting to note the breeding of the leaders for production. The Rev. N. L. Browning of Hemet, California, now has three animals in milk with the splendid average of 2,150 lb. milk, 100.5 lb. fat. It would be quite an accomplishment for any registered herd to show three cows with such an average in cow testing association work, and it must remember that these three animals are the only three milkers owned by Mr. and Mrs. Browning. The next four places on the list are filled by Holstein herds, those of L. E. Dickover of Delhi and J. Chapman of Salida, California, being second and third, while John Hagglof of Oakville, Washington has seven Holsteins that average 1,439 lb. milk, 56.8 lb. fat and occupy fourth position.

The tremendous record made by Bessie Snowball De Kol owned by Fred Hartsook of Lankershim, California gives her first position by a wide margin. She is credited with a production of 3,187 lb. milk and 143 lb. fat during the month of December in testing association work. Helm Colantha W. of the Helm farms, King County, California is second with 2,430 lb. milk and 122 lb. fat. Bess Hartog of the Rev. N. L. Browning's herd is third with 2,260 lb. milk, 119.8 lb. fat just in front of a grade Holstein owned by James Ballantyne of Santee, Califor-

nia with 1,980 lb. milk, 118.8 lb. fat. Whitney, a registered Holstein is in fifth position, with 1,941 lb. milk, 111.8 lb. fat. She is owned by Krebill & Van Meter of Loveland, California. Holsteins show very prominently in the report and only limitation of space prevents us telling the individual production of many more of the animals in the list.

A HOLSTEIN MONTH FOR WASHINGTON

By LINCOLN R. LOUNSBURY
Agricultural Extension Editor, State College of Washington

December proved a Holstein month among the dairymen of this state by reason of the number of purebred sires and cows of this breed which changed hands. More Holstein sires were placed through the cooperative efforts of the county agents and breeders than any other breed.

The big event of the month was the Holstein consignment sale conducted by the Lewis County Holstein-Friesian club when 49 head sold for an average of \$138. Besides this sale, four purebred sires and one cow were placed in Thurston County as a part of the purebred sire campaign being conducted by the Extension Service of the State College. John Lund purchased a bull calf from Utterback and Son; A. Neat of Fir Tree bought a sire of Cooper Brothers; Matt Forstrom of Rochester bought a bull calf from Edward Cross of Gate; R. H. Ensign of Spurgeon Creek bought a \$350 ten months old bull from Carnation Stock farm, while the Cloverfields Farm of Olympia, purchased the top cow at the Chehalis sale, paying \$350 for her.

Marshall K. Snell, recently purchased two registered Holstein females and a high-class sire to be placed on his farm. The sire is a son of Matador Segis Walker and has a fine record back of him. A purebred sire was placed in Grays Harbor County.

Not to be outdone by his seniors, David Nisbet, a member of the Chehalis Holstein calf club of Lewis County, sold his calf at the recent Portland sale for \$305. David bought the calf at the beginning of the year paying \$200. He won first place in the boys' and girls' calf club class as well as first in the open class at the Southwest Washington Fair at Chehalis. Not satisfied with these winnings, David showed at the Pacific International Livestock Show at Portland and won first place in the open class. His reports show that he made a profit of \$126 on his dairy venture.

Men and women are such poor philosophers that they will cuss their shoes because they don't fit their feet, when the only trouble is that their feet don't fit their shoes.

FREED HERD WINS HONORS

During the month of January, 26 herds containing 282 cows were tested in the Westfield Association which operates in Lawrence County, Pennsylvania. Gordon J. Rice, the tester, reports that 43 cows each produced over 40 lb. butterfat and 10 over 50 lb., while 8 cows exceeded 1,200 lb. milk in the month. The 10 highest cows for butterfat averaged 57 lb., and the 10 highest cows for milk averaged 1,355 lb. The leader was a purebred Holstein owned by Herb A. Freed. She was a seven-year-old and produced 2,446 lb. milk, 78.3 lb. fat and a daughter in the same herd produced 1,001 lb. milk and 40 lb. fat as a four-year-old. The purebred Holsteins of Herb A. Freed carried off the honors for herd production by averaging 1,343 lb. milk and 45.5 lb. butterfat.

REVIEW OF STATE WORK

A summary of testing association activities in California during the past year shows that 3,063 or 8.3% of the cows tested were discarded as unprofitable. Beginning December 1, 1922, there were 37 testers at work testing 39,162 cows. Humboldt County leads with 5,902 cows on test, then comes Los Angeles County with 5,500 Stanislaus with 4,013, Sonoma with 3,181, Marin, 3,079. The remaining counties have less than 3,000 cows each. A summary of the production of 16 associations having 14,408 cows on test shows that they averaged 273.2 lb. butterfat per cow per year, which is 91 lb. above the average California cow.—Noel Negley.

HONORS WELL DIVIDED

There were no less than 53 cows that attained the honor roll in the South Franklin County, Pennsylvania Association, reports tester R. S. Heisey. Twenty-one herds were tested and 28 cows made over 40 lb. fat during January. Twelve exceeded 50 lb., while 20 produced more than 1,200 lb. milk in the month. The leader was a Guernsey with 87.6 lb. fat. A grade was second with 74 lb. A Holstein owned by Isaac S. Myers was third with 1,358 lb. milk, 58.4 lb. butterfat. Three other Holsteins exceeded the 50 lb. mark. The honor cows came from 16 different herds.

SAMPLING DEVICE ON MILK-ING MACHINES

In the report of the Riverside, California Association, Mark Butterfield says that the Glenwood stock farm with a herd of 90 registered Holsteins is now using an automatic weighing and sampling device on their milking machines. As far as we know, this is the first purebred herd in America to adopt such a device, which would save time and labor in taking samples wherever such equipped milking machines are used.

Pat—"I hear you and the boys struck for shorter hours. Did you get 'em?"

Mike—"Sure. We're not working at all now."

IS THIS ANOTHER WORLD RECORD?

"Kit," a five-year-old grade Holstein in the Beloit Association, owned by Rockwell and Katterhenry, Beloit, Wisconsin, was retested on January 4th and 5th. She produced over 1.7 lb. fat from 49.4 lb. milk testing 3.49%. Her credit for the last 16 days of her association year was 27.6 lb. butterfat (she was fresh Jan. 14, 1922). Kit has the following to her credit for the association year ending Jan. 16, 1923:

23,374 lb. milk testing 3.44%, containing 804.2 lb. butterfat.
The value of her milk \$384.41
Total feed cost 118.08

Income over feed cost \$266.33

Kit's feed consisted of 23 lb. of following grain mixture:

Corn Meal 5.5 lb.
Ground Oats 5.5 lb.
Bran 5.5 lb.
Oil Meal 5.5 lb.
Soy Bean Meal 1.0 lb.

Her roughage consisted of:

Silage 10 lb.
Alfalfa 5 lb.
Red Clover 8 lb.

Kit's milk production for one year as far as we know stands as a world's record for a grade Holstein in a Cow Testing Association.

"Beauty," also a grade Holstein, six-years-old, a half sister to "Kit" owned by the same men, was retested at the same time. She produced 100.2 lb. milk testing 3.7%, giving 3,718 lb. butterfat in 24 hours. (Fresh Nov. 23, 1922). Her 31-day credit is 3,106 lb. milk containing 114.92 lb. butterfat. She received 25 lb. of the above grain mixture per day.

The good work was kept up in this herd during December as shown by the report of the Beloit Testing Association. Beauty is credited with 3,113 lb. milk, 113 lb. fat during the month, her milk averaging 3.63% fat. This is the first time in the history of the Beloit Association that a cow has produced more than 100 lb. butterfat in the month and Mr. A. J. Cramer, the state dairy husbandman predicted a higher average for January.

Kit produced during the month of December, 1,848 lb. milk, 58.3 lb. fat which is a remarkable production for a cow that has been fresh practically a year.

Rockwell and Katterhenry had twenty-eight cows which averaged 1,147 lb. milk, 39.4 lb. fat, the average test for the entire dairy being 3.44%. Queen a seven-year-old produced 2,495 lb. milk, 88.6 lb. fat and the six-year-old Johanna produced 2,282 lb. milk, 82.2 lb. fat. This herd had ten grade Holsteins, that each exceeded 45 lb. fat in December and each one produced more than 1,200 lb. milk.

Kit and Beauty are half sisters and have nine other half-sisters in the Rockwell and Katterhenry herd. The eleven half-sisters, all by one sire, have records averaging 438 lb. butterfat produced in an association year. Sad to say, their

sire was slaughtered for beef before the quality of his daughters had been demonstrated.

Twenty-six herds in this association finished the month with a total of 355 cows tested and an average of 700 lb. milk, 26.7 lb. butterfat. Seven herds averaged more than 30 lb. fat, 49 cows produced more than 40 lb. and 66 exceeded 1,000 lb. milk.

FIVE HIGHEST MILK PRODUCERS HOLSTEINS

During the month of January, twenty-two herds containing 403 cows were tested in the Andes Testing Association which operates in Delaware County, New York. There were forty-eight cows that made over 40 lb. butterfat, three made over 50 lb. and six produced more than 1,200 lb. milk. The five highest milk producers were grade Holsteins owned by Howard Coulter.

JOSEPH J. LINEHAN, Tester.

GOOD HOLSTEINS IN SULLIVAN COUNTY

Twenty-eight cows in the Sullivan County New York Testing Association produced more than 40 lb. fat for the month of January; twelve produced more than 50 lb. fat and twenty gave more than 1,200 lb. milk. There were 268 cows in the twenty-six herds tested, of which seventy-three cows are dry.

A seven-year-old grade Holstein, owned by C. V. Driscoll was the leader being credited with 61.4 lb. fat from 1,535 lb. milk. She was closely followed by a registered Holstein, six years of age, owned by Harrington & Co., which produced 60.3 lb. butterfat from 1,827 lb. milk. This cow was the leader in milk production. Eight of the ten leaders were black and white reports the tester, T. Ambrose Doyle.

HELSEL HERD LEADS

Twenty-four herds containing 319 cows were tested in the Cambria-Somerset Pa. Testing Association for the month of January. Fifty-nine cows produced better than 40 lb. fat, twenty-one better than 50 lb. while forty-eight produced more than 1,000 lb. milk and twenty-five more than 1,200 lb.

The high cow for the month was a registered Holstein owned by L. E. Helsel, of Elton, with a production of 2,139 lb. milk and 92 lb. butterfat. Mr. Helsel had the high herd for the month, his purebred Holsteins averaging 1,216 lb. milk, 33 lb. fat. Six of the ten leaders were black and white. The tester is M. A. Farrell.

COLORADO AVERAGES

H. R. Lascelles, the dairy fieldman for Colorado, has done some painstaking work in the four Colorado cow testing associations, and has reached some interesting conclusions. The average number of cows tested during 1922 was 220 per association and these produced an average of 8,358 lb. milk and 298 lb. butterfat. The average value of the product was \$108.53. The returns for each dollar spent for feed was \$2.60. The feed cost was \$.69 for each 100 lb. milk and \$.19 for each lb. butterfat.

FIRST AND SECOND IN OHIO

Twenty-two cows in the Hancock County, Ohio, Association were on the honor roll. First and second places were held by purebred Holsteins owned by C. E. Hay. The leader produced 73.18 lb. fat from 2,613 lb. milk while the second high cow produced 67.89 lb. fat from 2,263 lb. milk.

FIRST IN VIRGINIA

There were 420 cows in fifteen herds tested in the southwest Virginia Testing Association for the month of December. A registered Holstein owned by Martin Lynch of Bristol, Virginia, was the leader with 64.5 lb. butterfat from 1,650 lb. milk. Howard Straw is the tester.

NEARLY UP AGAINST IT

How to provide fresh milk for the population of Antofagasta, Chile, is a real problem. The district is entirely desert. All water used for irrigation and any other purpose has to be piped from the mountains and practically all the forage has to be brought in from a long distance. There is a dairy of 42 Holsteins which came originally from New York State and these are the sole source of milk. Their output does not go far in supplying the demand of the city and it is planned to materially increase the size of the dairy.

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published weekly at Harrisburg, Pennsylvania, for Oct. 1, 1922.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared HOWARD C. REYNOLDS, who, having been duly sworn according to law, deposes and says that he is the business manager of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BREEDER AND DAIRYMAN PUBLISHING CO., Harrisburg, Pa.

Editor, Not any.

Managing Editor, HOWARD C. REYNOLDS, Harrisburg, Pa.

Business Manager, HOWARD C. REYNOLDS, Harrisburg, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

OWNER: THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

STOCKHOLDERS OF THE BREEDER AND DAIRYMAN PUBLISHING COMPANY ARE:

E. E. SOUTHWORTH, Clarks Summit, Pa.

MARK T. MILNOR, Harrisburg, Pa.

EUGENE B. BENNETT, New Haven, Connecticut.

HOWARD C. REYNOLDS, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

SWORN TO AND SUBSCRIBED BEFORE ME,

this 10th day of February, 1923.

HOWARD C. REYNOLDS,

Managing Editor.

[SEAL] RAE FREIBERGER, NOTARY PUBLIC.

My commission expires at the end of next session of the Senate.

CRANDALL COWS MAKE GREAT SHOWING

The splendid average of 1,319 lb. milk, 45.85 lb. butterfat was made during January by fifteen purebred Holsteins owned by P. B. Crandall, Herndon, in the Fairfax County No. 1, Virginia, Association. The grade Holstein herds of I. C. Ferguson and F. M. Mochler also averaged over 40 lb. during the month.

The average general production for the whole association was 801 lb. milk 31.85 lb. butterfat. There were 612 cows in twenty-seven herds of which 142 made over 40 lb. butterfat, 16 made over 50 lb. and 5 made over 70 lb.

The leader was Mill Spring Marion Pontiac, 2,379 lb. milk, 80.9 lb. butterfat, owned by Mr. Crandall. Second was Lady Lena Bingham De Kol, another Crandall cow with 2,068 lb. milk, 73.4 lb. fat. The next four registered or grade Holsteins, next was a grade Guernsey followed by two grade Holsteins and another purebred member of the Crandall herd.

SPLENDID MARYLAND REPORT

The Washington and Frederick Counties, Maryland, Testing Association had a splendid January report. Enrolled in this association there are twenty-three herds containing 384 cows and of this number 76 made more than 40 lb. fat and ten exceeded 60 lb. during the month while the leader made 101.4 lb. She is a purebred Holstein Marianna, owned by the Springfield State Hospital with 2,817 lb. milk. Second, third, fourth, and fifth are also registered Holsteins owned by the State Hospital which has twenty-two cows in the honor roll five of which made over 80 lb. fat in the month.

IOWA RECORDS CLIMBING

There are three cow testing associations in Jackson County, Iowa, and there is quite a little rivalry among the various members as to who has the highest pro-

ducing cow each month. In October, Lawrence Kier, president of the Buckhorn association had the high cow with 51 lb. butterfat; the high cow during November was a Holstein owned by J. P. Mootz of Springbrook, a member of the East Jackson Association. His cow produced 81.1 lb. fat. In December, a purebred Holstein owned by Fred Kukuck, president of the Preston Association produced 84 lb. butterfat and there the crown rests at the present time.

WISCONSIN TESTING

Seventy-three cows in the Middleton, Wis., Association produced more than 40 lb. butterfat for the month ending January 18th. The high cow was a grade Holstein owned by Emil Dreger, she, having a production of 1,783 lb. milk, 62.4 lb. butterfat. The tester, Mr. W. J. Rabe, said that this cow returned \$4.60 in product for every dollar spent in feed.

The high cow in the Cedar Grove-Oostburg, Wis. Association was a grade Holstein owned by John J. Kleinhesselink. She is credited with 82.4 lb. butterfat from 1,917 lb. milk. Another grade Holstein in the same herd holds third place with 72.5 lb. fat from 1,727 lb. milk while two others made more than 54 lb. fat. The second high cow in the association was a grade Holstein owned by Harry Wieberdink, her production being 76.7 lb. fat from 1,668 lb. milk.

Thirty-one cows produced more than 45 lb. fat during the month of December, of which grade Holsteins held the first five positions.

A purebred Holstein was the leader in the Rockfield Testing Association. She was owned by Mrs. C. Bast and produced 72.7 lb. fat from 1,652 lb. milk. Second was another purebred Holstein owned by Paul Zeimer with 66.2 lb. butterfat from 1,891 lb. milk. Her stablemate, a grade Holstein, was third with 64.5 lb. fat from 1,535 lb. milk. The high herd was com-

posed of nine grade and purebred Holsteins. Their average was 1,140 lb. milk, 42.8 lb. butterfat. The 10 cow dairy of grade and purebred Holsteins, owned by Mrs. Christ Bast, was second with 37.8 lb. fat, 1,055 lb. milk.

Twenty-seven of the thirty-three cows producing more than 40 lb. butterfat for the month of January in the Chili Association were registered or grade Holsteins. The high cow was a grade Holstein owned by Albert Lindow with 1,562 lb. milk, 60.9 lb. fat. Second high cow was another grade Holstein with 1,537 lb. milk, 58.4 lb. fat. Third position was held by a registered Holstein owned by H. C. Portz. Her production was 1,258 lb. milk, 51.6 lb. fat made in twenty days. The tester is Jos. W. Reichert.

FINSTER COWS AGAIN LEAD

The high producing herd in the Hardin County, Iowa, Association was owned by Roy Finster of Eldora, their average being 38.5 lb. fat for the month of December. Second high herd was owned by Chas. A. Mark of Iowa Falls. This herd averaged 37 lb. fat.

Sixteen of the 325 cows tested produced more than 50 lb. fat for the month, the highest producing cow reaching 70 lb. fat. She was owned by Eugene Babcock of Iowa Falls.

THE MARYLAND CHAMPION

The new champion of Maryland for year butter production is Paladin Belle Johanna, owned by the Brooklandwood Farm at Lutherville. Her record is 848.7 lb. butter from 18,459.9 lb. milk. She displaces the former champion Spring Vale Helen, owned by the W. P. Jackson Farm, Salisbury, with 769.4 lb. butter.

"Why don't you move into more comfortable quarters, old man?"

"I can't even pay the rent on this miserable hole."

"Well, since you don't pay rent, why not get something better?"

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, Fred L. Obenchain, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

BLOOD WILL TELL

R. S. Heisey, the tester of the South Franklin County Testing Association, is urging his patrons to buy and breed better cows. In the local papers in his district, Mr. Heisey has an article under the above caption. He says:

"Like your forefathers you can live in a log cabin, hunt and fish and take life easy, except when you make that monthly trip with that ox-cart for groceries, and a few letters.

"You say, 'No! I want to make life worth living.'

"I am nosing around for good cows, the kind that will feed themselves their owner, and buy many useful things for the house and barn.

"I'll give these cows clean stables with plenty of light and pure air. I'll give them individual drinking cups and silage but the bathtub goes to the house.

"Woe unto the cow that gives less than 5,000 lb. milk yearly and to the bull from such a cow. Let the standard be 8 to 12 thousand pounds. Watch out for the bull, he is half the herd, and a miserably poor half he has been in the southern counties of Pennsylvania. Blood will tell, so get the blood from purebred dairy sires.

"The South Franklin County Testing Association members are nearly 100% users of purebred sires. There is one field of the business which for some reason is not worked up in Franklin County. It will be necessary to go outside of the county to buy large producing cows, the kind that will make large official records. This yearly work can be done here as well as in other sections.

"Water is good and corn, alfalfa and cow beets can be grown better here than in some states where large records are now being made.

"The object of having yearly record cows is to get big money for their calves; think of buying a male or female calf whose mother produced 15,000 to 25,000 lb. milk in one year.

"Buyers would come to this county from outside states, take with them train loads of large producing animals and leave with our breeders several hundred thousand dollars yearly; if we raised them. Cows will be sold out of this county for \$2,000 eventually.

"Who will be the first to import and work with foundation stock that will produce?"

BISHOP HAS GOOD PRODUCERS

The December leader for milk in the Shoreham-Orwell, Vermont, Association is a purebred Holstein, Isa Trintje Scotia, owned by E. O. Bishop with 1,659 lb. milk, 54.7 lb. butterfat. Quality Girl Scotia also owned by Mr. Bishop is second for milk production and first for butter with 1,653 lb. milk, 61.5 lb. butterfat. Mr. Bishop had four cows in a list of forty-nine making over 40 lb. fat or 1,000 lb. milk in the 30½ days.

For the year ending January 3, 1923 there were only two cows in the association that exceeded 400 lb. butterfat. A grade Guernsey owned by Mrs. Huntley of Orwell produced 445 lb. and Lillian, a grade Holstein owned by A. C. Plue, also of Orwell, produced 410.5 lb.

ROBERTSON AND STEWART DIVIDE HONORS

A purebred Holstein carried off the honors of the York Valley, Pa., Association. Clothilde, of the H. E. Robertson herd led for the third time in four months with a production of 2,514 lb. milk 67.9 lb. fat. The high herd consists of 23 registered Holsteins owned by Stewart Bros., their average was 885.3 lb. milk, 38.5 lb. fat.

During the month 365 cows owned in twenty-seven dairies were tested and, of this number 39 produced over 40 lb. fat and twelve over 50 lb. while 32 exceeded 1,200 lb. milk.

MAKING A GOOD START IN INDIANA

The Culver Cow Testing Association which operates in Marshall County, Indiana, had 235 cows tested during November the first month of its operation. Four cows made over 50 lb. fat for the month and the leader was Jane, a purebred Holstein, owned by John Newman of Culver, she producing 1,533 lb. milk, 59.8 lb. fat. The four leading cows were all purebreds two being Holstein, one Guernsey and one Jersey. Each herd in this association is headed by a purebred sire.

In December there were 38 cows that each made over 40 lb. fat and the leader was Vannie, a purebred Holstein, owned by L. M. Chase of Walkerton. She made 1,739 lb. milk, 87 lb. fat. The leader for milk production was Mag, a purebred Holstein, owned by J. A. Newman with 1,841 lb. milk, 73.6 lb. fat.

WHITE'S HOLSTEINS PRODUCE

The second cow testing association in Genesee County, Mich. commenced activities the latter part of November. The average production during the month of December was 574 lb. milk, 23 lb. fat. The butterfat leader was a grade Holstein owned by Bergess White, Linden, she producing 58.5 lb. fat which was contained in 1,227 lb. milk. Mr. White owned six cows, all grade Holsteins, which averaged 1,010 lb. milk, 40 lb. fat. The leader for milk production is Fentonia De Kol Sir Tula and she is second for fat production with 1,647 lb. milk, testing 3.4% and making exactly 56 lb. fat. Eldon R. Bruce, the official tester in his remarks says "These records show that feeding can make high grade cows produce just as well as purebreds if they are given a chance."

A Chicago woman shot her husband when he wouldn't go to church. She was going to get him to heaven one way or another.

KENTUCKY HOLSTEINS PROMINENT

The roll of honor for cows tested in Kentucky during the month of December is headed by the purebred Holstein, Countess Hengerveld Hartog, owned by Alfred Eisen of Newport. She produced 154.7 lb. milk, 4.64 lb. butterfat during the two days she was on test. Second and third places were held by cows owned by the Kentucky Holstein Farm, Bardstown, Oakwood Piebe Daisy Johanna being second with 142.6 lb. milk, 4.11 lb. butterfat and Rhoda Overton Segis was third with 102.5 lb. milk, 4.04 lb. fat. The Kentucky Holstein Farms had six cows on the honor roll which consisted of twenty-four animals, seventeen Jerseys and seven Holsteins owned by ten different dairymen in eight counties.

GOOD RECORDS IN WILLIAMS COUNTY

York De Kol Canary, a purebred Holstein, owned by H. E. Burghbacher of Bryan, Ohio, topped the list for milk production and was second for fat in the Williams County Association for the month of December. Her production was 2,344 lb. milk, 77.4 lb. fat, reports the tester, Miss Vivian McCoy. Royalton De Kol, owned by Harlan Snyder was highest for butter fat with 77.8 lb. from 2,102 lb. milk. Twelve different cows each made over 55 lb. fat or over 1,700 milk in the month.

AFTER THE APPROPRIATION

A bill calling for an appropriation sufficient to build a coliseum on the New York State Fair Grounds, Syracuse, was recently introduced in the Senate of the New York Legislature by Senator Ryan and in the Assembly by A. McGinnies. Those who are behind the bill hope to have the coliseum completed before October, 1923, when the National Dairy Show will be held in Syracuse.

KEEPING BACKUS BUSY

The Backus Pedigree Company are having a big run of business nowadays making sale catalogs and the breeders are keeping R. Austin Backus busy with sale work explaining pedigrees and calling attention to choice individuals brought into the sale ring. A glance over the February issues of THE BREEDER AND DAIRYMAN show that Austin officiates as pedigree man at a number of high class Pennsylvania sales.

On Washington's birthday he works at the W. H. Stanton dispersal at Troy. On March 5th, he officiates at the M. H. Bennet sale at Richland at which, one of the best known herds in Pennsylvania will be dispersed. On March 8, Mr. Backus works in the ring at Wyalusing, when the animals of the Merryall herd will be offered at public auction. Then on March 14, he officiates at the dispersal of the high class Bon-Lacta herd, owned by J. Harris Lenker of Sunbury. The next day, Mr. Backus is due to be present at Covedale when the McKelvey herd is dispersed. March 20th, Mr. Backus journeys to Muncy, Penna. where he again officiates at the J. R. Glass dispersal. These dispersal sales are all of well known Pennsylvania herds, cattle that are big producers and of well known lines of breeding. The herds are under state and Federal supervision and are tuberculin tested sold subject to a 60 day retest privilege. This is surely an opportunity for anyone in search of tuberculin tested Holsteins or high class individuality and breeding to secure any number of animals from one to a car load at prices set upon them by the bidders.

"When I looked out the window, Johnny, I was glad to see you playing marbles with Billy Simpkins.
"We wuzn't playing marbles, ma. We just had a fight, and I was helping him pick up his teeth."—American Boy.

AN APPRECIATED AUCTIONEER

Colonel E. Newlin Brown is being kept busy nowadays crying public sales in Delaware and surrounding Pennsylvania counties, and has received a number of tributes praising his work. For instance; early this year he received a letter from J. Carroll Molloy of Doylestown, Penna. Mr. Molloy is a real estate broker and business agent, and a Justice of the Peace, and often has occasion to employ an auctioneer. Under date of January 3d, he wrote Colonel Brown the following tribute of appreciation:

DOYLESTOWN, Pa., January 3, 1923.
COL. E. NEWLIN BROWN,
WYCOMBE, PA.

DEAR COLONEL:

As we enter the new year I felt that I would like to express to you my appreciation of your work for me during the past year. You have cried many sales for me during 1922 and I assure you that I have been more than satisfied with the results and I believe that you are now the leading Auctioneer of this County.

Wishing you all success for 1923, I beg to remain,

Cordially yours,
J. CARROLL MOLLOY."

ALL PUREBREDS HERE

The Justaholme Stock Farm is located on the Jefferson pike near Kokomo, Indiana, and is owned by Ira F. Keisling and his son, Lloyd. They have been raising purebred Holsteins for the past six years and have found their business very profitable. They have a good herd at the present time and staged a sale last August at which 40 head were sold. Buyers came from all parts of the state and from Illinois, Michigan and Ohio.

In addition to Holsteins, they have purebred Percheron horses and Chester White hogs, while Mrs. Keisling has a flock of 150 Rhode Island Red chickens.

How Do You Like the Dam of My New Herd Sire?

CORNUCOPIA PLUM JOHANNA 2d
731.06 lb. butter in 305 days. Pennsylvania State record in senior four-year-old class. Her dam made 1,056.78 lb. butter in a year and has five daughters that average 18,723.1 lb. milk, 918.35 lb. butter in long time test.

W. HUGH JONES

A Message from Springdale Farm

The dam of our junior herdsire is A. BEAUTY LYONS, 26.13 lb. butter, 570.5 lb. milk in seven days as a junior three-year-old, a daughter of Colantha Pietertje Lyons, who was by King Lyons, from a daughter of the 32-lb. cow, Buttercup Clothilde Pietertje.

His sire is KING ECHO SYLVIA MODEL, whose seven nearest dams have records averaging 35.49 lb. butter in a week, 141.81 lb. in 30 days; and whose first five daughters average 21.29 lb. butter in seven days, and practically 60 lb. milk a day at an average age of 2 years, 3 months and 28 days.

B. F. JONES & SON

SOUTH MONTROSE,

Polled Holsteins For

*Beauty
Safety
Symmetry
Conformation
Production
Profit*

Don't overlook the fact that Keystone Beauty Plum Johanna produced 25,787.5 lb. milk, 1,294.71 lb. butter in a year as a four-year-old in strictly official test, an unequalled performance. Her blood is being concentrated and intensified in Origin Herd.

A Polled Bull will improve the production and individuality of your herd as well as the fat-percentage in the milk.

Let us demonstrate this to you.

M. H. BENNETCH DISPERSAL SALE FIFTY REGISTERED HOLSTEINS

MONDAY, MARCH 5, 1923

FEDERAL TUBERCULIN
TESTED HERD

at my farm, Richland, Penna.

SOLD SUBJECT TO A 60
DAY RETEST

I WILL SELL IN THIS SALE:—

20 fresh or close springers
6 calves from 4 to 6 months of age

18 heifers bred in Sept. and December
8 granddaughters of King Model by a
son of a 31-lb. cow.

I will also offer several granddaughters and grandsons of Radium who is from the same dam as the world's record milk producer, May Echo Sylvia.

ALSO a few well bred young bulls, ready for service, including a son of a 30-lb. three-year-old and five grandsons of Spring Farm King through his best proven son.

This is a herd of genuine high class individuals—light in color and the big straight backed kind with two good ends and a good middle. The kind that are noted for "Individuality and Production."

Write for catalog and be sure to attend this important Pennsylvania sale.

HARRINGTON FARMS SALE

FIFTY
HEAD

HIGH-CLASS REGISTERED HOLSTEIN-FRIESIAN COWS & HEIFERS

FIFTY
HEAD

At the Farm, MARCH 7, 1923, at 12 o'clock noon, sharp.

We are going to dispose of our entire dairy consisting of about 50 registered and a few high-grade cows and heifers that are mostly due to freshen in March and April by one of the greatest bred May Echo bulls living.

This bull is sired by a son of May Echo Verbeke who is the dam of May Echo Sylvia; his dam is a 31 lb. daughter of old May Echo, who is the granddam of May Echo Sylvia. His four nearest dams average almost 31 lb. butter and over 700 lb. milk in 7 days. Can you beat it?

Farm only 4 miles from center of city on South Bay trolley, stop 2 right in front of the place.

B. V. Kelley, Auctioneer.

Dispersion Sale of a 22-Year-Old Herd

March 7, 1923, on the Farm at

Coldwater, Michigan

My herd of 35 head representing 22 years of breeding and selecting purebred Holsteins. Every animal except the herdsires are directly descended from my two foundation cows. Both were show cows, as well as producers, desirable traits transmitted to their descendants, one of which beat Minerva Beets in the show ring.

A granddaughter, Neeltje Terzoci Segis, and two of her sons are in the sale. She produced 99.4 lb. cf milk in a day, 633.5 lb. milk, 28.46 lb. butter in 7 days as a three-year-old. Her sons are by Paul Pietertje Wayne Prince (also to be sold) whose dam produced 117 lb. milk in a day and averaged 107 lb. for 30 days. She made 30 lb. butter in 7 days, 122 lb. in 30 days. Thirteen daughters of this grandly bred sire will be offered.

The herd is free from contagious abortion, and has passed four clean Tuberculin tests. All animals sold subject to 60-day retest privilege.

Merryall Farms and Herd to be Sold at Public Auction, March 8, 1923

on the farm three miles from Wyalusing, Pennsylvania
Sale Starts Promptly at 9 A. M. Farm will be Sold at 10 A. M.

This farm contains 275 to 300 acres of the very best dairy farmland in Bradford County, having about 100 acres tillable and very productive, a goodly amount of flat land and upland, with splendid pasture and abundance of never-failing water, which runs to all buildings by gravity. There are three houses; large new barns containing 40 stanchions, calf pens, box stalls, 3 silos, large storage for hay and grain; horse barn with basement; creamery and icehouse. Located on a good macadam road within 1½ miles of splendid high school and thriving town of Camptown, Pa., and 3½ miles of station of L. V. R. R. Main Line. Two R. D. routes, two telephone lines, jitney service, school wagon, milk trucks, and electric light and power line.

MAIN BARN AT MERRYALL FARMS

Fifty Head of Purebred Holsteins

KING SYLVIA JOHANNA PONTIAC No. 339758
Picture taken at the age of 1 year, 10 months

Headed by King Sylvia Johanna Pontiac, who was by the same sire as Carnation King Sylvia. His dam is Otego Valley Christmas Belle, 651.2 lb. milk, 40.51 lb. butter in a week and three A. R. O. daughters including one with 730.8 lb. milk 32.56 lb. butter in a week, 1,034.28 lb. in a year. Females of the best type and breeding with seven-day records up to 27 lb. and a good many year and 305-day records ranging from a yearling heifer with 500 lb. butter, 12,304 lb. milk, to mature cows with well over 20,000 lb. milk, 860 lb. butter. All but two or three of these animals were raised on the farm, for this has always been a breeding establishment and not a dealer's plant.

Six Head of Purebred Durocs, heavy with pig by our own boar of the Orion Cherry King Strain. These are Durocs of the real kind.

Two horses and all equipment needed to operate an up-to-date farm; electric light plant, milking machine, boiler, separator, vats, cans, tester, plows, planters, harrows, mowers, tedders, manure spreader, cultivators, wood saw, engine, feed grinder, ensilage cutter and carrier, hay fork and rope, ice saws and all small tools necessary on a well equipped farm.

Merryall Herd Is Under State and Federal Supervision.

BON LACTA HERD DISPERSAL SALE

STARTING AT 10:00 A. M.

WEDNESDAY, MARCH 14, 1923

50 REGISTERED HOLSTEINS 50
SUNBURY, PENNSYLVANIA

GREAT PRODUCERS

Note what will be sold in this sale:—A two-year-old daughter of a 30 lb. two-year-old, fresh in November—her sire from a 33 lb. cow with 107 lb. of milk a day for 7 days. Her daughter by Alcartra King Sylvia, junior herdsire at Avondale Farms—he is from Tilly Alcartra former world's yearly milk producer, and by Carnation King Sylvia the \$106,000 son of May Echo Sylvia (consider the establishments back of her.)

A daughter of Prince Quality whose four direct maternal dams average 1,150 lb. of butter and 28,500 lb. of milk in yearly tests (here is a gem that will start you right.)

Several young cows with A.R.O. records including a nearly 18 lb. two-year-old.

A number with excellent cow testing association records—a real herd of great producers, including many other well bred animals.

18 fresh cows in the sale. 8 due in April and May.

HERD SIRE TO BE SOLD King Lunde Pontiac Korndyke 53d, a very superior individual—a full brother to Grand Champion at New York State Fair in 1919; from a 29 lb. cow that twice made over 28 lb. and milked 663 lb. of milk. His sire is a real good son of King of the Pontiacs from a 30 lb. cow that averaged 100 lb. of milk a day for 100 days. With this bull will be sold 24 of his daughters—a real nice lot of straight individuals, of good growth and certain to develop into great producers. Come to this sale, and buy this great bull and get your share of his progeny.

The Demand for Holsteins

is again on the increase. Boom prices are over, probably for a long, long time, but the men who regard Holsteins as dairy animals, not as speculative investments, are again in the market. Letters coming recently to this office substantiate this statement. Read this one:

"We are in need of a carload of cows. We want them from an Accredited Herd. If you could tell us of a community where we could find them it would be greatly appreciated."

"They must be real dairy type and subject to a 60-day retest."

Then read this letter:

"I am in the market for 30 high-class grade Holsteins, must be from Accredited Herds, high producers and testers, from two to six years old. I don't want them to freshen all at once but so that they will come in all the year around. These cows must be given a guaranteed 60-day retest and the price must be that the average farmer can afford to pay."

The owners of several noted herds, men who are breeders, not dealers, are in the market for milkers and springers, not from a dealing standpoint but because they are experiencing a bigger demand for Holstein milk than they are able to supply.

We are informed that a Maryland owner is in the market for bred heifers, tuberculin tested and from a healthy herd.

In this issue of the BREEDER AND DAIRYMAN appears an advertisement inserted by a Pennsylvania breeder who owns a remarkably fine herd:

WANTED:—15 or 20 choice young Holstein cows that are milking well now and bred to come in next fall. Must be good individuals, well bred, and from tuberculin tested herds. Not particular about A.R.O. records. State price and full particulars.

If YOU have any good Holsteins you wish to turn into CASH, why not tell the news to the men who wish to buy? They read the BREEDER AND DAIRYMAN, and study the advertising columns. Let us tell you how to reach this splendid market at a very low cost.

The Holstein Breeder and Dairyman

VOL. II

HARRISBURG, PA., MARCH 8, 1923

No. 5

Boy Dairy Wonder of Grant County

By J. H. Lewis

IN and out of season, dairyland in southwest Wisconsin is Fairyland, for mythical figures who inhabit the woodland are here realized in real life,—the boys and the girls who take an active interest in dairy work. It is really remarkable how proficient they become while little more than toddlers.

One such instance of more than ordinary interest attaches to the Holstein dairy farm of Isaac J. Harvey, of Hazel Green, Wis., a member of the Hazel Green Cow Testing Association, whose son Thomas Harvey, not yet twelve years of age, has come into the limelight in competition with men of mature years and keen perception.

This is not a frame-up or a brazen attempt to obtain cheap notoriety, for the official tester of the association has checked up the work of both the boy and his cow, and the father asseverates on honor that he wants the boy to do every bit of the work so that his record may be earned honestly.

Star is a grade Holstein, four years of age. In the photograph shown herewith is the cow, her little groom and care-taker and baby Twinkle, a four-month-old calf. February a year ago Star made a record of 78 lbs. of butterfat for the official month. November 1922, Star showed signs of slowing up. The little dairy boss fed his cow every kind of feed he could think of that would promote the flow of milk, without avail, so he made his way to the official tester, crestfallen—simply ruined, because Star had gone back on him. The tester hastened over and examined the cow and advised the little man to milk her three times a day.

On the next trip over his circuit official tester Arthur A. Zenz, found that the cow had gained eight pounds daily in her milk and for the month of November her record in butterfat was 74.8 pounds.

This same official issued his report for January 1923, on the first ten cows in the association, first ten to finish highest.

Blackie, a registered Holstein, aged five years, the property of Leo Kuhl whose herd of 10 registered Holsteins was the top herd of the association for the month gave 2120 lbs. of milk, testing 3.6%, producing 76.3 lbs. of butterfat. Blackie is the top cow out of about 400 cows under test work in the Hazel Green Association.

Second cow;—Star, grade Holstein, aged four years, produced for January 1923, 1747 lbs. milk, testing 4.3% and yielding 74.8 lb. of butterfat. This is Master Thomas Harvey's own particular cow, the very apple of his eye, his darling and treasure. She had come within one and one-half pounds of the top cow for

first honors. The little fellow shows spirit—he has sent out an ultimatum to the Kuhl's to look well to their laurels for February 1923 for he says determinedly he is going to put Star in first place, top cow for the association.

It will indeed be a remarkable feat for a mere kiddo to step in and take top honors in an organization so powerful and functioning as perfectly as does this particular association. The entire community is now watching the contest.

The Kuhls, Leo senior, and his 19 year old son Clarence, are both experienced dairy farmers, without frills or flourish, and they know how to get every ounce out of a cow, and it is a fine record for a mere baby to come so close in a fight, where standards have been raised. There was a time when a 40-lb. butterfat standard let top cows in for recognition on publicity;

Master Thomas Harvey, the eleven-year-old dairyman, of Hazel Green, Wisconsin, his grade Holstein, Star, and her four-months-old calf, Twinkle.

in the Hazel Green Association, 40-lb. cows don't get a look in anymore—it is 60-lb. butterfat for the month or better to receive official mention.

Christmas Day when most boys so favored were revelling in luxury, Thomas Harvey spent most of his waking hours with Star. Somehow the cow seems to understand the affection and care of her little master,—there is sort of affinity between the two. Thomas cares for his cow in every detail—he prepares and weighs the feed she gets, he does all the milking himself, he grooms and cares for his cow, and the last service for a busy day is to see that she is well blanketed for the night and has a good bedding of nice, clean straw.

Our story is not complete, as yet. The correspondent visited the Star trio. It was necessary to obtain a photo, and while pursuing this agreeable task, investigation was made of Thomas Harvey's school record.

In his class work in the Hazel Green public school his average class standing is 92%. The same sane judgment the little man uses in his favorite occupation is directed in his school work for he realizes also that an education is necessary. Little wonder that the dairy prodigy of the Hazel Green Cow Testing Association has become a topic of general discussion among the older members.

The influence of such a life as this laddie lives is wholesome on the entire community. The pas and mas in the Hazel Green circuit are now organizing a calf club among their boys and girls and the drawing for animals will be made shortly. It will be the beginning of work, well directed effort in feeding and care, so

that in time the milk making machinery will be welded into shape for the big work two years hence when the heifers freshen.

More glory, more power, more honor to the little man not yet 12 years of age in his wonderful work. It is an inspiration not alone for boys and girls of tender years to develop into something real useful but the grown-ups can well afford to profit by his fine example.

It is claimed for Thomas Harvey that he is the boy champion dairyman of the United States. Perhaps we shall hear from other quarters but it appears impossible almost that one so young should do so well in this class of industry.

Green Feed for Winter

By H. M. Jones, *South Dakota Dairy Specialist*

THE natural conditions which make for abundant and economical dairy production occur in the late spring and early summer months. With warm weather, good water, and plenty of tender, green grass, the dairy cows produce their maximum.

The aim of year around dairying then should be to duplicate summer conditions as nearly as possible. A cow does not usually do her best on dry roughage. Since milk consists of about 87 per cent water, the milk cow needs a liberal allowance of water and also a succulent or juicy feed such as is supplied by fresh, green grass. Investigators have searched long and diligently to find a feed answering these requirements and which would be available the year around. The nearest approach to such a perfect feed came with the discovery of silage. Silage fills the need, can be produced and stored on almost every farm, and the past thirty years have seen silos built by the thousands.

Silos and successful dairying go hand in hand. On farms where dairying has become a specialty the silo is indispensable. It furnishes a green succulent feed for winter dairying. It is valuable even to the farmer who is keeping only a few cows as a side line. The more silos a state has, the more importance it assumes as a dairy state. With few exceptions, the number of cows per silo is in inverse proportion to the average annual milk production per cow as shown by the following data:

State	Number of Cows	Number of Silos	Cows per Silo	Milk Production per cow
Wisconsin	2,202,000	82,000	27	4016
New York	1,695,000	50,000	34	4317
Minnesota	1,578,000	30,000	53	3044
Iowa	1,093,000	25,000	44	2709
South Dakota	417,000	3,500	119	2339
United States	24,028,000	456,000	53	3412

When South Dakota approaches the point where she has a silo for every 20 cows instead of one for every 119 cows as at present, it is safe to say that the milk production per cow will more nearly approach that of the states where silos are more numerous. In South Dakota there is but one silo for every 22 farms. There is room and need for a great many more. No dairy farm should be without one.

The principle of siloing corn is too well known to require any lengthy discussion. Corn, sunflower, cane, Sudan grass, and small grains have been used with success in making silage. Corn has proven the most satisfactory where it can be grown. For silage, these crops are harvested in a green stage, cut finely, and packed in the silo. If too dry, water is added. It is poor policy to fill the silo with material which is too green.

Silos are invariably round or nearly so for the reason that this shape allows for more firm packing and withstands the greatest pressure. Types of silos are wood stave, wood frame, tile, brick, concrete block, concrete stave, monolithic stone and pit. They vary greatly in expense according to the materials available in the locality. Pit silos have proven very satisfactory in semi-arid localities and even in fairly humid areas where the soil conditions and drainage are right.

In a general way the height of silo to build depends upon the number of days the farmer expects to feed from it. The diameter to make it depends upon the number of cows in the herd.

Number of cows	Height to Build			
	Diameter to build	6 months feeding	8 months feeding	10 months feeding
10	12	20	24	28
15	12	26	30	34
20	14	24	30	36
25	16	24	28	32
30	18	24	28	32

A silo for summer use only should have a smaller diameter than one which is to be used for the entire year. Silage is subject to freezing, usually freezing only on the surface, rarely, if ever, through the walls below. If care is taken to see that the edges are kept well down and all frozen silage down toward the middle of the silo, the heat generated there will prevent further freezing. Covers of straw, paper or boards have been very effective in preventing freezing.

Silage is not a complete feed in itself. It is of greatest value when fed with some leguminous roughage

(alfalfa, clover or soy beans) and concentrates fairly rich in protein. Corn silage, alfalfa and ground oats, corn and bran have proven to be an excellent combination.

The silo is a boon to the dairyman. It is the means of supplying a warm, green, succulent feed on the coldest day of winter. It conserves practically all of the corn plant leaving no waste in the field. The silo is of value on almost any farm but has come to be recognized as a necessity on farms where dairying predominates and where a low cost of production is essential.

King of the Johanna Lads

EVERY breed has its stories of good sires who were slaughtered for beef before their excellent transmitting qualities were fully demonstrated. The prejudice against the purchase of a mature bull has been very strong and has been responsible for such tragedies. The cattle owner has evidently had the maxim "safety first" in mind and has interpreted this to mean personal safety. For personal reasons he has been instinctively afraid of the mature bull and so has generally confined his purchases to young untried sires in defiance of all scientific rules of breeding. Within the last few years, there has been a gradual divergence from the old practice and our readers can recall many instances of proven sires changing ownership.

A change of this kind that attracted considerable attention was the recent transfer of King of the Johanna Lads from Allamuchy and Tranquility Farms to the ownership of Albert Winters of Mahwah, New Jersey. King of the Johanna Lads, No. 194,390, was born October 13, 1915. He was sired by Colantha Johanna Lad and his dam is Lady Princess Beets, a cow of splendid individuality and great powers of transmission. As a three-year-old she produced 25.56 lb. butter, 513.9 lb. milk in seven days, 100 lb. butter in thirty days and as a four-year-old, this daughter of Inka Princess Canada Prince raised her record to 30.88 lb. butter in a week.

King of the Johanna Lads was born and has spent his life in New Jersey. In the Tranquility and Allamuchy herds he has more than fifty daughters and these will be developed as they mature. No less a judge than Arthur Danks believes he is one of the greatest living sires of to-day and that he is a splendid individual is shown by his picture which appeared on the cover of the February 8th issue. He has only about a dozen tested daughters and as far as we know, only two have been tested for the second time and these have made records of over 25 lb. in a week. Daughters of this bull have made cow testing association records of above 15,000 lb. milk in a year, one reached 18,000 lb. These were in their first lactation period and were milked only two or three times a day.

King of the Johanna Lads is a bull of massive size, very straight, a handsome fellow, showing lots of dairy temperament. He is full brother to the well-known sire, Dutchland Colantha Sir Inka and the work of his daughters indicate that he will make just as great a name for himself as years go by.

In his new home, he will have a splendid opportunity for Mr. Winters has a real good herd which contains a number of cows good enough to take to the largest shows in the country. Mr. Winters has been building up his herd for the past four or five years and has purchased only animals of exceptional individuality.

This herd received considerable notice when one of its members, Tranquillity Sadie Vale Wayne, No. 380-080, completed a test early in January making a seven-day record of 41.66 lb. butter, 726.9 lb. milk. Every day during the week she produced 100 lb. or more of milk. She is a daughter of King of the Sadie Vales and her dam, K. A. Wayne Korndyke is a daughter of Korndyke Abbekerk. There are a number of daughters and granddaughters of Korndyke Abbekerk in this herd.

It will be seen that King of the Johanna Lads will be given an excellent opportunity as his daughters in the Winters herd as well as on the Tranquillity and Allamuchy farm will be developed and then, too, the bull will be used in the herd of H. A. Davidson of Ramsey, New Jersey, on daughters of Colantha Aaggie Sir Abby Hartog, a strongly-bred Colantha bull tracing to Abby Hartog Clothilde.

In placing King of the Johanna Lads on the cover of the February 8th issue of THE BREEDER AND DAIRYMAN, we give him an honor that we believe is his due on account of his sale being one of the most important Holstein transactions that has been heard of for some time past.

The place of King of the Johanna Lads in his former home will be taken by his sons, one of which is from a 32-lb. daughter of King of the Sadie Vales that is now producing over 100 lb. milk in a day; her dam a daughter of Korndyke Abbekerk. The only reason this bull was sold was that there was so many of his daughters in the Allamuchy and Tranquillity herds. Another reason, perhaps, was the price that was given for him, which we are not at liberty to disclose excepting that we may say it runs into five figures.

Mrs. Grieve: "Tobias, I found this letter I gave you to post a month ago in your brown overcoat pocket." Mr. Grieve: "I remember. I took off that overcoat at the time to enable you to sew on a button, and it isn't sewn on yet."

Determining the Age of Cattle by the Teeth

THE age of cattle can be approximated closely by the appearance, development, and subsequent wear of their second incisor teeth. Cattle have eight incisor teeth, all in the lower jaw. In the calf at birth two or more of the temporary or first incisor teeth are present. With the first month the entire eight incisors have appeared.

FIG. 1.—Internal face of incisors of the calf.

As the animal approaches 2 years of age the center pair of temporary incisor teeth or pinchers is replaced by the permanent pinchers, which at 2 years attain full development.

FIG. 2.—Internal face of incisors at 2 years.

At from 2½ to 3 years the permanent first intermediates are cut and are usually fully developed at 3 years.

FIG. 3.—Internal face of incisors at 3 years.

At 3½ years the second intermediates or laterals are cut. They are on a level with the first intermediates and begin to wear at 4 years.

FIG. 4.—Internal face of incisors at 4 years.

At 4½ to 5 years the corner teeth are replaced, the animal at 5 years having the full complement of incisors with the corners fully developed.

FIG. 5.—Internal face of incisors at 5 years.

At 5 to 6 years there is a leveling of the permanent pinchers, the pinchers usually being leveled at six and both pairs of intermediates partially leveled and the corner incisors showing wear.

From seven to eight the pinchers are noticeably worn; from eight to nine the middle pairs, and by ten years the corner teeth.

FIG. 6.—Internal face of incisors at 12 years.

After 6 years the arch gradually loses its rounded contour and becomes nearly straight by the twelfth year. In the meantime the teeth have gradually become triangular in shape, distinctly separated, and show the progressive wearing to stubs.

—U. S. Department of Agriculture, *Farmers' Bulletin* 1066.

The British Government has made some regulations that are expected to materially affect American trade and manufacture of canned milk. The present American standard is 7.8% of fat in unsweetened milk and 8% in sweetened. The regulations, which are effective August 1st, calls for 9% of fat in full cream unsweetened and sweetened. During 1922 the United States exported 23,000,000 of condensed and evaporated milk to the United Kingdom.

DISPERSAL SALE

AT THE J. R. GLASS STOCK FARM

Saeger Station, Penna., (between Muncy and Montgomery).

TUESDAY, MARCH 20th

at 10 o'clock A. M.

34 ^{Head} of Pure Bred Holsteins

28 Females and 6 Bulls

Herd headed by a grandson of Segis Fayne Johanna, just a little past three years old.

His dam held first place over all breeds for FIVE MONTHS during 1922 in the Eastern Lycoming Cow Testing Association. Her average test is between 4% and 5% butterfat.

Herd under State and Federal Supervision. Sixty-day retest privilege.

Pedigree Catalog on Request. Write to

J. R. GLASS

MUNCY,

PENNA.

The Extent of the Dairy Business

DAIRY products in 1922, at farm prices, had a gross value of \$2,090,455,000, according to estimates by the United States Department of Agriculture. The value of dairy products in 1921 was placed at \$2,352,000,000, and in 1920, the top year in values at \$3,018,000,000.

Whole-milk sales from farms and consumption on farms comprised 65 per cent of the total value of all dairy products in 1922, and are given a value of \$1,357,000,000. In 1921 the value of such milk was placed at \$567,000,000, and in 1920 at \$1,911,000,000.

Farm-made butter had a value of \$220,000,000 in 1922, compared with \$242,000,000 in 1921 and with \$366,000,000 in 1920.

The 1922 value of cheese made, cream sold, butter fat sold, buttermilk, whey, and skim milk, is placed at \$513,018,000, compared with \$542,817,000 in 1921 and with \$740,736,000 in 1920.

The farm price of whole milk was 19.09 cents per gallon in 1922, compared with 22.19 cents in 1921, and with 30.10 in 1920. The farm price of butter was 35.23 cents in 1922, compared with 37.16 cents in 1921, and with 54.25 cents in 1920.

Two Milkers Require Two Test Supervisors

NUMBER Eleven of Reported Tests of Holstein-Friesian Cows, issued by the Superintendent of Advanced Registry, carries notice of a ruling of the Superintendent that prohibits the milking of a test cow by two different milkers, unless two official testers are present, one to watch each milker. The practice of having big producers milked by two men at once has been growing since it has been practiced so successfully at Avondale, for many of the greatest records made at Senator Hardy's establishment were made by animals under these conditions. The bulletin also gives the revised yearly production for Flossie De Kol of Nevada, No. 273588, as 28,242 lb. milk, 1,044.90 butterfat. This is slightly larger than the preliminary notice, and the test is extended to cover eight days in January of this year. This cow is owned by A. W. Morris & Sons Corp., of Woodland, California, and was seven years, nine months and five days old at the time she started to make this great record.

Superintendent Gardner's ruling is as follows: "During the past several years breeders have asked whether it is allowable to use two milkers in the milking of a cow on official test where the udder is so large that it is necessary for a single milker to milk from alternate sides. Where they have advised me that they were doing this I have told them that it was not allowable to use two milkers with one supervisor, but that if two supervisors were employed, one for each milker, there could be no objection. I have told them that no one supervisor can properly watch two milkers, and the allowing of any such practice would make fraud so much the easier. In order from now on to make the matter clear I will rule as follows:

"No owner or person in charge of a Holstein-Friesian cow on official test shall use more than one

milker at one time in the milking of the cow, unless there be a supervisor present for each milker. If any owner or person in charge desires to practice this form of milking he must apply to his state agricultural college for two supervisors instead of one, each supervisor to have charge of one pail and one milker. On the completion of the milking the milk shall be thoroughly mixed and each supervisor take samples and test independent of the other. Except as to the mixing of the milk and the testing of the samples, the test shall be conducted just as if there were two cows on test instead of one."

The Dairy as a Source of Profit

By H. M. JONES, SOUTH DAKOTA DAIRY SPECIALIST

THE dairy cow has won a well-deserved place in a program for permanent and prosperous farming. The day is past when she is to be looked upon only as a means of relieving the family budget. Time after time she has proved a godsend when crops failed or the market for them declined. In view of the fact then that the cow has often proved to be the saviour of the day in depressing times, she is worthy of careful study as a permanent enterprise for profit on the average farm.

The fact that the cow furnishes a ready cash income is not in itself enough to warrant a place for her on every farm. Some account must be taken of the cost of keeping her and getting her products to market. Too often no consideration has been given the cost of producing dairy products. A great many people are satisfied with the dairy because it provides a cash income the year around. The right kind of a cow, kept in the right kind of a way, in the right kind of a place, by the right kind of a man, pays her way and yields a good profit besides.

There has been a great increase in the volume of dairying in South Dakota during the last four years. Not only has the number of cows and their total output increased, but also the average production per cow as shown by the following data:

Year	Number of Daily Cows	Pounds of Milk	Milk Production Per Cow
1919	381,249	914,136,975	2,395
1920	365,741	778,122,045	2,127
1921	392,115	953,763,525	2,432
1922	435,478	1,151,500,482	2,644

A part of the increase for the last two years has been rather temporary in nature, but even making allowances for the number of beef animals that were milked during this period, it still leaves a substantial gain. In justice to the South Dakota cow, it should be stated that the production given in the last column includes tens of thousands of cows which were milked for only a few months each year, thus bringing down the average.

Dairying yields a profit in many different forms. Sometimes actual cash profits may seem small. Indirect profits may at times be obscure but are present and far reaching nevertheless. In addition to the cash income, the dairy cow is utilizing cheap feeds, grazing on rough land, and saving the by-products of the grain

fields. Skim milk is a very valuable feed for the growing pig and calf. In addition to this, the dairy cow returns directly to the soil much of the fertility which is removed by the crops. Under such circumstances it would be a very poor cow indeed which would not return value received in one form or another.

It would appear then that where dairying is said to be a losing game, something needs remedying. The cow is not always at fault, and we should not be too quick to condemn her. Oftentimes individual cows ought to be discarded, but this does not hold true of cows in general. There are a great many items besides the cow herself which might lead to a seeming loss.

The farmer who makes a success of dairying usually does not keep more cows than he is equipped to handle nor more than he is able to feed adequately. He pays some attention to improving his herd by the use of good purebred dairy sires, and plans so that the majority of his cows freshen in the fall of the year. The most successful dairymen are equipped with silos for winter feed, have ample pasture or soiling crops for summer months, and see that during the entire year their herds are supplied with plenty of clean, fresh water, warmed during the winter.

The man who profits the most from dairying is the one who brings a first class product to market, who studies the market to meet its demands, and who gives milk and cream the proper care while on the farm. The utilization of by-products on the farm, and a constant vigil to prevent wastage and loss also go to make up success.

Dairying in Porto Rico

THE cattle generally found in Porto Rico are doubtless descendants of some that were introduced from Spain at an early date. The only record of new improved blood is that of some Zebu brought in about 60 years ago, and the effects of this blood is still visible in the large working stock. Apparently no effort had been made during the 400 years the Island was under the Spanish regime, to improve the cattle for any specific purpose. Dairying was only incidental, the milk being a by-product. The native cattle are of splendid physique and strong frame, features which are due to the luxuriant and nutritious pastures and the equable climate. In milking qualities, however, they fall far below their worth for beef production and as work animals. The flow of milk is small and the fat content is variable.

Conditions for dairying on the Island are admirable, there being an abundance of luxuriant grasses and a mild climate. The demand for dairy products is increasing. The Porto Rican experiment station recently made a study, covering eight months, to determine the approximate milk yield of native and grade cows, together with the cost of the product, and the profits. The average daily milk production per head varied from 4.72 lb. to 16 lb. and the fat test varied from 1 per cent to 11 per cent. The general results indicate the need of introduced blood to improve the milk stock of the Island, and more modern methods of milking and handling than are now used. It is a nota-

ble fact that the native cows varied greatly in their yields of milk and butterfat. The high testing cows gave such large yields as to indicate that they are a good foundation stock that is acclimated and immune to tick fever.

One of the greatest needs of the territory at the present time is the development of dairying to supply milk for local purposes and for the making of butter and cheese for home consumption. There are no particular difficulties involved in building up a dairy herd than there are in any nearby section of the Temperate Zone, reports D. W. May in the United States Department of Agriculture, bulletin No. 29, which is just published. The Agriculture Experiment Station in the Island maintains a number of purebred sires and is endeavoring to encourage the improvement of the native cattle by offering the use of such sires to Porto Ricans owning dairy stock.

Junior Department

Real Livestock Girl

Miss Justine Moss, of Mossmeade Ranch, Leavenworth, Kansas, was the only lady exhibitor at the recent livestock show in Wichita. She exhibited Holsteins with good success, but her favorite stock is hogs, which she showed for four months last fall with a considerable degree of success.

Miss Moss said that her father came from England and coached the football team at Kansas University for years. He purchased a ranch at Mossmeade, and his three girls (there are no boys in the family) became interested in the care of livestock.

Figure Their Own Check

The members of the St. Onge Holstein Club were visited January 22d by Mr. Scarbro, the South Dakota state club leader, the county agricultural agent and Earl Cooper, calf club leader of the National Association. The club members are doing well and each boy has a calf, as well as a two-year-old heifer. The milk is carried to the St. Onge creamery and from the test, the boys figure how much of each cream check belongs to them.

In the afternoon, there was a meeting at the St. Onge hotel, at which time the boys, parents and visitors had dinner. The regular club meeting was held afterwards and Mr. Cooper talked about care of animals.

Appropriate Prize Money

The Racine County Holstein-Friesian Association voted \$100.00 to be given as prizes for the best Holstein calves raised by the boys and girls of the county in calf club work and shown at the County Fair next fall. All enrollments should be made before May 1st. There will be four classes, for junior and senior heifer calves and for junior and senior bull calves, the age dividing line being February 1, 1923. Besides four prizes for each division, there will be a sweepstake

prize of \$50.00 for the best calf of any age or breed. It is planned to have someone visit the members, look over the animals, and give advice as to feed and care so as to make the raising of the calves truly educational.

Herds Increasing Fast

There is a calf club at Bemidji, Minnesota, operated under the auspices of the Security State Bank. Twenty-four purebred calves were brought from Wisconsin in June, 1921, and these are now beginning to reproduce. Seven out of the nine births so far reported are females. Needless to say, when that calf club meets the members have a royally good time.

Father Favors Club Work

Walter and Herman Hodel, of Verona, Wisconsin, are sons of Mr. and Mrs. Ernest Hodel. Walter is 17 and Herman is 12, and each have been in calf club work for two years. Mr. Hodel is a staunch supporter of junior club work and is quoted as saying: "Calf club work keeps the boys interested in the farm at an age when they might otherwise believe their life work lay in another direction. By giving them farm animals which they are interested in, and letting them experiment with them and work out their own ideas, I have found that my boys have learned much which they would have failed to learn had they not had this opportunity."

The Hodel herd is not all purebred, but is rapidly becoming so, there being 11 purebred members in the herd at the present time. It is headed by King Aaggie Fayne Oak Homestead, a very handsome young bull nearly two years old, whose dam has a seven-day butter record of over 27 lb.

Learn to Be Cattlemen

St. Louis, Missouri, has an industrial school called Bellefontaine Farms in which there are 26 boys. These boys are learning the dairy business, as well as other things and their teachers give, in arithmetic work, problems they are apt to get in dairy practice. After the boy figures out the cost of the grains, silage, hay and beet pulp he has fed his cow, and then figures out at wholesale prices, the value of the milk which each one has produced, he actually knows more about the profit earning capacity of his animals than many dairymen know about their herds. The boys get real practice, as the animals are milked three times daily and there are some real good cattle in the herd.

One member, Duchess Chemacqua Hengerveld, recently produced 16,171.5 lb. milk and 558.6 lb. of butterfat in a year as a junior two-year-old. Both were state records at the time of making, although the fat record was exceeded by a university heifer a few days after it was finished.

Two boys had the handling of the Duchess's work under the direction of Superintendent Carl H. Soest. The first boy had had her for seven months when he finished his time at the institution, and was employed on a dairy farm owned by a prominent business man

of St. Louis. The second boy was entitled to leave the institution just before Christmas, but requested to be permitted to stay until the heifer should finish her year's record. After the test period was over, he obtained a position on a farm in St. Louis County with a large dairy company.

An Enterprising Newspaper

The Minneapolis Journal is actively promoting dairy calf club work in the various counties of Minnesota, and recently made a very generous offer, which was accepted by the regents of the University of Minnesota. This offer provides for a free trip at the expense of the Journal to the Second National Boys' and Girls' Club Exposition in Chicago for the winner in boys' and girls' dairy calf club work in each Minnesota county, each club to have an enrollment of 25 or more.

In addition there are four scholarships of \$100.00 each to be applied in any one of the schools of agriculture in Minnesota or in the Minnesota College of Agriculture, one scholarship each to be awarded to the boy or girl adjudged the state winner in dairy calf club work in each of four different breeds: Holstein-Friesian, Guernsey, Jersey and Ayrshire.

Last year there were 924 boys and girls enrolled in 79 clubs in forty Minnesota counties.

Although the clubs are called calf clubs, they are really dairy clubs, for each member is judged on the basis of three years' work. Each member is required to start with a calf, raise it to a heifer, have it bred, take care of the cow and calf for the third year. Or they may start with the heifer and then breed it and raise its calf for the first year's credit. Or they may start with a cow and calf and raise the calf and take care of that during its heifer year for the remaining credit.

Each member must keep an accurate record of all expense incurred and of all milk received, and at the end of each year must write a detailed account of the experiences of the year. Authorities at the University farm score each contestant and the grades and markings thus given will be official and final in determining the winners in the various counties and classes.

CASTINE SIR JOHANNA NIG ORMSBY.
First prize senior bull calf and winner of junior and grand championships at the 1922 State Fair, Dallas, Texas.
Owned by F. E. Prince, Pittsburg, Texas.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.
Copy for the publication should be received not later than the 15th or 27th of each month preceding date of issue.

March 8, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Abolish the Butterless Sandwich

WHEN a person in his spare time talks along one line, we say he has a hobby, and if he is very enthusiastic we go farther and, generally behind his back, class him as a crank.

Readers of THE BREEDER AND DAIRYMAN have occasionally read articles compiled by A. L. Haecker, who primarily is a silo press agent, but often writes articles on general dairying. Mr. Haecker has a hobby, and is nearly a crank on the subject. He travels occasionally and often has to get a hurried bite at a railroad lunch counter, or a quick-lunch restaurant. Like most of us, a sandwich is the first thing he thinks of. After he gets it, instead of the generous handout mother used to provide generous slices of sweet, juicy meat, and soft, tasty, well-buttered bread—he finds a paper-thin slice of tasteless substance between two slabs of dry bread, and, climax of horror *No Butter*. With Mr. Haecker that is the last straw, and there are few of our readers who will not agree with him. Personally we have occasionally thrown part of such purchases away after a desperate attempt to get the dry, tasteless substance down our throat and have, more or less resignedly, traveled on to our journey's end, nursing a defrauded feeling, our hunger unappeased.

Mr. Haecker makes two suggestions: First; he proposes Federal legislation prohibiting the sale of butterless sandwiches, and second; suggests that there be different prices for buttered and butterless sandwiches and that a buyer should have the privilege of inspection before purchase.

We doubt the possibility of getting our Senators and Congressmen enthused on such legislation. If, instead of living in Washington, they traveled over the country, making hurried jumps from one dinerless train to another, it might be possible. And in regard to price, we think the charge for a sandwich at most places is high enough to call for a generous spreading of pure, tasty, nutritious dairy butter.

The situation calls for action, united and individual. Nearly every reader of this paper is well acquainted with some one who does considerable train traveling. Talk this over with him and see how soon you strike a chord of sympathy. Ask him to call for buttered sandwiches and to kick loud, long and vigorously when he gets one minus butter. And when you have occasion to purchase a sandwich, if you are cheated of your butter, set an example and set up a "holler." You really will be helping your own business, as well as satisfying your hunger and pleasing your palate.

No Indemnity for Scrub Bulls

THERE are few who will disagree with the United States Department of Agriculture ruling that no Federal indemnity will be paid for scrub bulls that react to the tuberculin test after March 1st. The revised regulations governing the appraisal of tuberculosis animals thus lays down the law. "No compensation will be paid for tuberculous steers or unregistered bulls."

Should the herd owner be so unfortunate as to have a purebred bull react to the test, it will be necessary, to obtain Federal indemnity, to supply the appraising officer with the name and registry number of the animal when filing description and other data demanded.

Purebred owners everywhere will agree with the inference that scrub and grade bulls are undesirable for breeding purposes and so are not entitled to be classed as breeding stock.

When every herd in the country is headed by a purebred sire the average production will be greatly increased and the cost of production will be much lowered. We do not believe that the question of the amount produced is anywhere near as important to the dairymen as are these two points. Lower the cost of production and increase the production average and you will come very near solving the dairy owner's chief problem which is "How to make a profit?" The purebred sire is one of the chief aids to answer this important and all-pervading question.

Volume 48 Now Ready

VOLUME 48 of the Holstein-Friesian Herd-book is now being distributed by the secretary to those members of the National association who have sent in their orders. The new volume contains particulars of registrations between October 15, 1921 to February 15, 1922. During this period 11,500 males and 30,500 females, a total of 42,000 animals were recorded at the secretary's office. In the published forty-eight volumes of the herd book are registered 367,000 males and 722,500 females, a grand total of 1,089,600. The preliminary pages, besides the list of members, carry the constitution of the Holstein-Friesian Association of America and the by-laws as amended June 7, 1922. It gives the reports of various committees and of the Board of Directors, as well as a report of the Kansas City convention and the various directors' meetings.

In addition, there are the reports of the auditor, treasurer, secretary, superintendent of advanced registry extension service committee on special prizes and finance committee as submitted by these various officials and bodies to those present at the Kansas City Convention last June.

THE BREEDER AND DAIRYMAN commends the binding of these reports in this volume, instead of holding the reports until they can be incorporated in the volume which records the registrations made during the time the convention was sitting. We believe that the reports of any meetings or conventions should be bound in the herd book, first distributed after the said meeting is held.

The budget for the fiscal year 1922 is also given. It will repay members of the association to read this budget carefully and see how the money is used. The price of volume 48 is \$2.00 and orders, with the price, should be sent to Secretary F. L. Houghton at Brattleboro, Vermont.

Some One Out of Step With the Times

THE Extension Department of our Association seems doomed to get in wrong. The present director, Fred Koenig, was employed sometime before the meeting at Syracuse, June 1921. After the Syracuse meeting at which the transfer fee was lowered from \$1 to 50 cents the services of his superior, Professor Rider, was dispensed with but Mr. Koenig was retained. He has drawn pay continuously, despite the statement widely circulated that all extension activities were cut off because of the cut in fees, a statement carefully helped by editorials in one of the breed papers. You were led to infer that nothing whatever was done. Still Mr. Koenig drew his pay every month. What did he do to earn it?

After the Kansas City meeting in June 1922, Mr. Koenig was promoted to be director of extension work and his salary increased to \$5000 a year. February 1923, eight months later, in a letter advising owners of Holstein-Friesian cattle to buy billboards advertising Holstein cattle and Holstein milk, he gets off this gem of truth. "After eighteen months of inactivity on the part of the National Association the Board of Directors have again authorized the advertising of Holstein cattle and in addition has authorized the advertising of Holstein milk."

Just how he figures the Association was inactive he alone can tell. And for what he drew his pay for those same eighteen months, probably he never will tell.

The new booklet "Holstein Milk-Vitality" was widely heralded by inspired propaganda as something that would tend to increase the demand for milk produced by black and white cows. Maybe it will but, by its extreme statement, it has angered the adherents of the other dairy breeds and it has gained no friends among well informed people anywhere. This is particularly unfortunate at the present time. President Lowden at the National Dairy Show and elsewhere held out the olive branch to the other dairy breed associations. And a large sign at the National Dairy Show paid for by the Association intimated that the association was in favor of anything that would benefit the Holstein breed but not in disparagement of other breeds.

Recently a meeting was called in Washington by the United States Department of Agriculture seeking to correlate the work of field men of the different dairy breed associations. Present at this conference were the President and Secretary of every dairy breed association with the exception of the Holstein Association which was represented by three delegates, one of whom was the Secretary of the association and another its Superintendent of Advanced Registry. The agricultural papers throughout the country heralded this conference as a long step in advance and intimated that instead of war amongst themselves as to the relative virtue of purebred dairy cattle in United States, the dairy associations would unite in a country wide effort to show the economic value of the purebred and its superiority as a profit maker over the native and scrub. Evidently the present director of the Holstein-Friesian extension service is not in sympathy with that movement although there is not a prominent dairy leader, investigator or scientist that would not endorse it.

Evidently the head of our extension service is wrong or, "They are all out of step except Koenig."

That we are not alone in our condemnation of director Koenig's unwise course is shown by an editorial in the Ohio Farmer, a paper which has been established seventy-five years and has always been a leader in movements likely to benefit the agricultural and cattle industries. This was headed "Sell your own wares" and is as follows:

"Three interesting documents have just come to our desk within the last few days that carry a lesson, or else the lack of it. First of these was a story of a conference of officials of the various dairy breed associations, where they agreed to bury the hatchet and each stay in his own backyard and quit slinging mud at his neighbor and all work for the common cause, that of promoting the dairy industry. It is a real job, with great intent and prospect, and it requires undivided support.

"Then we picked up a booklet 'Holstein Milk-Vitality,' and as we glanced through it we chanced on some mighty interesting statements; and there we decided the Holstein fellows buried the hatchet with the handle sticking out. Somebody in his zeal to put over an advertising campaign had just run wild.

Finally, we picked up the third pamphlet, one from the Associated Advertising Clubs of the World, and came across the sound, sensible story setting forth the ideals in their truth-in-advertising movement, entitled 'Winning the Fight for Honest Business.' The three documents did not consistently go together.

"We have an abiding faith in Holstein milk and Holstein cattle, and we extend our hand of coöperation for promoting both, but experience and scientific investigations will not allow us to sanction all that is set forth in this campaign to further the use of Holstein milk in preference to that of other breeds. Personally we feel each breed has its own individual merit.

The National Dairy Council has a commendable record in promoting dairy interests, all breeds alike. Why not allow them to continue this educational campaign, supported by the breed associations, and not allow petty jealousies to dominate questionable competition?"

An Explanation

WE are publishing elsewhere in this issue under the heading "Letters to the Editor" a letter from Mr. W. G. Davidson, in which he states that we are entirely wrong in the conclusion we have drawn in the paragraph which appeared in our Editorial of February 8th, and which reads as follows:

"Mr. W. G. Davidson of Brentwood fame and who has a national reputation in the Holstein fraternity, is not the only man of means and influence that the "Rule and Ruin" group has failed to make a monkey of and use as a Cat's paw in forwarding their interests, a thing which they evidently tried to do at the Kansas City convention when they elected him as an illegal director, an office which he refused to accept."

Mr. Davidson writes, "I would like very much to know where you derive this information as it is entirely wrong." Mr. Davidson states that he did not accept the directorship and that is what we stated in the above paragraph. We fail to see where we are wrong.

The reason Mr. Davidson gives for not serving as Directors, is that he found it impossible to give the matter the necessary time. We did not endeavor to state just why Mr. Davidson did not serve as Director, we merely stated that *the illegal Board had failed to make a monkey out of him or use him as a Cat's Paw.*

From the Bottom Up

SIR Horace Plunkett, eminent leader in Irish coöperation, gives American farmers a well-deserved criticism. It is a fact that too many organizations have been started at the top. That it is without doubt the reason for many failures. Too often we become impatient for results and do not take the time to lay the foundation for the organization that is to bring these results.

"In Ireland," says Mr. Plunkett, "we attach so much importance to the coöperative spirit that we try to get farmers to organize coöperatively for every purpose of their industry, always beginning with some very simple transaction, such as buying fertilizer, or perhaps selling their eggs or something of that sort, to try out the method and get them to understand the principles involved. We maintain that the coöperative principle is the only sound principle for farmers' combinations, the capitalistic or joint stock system nearly always ends disastrously."

"A notable characteristic of the agricultural coöperative movement in the United States is that the organizations are built from the top down. We don't build that way. When we organize we build from the bottom up and not from the top down."

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

March 8—Charlottesville, Va., Virginia State Dairymen's Convention.
March 30—Orono, Maine, Annual Meeting Maine Holstein-Friesian Association.
April 3—Salt Lake City, Sixth Annual Inter-Mountain Livestock Show.
Oct. 25—Washington, D. C., World's Dairy Congress.
Oct. 6-13—Syracuse, N. Y., National Dairy Show.
March 18—Howell, Mich., Livingston County Holstein Breeders Association Meeting.

ELECT ASSOCIATION OFFICERS

At the annual meeting of the Central Pennsylvania Holstein-Friesian Breeders' Association, held Feb. 3d, at Williamsport, the following officers were elected: President, H. H. Blair; vice president, H. R. Paulhamus; secretary, Thos. L. Reese; The following executive committee was elected: L. M. Losch, V. A. Shirey and H. F. William Flock.

TROUT LAKE MEETING

A recent meeting of the Trout Lake Holstein Association was held at White Salmon, Washington. The following officers were elected: President, C. F. Coate; vice-president, R. A. Wilson; secretary and treasurer, Frank Corey. The executive committee are C. E. Hall, C. A. Elmer and Louis Rasmussen.

BOURBON HOLSTEIN BREEDERS ORGANIZE

Twenty-eight Holstein breeders living near Fort Scott, Kansas, recently organized a breeders' association for the promotion of Holstein breeding and the use of Holstein cows in the dairy business.

The following officers were elected: Earl Williams, Hiattville, president; Arthur Towles, Fulton, vice president; Harry L. O'Bryan, Fort Scott, secretary.

ASK FOR A MILLION DOLLARS

The Sheboygan County Holstein Breeders' Association assembled in special meeting at Plymouth, Wis., January 20th and endorsed the plan to ask the Wisconsin legislature to appropriate \$1,000,000 annually for the next two years for use in an indemnity fund in the tuberculosis eradication campaign. The resolution as given out for publication are endorsed by the officers and the full board of directors.

FORM BREEDERS' ASSOCIATION

Twenty Holstein breeders of Ionia County, Michigan, have organized the Ionia Holstein Breeders' Association. This is the fourth livestock breeders' association in Ionia County. The following directors were elected: Leon Augst, Lake Odessa; J. C. Butler, Danby; Fred Curtis and L. C. Smith, Roland; Howard Hall, Belding; Fred Howard and C. C. Cook, of Berlin. The directors will meet soon and elect the president and secretary.

BREEDERS INTERESTED

At the recent meeting of the Jefferson County Holstein-Friesian Association held at Watertown, New York, the breeders present appeared much interested in plans to exhibit their cattle at the National Dairy Show which will be held at Syracuse next October.

The principal speaker was Dr. D. B. Armstrong, of Watertown and Pierrepont Manor, one of the directors of the Holstein-Friesian Association of America. Dr. Armstrong explained the advertising plans of the association.

ALLEGHENY COUNTY BREEDERS MEET

The Holstein club of Allegheny County held its annual meeting at Pittsburgh, Pa., February 19th. About 50 breeders and dairymen and friends attended the banquet in the Ft. Pitt Hotel. F. R. Babcock of Chestnut Hill Farms was toastmaster and the principal speakers were Dr. J. T. Holdsworth of Pitts-

burgh, A. N. Crissey, extension representative of the National Association, and Henry Eby, Allegheny County agent.

At the business meeting the following officers were elected: John A. Bell, Jr., Pittsburgh, president; Edward Hays, Imperial, vice president; Albert Craig, Pittsburgh, secretary, and Frederick R. Babcock, Pittsburgh treasurer.

PLAN TO INTEREST JUNIORS

The Hillsdale County Holstein Breeders' Association met February 10th at the Courthouse, Hillsdale. Quite a number of the men were accompanied by boys whom it was expected to interest in calf club work. O. R. Rumsey gave a report of the state Holstein meeting at Lansing. W. J. Moore told what the Rotary Club was doing in the way of furnishing free milk to the school children. J. O. Wallace and Elmer Hagaman were appointed a committee to help promote the boys' and girls' calf club work in the county.

LANCASTER COUNTY BREEDERS MEET

The Holstein-Friesian Breeders Association of Lancaster County, Pa. held its annual meeting in the Farm Bureau rooms, January 30th. This association was organized June 1922 with eleven members and now has enrolled 84, being one of the largest in the state.

Mr. A. N. Crissey, Extension man of Pennsylvania, New Jersey and Delaware district, told about the work he expects to do among the breeders and to increase the demand for Holsteins and their products.

The officers of the organization were all reelected and are: President, John H. Shirk; vice president, Clayton A. Spahr; secretary, H. Elvin Herr; treasurer, J. Lloyd Harnish.

NORTHFIELD CLUB ELECTION

All the officers of the Northfield Holstein Club were reelected by acclamation at a meeting at Northfield, Minn., February 6th. They were: President, A. J. Lashbrook; vice-president, R. B. Goodhue; secretary, A. B. Knapp, and treasurer, Nels Parson.

After an animated discussion on the question of engaging a paid secretary, the meeting unanimously adopted a motion made by W. F. Schilling that "the President appoint a committee of three on every road leading out of Northfield to get the sentiment of all the farmers relative to the proposition."

President Lashbrook spoke of the records made in Northfield community during 1922 and mentioned the county exhibits at the county fair and the National Dairy Show and the large number of grade Holsteins sold during the year.

AN AMBITIOUS PLAN

Fresh from a trip to the offices of the national association's extension department, J. G. Hays told the members of the West Michigan Holstein Breeders' Association how that department plans to spend \$200,000 in so-called publicity and educational work. The meeting was held at Grand Rapids, February 16th. Mr. Hays represented the state association as well as the Michigan Agricultural College dairy extension department.

The officers of the local association now are: President, D. R. Edgerly, Jenison; vice-president, John C. Buth, Grand Rapids; secretary-treasurer, W. R. Harper, Middleville. The next meeting will be held in Grand Rapids, April 6th.

MICHIGAN ASSOCIATION MEETING

The Michigan Holstein-Friesian Breeders' Association met at the M. A. C., Lansing, January 31st, for its annual business meeting.

Reports were given by Secretary H. W. Norton, Jr., of Lansing, and Treasurer S. M. Munsell, of Howell. The principal speakers were Prof. O. E. Reed, of the Michigan Agricultural College Dairy Department; President Dudley

E. Waters, of Grand Rapids, and Earl J. Cooper, calf club leader from the National Holstein-Friesian Association.

Officers elected for the coming year are: President, E. E. Smith, Adrian; vice-president, W. R. Harper, Middleville; directors, Neil Lamoreaux, Comstock Farm; C. W. Post, Hillsdale; H. W. Norton, Jr., Lansing; Silas Munsell, Howell; Geo. Spillane, Flint; M. W. Wentworth, Battle Creek; R. F. Sloan, Charlevoix.

WASHINGTON STATE ASSOCIATION

The annual meeting of the Washington State Holstein Association was held at the Frye Hotel, Seattle, Feb. 6th. W. E. Meyer, field representative of the National Association outlined some of his plans. At present his office will be at the Frye Hotel.

Officers and directors were elected as follows: President, Harvey Schoultes, Adna; vice president, Thos. Owens, Kirkland; executive secretary, George Gue; Auburn; treasurer, George Bulkley, Seattle. The following directors were elected: William Bishop, Chumacum; E. A. Stuart, Seattle; Thos. Lockhart, Mount Vernon; A. E. Smith, Sumas; Alex. Todd, Yakima.

CHOOSE NEW SECRETARY

Members of Clayton County Holstein Breeders' Association met January 30th at Elkader, Iowa. President J. L. Cords called the meeting to order. G. N. Meyer of Littleport was elected to fill the office of secretary for the remainder of the year, made vacant by the resignation of Earnest Lihn.

The organization of a county calf club was seriously discussed. The association passed a resolution approving the club program offered by the Farm Bureau Committee and a committee of members including the president and secretary were appointed to cooperate with the Farm Bureau committee in club work.

Mr. J. P. Eves of the Iowa Dairy Association spoke on association work. Two reels of motion pictures, showing animals of the Holstein breed were exhibited.

Complete Dispersal Sale

35 REGISTERED HOLSTEIN-FRIESIANS 35

Monday, March 26th, at 11 o'clock

This is an ACCREDITED HERD and will be sold subject to 60-day retest privilege.

Sale held on the Walter K. Sharpe Farm, situated along the Cumberland Valley Division of the Pennsylvania Railroad between Newville and Oakville. By special arrangement the two morning trains and the two evening trains will stop at the Farm.

READ CAREFULLY THE OWNER'S STATEMENT:

I am selling my entire herd consisting of the herdsire, a few choice young bulls and bull calves, and a number of very fine, large and well-bred cows, heifers and heifer calves. The foundation of this herd was laid 20 years ago. The first herdsire was a direct descendant of Sadie Vale Concordia 30 64 lb. butter in seven days. She was the first 30-lb. cow and at the time was World Champion. My second herdsire was also a grandson of this great cow.

In 1907 I bought a son of King of the Pontiacs and a son of King Segis, the two greatest bulls of the breed and since then purchased another son of King of the Pontiacs.

You can see the bloodlines represented in the pedigree of the offerings. A number of good A.R.O. records have been made in this herd, and the animals have the capacity to do far better.

I am not selling because I am no longer interested in Holstein cattle nor because I think they do not pay but on account of a large law practice and other business interests I am not able to give the herd the necessary attention.

Pedigree Director: S. R. MILLER, Chambersburg.

WALTER K. SHARPE
CHAMBERSBURG, PENNSYLVANIA

FEDERATION WILL TAKE A HAND

The New York State Farm Bureau Federation plans a state wide investigation of methods of eradicating tuberculosis, to be followed by the presentation of a plan to coordinate and add to the effectiveness of the present system. The Federation will now take an active part in fighting the disease. The committee appointed consists of H. E. Babcock, of Ithaca; L. A. Tone, president of the State Guernsey Breeders' Association; E. R. Zimmer, secretary of the State Holstein-Friesian Association; F. M. Buchley, of Westchester County, and Jay Coryell, state leader of farm bureau managers.

At the present time there are 20,692 animals in the 1,117 herds on the accredited list, with 106,329 animals that have passed one clean test. There are 327,900 cattle in 12,313 herds under supervision, with approximately 5,000 herds containing 150,000 cattle on the waiting list.

HOLSTEIN COW RECEIVES CREDIT

The Steele County Holstein Breeders' Association met at Owatonna, Minn., February 2d, and reelected their old officers, who are: President, Ernest Sloan, Ellendale; vice-president, Emil G. Heinz, Meriden; secretary-treasurer, Donald M. Alexander, Owatonna.

The principal speakers at the banquet were Secretary Geiger, of the state association; E. T. Winship; County Agent E. M. Torblaa and W. J. Corwin of Winona.

Mr. Winship declared that Steele County's present standing in the United States Dairy industry was due almost entirely to the Holstein cow. He declared testing associations to be important agencies for successful dairying and urged his hearers to become members of such organizations.

Mr. Corwin spoke on the importance of selecting a good type and County Agent Torblaa outlined the Farm Bureau's plan for the area testing for tuberculosis. The boys' and girls' calf club work was endorsed by the association and will continue to be supported by them.

BULL ASSOCIATION DINES

The annual dinner of the Todd County Bull Association held February 8th at the Ross Cafe, Brainerd, Minn., was attended by thirty-five members from various parts of the county.

It was voted to incorporate the association and to permit all the farmers of the county interested in the Holstein breed to become members if they wish. Another purebred Holstein calf club will be started among the boys and girls. There are two such clubs now in the county; one of them is on the second year and the other is on the third year of its organization. A committee was appointed to look after calf club work and it was voted to offer calf club members the free use of the association's sires for the coming year.

One of the bulls owned by the Todd County Association is King Piebe 6th. He is by King Piebe and from Miss Ormsby Jewel, who has a year record made as a junior three-year-old of 1,017 lb. butter. This bull is kept on the P. J. Nelson Farm at Eagle Valley. The association paid \$2,500 for a half interest in him and has an agreement with Messrs. Hargrove & Arnold to take him back at the end of two years if the association decides not to complete the purchase.

Another of the county bulls is Marathon Bess Burke 18th. He is a son of Marathon Bess Burke and his dam is Princess Della, who has a year record of nearly 1,100 lb. butter and 28,000 lb. milk. He is stanchioned at the M. E. Gutches farm at Reynolds.

The officers of the association are P. J. Nelson, president, and Henry Jedlicka, secretary.

FORM INDEPENDENT ORGANIZATION

The Holstein Association of Clarke County, Washington, at a meeting late in January decided to withdraw from the Washington State Association and to form an independent organization.

For the past two years the Clarke County Holstein men have been remitting to the state association and feel that they have not received their money's worth. The notification that the state body needed more money precipitated the action.

A resolution was passed urging the state legislature to ap-

propriate \$100,000 for continuing tuberculosis eradication work. The agricultural department is now entirely without funds, and unless money is forthcoming this year, test work will have to be abandoned.

The association plans a big dairy picnic for June 14th, when a tour will be made of the dairies in the vicinity of Vancouver, and demonstrations given by livestock experts from Washington State College.

The following officers were elected: President, Lloyd Whipple, of Mill Plain; vice-president, W. C. Groth, also of Mill Plain; secretary, M. B. Cunningham, of East Vancouver. Russell Case, of Fruit Valley, and John Hancuff, of Brush Prairie, were selected as members of the Board of Trustees.

WILL NOT HIRE MEMBERSHIP SOLICITORS

At the annual meeting of the Tioga County Holstein-Friesian Association one of the speakers was Elmer R. Zimmer, field secretary of the state association, and formerly manager of the Tioga County Farm Bureau. He said that the state organization was aiming to secure 2,000 members this year and urged cooperation. He also urged the local club to send county exhibits to the state fair and the National Dairy Show.

Resolutions were adopted urging the legislature to make the necessary appropriation for the construction of a coliseum on the New York State Fair Grounds, and also urged the making of appropriations to carry on the campaign for the eradication of tuberculosis. A copy of these resolutions were ordered to be sent to Senator Bernard Downing, chairman of the Senate finance committee.

The members present decided to purchase and erect one of the billboards advertising Holstein milk. Secretary L. J. Yates offered a location and necessary labor, and Fred Blewer guaranteed to make good the deficit if there was any.

It was decided not to hire professional solicitors to get new members but that a committee of five men should be appointed to lay out into districts the county and have members attend to getting everyone who was interested into the association.

At the election of officers Fred Hilbert was elected president; Ross Mead, vice-president; Fred Andrews, treasurer; and Laurence J. Yates, secretary. Mr. Hilbert was elected delegate to the state association and as a member of the advisory committee.

THE WISCONSIN STATE ASSOCIATION MEETING

The Holstein-Friesian Association of Wisconsin held its thirty-first annual meeting February 6th at the Armory in Fond du Lac. Nearly 150 delegates and friends were present. President H. F. Schroeder told of the early history of the county and state organizations, and said that 30,000 Holsteins, grade and purebred, had been sold in the state during the past year. He anticipates more than 6,000 members of the state association in 1923 against 567 during 1921 and 517 in 1922. The new affiliation plan reaches the rank and file of the dairymen.

Secretary Oldham's report showed that these 567 memberships recorded at \$5 each brought in a total of \$2,835 in 1921, while during 1922 the 517 members paid the association \$4,052.60, an average of \$7.83 each. To obtain the 1,084 memberships issued during the two years period cost the Wisconsin Association \$1,709.41 or approximately 25%. Wisconsin plans to advertise her dairy products and a number of breeders will erect Holstein billboards.

The meeting favored larger indemnities for tuberculosis control work; favored forbidding cattle to be sold at public auction places unless they have passed a tuberculin test; and also requests managers of fairs and exhibitions to refuse cattle that have not been tuberculin tested. They favored the pasteurization of dairy by-products before they are returned to farms; are in favor of prompt disposal of reacting cattle and also requested that more dairymen be placed on the State Sanitation Board.

The treasurer's report showed a balance on hand February 1st of \$454.78 against \$315.65 a year ago. The sum of \$2,003.40 had been received as dues for 292 memberships and \$2,191.75 was received from assessments on the county organizations. The state association received since June 1922, \$3,443.50 from

the National Association, one third of the amount Wisconsin Holstein owners paid in transfer fees.

Considerable opposition was shown against a state sale and after much discussion the matter was left for the consideration of the Board of Directors. A nominating committee suggested F. J. Southcott of Dousman, Waukesha County, F. H. Everson, Lake Mills, Jefferson County; J. A. Craig, Janesville, Rock County, and John Wuethrick of Greenwood, Clark County; to serve as directors for three years.

Nineteen names were suggested for delegates to the Cleveland meeting next June but as the effect of Judge Pooley's decision will undoubtedly call off that meeting we are not taking the space to print them here.

CANADIAN ASSOCIATION HOLDS ANNUAL MEETING

The Holstein-Friesian Association of Canada held its annual meeting at Toronto, February 8th with a small attendance. The Secretary's report showed a drop in registrations and transfers compared with the preceding year. There was a falling off in the number of short time records made the figures being 637 in 1922, 1,247 in 1921. The association gained 314 new members during the past year.

The splendid showing made by Holsteins during the past year at the prominent fairs and at various dairy tests was a source of gratification to those present.

President A. E. Hulet called the meeting to order. There was a discussion on printing and printing charges and the members present voted that all contracts amounting to \$200 or more should be submitted to competitive bid. A standing committee consisting of R. M. Holtby, chairman, P. H. Moore, Hon. W. M. Lea, P. J. Salley and R. J. Kelley was appointed to select a list of competitive judges which would be available to act at fairs.

The British Friesian Association was asked to recognize from Canada only such animals of the Holstein-Friesian breed as were approved by the Canadian association. The British society was requested to use its influence to get permission for a Canadian exhibit at the London Royal Show.

Publication of the year book containing the records made will be resumed this year. It was omitted last year on account of finances.

The members present endorsed the generous grants which the Canadian association has been giving for Holstein prizes at leading Canadian fairs.

On motion of P. J. Salley, it was resolved that supervisors of official tests should be changed at the end of every thirty day period. A recommendation was made that the Record of Performance rules should be amended so that all purebred cows in a herd, without a previous record must be entered in test if any long time testing is done in the herd; no test to be made where there are less than four milking cows of which at least one must be a purebred.

The Dominion Government bears the cost of supervision of R. O. P. Records and the Department of Agriculture is more interested in general herd improvement than in making of a few sensational records.

The breeders present commended the officers and herdsmen of the Dominion Experimental Farm at Agassiz, B. C. on account of the splendid record made by the new World's Champion, Agassiz Segis May Echo. W. H. Hicks, superintendent of the Agassiz Farms was present and told some interesting details concerning the cow and her care during her record breaking test. R. F. Hicks, the breeder of the new champion spoke about herd management. Fred Lea was commended for his handling of the successful Ontario herd last fall at the National Dairy Show.

The salary of the secretary was set at \$3,500, the same as last year and a sum of \$2,000 was appropriated for the Publicity Committee. After considerable discussion, the incoming Board of Directors were instructed to appropriate a reasonable sum for extension work and to appoint a committee of breeders to act as temporary field representatives throughout the coming year. Resolutions were adopted asking the association to see that a representative exhibit of Canadian Holsteins was sent to the London Dairy Show and to the National Dairy Show at Syracuse, New York.

The following directors representing Ontario were elected: C. T. Houck, Chippawa, W. R. Cummings, Geo. Arbogast, Sebringville, R. M. Holtby, Port Perry, W. H. Cherry, Hagersville, R. F. Hicks, Newton Brook. The directors for the other provinces had already been elected by mail vote.

W. A. Clemens was reelected secretary-treasurer; B. Malory, Belleville and J. W. Richardson of Caledonia were elected as auditors. At a subsequent meeting the directors elected the following officers: president, R. W. E. Burnaby; 1st, vice president, Hon. Walter M. Lea; 2d, vice president, R. M. Holtby; 3d, vice president, P. J. Salley; 4th vice president, C. T. Houck.

The annual banquet was held at the Prince George Hotel, February 7th. The toastmaster was President Hulet. J. M. Kelley spoke on his favorite subject "Advertising Holstein-Friesian Milk" and received considerable applause. Other speakers were Venerable Archdeacon J. B. Fotheringham, Rector of Grace Church, Brantford, Ont.; Hon. Walter M. Lea, who spoke in place of Hon. Duncan Marshall, who was unable to be present; and Deputy Minister Roadhouse, who aroused enthusiasm on promising the active support of the provincial government in the sending of a shipment of Ontario Holsteins to London next fall to compete at the Royal; and Louis Blake Duff, newspaper editor. Some interesting lantern slides of Friesland farms and scenes were shown by W. H. Porter, managing editor of the Farmers' Advocate.

THE FILLED MILK MENACE

Senator E. F. Ladd, the Non-Partisan scientist-teacher-farmer from North Dakota, has been a mighty force, during the recent congress, in advocating measures likely to benefit the farmer.

In presenting the report of the senatorial committee on agriculture, relative to the Voigt Bill aiming to prohibit the shipment of "filled" milk in interstate or foreign commerce, the North Dakota Senator submitted the following statistics, compiled by the Bureau of Agricultural Economics, showing the growth of the filled milk industry in this country.

Year.	Canned.	Bulk.	Total.
1916	12,000	14,134,712	14,146,712
1917	18,504	17,489,064	17,507,568
1918	41,033,855	7,591,182	48,625,037
1919	62,262,221	2,748,120	65,010,341
1920	84,044,000	2,517,000	86,561,000
1921	59,020,000	5,873,000	64,893,000

SALEM-CUMBERLAND-GLOUCESTER COUNTIES ASSOCIATION

Nearly 150 attended the fifth annual banquet of the Salem-Cumberland-Glooucester Counties Holstein-Friesian Association held at Shiloh. President Walter S. Garrison gave the address of welcome. He emphasized the fact that during the last few years of trying times the cattle industry had done much to help the dairyman over the rough places and where one was careful to follow the best dairy practices a handsome benefit could be made despite low prices.

Dr. J. H. McNeil, State Veterinarian of New Jersey, spoke of bovine tuberculosis control and state and federal supervision of herds. He said that throughout the state there are two purebreds tested to every grade. During the last six months, 456 herds and approximately 17,000 cows had been tested. He advised the breeders of purebred cattle to get into the testing work to facilitate the sale of surplus stock.

Prof. Faust, of the Agricultural Department of the Shiloh school, briefly outlined the work jointly carried on by the students and local dairymen. Fred W. Jackson of Bridgeton, county agricultural agent, gave an address on coöperation in all dairy work.

Allen N. Crissey now extension specialist for the district of Pennsylvania, New Jersey and Delaware, gave the report of the last annual meeting and executive meeting and also talked on what he was doing to try to benefit Holstein breeders.

Next was the election of officers. Sam Ridgway of Salem, the well known South Jersey breeder was elected president; Eber M. R. Davis of Malboro, owner of Eberdale Farms, was chosen vice president and John Ridgway of Hancock's Bridge

was reelected treasurer. The board of directors were elected as a board to continue work already started.

J. W. Bartlett, former secretary of the New Jersey Holstein-Friesian Association, now Professor of Dairy Husbandry at New Brunswick spoke about the dairy work being done at State College. Paul Bennetch, Dairy Marketing specialist from the State Department of Agriculture outlined the work which is now being carried out for the improvement of marketing milk. W. W. Wetmore, the new secretary of the Holstein-Friesian Association of New Jersey, urged coöperation of the state and local associations. Mr. Cohee of the Milk Producers Association extension staff said that only by producing cleaner and better milk could the farmer receive better returns and he urged the use of sterilized utensils and equipment. His talk was followed by the two-reel motion picture, Fair Acres distributed by the Interstate Milk Producers' Association for the stimulating of interest in producing clean milk.

LEAGUE MILK PRICES FOR MARCH

At the regular monthly meeting of the Board of Directors of the Dairymen's League Coöperative Association held at the general office in Utica, New York, February 21st and 22nd, the following recommendations were made for March milk prices. The prices here given are those recommended by the Board for dealers to pay the association for the milk as sold in the different classes.

Class 1, \$2.80, milk sold in fluid form.

Class 2, \$2.50, milk sold as soft cheeses, made into sweet cream or sold as skim milk.

Class 3A, the price will be the same as February or 59 cents per 100 lbs. above the average New York City quotations for butter. This includes milk made into condensed or evaporated milk, powdered milk, etc.

Class 3B, 40 cents per 100 lbs. above the average New York City quotations for butter. This includes milk made into hard cheeses.

Class 4A, the average official New York City quotations for butter. This includes all milk made into butter.

Class 4B, the average official New York City quotations for cheese. This includes all milk made into American cheese.

The above prices are for 100 lbs. of milk testing 3% butter-fat at the base zone 201-210 miles from New York City.

With the exception of class 1, which is 10 cents per 100 lbs. below the price paid the association by dealers for February milk, the prices above given are the same as for February.

A PACIFIC COAST CHAMPION REPEATS

Five hundred twenty-six pounds of butter and ten thousand seven hundred pounds of milk in the first hundred days is the remarkable record of Hollywood Lilith Palmyra Abbekerk, Holstein aristocrat in the herd of the Los Angeles County Farm. But this is not her first appearance in the headlines. She already stands as Pacific Coast Champion for both milk and butter produced in 305 days as a senior four-year-old, with the second highest record ever made in that class. By freshening again on October 21, 1922, she ratified her title in the ten-months class with 22,245.1 lb. of milk containing 982.97 lb. of butter, this being the highest record ever made following the birth of twin calves.

During her first week on test in the new lactation period she made over 35 lb. of butter and gradually increased this total to 38.64 lb., milking 786.3 lb. in the week. Continued on 30-day official test she made 156 lb. of butter from 3,041 lb. milk. In the third month after calving she increased her milk flow, making another seven-day record of 37.39 lb. butter with 844.4 lb. of milk, her highest day's milk being 125.3 lb. on the 73d day after calving. Her present owners feel that she has not yet reached the peak of her production as she has had serious handicaps to contend with every year. The seven-day record of 38.64 lb. was made by a milker who had never before attempted an official test or even handled purebred cattle under herd conditions. A few days before the end of her 30-day period it was necessary to change milkers and the new man used such different methods that she dropped to 85 lb. of milk per day, but immediately began to recover and soon reached 120 lb. Last year's remarkable production was greatly reduced by a bad fall in the eighth month of the test. For these reasons it is felt that with an even break and absence of such

emergencies she should stand a good chance of making a considerable increase over her previous performance.

Previous records made by this cow include a senior 3-year-old yearly record of 883 lb. of butter in 365 days from 21,606 lb. milk, carrying twin calves during eight months of the test period. During this period she was also shipped from Seattle, Washington, to Los Angeles, California, and went through the public sale ring at the California Guarantee Sale in 1921. Seven-day records during the first two lactation periods were 19.84 lb. butter at 2½ years age and 22.89 lb. butter at the age of 3 years, 6 months. She has always been a regular breeder as well as a consistent producer, year after year.

Examination of the pedigree of Hollywood Lilith Palmyra Abbekerk would convince anyone versed in Holstein lore that great possibilities of production would be hers as well as excellent type. Names in this pedigree have been among the most prominent in show-ring and prize lists for many years. Her sire is Hollywood Lilith Palmyra, one of the most wonderful transmitting descendants of King Segis, whose 28 ARO daughters include two with records above 38 lb. of butter in seven days and eight over 30 lb., seven of these records being made in three and four-year-old form. He is the only sire to have two daughters with yearly records over 29,000 lb. of milk in 4-year-old class and he has two others above 25,000 lb.

HOLLYWOOD LILITH PALMYRA ABBEKERK

526 lb. butter, 10,700 lb. milk in 100 days. Owned by the Los Angeles County Farm, Hondo, Calif.

of milk as 4-year-olds. Their 4-year-old butter records run as high as 1,174 lb. in 365 days. The record just completed at the County Farm gives him the highest average milk production for two daughters in seven-days test of any sire of the breed, with 826.3 lb. Only one other sire has two daughters with over 800 lb. of milk in seven-days' test. Hollywood Lilith Palmyra Abbekerk has become the highest seven-day record daughter of this illustrious sire for milk, second for butter and the highest in the 305-day class for both milk and butter. When it is considered that this sire only had two years of service before his untimely end, his wonderful prepotency becomes more evident. He was out of Lilith Queen Pauline, 1,077 lb. of butter, the highest yearly record daughter of the near century sire, Lilith Pauline De Kol's Count, and by a son of King Fayne Segis from a 30 pound daughter of Hengerveld De Kol. King Fayne Segis was one of the best bred sons of King Segis, being out of Grace Fayne 2d's Homestead, the 35 lb. world record holder of 1910.

The dam is Hollywood Abbekerk Korndyke, a 30 lb. daughter of Sir Pontiac John Korndyke with a 4-year-old record of 818.95 lb. of butter in 365 days, and out of Pietertje Korndyke Abbekerk with a senior 4-year-old record of 984.83 lb. in yearly test, and with 35.38 lb. butter in 7 days from 713 lb. of milk. She is thus a double granddaughter of Korndyke Abbekerk, the famous old Allamuchy sire, whose descendants have been among the greatest line of show ring winners of the breed. This brings in the blood of Pontiac Korndyke and of Hengerveld De Kol. This is not only a line of excellent producers but a strain showing ability to consistently transmit production. Pietertje Korndyke Abbekerk is the foundation animal of one of the best families developed at the well-known Hollywood Farms in Washington. Her three daughters include the 30

lb. Hollywood Abbekerk Korndyke described above, another 4-year-old with 28.93 lb. of butter and a 3-year-old by Judge Segis that just completed a record of 26.85 lb. butter from 528.4 lb. of milk, and the ten-months' record of 777 lb. butter after calving at 2 years, 2 months. In addition to the subject of this sketch, Hollywood Abbekerk Korndyke has a daughter by Judge Segis that calved at 24 months age, making 614 lb. of butter in ten months. Her daughter, Hollywood Lilith Palmyra Abbekerk is also the dam of a junior 2-year-old with 19 lb. of butter in seven days and a ten-months' record of 673.8 lb. of butter from 15,682.1 lb. milk. This promises to become one of the most notable four-generation groups of the breed both in seven-day and yearly classes. We already have three direct generations all over 30 lb., averaging 34.67 lb. butter in seven days, the same three averaging in semi-official test 928.92 lb. of butter, all of these records being made as 4-year-olds, one of them in ten months.

To find an individual combining in such an unusual degree excellent conformation, production, and proven transmitting ability, backed by generation after generation of the leading animals of the breed, is rare indeed. Fortunately her blood is being conserved by the use of her sons as herdsires in two large Pacific Coast herds. Her oldest son by Judge Segis is in service at Hollywood Farms, Washington, and her younger son by King Korndyke Pontiac Mead is Junior Sire at the Los Angeles County Farm. He brings into the pedigree the wonderful De Kol of Valley Mead strain that has to date produced in California alone, twenty-three cows averaging over 1,000 lb. of butter and 21,500 lb. of milk in yearly test and his daughters will carry one of the greatest blends of high producing blood ever developed within the Holstein breed.

THE KANSAS NATIONAL

The Holstein ribbons at the Kansas National Livestock Exposition were placed by Robert E. Haeger, of Algonquin, Ill., who praised the progress Kansas Holstein breeders are making. He particularly praised the individuality of the first and second animals in the heifer class and said that they were fully as good as those winning similar places at last years National Dairy Show. Judge Haeger's work was watched carefully by a number of Holstein breeders from Kansas, Missouri, and near-by states.

A feature of the entertainment was the rodeo and bull fight. Joe Miller of 101 Ranch, Bliss, Okla., shipped up some Brahman animals that gave the matadors and toreadors a lively time while they were in the ring.

The exhibitors of Holsteins were: Mark Abilgaard, Mulvane, Kans.; George Young, Manhattan, Kans.; C. L. Sommer, Wichita, Kans.; C. L. Goodin, Derby, Kans. State Training School, Winfield, Kans.; Arthur Moss, Leavenworth, Kans.; Modern Woodman of America Sanitorium, Woodmen, Colo.; Arkansas Valley Sugar Beet and Irrigated Land Co., Holly, Colo.; C. W. McCoy, Valley Falls, Kans.; W. H. Mott, Herrington, Kans.; B. R. Gosney, Mulvane, Kans.; Geo. B. Appleton, Mulvane, Kans.; A. L. Howard, Mulvane, Kans.; J. C. Dulaney, Winfield, Kans.; Chas. P. High, Derby, Kans.; O. G. High, Derby, Kans.; A. C. Cline, Rose Hill, Kans.

The Holstein awards were: Bulls, three years and over: 1st, George Young on U. S. Korndyke Homestead Segis; 2d, Abilgaard on King Genista Homestead; 3d, Somers on King Rachael Cewina Homestead; 4th, Arthur Moss on King Aaggie Pontiac; 5th, Cook on Canary Butter Boy King;

Bull, two years and under three: 1st, Modern Woodman on King Pontiac Parthena Champion; 2d, Arkansas Valley Sugar Beet Co., on Avoca Lodge King Johanna;

Bull, one year and under two: 1st, Arkansas Valley Sugar Beet Co., on Paramity Rag Apple De Kol;

Senior bull calf: 1st, Modern Woodmen, on Wonderaff Chiron Pontiac Tempest; 2d, B. R. Gosney on unnamed; 3d, A. V. S. B. Co. on Paramity Johanna Posch; 4th, C. L. Goodin on Goodin Canary Mead.

Junior bull calf: 1st, State Training School on King Korndyke; 2d, W. H. Mott on Gloria Korndyke Butter Boy;

Aged cow: 1st, Modern Woodmen on Zwingara Segis Clothilde Mantel; 2d, Sommer Aaggie Clothilde Parathena; 3d, Arkansas Valley Sugar Beet Co. on Pioneer Oakes Korndyke Mantel; 4th, Appleman on Lettie De Kol Clothilde.

Cow three years, under four: 1st, Young on Lady Lockhart

Colantha, Abilgaard on Zwingara Clothilde Creamelle; 3d, Modern Woodmen on Kansas Star Cora; Appleman on Lady Paramity Maple Crest Zuiderzee.

Two-year-olds: 1st, Appleman on G. B. A. Parthenia Katy; 2d, Mott & Branch on Queen Fobes Pontiac; 3d, Modern Woodmen on Kansas Star Lady Bonheur 2d; 4th, Arkansas Sugar Beet Co. on Paramity Rag Apple Mercedes; 5th, Somers on Rago Boutsje Molly Fobes.

Senior Yearlings: 1st, Appleman on G. B. A. Mutual Clothilde; 2d, Gosney on Segis Pontiac Wayne; 3d, O. G. High, on Ruth Oakhurst Mead; 4th, Arkansas Valley Sugar Beet Co. on Paramity De Kol Augusta; 5th, Young on Lady Volga Johanna.

Junior yearlings: 1st, Arkansas Valley Sugar Beet Co. on Paramity Korndyke Ormsby 3d; Modern Woodmen on Woodcraft Changeling Johanna; 3d, Gosney on K. P. B. Pretty Bess.

Senior calves: 1st, and 4th, Mott & Branch on Gloria Watson Pontiac Butter Girl and Gloria Midnite Watson; 2d and 3d, Modern Woodmen on Woodcraft Johanna Changeling and Woodcraft Lady Flora Pontiac; 5th, Arkansas Valley Sugar Beet Co. on Paramity Johanna De Kol.

Junior calves: 1st, Appleman on unnamed, (Junior champion) 2d, Arkansas Valley Sugar Beet Co. on Paramity Pontiac Shadeland; 3d, Modern Woodmen, Woodcraft Changeling Pontiac; 4th, Young on unnamed; 5th, Al Howard on unnamed.

Exhibitors' herds: 1st, Modern Woodmen; 2d, Appleman; 3d, Arkansas Valley Sugar Beet Co.

Breeders' Young herd: 1st, Arkansas Valley Sugar Beet Co.; 2d, Modern Woodmen.

Calf herds: 1st, Mott & Branch; 2d, Modern Woodmen; 3d, Arkansas Valley Sugar Beet Co.; 4th, Appleman.

Get of Sire: 1st, Appleman on King Segis Aaggie Clothilde; 2d, Arkansas Valley Sugar Beet Co. on Paramity Rag Apple Korndyke; 3d, Appleman on King Mutual Katy; 4th, Young on Maid Henry Pontiac De Kol.

Produce of cow: 1st, Abilgaard; 2d and 3d, Young.

PENNSYLVANIA DIRECTORS MEET

The directors of the Pennsylvania Federation of Holstein-Friesian Clubs met in parlor D of the Penn-Harris hotel, Harrisburg, on March 1st to lay out plans for the ensuing year. Those present were: Dr. L. M. Thompson, Montrose, H. A. Robertson, York, James M. Paxton, Houston, Wm. J. Fairchild, Berwick, John H. Shirk, Lancaster, H. H. Blair, Williamsport, Sam T. Witmer, Union Deposit, Ivo V. Otto, Carlisle. W. Hugh Jones of South Montrose secretary; Frank Keene, West Chester, treasurer; Allen N. Crissey, extension specialist for the district of Pennsylvania, New Jersey and Delaware, were also present.

In the absence of president Bell and vice-president Bennett, Dr. L. M. Thompson was made chairman of the meeting. A standing auditing committee was appointed to go over the bills and accounts of the association just before the next annual meeting.

The directors discussed calf club work in Pennsylvania and Wm. J. Fairchild explained the methods in use in Columbia county where the breeders have been very successful in calf club enterprises. A committee will be appointed to canvass the possibilities of sending a Pennsylvania show herd to the National Dairy Show which will be held in Syracuse next October and also to ascertain the possibility of sending a representative Pennsylvania consignment to the next National sale. It was voted that the federation should not purchase any of the Holstein billboards which the Extension Department of the Holstein-Friesian association is advertising, on the grounds that it was a matter for the local clubs. Mr. Crissey made a report of his tour of the state and said that he had been in about 20 counties already.

The directors elected as executive committee, H. C. Reinhold, H. H. Blair, Dr. L. M. Thompson and H. A. Robertson. The president, treasurer and secretary are members of this committee by virtue of their office. The meeting went on record as favoring the Voigt Filled Milk Bill, which was that day before Congress, and telegrams to this effect were sent both of the Pennsylvania senators in Washington. The directors also went on record as being in favor of the Ice Cream and

Filled Milk Bills now before the Pennsylvania Legislature. They also favored the Tuberculosis Indemnity Deficiency Bill and Mr. Paxton moved that resolutions to that effect be drawn by the president and secretary and sent to the Governor and to members of both houses.

It was announced that the bill which would allow the dog tax receipts to be used to pay cattle indemnities was likely to pass. It is estimated that this will realize a sum of \$580,000 if the receipts from the cities are included, but that if it is decided to let the cities have the money realized from their share of the taxes that a sum of \$287,000 coming from the rural districts will be available.

Letters to the Editor

February 27, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Gentlemen: I have been receiving sample copies of THE BREEDER AND DAIRYMAN for some time, and I would be very ungrateful if I did not so much as to acknowledge my appreciation of the same, but as I am no longer breeding Holsteins I am not directly interested.

I joined the Association in 1910. At that time the transfer fees were 25 cents and the Herd Book free. The Association accumulated \$300,000.00 reserve fund and the breed was forging to the front as no other breed ever did before or since, but from the time the bunch made an attack on the Secretary of the Association some six years ago, and the Association got in the hands of financiers (Money Grabbers) there was a decline in the business of breeding Holstein cattle. Fees were boosted until the small breeder was frozen out, and I was one of them, quitting in 1920; don't have a Holstein on the place now. The Black and White Record of New York has been one of the trouble makers from the start. I assure you that I appreciate everything that you are doing in order to set the Association right and at any time my vote is needed to help, I shall be only too glad to send you my proxy (if again we are allowed to vote our choice).

I was very much interested in the decision of the Supreme Court, and this I would not have had the pleasure of reading if I had not received your paper. Yours,

March 1, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Gentlemen: We congratulate you upon your perseverance and success in the fight against illegal control of the Association. Very truly yours,

NEW YORK BREEDER.

BRENTWOOD FARM

ABINGTON, PA., February 28, 1923.

TO THE EDITOR, HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dear Sir: My attention has been called to a paragraph in one of your recent editorial articles, in which it is inferred that I am not in sympathy with the present Board of Directors of the Holstein-Friesian Association of America. I should like very much, to know where you derived this information, as it is entirely wrong.

The only reason for tendering my resignation as a director, was, that I found it impossible to give the necessary time to this important position.

I hope that you will correct the impression given in the article referred to above, by publishing this letter in an early issue of your journal. Yours very truly,

(Signed) W. G. DAVIDSON.

Our classified advertising page is full of bargains. Why not take advantage of some of them?

Cow Testing Association Reports

TESTING IN STANISLAUS COUNTY

No less than 2,665 cows were tested during January in Stanislaus County, California, reports the supervisor, M. L. Gorow. The average for the entire association was 27.3 lb. fat, 713 lb. milk and 292 cows produced over 40 lb. fat in the month.

Black and white herds made a good showing, especially the larger ones. Kaiser Brothers' grade Holstein herd of 59 cows averaged 35.3 lb. fat, 970 lb. milk. The Alvernaz Co. herd of 48 Holsteins averaged 30.2 lb. fat, 820 lb. milk. The herd owned by Gonsalves Co., consisting of 74 grade Holsteins averaged 29.5 lb. fat, 822 lb. milk and 51 cows owned by Bettencourt Bros. averaged 29.3 lb. fat, 766 lb. milk.

The division consisting of herds between fifteen and forty cows is headed by the fifteen cow dairy of B. L. Hayden. These registered and grade Holsteins averaged 43.2 lb. fat, 1,055 lb. milk, while the twenty-one registered Holsteins owned by E. W. Looney averaged 39 lb. fat, 1,189 lb. milk. Of the twenty-one cows in this herd no less than twelve exceeded 40 lb. fat in the month. A herd of twenty-three grade Holsteins owned by Kraugh & Silva is in third position with 35.8 lb. fat, 1,029 lb. milk.

In the smaller herd division, registered Holsteins owned by J. A. Pelanda is first with an average of 46.5 lb. fat, 1,242 lb. milk for nine cows. A grade Jersey herd is second and a grade Guernsey herd third.

The list of the ten highest producers contain the names of eight black and white cows but the leading place was taken by the registered Jersey, Ada, with 71.3 lb. fat, 1,190 lb. milk. A grade Holstein, owned by Soares & Freitas was second with 70.3 lb. fat, 1,714 lb. milk and a grade Jersey is in third position although she beats out, Maggie, a grade Holstein, owned by F. Schneider by only 1-10 lb. fat. Maggie's figures being 68.6 lb. Grade Holsteins are in the next three positions, then comes a registered Holstein of the Looney herd, then another grade Holstein, a registered Holstein owned by Kaiser Brothers, completes the ten.

NEW YORK STATE TESTING NEWS

The News Letter issued by G. W. Tailby, Jr., Supervisor of the Dairy Improvement Associations of New York State recommend that no change be made in the general grain mixture as suggested by him in December which is as follows: 200 lb. wheat bran, 400 lb. ground oats, 400 lb. hominy, 600 lb. gluten feed, 200 lb. cottonseed meal 43%, 200 lb. linseed oil meal.

This mixture has an approximate analysis of 21% protein, 9% fiber and 5%

fat. This forms a balanced ration when combined with good corn silage and mixed hay containing one-half clover. If the roughage is not of this type, some changes should be made in order to properly balance the ration. Mr. Tailby goes on to say that at present prices cane molasses is a cheap and palatable addition to farm rations.

Aggie, the splendid grade Holstein owned by Sam Barber, of Scottsburg, again leads the cows in the state for production in November, she making 91.8 lb. fat, 1,995 lb. milk in the month. Second is another member of the Barber herd, a three-year-old named Babe that in 27 days produced 87.7 lb. fat and 1,827.7 lb. milk. A registered Holstein two-year-old owned by J. M. Hoff, of Hemlock, is third with 74.5 lb. fat and 1,146 lb. milk and is followed by an eleven-year-old Holstein owned by Dale Bros., of Gasport, with 72.2 lb. fat, 1,950 lb. milk.

The reports for December received up-to-date of publication, which is January 25, show that a purebred Holstein owned by J. P. Harbeck of the Allegheny Association leads with 3,174 lb. milk and 88.9 lb. fat. The December report had not been received from the Livonia Association. Holsteins, purebreds and grade held their usual preeminence in the associations reporting.

SET NEW RECORDS

In the Tulare Cow Testing Association the herd of registered Holsteins owned by F. S. Borrer & Son, of Tipton, California, established eight new high records for the association in individuals and groups during the month of December, 1922. They made a new high record for both fat and milk for an individual cow; highest five cows for milk with an average of 2,430 lb.; the highest five cows for fat with an average of 2,079 lb.; highest ten cows for milk with an average of 70.78 lb.; highest herd average for milk, 1,543 lb., and highest herd average for fat, 53 lb.

BREED SHOWS WELL

A grade Holstein owned by G. C. Young led the Central Lamoille, Vermont, Association for January with a fat production of 72.8 lb. from 1,348 lb. milk. A Jersey was second and another Young cow was third. The highest milk producer was a registered Holstein, owned by A. E. Ricketson, with 1,467 lb.

PUSSY WILLOW

Pussy Willow, a Holstein owned by Tracy Phillips, of Buckhannon, led the Central West Virginia Association for the month of January. She produced 2,030 lb. milk. Mr. Phillips had seven of his fifteen cows make the honor list.

DEMAND GREATER THAN SUPPLY

There are three cow-testing associations in Kane County, Ill., but during January the highest producing herd in the whole county was the well-known Milky Vale Herd, owned by Louis H. Klaas of Maple Park. The average of this herd was 1,303 lb. milk and 41 lb. fat, nine cows daily filling seven 8-gallon cans. Eight others, either heifers in their first lactation period or cows that had been milking since last March, filled four cans. Three of the Milky Vale cows were on the list of the ten highest producers, one of these cows produced thirty-six 8-gallon cans of milk in the 31 days of January. Another cow finished a lactation period of ten and a half months with 15,000 lb. milk to her credit while another produced 50 lb. butterfat in her ninth lactation month when she really should be dry, as she is due soon to freshen. Is it any wonder that Mr. Klaas can say what so few purebred Holstein breeders are able to say nowadays, "I am getting more demand for stock than I can supply"?

HOLSTEINS SHINE IN ILLINOIS

The report of association testing in Illinois during the month of January is a wonderful advertisement of the black and white breed. There were 20 associations recorded. In seven instances, the leader was a grade Holstein and in eight instances a purebred Holstein.

The list of high-producing herds in each association even more strongly brings out our opening statement. Sixteen of the associations report that their best producing herd consists of black and white cows, purebreds or grades or containing both. One association is headed by a grade Jersey and Guernsey herd and three associations report their leading herd as of mixed breeding.

The highest average production herd in the state consists of seven purebred and grade Holsteins owned by J. R. Wells of McHenry County. They averaged 1,392 lb. milk, 50.3 lb. fat. Seven purebred Holsteins owned by Frank T. Fowler of Lake County, averaged 1,364 lb. milk and exactly 49 lb. fat. Thirteen purebred and grade Holsteins owned by Chas. Reed in the Ogle County Association averaged 1,414 lb. milk, 47.3 lb. fat. A grade Jersey and Guernsey herd is fourth with an average of 47.1 lb. fat while grade Holstein herds stand in fifth and sixth positions.

The highest producing cow in the state was a purebred Holstein owned by Frank T. Fowler with 2,685 lb. milk, 96.6 lb. fat. Purebred Holsteins from the Rock River Farms, Byron, were second and third with 2,626 lb. milk, 89.3 lb.

fat and 2,127 lb. milk, 85.1 lb. fat respectively. Peter Olesen of DuPage County, is fourth with 1,968 lb. milk, 84.6 lb. fat while in fifth place is another purebred Holstein owned by Eugene Nagel of Madison County with 2,378 lb. milk, 83.2 lb. fat. Grade Holsteins occupy the next two places, then comes a purebred Holstein, then a purebred Guernsey followed by another registered black and white cow. The first five places are filled by purebred Holsteins and the first eight by black and white cows.

WISCONSIN TESTING

During the 30 days ending February 20, 325 cows were tested in the Chili Testing Association. Of this number, 43 made over 40 lb. of butterfat, 11 over 50 lb. and five over 60 lb. Test supervisor, Jos. W. Reichert, reports that the high herd averaged 1,212 lb. milk and 43.1 lb. butterfat. It consisted of high-grade Holsteins and was owned by Wm. Sanger.

Eight pure bred Holsteins, owned by R. Zimmerman led the Horicon Association for January production with an average of 61.1 lb. of butterfat. There were 302 cows tested and 96 that each produced more than 40 lb. of fat.

Windsor, a registered Holstein owned by Frank Draeb, headed the 703 cows of the Kewaunee Association by producing 66.2 lb. of fat during January. The Frank Prochnow herd, consisting of grade and purebred Holsteins, took herd honors with the average of 1,171 lb. milk and 41 lb. butterfat. There were five cows that each made over 60 lb. of butterfat in the month and 16 over 50 lb.

REYNOLDS HERD PRODUCES

During January the supervisor, Paul J. Stonebraker, tested 262 cows belonging to 27 herds enrolled in the Volant Association which operates in Lawrence County, Pa. Of this number 62 cows produced over 40 lb. butterfat and 24 over 50 lb. while 12 different cows produced over 1,200 lb. milk. The ten highest milk producers averaged 1,636.6 lb. and the ten highest fat producers averaged 64.55 lb.

The leader was a purebred Holstein owned by D. B. Reynolds, she making 2,253 lb. milk, 78.9 lb. fat. Second to her was a purebred Jersey with 915 lb. milk, 75.9 lb. fat. Mr. Reynolds had 16 cows that each made over 30 lb. fat, ten exceeded 40 lb. and three of these exceeded 60 lb.

HESSE'S HOLSTEIN LED

A purebred Holstein with the production of 1,655 lb. milk, 69.1 lb. fat, headed the Pope County, Minn., Association for the month of January. There were 62 cows that produced 40 or more pounds of butterfat in the 280 tested. The average milk production was 744 lb., and the average fat 29.7 lb. Ernest Hesse owned the leader.

GUERNSEY LEADS SOUTH CAROLINA

For a number of months the BREEDER AND DAIRYMAN has been reporting the results of testing in South Carolina, but this is the first month that we have to chronicle that the leader is not a Holstein. The January news letter shows that a registered Guernsey produced the most fat, 83.9 lb. in the month, surpassing Cedarvale Alice Korndyke Posch, owned by V. M. Montgomery, of Spartanburg, with 80.3 lb from 2,196.9 lb. milk. Polly Fellingla Posch, another member of the Montgomery herd and a senior three-year-old, is third with 75.4 lb. fat from 2,044 lb. milk. Mr. Montgomery has fourteen cows that each made 40 lb. or more fat in the month. J. T. Willard, also of Spartanburg, has four, and there are two two-year-olds, owned by the Clemson College of Agriculture that have exceeded the 40 lb. mark.

During the month 83 cows of all breeds were tested, of which 53 made the honor roll. There were 30 Holsteins tested, of which 18 made 40 lb. or more butterfat in the month.

A PERSISTENT PRODUCER

The January report of the McLean County, Illinois, Testing Association, shows the highest production of any month since the association was organized, June, 1921. The highest producing cow is a grade Holstein, Betsy, owned by Guy Hilton, she producing 77.1 lb. butterfat. Last month she also held first place, and her average milk production for January is only two pounds less than her December production, while her total butterfat production for the month is only 2.1 lb. less than for the previous month. The Hilton herd, consisting of 22 grade Holsteins, averaged 990 lb. milk, 38.2 lb. butterfat, and ranked fifth in order of production.

HOLSTEIN LEADS FIRST MONTH

The first monthly report of the Hamilton County, Indiana Testing Association was published February 14th, and shows that during the month 534 cows were tested with an average production of 602 lb. milk, 19.8 lb. fat.

The highest producer was a grade Holstein owned by Dr. T. Stout, who was also owner of the cow holding third position.

A NICE LITTLE HERD

The highest producing herd in the Waterbury-Waitsfield, Vermont, Association for January, consisted of eight registered Holsteins with an average production of 46.9 lb. fat, 1,585 lb. milk. They are owned by the Lake Mansfield Trout Club. One of these cows is third highest with 58.3 lb. fat from 1,989 lb. milk, and another is fourth with 57.9 lb. fat from 2,443 lb. milk. A grade Holstein is in second place with 58.5 lb. fat and a grade Jersey is in first place with 60.3 lb. fat.

DIVIDED HONORS

Five years ago the Johnstown Cow Testing Association was started with a membership of sixteen herds containing 214 cows, now it includes nearly all the best herds in northern Colorado. The fifth annual report shows that the leading herd for milk production is owned by Crowley and Letford, and averaged 12,567 lb. milk. They were closely followed by Whowell & Polley, with seventeen registered Holsteins that averaged 12,356 lb. The Whowell & Polley herd led for fat production with an average of 434.6 lb., while the Crowley & Letford herd was second with 423.2 lb.

The leading cow for fat production is South Onondaga Favorite, owned by Whowell & Polley, with 686 lb. She is closely followed by Ruth Battels Pietertje 3d, also of the Whowell & Polley herd, with 656.7 lb. The leading milk producer is a grade Holstein owned by C. W. Henry, with 20,331 lb. Johanna Rue Wayne 3d, of the Whowell & Polley herd, was second with 19,661 lb., and Ruth Battels Pietertje 3d was third with 19,211 lb.

KOSSUTH ASSOCIATION REORGANIZED

The Kossuth County, Iowa, Testing Association has finished a successful year and was reorganized with twenty-six members. Their old tester, James F. Lage, has been retained for another year.

During the past year 430 cows in the twenty-six herds produced 2,533,167 lb. milk, 105,627.8 lb. fat, at a fat cost of 16.9c. a pound and 70.5c. for each hundred pounds of milk. The three cows standing highest produced more than 527 lb. fat, 36 others exceeding 400 lb.

A. A. Dreyer with six purebred Holsteins of which five were on test averaged 422.8 lb. fat, 10,945 lb. milk. C. F. Laage & Son, of Fenton, had an average of 354.2 lb. fat, 9,124 lb. milk for their purebred Holsteins.

PUREBRED HOLSTEIN FIRST

The January report of the Pioneer Testing Association shows that 220 cows were tested during the month, and the average production was 33.9 lb. butterfat, 788.4 lb. milk. The highest cow is the registered Holstein, Korndyke Doede De Kol, owned by A. H. Jagels, of Buhl, Idaho. She produced 2,132.9 lb. milk, 89.6 lb. fat. A Jersey was second and a Holstein third. Mr. Jagels had six Holsteins that averaged 1,204.3 lb. milk, 42.6 lb. fat. This was the highest herd under fifteen cows.

JERSEY SETS NEW WISCONSIN RECORD

Beaut Fern, of Spring Brook, a nine-year-old registered Jersey cow owned by J. C. Mathews, Marion, Wis., and enrolled in the Leopold-Tilleda-Marion Testing Association, has established a new high record for a cow enrolled in a Wisconsin Testing Association by producing 13,130 lb. milk, 844.1 lb. butterfat in 329 days.

GOOD SHOWING ON TWO MILKINGS

Two hundred and fifty cows were tested in the Knox County Testing Association and they averaged 625 lb. milk, 27.1 lb. fat. The leader for fat and milk is a grade Holstein, she producing 82.8 lb. butterfat, 1,801 lb. milk in her third lactation method. She was milked only twice a day and received an ordinary Illinois farm dairy ration, and is owned by Reed and Day, Aledo, Ill.

Purebred Holsteins owned by Zena S. Crane, of Oneida, carried off the highest herd honors, the thirteen cows averaging 1,146 lb. milk, 38.6 lb. butterfat.

DOTY HERD HIGH

An average of 856 lb. milk, 29.2 lb. butterfat is shown for the 220 cows enrolled in the Kane County No. 3 Testing Association during January. The highest herd production was obtained by W. E. Doty, Hampshire, with sixteen purebred Holsteins, which averaged 1,218 lb. milk, 37.8 lb. fat. This herd is under Federal supervision. The L. F. Wettering herd, consisting of 32 Holsteins, was in second place, with an average of 1,153 lb. milk, 36.9 lb. fat in the month. Forty lb. fat was produced by 75 cows, while 23 cows exceeded 50 lb.

STODDARD AGAIN LEADS

For the third successive month, the grade Holstein herd owned by G. C. Stoddard, of Jesup, Iowa, led the Wapsie Valley Testing Association. Sayles, one of his cows, produced 63.7 lb. butterfat; five others in this herd were included in the list of ten highest producers. The average cost of feed per cow in the association was \$6.41 for the month of January. The average cost of butter was 23c. and the average cost of milk was 92c. for 100 lb.

SOON TO FINISH SECOND YEAR

The Testing Association operating in Harding County, Iowa, will soon complete its second year and some interesting figures are promised. The Holstein herd of W. H. Dreier, of Iowa Falls, was high for January with an average of 40.9 lb. fat. Holstein herds were second and third. The high cow was a grade Holstein of the Dreier herd, she producing 71.5 lb. fat in the month.

GOOD HOLSTEINS AT THE PENITENTIARY

A herd of 34 Holstein-Friesians, owned by the Walla Walla Penitentiary, in care of Warden John W. Pace, averaged 989.78 lb. milk, 35.98 lb. fat during January, leading the local association for the second successive month. The division for small herds was led by Chas. Baker's Holstein cows, which averaged 962.25 lb. milk, 43.05 lb. fat.

HE HAS LIGHT FEED BILL

Fed on barley pasture and alfalfa hay, twenty-five cows owned by J. P. Bayerque, of El Centro, California, averaged 40.4 lb. butterfat in the Imperial County Testing Association. A registered Holstein owned by A. H. Smithson, of Alamo, led the association with 76.7 butterfat. She was fed alfalfa pasture and hay and silage and a grain ration of barley, bran and cottonseed.

A PRODUCING QUARTETTE

During January 168 cows were tested in the Hancock County, Illinois, Testing Association, and averaged 576.4 lb. milk, 27.5 lb. fat. The average cost of production of 100 lb. milk was \$1.22. Four purebred Holsteins led with an average of 1,067 lb. milk, 39.6 lb. fat.

Give some people an inch and they will proceed to divide it up into building lots.

CANADIAN TESTING

During January reports of official tests of 64 cows and heifers were accepted for entry in the Record of Merit. The mature cow, Orndyke Pietertje Korndyke 2d, owned by R. R. Stevens, Bowmanville, Ont., leads with a record of 33.61 lb. butter, 715 lb. milk. This is all the more remarkable as it follows the making of her world's record of 24,119 lb. milk, 1,122.50 lb. butter in the 305-day division.

De Kol Plus Segis with 467.8 lb. milk, 23.86 lb. butter heads the senior four-year-old class. She is owned by D. Raymond, Vaudreuil, Que. The Hardy herd furnishes the leaders of the junior and senior three-year-old classes. May Sylvia Pietje 2d is credited with a seven-day production of 567 lb. milk, 27.62 lb. butter and 4,925.5 lb. milk, 215.50 lb. butter in sixty days, calving at 4 years, 17 days. Eco-Sylv Belle Model Pietje has the very large records of 640.7 lb. milk, 34.77 lb. butter in seven days, 2,510.3 lb. milk, 134.25 lb. butter in thirty days, and 4,829.6 lb. milk, 236.81 lb. butter in sixty days.

Lulu Segis Car Born, calving at three years, eight months, produced 625.1 lb. milk, 23.57 lb. butter in seven days. She is owned by Giles Martin & Son, Springfield, Ont. The senior two-year-old class is headed by another Hardy heifer, Eco-Sylv Pauline Queen, who produced 514.1 lb. milk, 30.37 lb. butter in seven days, 2,188.8 lb. milk, 121.66 lb. butter in thirty days, and 4,143.1 lb. milk, 221.90 lb. butter in sixty days. The junior two-year class is led by Clovermead Beauty, owned by J. J. Fox of Guelph, Ont., with 430.2 lb. milk, 17.92 lb. fat.

The official figures for the year record made by Agassiz Segis May Echo are 30,886 lb. milk, 1,681.25 lb. butter, which is slightly more than the figures previously given. As our readers probably know, her title is vested in the Director of Experimental Farms, Agassiz, British Columbia.

The only four-year-old reported is Beauty Wayne Colantha, 13,004 lb. milk, 518.75 lb. butter. She is owned by Jacob Mogk, Tavistock, Ont. The two-year class is headed by Pontiac Atlas Francey 4th, with 17,258 lb. milk, 693.75 lb. butter, her owner being J. J. Fox, Guelph, Ont. Grace Fayne Aaggie, the famous show cow and producer of the Ottawa Experimental Farms is credited with a record of 1,040 lb. butter from 21,473 lb. milk in 305 days. Only three mature cows are reported in this division, with one three-year-old and only one in the two-year-old class. Gloriana Artis who is really only a yearling. She is credited with 12,689 lb. milk, 533.75 lb. butter and is owned by John N. Evans of Duncan's Station, B. C.

MINNESOTA ASSOCIATION WORK

Parkside Johanna Parthenia 2d, a purebred Holstein owned by Joe Schwager of Altura, was high cow in the Western Winona County Association for the month of December. She produced 68.11 lb. fat. Second was Bell 1st, a purebred

Holstein, owned by Alvin Simon, who also owned the high herd. These nine cows averaged 50.78 lb. butterfat for the month.

Nineteen herds in the West Dakota County Association produced to average 25 lb. or more butterfat during December. Eighty-one produced 40 lb. or more fat. The average of the 375 cows in the 27 different herds was 851 lb. milk, 30.3 lb. fat. The leader of this association was a grade Holstein, owned by Smith & Holley with 2,151 lb. milk, 90.3 lb. fat. Smith & Holley also owned the high herd, the average being 1,570 lb. milk, 54.8 lb. fat.

Twenty-four herds consisting of 281 cows were tested in the Brown and Watonwan Association during the month of December. Thirty-seven of these cows produced more than 40 lb. fat; thirteen of the herds averaged over 25 lb. fat. The average of all the cows in the association was 678 lb. milk, 25.66 lb. butterfat. Twenty-two herds are headed by purebred sires.

The leader of this association is a grade Holstein owned by T. S. Merkel, her production being 1,491 lb. milk containing 58.10 lb. fat.

HOLSTEIN WINS MISSOURI TROPHY

For the first time in the history of the Missouri State Dairy Association, a Holstein cow has won the association's trophy, which is a cup awarded annually to the cow that produces the highest official butterfat record in the previous year. In order to gain permanent possession it is necessary to win three years in succession. Two previous years it was won by the well-known Jersey establishment, Longview Farm.

The name of the Holstein winner is Fobes Homestead Rauwerd. She is a four-year-old, and during 1922 closed a record of 21,683.6 lb. milk and 817.31 lb. fat, or 1,021.6 lb. butter.

At the business meeting, C. N. Walbridge of Independence, was elected a director and with this exception, all the officers and directors were reelected. They are: President, George Hine, Marshfield; Vice-President, J. E. Jones, Liberty; Secretary-Treasurer, E. M. Harmon, Columbia.

MADE NICE RECORD

Bess Piebe Fayne Ormsby, owned by Adams & Son of Racine, Wis. completed a record of 34.57 lb. butter in the first seven days of her official test. She freshened at three years, seven months old and this is her second lactation period. As a junior two-year-old she produced 20.21 lb. butter in seven days and in test for the year she made 761 lb. butter from 17,822 lb. milk.

She finished this year in October and freshened again January 12th. She is the eldest daughter of Sir Bess Piebe Ormsby, the Adams herdsire. A number of other good records were completed in this herd.

THIRTY POUNDS AT FIRST ATTEMPT

Alicia Beets Segis Lyons No. 458758 owned by Lee Purdy, Ft. Atkinson, Wis. has an official seven day butter record of 30.23 lb., 514.8 lb. milk average test being 4.7%. This record is all the more creditable because she is the first cow Mr. Purdy has tested. To obtain a 30-lb. record at the first attempt is a showing that reflects a great deal of credit on the cow and on her caretaker.

Alicia was born Dec. 9, 1917 and so now is five years old and is a daughter of King Beets Lyons 4th and Calista Beets Segis, who as a junior two-year-

ALICIA BEETS SEGIS LYONS
30.23 lb. butter, 514.8 lb. milk in seven days.
Owned and tested by Lee Purdy, Ft. Atkinson, Wis.

old, produced 17.85 lb. butter in a week and is a granddaughter of King Segis Beets from a 20 lb. daughter of the A. R. O. cow Piebe Pauline De Kol. King Beets Lyons 4th is from Lady Ivaloo De Kol Korndyke 23.35 lb. butter and was sired by King Beets Lyons, a son of King Lyons and Segis Beets Girl 32.6 lb. a daughter of King Segis.

It can be seen that blood lines represented in the pedigree of Alicia Beets Segis Lyons are noted for production. Mr. Purdy is fortunate in owning two daughters of this 30 lb. cow.

One of the principal things a young man learns in college is how little the "old man" knows.

WILL GET BETTER OPPORTUNITY

Sir Topsy Pontiac Segis, the Silverdell herdsire has been sold by Paul Freeman to the Missouri State Sanitarium at Mount Vernon. Silverdell farm is located near Joplin, Mo., and exhibits from this herd created quite a sensation at the Cherokee County Fair and the Southwest Missouri Fair last fall. The first prize young herd at both events were sired by this bull.

In his new home, Sir Topsy Pontiac Segis will have a much greater opportunity for the Sanitarium has a herd of sixty females while the Silverdell herd numbers only sixteen.

THE VALUE OF REGISTRY PAPERS

B. W. Reeve, of Tacoma, Washington, brought suit in the Superior Court, his complaint being that he purchased three registered Holstein cattle from L. J. Pettie and J. A. Anderson, that he never received any registration papers, and that there was a difference of \$660 between the value of the animals registered or unregistered. Judge E. M. Card awarded him \$300.

WHAT A CRUEL WORLD!

"I suppose the young man thought he would live with his wife's parents?"

"That's what he thought, but her father was too smart for him."

"What did he do?"

"Before they got back from the honeymoon he sold the old home place and moved to a hotel."

Following a recent small earthquake which did a little damage in a California town, five-year-old Jimmy was sent by his fond parents to a distant uncle's home. Three days later they received this wire: "Am returning your boy. Send me the earthquake."

CATTLE DECREASED IN VALUE DURING 1922

The new Pennsylvania Secretary of Agriculture, Frank P. Willits, has had L. H. Wible, statistician of his department make a report on the livestock on the farms in the state. Mr. Wible's report shows a slight decrease in value of horses and mules, dairy and other cattle, but an increase in the average value of sheep and swine.

He reports that there has been no apparent change in the number of dairy cows on Pennsylvania farms during the year, but that the number of other cattle has declined about 1%. He estimates that in January 1st of this year, there were 862,467 cows compared with 862,868 a year ago, and he estimates the present value to be \$49,861,263.45 compared with \$50,946,852.00 on January 1, 1922. The average price per head is placed at \$57.80, an average decrease of \$1.20, as the figures a year ago were exactly \$59.00. The census report shows that in January, 1920, there were 885,855 two years old and over on Pennsylvania dairy farms.

Cattle, other than cows show a slight decrease both in number and value. The figures for this year are 607,140 compared with 614,372 a year ago, while the average price is estimated at \$31.70 compared with the 1922 value of \$32.00.

THE AGNES SISTERS

The boys in the California College of Agriculture make a regular pet of California Agnes Colantha. This cow was born on the University farm, April 16, 1915. She dropped her first calf October 7, 1917 and since that time her milk has been weighed and tested. During the four years she has produced 79,063 lb. milk containing 2,828 lb. butterfat. On December 22, 1922, she completed a year record of 26,250 lb. milk, 981 lb. butterfat or 1,227 lb. butter. She has two full sisters in the University herd that have made splendid records.

This is Cornucopia Plum Johanna

1,056.78 lb. butter in a year, the maternal granddam of my junior herdsire, ORIGIN SIR NAPOL CORNUCOPIA. She has two 1,000-lb.-year record daughters besides his dam, whose 731.6 lb. butter in 10 months as a senior four-year-old is a Pennsylvania State Record.

Herd under the Accredited Plan

HAS A HERD TO BE PROUD OF

At the Brentwood, sale last spring, W. S. Brown of Central Village, Connecticut, purchased for \$775, the heifer Empress Prilly, 576594, then just 24 months old. This heifer was a granddaughter of King Segis Alcartra Prilly, and was carrying calf by this same great sire, whose daughters have made such splendid records and whose offspring possess an individuality that is always admired. The sire of Empress Prilly is King Abbecker Johanna Segis, whose dam is the wonderful cow, Adirondac Wietske Dairy Maid, whom many believe to be the world's greatest cow. She averaged 1,357.65 lb. butter and over 33,000 lb. milk a year for two successive years.

Mr. Brown already has a very nice herd, headed by Hollywood Glen Alex Segis. This bull is by Judge Segis from Glen Alex Queen De Kol, 42.36 lb. butter in seven days, as a senior two-year-old, the world champion of her class. She is one of the good daughters of Tietje Queen De Kol, another 42 lb. cow, so that Holly Glen Alex Segis is from a 42 lb. two-year-old daughter of a 42 lb. dam. In the Brown herd there are a number of promising daughters of this young sire, and some 30 head bred to him will freshen before spring. Mr. Brown, who is proprietor of The Attawaugan of Danielson, Connecticut, takes a lot of pride in his herd and believes that he owns a number of animals that are as good as any in the world. We are inclined to agree with him.

Population of this world is estimated at 1,702,000,000 all of whom are grouchy at breakfast.

March 8—Wyalusing, Pa., C. W. Newman Dispersal, R. Austin Backus, Mgr.
March 9—Hagerstown, Md., R. A. Eldridge Sale.
March 10—South Lyon, Mich., Musolf Bros. Sale, Farm No. 3.
March 13—Norton, Kans., Northwest Kansas Breeders' Sale, W. H. Mott, Mgr.
March 14—Hornell, N. Y., Wolfspring Herd Dispersal, E. M. Hastings, Sale Director.
March 15—Montoursville, Pa., S. L. J. Reese Sale.
March 15—Muncy, Pa., J. R. Glass Dispersal, R. Austin Backus, Mgr.
March 13-14—Fond du Lac, Wis., W. F. Braatz Dispersal.
March 13-14—Fond du Lac, Wis., Quality Sale, Holstein Breeders Sale Co., S. H. Bird, Mgr., So. Byron, Wis.
March 14—Sunbury, Pa., J. Harris Lenker Dispersal Sale.
March 15—Hollidaysburg, Pa., F. R. McKelvey Dispersal, R. Austin Backus, Mgr.
March 15—Waterloo, Iowa, Iowa Holstein Breeders' Annual Spring Sale.
March 20—Topeka, Kans., Kansas Association Annual State Sale, W. H. Mott, Mgr.
March 20—Topeka, Kans., Glass Dispersal, R. Austin Backus, Mgr.
March 20-21—Fond du Lac, Wis., W. F. Kaschube Dispersal, S. H. Bird, Mgr.
March 21—Fayetteville, Pa., D. H. Yaukey's Sale.
March 22—Wilmington, Del., State Fair Grounds, Fourth Annual Consignment Sale.
March 22—Pipersville, Pa., Levi P. Moyer's Dispersal Sale, W. M. Benninger, Mgr.
March 24—Watsonville, Pa., H. R. Remley's Sale.
March 26—Chambersburg, Pa., Walter Sharpe Sale.
April 3-7—Tulare, Cal., 1923 Guarantee Sale.
April 10—Chippawa, Ont., Llenroc Reduction Sale.
April 17—Ponca, Okla., W. H. England Dispersal, W. H. Mott, Mgr.
April 17-18—Syracuse, N. Y., The 1923 Sale, New York State Fair Grounds, E. M. Hastings, Mgr.
April 25—Wolcott, N. Y., E. Washburn & Son Dispersal, E. M. Hastings, Sale Director.
April 26—Visalia, Cal., Walter F. Mitchell Sale.
April 30—Elkhorn, Wis., Rock County Holstein Breeders' Semi-Annual Sale.
May 1—Jamesville, Wis., Spring Consignment Sale, Waupaca County Breeders, A. B. Rowe, Sec'y.
May 2—Clintonville, Wis., Green County Holstein Breeders' Semi-Annual Sale.
May 2-3—Monroe, Wis., Dane County Holstein Breeders' Semi-Annual Sale.
May 4—Madison, Wis., Holstein Breeders' Sale Co., S. H. Bird, Mgr.
May 7-8—Fond du Lac, Wis., Holstein Breeders' Sale Co., S. H. Bird, Mgr.
May 8-9—Earlville, N. Y., New York Spring Sale, New York Holstein-Friesian Ass'n.
June 4—Mentor, Ohio, Pinery Farms, Annual Sale.
June 7-8—Cleveland, O., National Cooperative Holstein Sale, Ohio Holstein-Friesian Association, Mgrs.
June 8—Norwich, Conn., Plain Hill Farms Annual Sale, The O. S. Peck Co., Mgrs.
June 12—Owatonna, Minn., Taylor & Christgau Sale.
June 14—Thorp, Wis., W. H. Krause Annual Bred Heifer Sale.
Aug. 30—Montrose, Pa., Susquehanna County Breeders' Second Annual Sale, S. E. Gehrig, Mgr.
Oct. 20—New Douglas, Ill., Holstein Breeders' Consignment Sale, S. E. Gehrig, Mgr.
November 5—Elkhorn, Wis., Walworth County Breeders' Fall Sale.
November 12—Elkhorn, Wis., Walworth County Breeders' Bull Sale.

KANSAS FARMERS' WEEK SALE

Fourteen purebred dairy bulls sold on February 6th, during the Kansas College Farm-Home week, brought an average of \$862 and went to thirteen different herds. Only five of the fourteen bulls were more than six months old. The Holstein bulls averaged \$81.75 a head. The highest price was \$167 which the Osawatimie State Hospital paid for a son of Maid Pontiac Henry, 21,767.9 lb. milk, 910.42 lb. butter in a year.

SELLERS & ANDREWS SALE

The Sellers & Andrews herd was sold at Greenville, Ill., February 17th and was attended by a fairly good sized crowd. The highest price was \$295 for a female and \$240 for a bull. The principal purchaser was Oscar Westerheide of New Douglas. The sale was held in a commodious machine-shed which was comfortably heated. The auctioneer was Col. Roy Kessinger of Nokomis, while R. N. Thompson of Cowden, secretary-treasurer of the Illinois Holstein-Friesian Association, explained the pedigrees.

RED RIVER VALLEY SALE

The livestock pavilion at Crookston, Minnesota, was packed, February 8th, when fifty-one head of purebred Holsteins were sold at public auction during the Red River Valley Mid-Winter Show. The fifty-one head averaged \$177. There were 7 bulls that averaged \$116 and 44 females that averaged \$194. The top price was \$480 and was paid for Miss Burke Hartog, consigned by the Dollar Farms at Mentor and purchased by L. J. Ahre, of Lake Park. During the evening session the crowd in the armory listened to an address by Rev. Chas. W. Gordon, of Winnipeg, better known under his pen name of Ralph Connor.

RECORD NOT IN CATALOGS

One of the problems of herd management is to keep pedigrees up to date. Animals are sold when young, pass into other herds where they are officially tested and oftentimes some of these animals make records that materially affect the selling value of their brothers and sisters.

Sometimes animals are sold from herds where owners do not officially test and the records they make are, in many instances, indicative of what their sisters would do under similar conditions.

One such instance came to our notice this week. In sending the advertisement for his dispersal sale at Covedale, March 15th, Mr. F. R. McKelvey of Hollidays-

burg drew attention to the breeding of his herd sire King Diona Konigen, who is a son of King Segis Pontiac Konigen and the 35.94 lb. cow Diona Konigen Pietertje 2d whose dam has a 37 lb. seven day butter record. About the same time a letter came into the office from Fred C. Lehman of Carlisle, Pa. saying that his heifer, Beauty Konigen Korndyke, a daughter of King Diona Konigen, Mr. McKelvey's herd bull, was put in test 84 days after freshening and produced in seven days 16.05 lb. butter from 390.5 lb. milk. Her record is all the more creditable to herself and to her sire because of the fact that she was only two years nine days old when she freshened and that she had no preliminary fitting whatever for a test. Anyone planning to attend Mr. McKelvey's dispersal sale should bear this record in mind when the daughters of King Diona Konigen are led into the ring.

CORNELL UNIVERSITY FARMERS' WEEK SALE

The thirteenth annual sale of the Cornell University herd was held February 16th, during Farmers' Week at Ithaca, New York, and was, we believe, the most successful of any of these events. The twenty-seven animals, most of which were bulls, averaged \$145.37.

The highest price was \$290 obtained for King Sadie Vale Pontiac, a two-year-old daughter of King Sadie Vale, purchased by Eugene Staples, of Yardley, Pa. Seven other animals brought prices ranging from \$200 to \$255 and twenty-one exceeded \$100. Considering that some of the animals were very young bulls, it will be seen that the average price was very creditable. The dairymen of New York have not previously appreciated the value of the Cornell offering at Farmers' Week, for the University herd ranks with the best in the state.

Animals bringing \$125 or more with names and addresses of their purchasers are:

2	Great Fortuna, 6 months, E. A. Powell, Syracuse, N. Y.	\$200
4	Great Euphony, 11 mo., N. Stevens & J. H. Hill, Freeville, N. Y.	200
6	Male calf, 6 mo., B. F. Kennedy & S. W. Morse, Pleasant Mt., Pa.	155
7	Glista Divina, 6 yrs., W. L. Blims, Candor, N. Y.	255
10	Glista Energy, 3 yrs., R. E. Barden & Sons, Berkshire, N. Y.	250
11	Glista Halley, 3 yrs., R. E. Barden & Sons	235
13	Glista Hyacinth, 3 yrs., R. E. Barden & Sons	235
14	Glista Halcyon, 5 yrs., C. W. Gleason, Okl. City, Pa.	155
15	King Sadie Vale Pontiac, 3 yrs., Eugene Staples, Yardley, Pa.	290
18	King Sadie Vale Hartog Canary, 2 yrs., H. Smith, Utica, N. Y.	150
20	Greatest Stella Pontiac, 11 mo., Wm. F. Jollner, Crittenden, N. Y.	125
21	Pel Pontiac Spring Farm King, 2 yrs., Nelson F. Hopper, Ithaca, N. Y.	145
22	Senior Colantha Glista, 1 yr., Nelson F. Hopper	135
23	Jasmine Pride Johanna, 1 yr., Mrs. S. D. Bull, Slaterville, N. Y.	210
26	Greatest Earl Glista, 8 mo., Ralph Cleatfield, Freeville, N. Y.	130

W. M. MOORE DISPERSAL A SUCCESS

Owing to the fact that W. M. Moore, of Woodlawn, New Jersey, has recently sold his farm to his fellow townsman, Fred Johnson, the Moore herd was sold on the farm early in February. The sale was managed by the Salem-Cumberland-Gloucester Counties Holstein Association with Joseph C. Bowden as auctioneer and Dr. Bullard pedigreeman. Luncheon was generously provided by Mrs. Moore. The sale was considered a success. The thirty-nine animals sold for \$5,915, an average of \$151.66.

Animals bringing \$150 or more with names and addresses of their purchasers are:

Purchased by Meyhew Sparks, Salem, N. Y.		
Glen Korndyke	\$165
K. H. Marion	175
Bull Calf	150
Purchased by John P. Ridgway, Hancock's Bridge, N. J.		
Korndyke Hilda	150
Oatka Spofford Ray	200
Purchased by W. R. Smith, Oxford, Pa.		
Johanna Daphne	250
Vikina Johanna Silk	250
Purchased by Lewis Dare, Beebe Run		
Pietje Ormsby Little	285
Hedgefield Johanna Glista	180
Purchased by A. E. Deless, Edgewater Park, N. J.		
Oatka Spofford Rag Apple	195
Purchased by Russell Skinner, Mullica		
Pietje Ormsby Rag Apple	455
K. H. Elnora Lyons	210
Purchased by Samuel Watson, Greenwich, N. J.		
Hedgemere Korndyke Glista	270
Purchased by Prof. Kenney, New Brunswick		
Hedgemere Daphne Rag Apple	175
Purchased by Warren Johnson, Elmer		
Emma Cornucopia Korndyke	150
Purchased by J. Parker Minch, Bridgeton		
Bull Calf	175

YAUKEY HERD TO BE DISPERSED

Another good Pennsylvania Holstein herd will be dispersed when the D. H. Yaukey herd is sold at public auction, March 21st. This event will take place in the dairy barn on the Yaukey farm which is located at Fayetteville, Penna., on the Lincoln highway, about six miles from Chambersburg. The farm is reached by trolley, the cars leaving the public square at Chambersburg on the even hour.

The Yaukey herd has more than a local reputation for production, breeding, individuality and health. The former owner was a capable judge and spent 15 years of a busy life in building up the present establishment.

(Continued on page 188.)

CORN GROWING BRINGS COWS

Many of our readers would consider South Dakota as a wheat state overlooking the fact that since 1900 less than a quarter of a century ago it jumped from 23d position to 9th position as a corn growing state. In 1900, the corn production was 32,400,000 bushels, while in 1921 its production was 125,000,000 bushels and was only just a little less last year. Dairying is growing nearly as fast as corn production although it made a somewhat later start.

An indication of the way Holstein cows are making good in this territory is a letter written to the dairy division of the Sioux Falls Trust and Savings Bank by Henry Sharnhorst, proprietor of the Northwest Seed Corn farm at Egan. Mr. Sharnhorst asks some advice on dairying from the bank and in his letter says: "My plan is to keep about 20 milk cows on my farm. I sell some milk in town counting on about \$1,000 a year for it. My idea is to have this summer two bulls and two loads of cows, for it seems to me this is the only way to find out which kind is best. If I only sell cream I would prefer Holstein cows. I have only one boarder among my 20 cows, and my family would put up a fight if I should sell these Holsteins and buy American cows again."

DONATED TO A WORTHY CAUSE

Some time ago THE BREEDER AND DAIRYMAN mentioned the Veterans' Mountain Camp at Tupper Lake, New York. Appeals were sent out for dairy cattle, Holsteins preferred. The milk from the herd was to be used for the veterans in the camp. The Theater Assembly of New York City purchased twelve registered cows for that purpose from the veteran Holstein breeder, E. A. Powell, Syracuse, and Mr. Powell generously donated De Kol Webb Pontiac, a bull that was a prize winner in the two-year-old class at the 1922 New York State Fair.

A former service man has offered to donate a small herd of reindeer to the camp and the camp officials are now trying to find out if reindeer would be satisfactory in that territory before they accept or refuse the unique gift.

WHAT DID HE SAY

Mrs. C.—"I wonder where in the world the alarm clock has gone? I saw it on the mantel yesterday."

Mr. C.—"It was there yesterday, but I heard it going off this morning."

Mrs. C.—"Well, I hope it hasn't gone where you told it to go."

30 days' trial on a money-back guarantee. Write for direct-from-factory prices. Address: IDEAL CHEMICAL CLOSET CO., Box 81, Seneca Falls, N. Y.

LAST NIGHT IT SNOWED

Last night it snowed; and when the morning came, I peered out on a great white world beyond a fancy frosted pane. There was snow down in the valley and snow upon the hills. It topped the fence-posts, clung to trees and heaped at window sills. And down upon the pasture lot it was so broad and white and clean, it seemed that I had quite forgot what once that great white field had been.

It had been a purple meadow there, in the soft, warm silver light, the crickets sawed their violins while moth and miller danced all night.

It was a field where, when the morning sun smiled down and kissed each dew-dripped clover top, a lark would skyward soar and sing until it, breathless, had to stop; where bobolink would fidget upon the long, wire fence, and flirt his wing and cock his head with quick and pert pretense, and sing his wise and cheery lay, how he would move his folks away before the clover went to hay.

It was a field where in the silent, sultry noon sailed aviating picaroon, rumbling, bold young bumblebee! In yellow-girded jacket he rose and dipped o'er purple sea. With tail-spin, loops and sidewise shift he'd plunge and tremble, drop and drift until he made the wild rose swoon, then, laughing, boom across the sea he'd swing to blue-eyed chicory and let his motor croon.

It was a field where mustard flower and Queen Anne's lace and black-eyed Susans found a place; where, in the corner, milkweed pod burst white near flaming goldenrod; where sumac flung her gory plume above brown autumn's graying tomb.

But when about to pass from wintry pane, I glimpsed that wide, white world again, the morning sun ran red upon the topmost hill, rose-gold jewels on its summit burning, and the snow, before me, on my window sill, to countless, intricate, beautiful stars were turning.

A NEW USE FOR MILK

The Indiana Farmer's Guide reports a new use for milk. The editor of the Indiana paper was having trouble with a leaky radiator in his family car. While he does not tell the make of the car, most everyone knows that an editor always has a Ford. The radiator persisted in leaking so the car was stopped at a country garage where the mechanic in charge prescribed a quart of milk to be poured into the radiator. This did the business temporarily at least, and while not recommended in place of permanent repairs, the Indiana editor says that it will work better than some of the preparations sold on the market for the purpose, and he recommends a trial the next time any of his readers have trouble of this kind.

Mistress—"So your matrimonial life was very unhappy. What was the trouble? December wedded to May?" Chloe Johnson—"Lan' sake, no, mam! It was Labor Day wedded to de Day of Rest.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 187.)

The first two sires Mr. Yaukey purchased were sons of Korndyke Butter Boy, a sire whose descendants have made splendid records. This bull was sired by De Kol 2d's Butter Boy 3d, and his dam was Korndyke Queen De Kol, the best known daughter of the famous Belle Korndyke who was also the dam of Pontiac Korndyke. Incidentally we may mention that one of these herdsires Mr. Yaukey purchased was from a A. R. O. daughter of Pontiac Korndyke, thus carrying a double cross of the producing and transmitting Korndyke blood. The latest herdsire of the Yaukey establishment is a son of Dutchland Creamelle Korndyke Lad, from a 31.65 lb. daughter of Dutchland Sir Pontiac Rag Apple. The latter bull, while himself a great sire, was by Pontiac Korndyke from a daughter of Hengerveld De Kol and was a full brother to the former world champions, Pontiac Rag Apple and Pontiac Clothilde De Kol 2d.

It can be seen from the foregoing that similar blood to that flowing in the veins of world champions also flows in the veins of animals in the Yaukey herd. The former owner did some official testing and his animals made a number of very creditable records, while animals from this herd have gone into other hands and made records that reflect credit upon them and their lines of breeding.

The herd is under state and federal supervision, and has always borne a good reputation for health. In addition, all animals under six months of age will be guaranteed against tuberculosis for a period of at least 60 days and will be subject to a 60-day retest under the usual standard conditions.

The well-known Holstein breeder, S. R. Miller, will elaborate on the pedigrees and be on hand to answer any questions. Do not overlook the fact that owing to the death of the former owner, every animal in the herd must be sold. Inquiries for cattle should be sent to Mrs. Marjorie Yaukey, c/o Farmers and Merchants Trust Company, Chambersburg, Penna.

THE DISPERSAL OF A TWENTY-YEAR OLD HERD

On March 26th, a Holstein herd that has been established twenty years will be thrown on the market when Walter K. Sharpe of Chambersburg sells his aggregation of high class Holsteins at public auction.

The first two herdsires of the Sharpe establishment were grandsons of Sadie Vale Concordia, 694.3 lb. milk, 30.64 lb. butter in seven days, the former world's champion. Sadie Vale Concordia was the first cow to make thirty pounds of butter in seven days official test. She was a cow of magnificent proportions and superb individuality—characteristics which are transmitted to her descendants with a great degree of certainty. One of her daughters made over 41 lb. butter in seven days and she in turn has a daughter that produced over 38 lb. butter in seven days, while her sons and grandsons include a number of great sires.

Sixteen years ago, in 1907, Mr. Sharpe purchased two bulls for herdsires. One was a son of King of the Pontiacs and the other a son of King Segis. At that time these two bulls were considered by practically everyone interested in Holsteins as being the two greatest sires developed in the breed and the records made by their descendants show that these claims were not unjustified.

Another son of King of the Pontiacs followed these two bulls in the herd and the blood lines in the present herd of Holstein beauties are found to a more or less degree, in the pedigree of nearly every large record cow of the present day.

Some official testing has been done in the Sharpe herd and a number of creditable records have been made but it is conceded that no attempt has been made to show the true producing capacity of the animals. The records, although creditable are simply indicative of their every day work.

Mr. Sharpe is disposing of his herd not because of a loss of interest in the business or because of lack of confidence in the future but he has a number of other business interests and a large law practice and on these accounts is not able to give the herd the attention it requires and deserves.

The Sharpe herd is under state and federal supervision; in fact, is on the list of accredited herds and the animals will be sold subject to a 60-day retest privilege. The sale will be on the farm which is situated along the line of the Cumberland Valley division of the P. R. R. between Newville and Oakville. By special arrangement the two morning trains on March 26th will stop to let off visitors and intending purchasers and the two evening trains will also stop to allow them to proceed to their homes. The well known Pennsylvania Expert, S. R. Miller, a townsman of the owner will be on hand to explain pedigrees. The requests for catalogs should be addressed to W. K. Sharpe at Chambersburg, Pa. It is seldom that intending purchasers have an opportunity to buy from an accredited herd especially one that has been bred over two decades along well defined lines, so it is only to be expected that a large crowd and good prices will be seen at this sale.

"CONTRIBUTORY NEGLIGENCE"

A somewhat miserly old man dropped a gold piece in the collection plate, mistaking it for a penny. When he discovered his mistake he asked the sexton

to give it back, but had no success. He accordingly consulted a lawyer, to see if it could be recovered.

"Sir," said the lawyer at once, "you have no case. You were guilty of contributory negligence."

THE COST OF PRODUCING MILK

Lancaster County is said to be the richest agricultural county in Pennsylvania, and acre for acre, it probably produces as much wealth as any other county in the United States.

The Pennsylvania State College during the crop year 1921-22 worked in conjunction with 78 farmers in this county who kept complete farm accounts of the cost of producing farm and dairy products. A complete inventory was taken of all farm property at the beginning and end of the year. All receipts and expenses were recorded and in addition, a labor record was kept with those crops or branches of livestock, in which the farmer was most interested. In calculating, man labor was charged at 30 cents per hour, with horse labor at 20 cents per hour. The time of a tractor and its operator was charged for at \$1.25 per hour. The rent of land and buildings was calculated at 5% of the investment, or if a cash rent was paid, the actual figure. Some of the farms were operated on halves, and in this case the figures are on a proportional basis. In figuring the cost of milk, there were some credits given. The value of manure was estimated at \$2.00 per ton, the money from calves sold and the increase in inventory due to the raising of young stock was duly credited. Straw was charged at \$8.00 per ton, farm value.

The average production per cow was 6,996 lb., and the cost of 100 lb. of milk was \$2.54. Each cow required 135.2 hrs. of man labor, and 21.6 hrs. of horse labor. The cash expense for labor and feed was \$138.73, and the average cost of keeping a cow for a year was \$211.40. Against this, there are credits for manure produced, sale of calves and increase in inventory of \$33.60, so that milk produced during the year cost \$177.80.

Quite a number of steers are fattened in this district. The dairy makes a much better showing than any other kind of livestock. The net profit for keeping the average Lancaster hog during the

year 1921-22 was only 35 cents. The sheep average profit was only 10 cents, but it is only fair to say, however, that on one farm there were a number of ewes and lambs lost, which lowered the average profit. The hen made a good showing, her average cost being \$2.85 for 5,706 fowls on 17 different farms. The average net profit per hen was \$1.34.

In summing up, E. L. Moffett and H. S. Sloat of the Department of Farm Management Extension of State College say that the practice of feeding roughage and corn to livestock and selling the by-products in the form of beef, pork, eggs and dairy products has yielded the greatest returns from the farm, with the least loss of its fertility.

"Producing a standard high quality product should be combined with a maximum quantity. It is not worth while to produce a large quantity of stuff that the market does not want. Every farmer should aim to produce a quality of product that he is willing to stand back of, and be proud of it. Careful study of market conditions is necessary in disposing of farm produce to good advantage."

"The best cure for many losses and evils on the farm is keeping records of the farm, and cost accounts on the more important crops or livestock. This will show the parts of the farm that are making money and those which are being run at a loss. The reasons for the loss may be accounted for and changed to a profitable basis, if it be due to poor management. It may show that the product is poorly adapted to the type of farming, or market conditions. If they cannot be made to show a profit, they should be dropped, and the capital and labor invested in some more profitable enterprise, unless their continuance is necessary to profitable returns in some other enterprise.

I tell you a wife is a very expensive article.

True, but you must remember a wife lasts a long time.

LOOKS LIKE A BARGAIN

It is not difficult now-a-days to buy a good young bull backed by large seven-day records. A few years ago a bull whose three nearest dams had seven-day butter records, averaging over 31 lb. butter, a bull whose dam and dam's dam had records around 30 lb. would, if he was a good individual, have brought a sum well up toward four figures, yet we notice that Horton Cray & Company who have a fully accredited herd, advertise a young bull from a 29½ lb. dam for only \$185. Look the advertisement over and you will see that both grand-dams are well above the 30 lb. mark, the sire's dam having 34.93 lb. to her credit, and the dam's dam having a record of 31.4 lb. This young bull is ready for service. It would seem that whoever snaps him up at the low figure quoted would be getting a real bargain, and don't overlook the fact that the herd from which he comes is on the accredited list and not merely under state or Federal supervision.

An apt definition for poise is: The quality that keeps a hostess smiling when a departing guest holds the screen door open and lets the flies in.—*Everybody's Magazine.*

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

BANK PLANS MORE DAIRY EXTENSION

The Sioux Falls Trust and Savings Bank which is doing such good work in South Dakota plans more dairy extension work and has secured the services of Joseph H. Hamilton, now county agricultural agent of Minnehaha County.

Mr. Hamilton is a graduate of the Michigan Agricultural College where he studied under the well-known dairy expert and teacher, Professor A. C. Anderson. Mr. Hamilton graduated in 1913, taught agriculture for nearly four years, one year in the high-school at Rushford, Minnesota and nearly three years at Mitchell. At both schools dairy work was emphasized. Since coming to Minnehaha County, Mr. Hamilton has built up the farm bureau from an organization of 500 members to one of more than 1,200. He has been very successful in securing help for the farmer and employment for farm laborers, and has encouraged the growth of Kanred wheat and sweet clover, the later as a pasture and soil improvement crop. Mr. Hamilton has been very successful as an organizer of boys' and girls' club projects, both in livestock and general cropping. He will be succeeded by George B. Kenard of Armour, South Dakota who was Mr. Hamilton's predecessor as county agent four years ago.

A SPIRITED TESTIMONIAL

The farmers of Moffatt County, Colorado, are having a big fight over the question whether or not their county agent is to be retained. The Board of Commissioners asked for an expression as to their desires and was flooded with petitions for and against. The old board passed the buck over to the newly elected board and at the very first meeting after the election there was a hot fight and one member resigned in consequence. There was some talk that the agent had induced a number of "suckers" to invest in Hol-

steins. One farmer who favored the county agent, after praising his work with the boys and girls clubs went on to say:—"I am one of those suckers who got Holsteins; I got nine cows and a bull in the first shipment through our county agent and the agricultural college, and although they insisted on having bull calves first, I now have 34 Holstein cows and heifers and two bulls. I am proud of them and what they are doing for me and, but for my cream checks, I could not have paid my bills.

"Why, oh why, do the farmers think of laying off their very best help when he is needed so badly? Why go backward? Why stand still? Let us all pull together with our county agent in 1923 and the years to follow and make things move."

DAIRYING PAYS MCCARTHY

Five years ago Dan McCarthy, Jr., purchased two Holstein calves, paying \$22 each for them, delivered at Hays, Kansas, his station. His herd now consists of seven cows two years old or more, and he has sold four male calves. During the past year six of these animals produced milk, and Mr. McCarthy received \$577.48 for butter and milk. All the feed for the cows has been produced on the farm excepting half a ton of bran, which was purchased. Mr. McCarthy claims that he would have run behind during the last two years on his wheat farm if it were not for the money he received from his dairy.

One night last week Mr. Carr stopped in rather late to see one of his neighbors. When he knocked, his neighbor put his head out of a window and said, "Who's there?"

"Mr. Carr."

"Well, what do I care if you missed a car? Why don't you walk and not wake up people to tell them about it?" the neighbor retorted and closed the window.

THE ARKANSAS CHAMPION

Arkansas Johanna Snowball, No. 556-895 was the first prize three-year-old at the Arkansas State Fair. This cow has been in long time test and in 326 days produced 15,205.1 lb. milk and 487.19 lb. butterfat. Her year record will be the highest ever produced by any cow in the State of Arkansas.

In 1917 Professor H. C. Devorachek of the Department of Animal Husbandry at the University of Arkansas went to Wisconsin and purchased three cows and a bull which were prepared at the Experiment station at Fayetteville. The new champion is a daughter of one of these cows, Pontiac Snowball and was sired by Dalles Colantha Johanna Lad. She was bought November 16, 1919 and is a splendid individual.

A GENEROUS ACT

That good Maryland breeder, John M. Dennis of Lutherville has loaned his well-known bull S. X. Cornucopia Vale Korndyke to the Springfield State Hospital at Sykesville. He will be bred to the 38 purebred Holstein matrons in the hospital herd. The bull who was three years old on February 8th, is a son of King Cornucopia Vale Aaggie and Cloverleaf Nina Korndyke. He weighs just over a ton at the present time. He is very light in color and a splendid individual. Although shown extensively, he has never been beaten in the show ring. Mr. Dennis who is State Treasurer of Maryland is always doing little things of this kind, acts which benefit the livestock industry and the breeders of his home state.

"Why did you strike the telegraph operator?" asked the magistrate of the man who was summoned for assault.

"Well, sir, I gives him a telegram to send to my gal, and he starts readin' it. So, of course, I ups and gives him one."

What Do You Think

of 22,000 lb. milk and 960 lb. butter in 10 months as a junior three-year-old?

That's the WORLD RECORD produced by CRESTMONT ORMSBY ALCARTRA, a daughter of my senior herdsire, KING PONTIAC ALCARTRA WAYNE, and she is due again in April.

Remember that I am raising sons and grandsons of this great sire.

Let me price one to you.

The Best of Wisconsin Holsteins!

A Bull Calf That Will Improve Your Herd.

He is nicely and evenly marked, good in every way, from a 23 lb. four-year-old full sister to Lady Jewel De Kol Colantha, 32.56 lb. butter, 830.5 lb. milk in a week, the Wisconsin Champion for milk production.—See the Holstein Breeder & Dairyman, issue December 22d, 1922.

Also a few young females, all sired by Edenvale Roy Pietertje No. 245651, our handsome grandson of old Sir Pietertje Ormsby Mercedes.

Our stock is always worth the money we ask for them, and we will let you be the judge.

J. W. LAWTON & SON,
MAPLE PARK STOCK FARM,
Established 1906. VIOLA, WIS.

MINNESOTA COWS MAKE RECORDS

Eight more 1,000-pound cows—cows that have produced 1,000 pounds of butter each in a year according to official records—have just been added to the long list of such producers in Minnesota. All are Holsteins. The facts are contained in the February report of W. A. Petersen of University Farm, superintendent of official testing in Minnesota. According to his report the eight new 1,000 pounders are:

Maggie Pontiac De Kol, owned by Stensrud Bros., Watson, Chippewa county, 1,070 pounds of butter.

Princess Changeling Segis, owned by J. M. Hackney, St. Paul 1,287.5 pounds.

Snooks Nig De Kol, owned by Ramsey County Home, 1,077.6 pounds.

Miss Pietertje Burke, owned by Marlow & Randall, Mankato, Blue Earth county, 1,194.9 pounds.

Queen Ormsby Glen, a two-year-old, owned by H. W. Schroeder, Owatonna, Steele county, 1,048.9 pounds.

Ourvilla Colantha Elba, senior four-year-old, owned by Wm. Schmidt & Sons, St. Peter, Nicollet county, 1,091.0 pounds.

Edenvale Agassiz Pietertje, owned by M. L. Enright, East Grand Forks, Polk county, 1,079.8 pounds.

Hartog Pontiac Colantha Maid, owned by W. W. Walker, Austin, Mower county, 1,281.2 pounds.

All parts of the state except the remote timbered districts, in the northwest, are represented in this list of great producers, showing that Minnesota is a natural dairy state and will long retain its position among the leaders in its output of dairy producers.

JOHN J. WALRATH

John J. Walrath of East Springfield, New York, passed away February 16th. He was one of the veteran Holstein breeders of New York State, joining the association in 1904. Dutch Corner, Mr. Walrath's establishment, was the first accredited herd in Otsego County and the owner was always a leader in his community and a man of splendid character. The Dutch Corner herd has a first class reputation for individuality and production and at one time was headed by King Lyons 3d, a maternal brother to Judge Segis, both sires being from Gypsy Hengerveld.

ALL BLACK AND WHITE STOCK

Mr. Frank Buck of Metamora, Ohio is bound to make Brookmead Stock Farm a purebred establishment. Besides keeping purebred Holstein-Friesian cattle, Mr. Buck has Spotted Poland China hogs, Mottled Java Chickens and Shepherd and Police dogs and tolerates nothing but purebred stock. Mr. Buck has a large drove of Spotted Poland China swine, all registered in the National Spotted Poland China Record. Evidently he believes in black and white stock.

While only a small proportion of Holstein cattle owners in the east keep purebred swine it is not at all uncommon to find in the states from Ohio westward

large herds of purebred swine on Holstein farms. The quality found in the herd is indicative of the skill and judgment of the owners which have been developed in building up their purebred Holstein herds.

Helen, age three, was taking her first train ride and was passing through a woods. "What's them?" she asked her mother, pointing to the trees.

"Those are trees," was the answer. "Where are they going?" she asked.

TIRED OF WAITING

Agent—"But, mum. It's a shame to let your husband's life insurance lapse."

Lady (over washtub)—"I'll not pay another cent. I've paid regular for eight years, and I've had no luck yet."

SHE KNEW

Mildred—Do you know Frank proposed to me last night?

Flora—Yes. Doesn't he do it beautifully?

Balanced Fertilizer

FERTILIZERS are used to increase crops and profits. The right kinds and amounts of plant food make profits by reducing the cost of production of a unit of crop, by improving the quality, and by increasing the yield.

One-sided fertilizers may be unprofitable. Today Potash is the cheapest ingredient used in fertilizers, even cheaper than before the war.

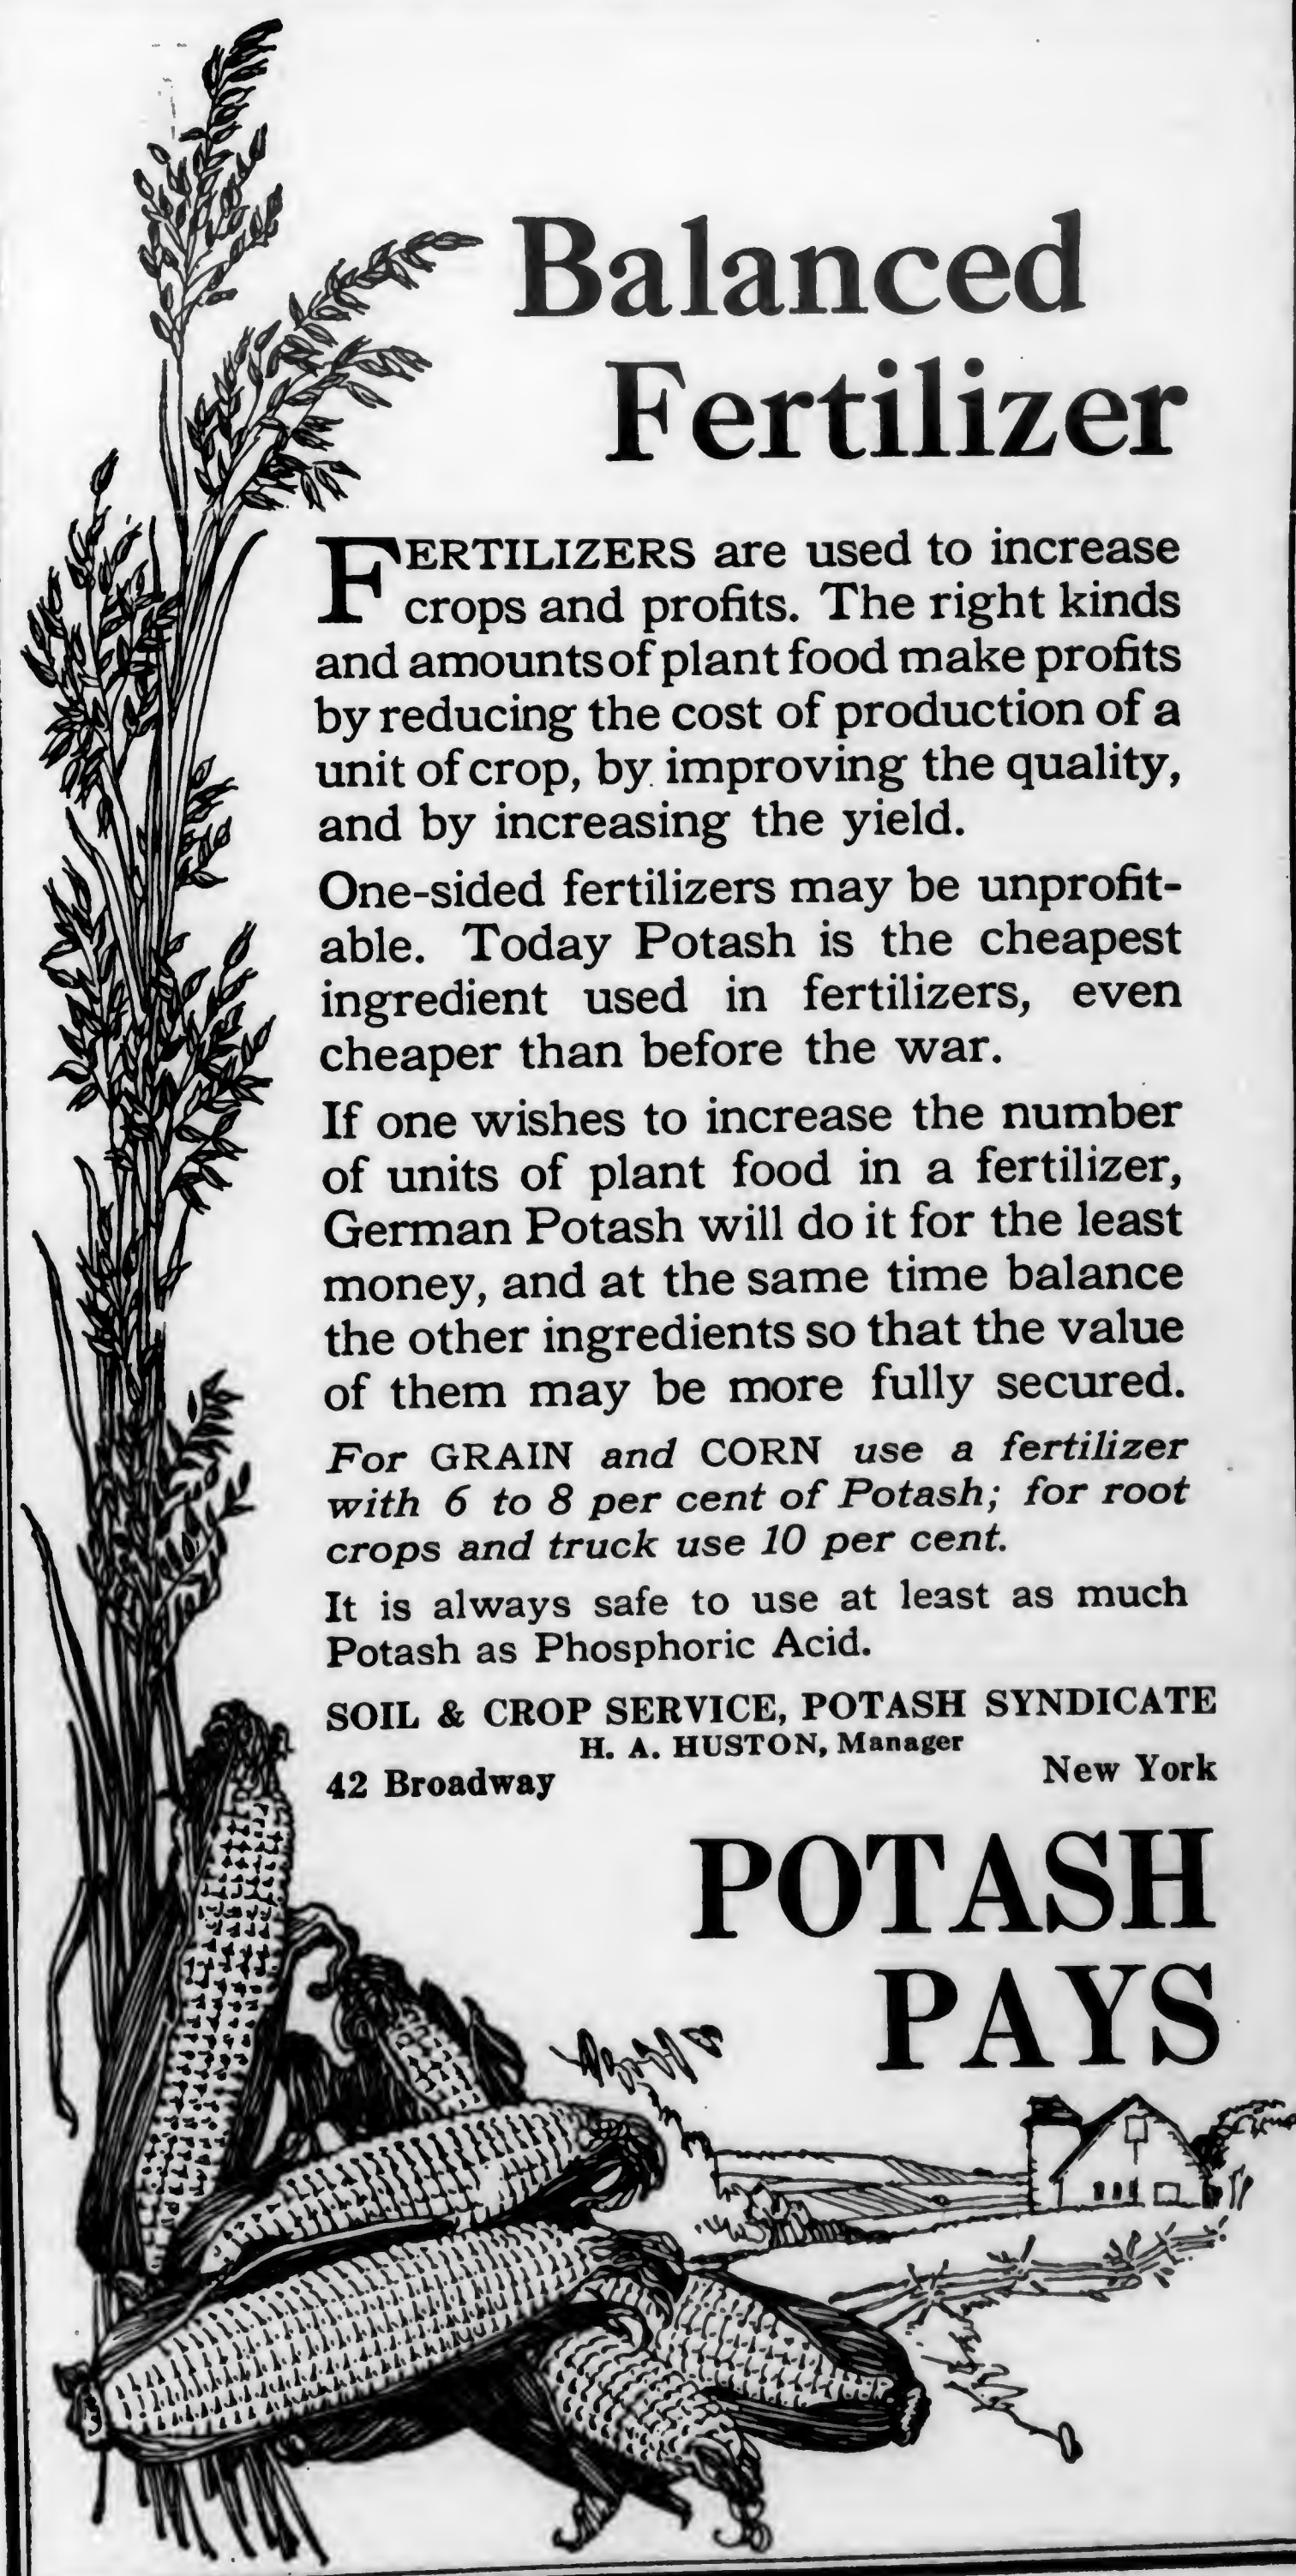

If one wishes to increase the number of units of plant food in a fertilizer, German Potash will do it for the least money, and at the same time balance the other ingredients so that the value of them may be more fully secured.

For GRAIN and CORN use a fertilizer with 6 to 8 per cent of Potash; for root crops and truck use 10 per cent.

It is always safe to use at least as much Potash as Phosphoric Acid.

FOR SALE OR EXCHANGE

My herdsire, King Korndyke Sadie Vale Lona, No. 299662. Born May 2, 1919. He is about three-fourths white, very nicely marked and a real good bull in every respect.

His dam made 23.12 lb. butter in a week averaging better than 75 lb. milk a day. She is from a 24-lb. cow with 619 lb. milk. Dam's sire is Granville Kriemhilt, from a 26.5-lb. cow and by a son of Canary Mercedes.

His sire, King Korndyke Sadie Vale, is known everywhere owing to the production of his daughters. His dam is Sadie Vale Concordia 4th, a 41-lb. daughter of the first 30-lb. cow. His three nearest dams average 36.3 lb. butter in seven-day work.

King Korndyke Sadie Vale Lona sires individuals that please you. The only reason I will part with him is to avoid inbreeding. Come and see him and his daughters and you will want him.

C. G. OAKES, ASSUMPTION, ILL.

MAPLE GROVE REPORTS GOOD DEMAND

The Maple Grove Stock Farm at Centerville, Penna., reports a good demand for young bulls. They recently sold to J. M. Rodgers, of Centerville, a fine young bull, sired by their Glista bull and from a daughter of King Pontiac Jupiter. Their former herd sire, King Pontiac Jupiter was sired by King of the Pontiacs, and his dam was a good daughter of Hengerveld De Kol, a combination of blood-lines found in the pedigrees of a number of animals that made world records. There is every reason to believe that Mr. Rodgers will be well satisfied with the results from this selection.

Another young sire was purchased by Chas. F. Scott, of Grand Valley, Warren County, Penna. This young bull was sired by the present senior herd bull, Clever Model Glista, whose dam, Glista Coreva, is the second highest record cow of the Cornell University herd. Glista Coreva, as a six-year-old, made nearly 600 lb. of milk in a week and 34.08 lb. butter in seven days, and the next year practically repeated her milk record and produced 31.21 lb. butter in seven days.

The dam of Mr. Scott's young bull is an 18.5 lb. daughter of Model Daniel Glista, another one of the Maple Grove Stock Farm herd sires, and a half brother to Clever Model Glista.

Mr. O. N. Shreve, of Union City, Penna., also selected a Maple Grove Stock Farm bull to head his herd. This fellow was sired by a son of Model Daniel Glista, and was from a daughter of King Pontiac Jupiter, so that he will have a number of sisters carrying 75 per cent or more of the same blood and these will be tested from time to time.

The Maple Grove herd is under state and federal supervision and is certainly backed by producing strains. The bulls that have stood at the head of this establishment have been closely related to the largest producers of their day, and the results show in their descendants.

PRODUCERS HANDLE OWN MILK

A price that averaged more than \$2 per 100 lb. was paid the members of the Inland Empire Dairy Producers' Association for the 18,517,205 lb. milk handled by the association during the year 1922 and this on a basis of 3.6% butterfat. Monthly figures for the year as well as for January of this year follow:

January, \$1.75; February, \$1.85; March, \$1.98; April, \$1.90; May, \$1.80; June, \$2.10; July, \$1.70; August, \$2.40; September, \$2.26; October, \$2.36; November, \$2.25; December, \$2.35; January, \$2.36.

The association owns its own by-products plant in Spokane and during January of this year handled a surplus of over 550,000 lb. milk thus preventing flooding the market and disastrous price cuts.

The auditing committee's report which agreed with that of Secretary-Manager G. D. Railsback, showed that the members were paid \$421,707 net for the milk during the year, \$61,264 being retained for operating expenses, reserve fund, taxes, interest and insurance. The association owns a by-products plant, and a processing plant the value of which is given as \$53,427. The association has a membership of approximately 800, of which 500 are now producing and shipping milk to the plant at Spokane, Washington.

DAIRYING PAYS IN NEBRASKA

Fred Liebers lives about 27 miles from Hastings, Nebr. farms 320 acres of land and claims that his eight grade Holsteins are the most profitable department of his farm. During 1922, they brought him in \$1,273.10 and the feed cost was \$235. The total milk yield from the eight cows was 81,848 lb. or an average of 10,231 lb. Mr. Liebers does not charge for his labor believing that the manure used to enrich the soil off-sets this item. Practically all the forage and roughage consumed would have been wasted the owner says. The only grain feed was corn and cob meal. The animals received no silage but their owner is planning to build a silo for he is convinced that dairying would pay him.

HOPE FAILED

The great ocean liner rolled and pitched.

"Henry," faltered the young bride, "do you still love me?"

"More than ever, darling," was Henry's fervent answer.

Then there was an eloquent silence.

"Henry," she gasped, turning her pale ghastly face away. "I thought that would make me feel better, but it doesn't!"

OBEYING ORDERS

A lady going out for the day left a note on the back door for the benefit of the grocer. "All out, don't leave anything," it read.

On her return she found her house ransacked and all her choicest possessions gone. To the note was added. "Thanks, we haven't left much."

WANTED 15 or 20 choice young Holstein cows that are milking well now and bred to come in next fall.

Not particular about A.R.O. records but they must be good individuals, well bred and from tuberculin tested herds.

State Price and Full Particulars.

M. L. Jones, Westtown, Pa.

Offered

FEMALE: Bonalevo Walker Quality Queen calved Jan. 27, 1916. Sire Czar Walker, a King of Black and Whites. Dam: Bonalevo Quality Walker Queen, a 27-lb. cow. **\$175**

ACCREDITED HERD DISPERSAL SALE

TWENTY HEAD THURSDAY, MARCH 15, 1923 TWENTY HEAD

Headed by the grand young Ormsby bull, **BLACRES ADAM AMBROSIA**, No. 359690 who was two years old February 6th. His 23 A. R. O. sisters, tested at an average age of four years, average 529 lb. milk and 24.40 lb. butter. Only three of them were five-year-olds, the others being heifers; 8 four-year-olds, 7 three-year-olds and 5 two-year-olds. Twenty of these 23 sisters made more than 20 lb. butter in a week; 4 made above 30 lb. butter and 600 lb. milk in fact, they average 655 lb. milk. Eight sisters of this bull have produced 600 lb. or more of milk in 7 days.

His full sister, **Blacres Ambrosia Lyons**, as a four-year-old, produced 31.74 lb. butter, 642 lb. milk in 7 days and 870 lb. butter from 19,337 lb. milk in a year.

His dam, **Betty Lyons Pontiac Ambrosia**, No. 260997, a daughter of **Sir Lyons Hengerveld De Kol**, made 27.36 lb. butter from 642 lb. milk in a week as a four-year-old.

His sire, **Cornucopia Ormsby Lad**, is making a remarkable record as a sire and is believed to be the best transmitting son of the great **Ormsby Korndyke Lad**. Everyone knows him.

BLACRES ADAM AMBROSIA resembles his sire both as to markings and individuality. You can get the desired and desirable **POSCH-ORMSBY** breeding in this young bull. He is good enough to head any herd.

In addition to the herd bull I will sell **FOURTEEN** young cows and several heifers.

This herd is **clean**. In keeping Holsteins for twenty years I have never owned a reactor.

CATALOG NOW READY. BE SURE AND COME.

Polled Holsteins For

Beauty
Safety
Symmetry
Conformation
Production
Profit

Don't overlook the fact that **Keystone Beauty Plum Johanna** produced 25,787.5 lb. milk, 1,294.71 lb. butter in a year as a four-year-old in strictly official test, an unequalled performance. Her blood is being concentrated and intensified in **Origin Herd**.

A Polled Bull will improve the production and individuality of your herd as well as the fat-percentage in the milk.

Let us demonstrate this to you.

Dispersal of the McKelvey Herd

at Covedale, Pa., March 15, 1923

*We Believe This Is the Best Herd of Holsteins in Central Pennsylvania.
Much Time and Money Was Spent in the Building.*

Cows with seven-day records up to 26 lb.; heifers and calves with quality and breeding. The type and individuality will surprise and please you.

Senior Herd Sire: **King Diona Konigen** No. 222047. His seven nearest dams have seven-day records averaging 37.61 lb. butter, 681.52 lb. milk. His sire is the noted **King Segis Pontiac Konigen** and his dam is **Diona Konigen Pietertje 2d**, a 35.94 lb. daughter of a 37 lb. dam.

Junior Herd Sire: **King Walker Echo Sylvia** No. 309789. His dam as a two-year-old made 24.61 lb. butter in seven days averaging 70 lb. milk a day. His sire is the famous **Champion Echo Sylvia Pontiac**, the best son of the world's milk champion **May Echo Sylvia**. There will be 20 daughters of this bull in the sale.

An Absolute Dispersal Without Reserve.

A 60-day Retest Privilege Given

Covedale is on the Petersburg Branch of the Pennsylvania railroad which runs from Altoona to Huntingdon. Good train service. Sale held one block from station.

The Well-Known D. H. Yaukey Herd

50 Registered Holstein-Friesians 50

WILL BE COMPLETELY DISPERSED
AT AUCTION

Wednesday, MARCH 21, 1923

Beginning at 11 o'clock

at the Dairy Barn at the Yaukey Estate, Fayetteville, Pa., along Lincoln Highway, six miles from Chambersburg. Trolley service on the even hour.

On account of owner's death every animal *must be sold*.

This herd represents 15 years of careful work and selection and contains a wealth of good breeding.

BREEDING—The first and second herdsires were sons of **Korndyke Butter Boy**, one being from an A.R.O. daughter of **Pontiac Korndyke**.

The latest sire is a son of **Dutchland Creamelle Korndyke Lad** from a 31.65 lb. daughter of **Dutchland Sir Pontiac Rag Apple**. See the sons and daughters of this bull now in the herd.

PRODUCTION—The blood of the greatest producers known flows in the veins of the animals now offered you. A lot of good A.R.O. records have been made not only in the herd but also by animals that have gone into other hands.

HEALTH—Herd under State and Federal Supervision. All animals over 6 months old Tuberculin Tested and sold subject to 60-day Retest under standard conditions.

Holsteins, Horses, Hogs, Etc.

Thursday, March 15th, starting at 10 A. M.

ON THE CHARLES G. WAPLE DAIRY FARM

In Sinking Valley, two miles east of Tyrone, Penna., and one mile from trolley line

WILL BE SOLD

30 Purebred and Grade Holstein Cows and Heifers

Producers themselves and backed by producing lines of breeding.

QUEEN KONINGEN NETHERLAND 288705, due to freshen March 14th. She has given 2,300 lb. milk and over 100 lb. butter in a month. There are two of her daughters and two granddaughters. Some man should take the whole family.

JOHANNA PIETJE KORNDYKE 446891.

LADY SEGIS PONTIAC NETHERLAND 439996.

IDEAL ROXIE NETHERLAND 519202, whose dam, the 21-lb. cow Spring Brook Roxie, is full sister to Spring Brook Bess.

DOLLIE BEETS DE KOL 3d 569451.

BEETS HENGERVELD KORNDYKE GIRL 354439, one of the many good granddaughters of Pontiac Korndyke.

DE KOL CORNUCOPIA LASS 638746, a daughter of King Korndyke Sadie Vale, Jr., from a three-year-old that produced 700 lb. milk in 7 days and 3,096.5 lb. milk in 30 days.

The others are of lines of breeding equally noted.

AGASSIZ SEGIS MAY ECHO

These cows are all bred to the grandly bred bull LYONS ECHO POSCH 307983, who weighs to-day as a three-year-old 2,170 lb. He is nearly all white. I have his first crop of calves. They too, are light in color and as uniform as peas in a pod. His sire, Radium, is from the same dam as May Echo Sylvia, 1,005 lb. milk in a week, the world's record, and is also brother to the sire of Agassiz Segis May Echo, 30,886 lb. milk, 1,681.25 lb. butter in a year, the new WORLD'S CHAMPION COW FOR YEARLY BUTTER PRODUCTION. If they were human we would call them FIRST COUSINS.

My milking dairy, some of them two- and three-year-olds, averaged last year between 9,000 lb. and 10,000 lb. milk.

I will stand good for any loss and for 60-day retest of any of these cows in milk bought for a fully accredited herd.

SIX Big Draft Horses---good ones, too

30 Berkshire Hogs---Brood Sows, Shoats and Boars

CHICKENS, DUCKS, GEESE, GUINEAS, FARM MACHINERY, WAGONS, Etc., Etc., Etc.

All kinds of tools and harnesses used about a farm.

One thousand bushels of ear corn, 800 bushels seed oats, hay by the ton.

MILKING TIME

The Unahanna Herd crossing the D. & H. Railroad track which runs between the pasture and barn. The Unahanna Farm is located near Sidney, New York, at the junction of the Susquehanna and Unadilla Rivers.

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the act of March 3, 1879.

Berks Farm Holsteins

A 25-lb. TWO-YEAR-OLD

LADY THYRSA WALKER SEGIS

Lady Thyrsa Walker Segis produced in seven days, at the age of two years and nineteen days, 25.41-lbs. of butter and 439.9-lbs. of milk. In thirty days she produced 96.90-lbs. of butter and 1,989.8-lbs. of milk. These records give her the distinction of holding the second largest butter record for age in the State of Pennsylvania for seven and thirty days.

The sire of this wonderful young heifer is King Segis Fayne Alcartra, a show bull, by the \$50,000 bull, King Segis Pontiac Alcartra, who has 120 A.R.O. Daughters and 94 A.R. Sons. His dam is Sethje Mooie with three records above 30-lbs.

The dam of Lady Thyrsa Walker Segis is the 20-lb. three-year-old, Lady Thyrsa Walker who is by King Snowball Walker from the great old cow Lady Thyrsa Hartog with 25.27-lbs. of butter and 601.6-lbs. of milk in seven days as a ten-year-old. Some of the other animals that are closely related to this heifer are King Segis Pontiac with 186 A.R.O. Daughters and 97 A.R. Sons, Mooie Fayne De Kol with 38 A.R.O. Daughters and 17 A.R. Sons, K. P. Alcartra with 30.87-lbs. of butter in seven days as a three-year-old (World's Record when made), and Sethje Golden Nannette with 30.75-lbs. of butter in seven days as a five-year-old.

Another thirty-pound cow in the making, watch for her final figures in a later issue.

COMPLETE DISPERSION SALE

OF DR. A. A. PEASLEY'S HERD OF

40 REGISTERED HOLSTEIN-FRIESIANS 40

THURSDAY, APRIL 12, 1923, at 10.30 O'clock A. M.

THIS HERD IS UNDER STATE SUPERVISION

This herd consists of animals born as follows: 1-1913, 2-1914, 2-1915, 5-1916, 2-1917, 2-1918, 2-1919, 6-1920, 4-1921, 11-1922 and 2-1923 all females except 2 bull calves and herdsire, born February 8th, 1921.

THE HERDSIRE'S DAM has a four-year-old record of 25.08 lb. the seven dams in his pedigree average 29.87 lbs. butter in 7 days. He carries 37½ per cent. of the blood of the great COLANTHA JOHANNA LAD. All animals in calf are bred to this sire.

Most of these animals were bred on this farm, the first bull used was from a 27-lb. cow, the second from a 30-lb. cow and the present herdbull is the third sire to be used. The Doctor is selling this fine herd because he cannot give his personal attention on account of his profession and he finds it almost impossible to retain competent help. The sale will be held on the Doctor's farm 10 miles north of Columbus, Ohio, STOP 28 on the Columbus and Delaware Traction Line.

Allendale Farms' Reduction Sale **Saturday, April 14th, 1923**
Montoursville, Penna.

25—REGISTERED HOLSTEINS—25 **8—REGISTERED GUERNSEYS—8**

Tuberculin Tested. Sold Subject to 60-day Retest.

Herd under State and Federal Supervision.

Terms of 8 months' time with approved notes and endorser. Four per cent discount for cash.

THESE GREAT ANIMALS TO BE SOLD

The Senior Herd Sire—from a 25-lb. three-year-old with 19 lb. as a two-year-old, and by a good 28-lb. son of Dutchland Creamelle Korndyke Lad. This bull with ten of his daughters will be sold.

A daughter of a 29-lb. cow that made 1,000 lb. of butter and gave nearly 22,000 lb. of milk.

An A. R. O. cow that gave nearly 15,000 lb. of milk in ten months, a daughter of Dutchland Colantha Sir Inka Prince, who is a full brother to Dutchland Colantha Sir Inka, with fifteen 30-lb. daughters.

The majority of these animals are of milking age and many will be fresh or soon due at sale time.

Remember—that many of the animals are in calf to a son of King of the Ormsbys from a 30-lb. cow that made 971 lb. of butter in a year as a four-year-old, and she by Pietertje Hengerveld Segis.

A son of King of the Ormsbys ready for heavy service will be sold, and his dam is a 27-lb. cow that made 953 lb. of butter and 21,488 lb. of milk in a year. Twice above 26 lb.

Location: To reach the farm, take the Montoursville trolley from Williamsport. Get off at the end of the line on Broad Street. Automobiles will meet all cars on day of sale. Sale starts at 10:30. Lunch served at the farm.

Write for Catalog to Owner.

The Demand for Holsteins

is again on the increase. Boom prices are over, probably for a long, long time, but the men who regard Holsteins as dairy animals, not as speculative investments, are again in the market. Letters coming recently to this office substantiate this statement. Read this one:

"We are in need of a carload of cows. We want them from an Accredited Herd. If you could tell us of a community where we could find them it would be greatly appreciated."

"They must be real dairy type and subject to a 60-day retest."

Then read this letter:

"I am in the market for 30 high-class grade Holsteins, must be from Accredited Herds, high producers and testers, from two to six years old. I don't want them to freshen all at once but so that they will come in all the year around. These cows must be given a guaranteed 60-day retest and the price must be that the average farmer can afford to pay."

The owners of several noted herds, men who are breeders, not dealers, are in the market for milkers and springers, not from a dealing standpoint but because they are experiencing a bigger demand for Holstein milk than they are able to supply.

We are informed that a Maryland owner is in the market for bred heifers, tuberculin tested and from a healthy herd.

In this issue of the BREEDER AND DAIRYMAN appears an advertisement inserted by a Pennsylvania breeder who owns a remarkably fine herd:

WANTED:---15 or 20 choice young Holstein cows that are milking well now and bred to come in next fall. Must be good individuals, well bred, and from tuberculin tested herds. Not particular about A.R.O. records. State price and full particulars.

If YOU have any good Holsteins you wish to turn into CASH, why not tell the news to the men who wish to buy? They read the BREEDER AND DAIRYMAN, and study the advertising columns. Let us tell you how to reach this splendid market at a very low cost.

The Warble or Grub

A Source of Loss Worthy of Serious Consideration by Dairymen

By F. C. Bishopp

Bureau of Entomology, United States Department of Agriculture.

WHILE nearly all dairymen are familiar with the warbles or grubs in the backs of their cattle few realize what a tolerance of this pest in their herds means to them. This parasite of cattle is practically nation wide in its distribution. In fact it occurs throughout many other countries of the world. It attacks all classes of cattle but the losses probably fall heavier on the dairyman than on the producer of beef animals.

The annual loss due to the insect is conservatively estimated at fifty million dollars. Many consider it double that amount. The ways in which cattle are injured by the pest are quite diverse and can not be readily explained without describing in some detail the habits of the insect. The ways in which these losses may be briefly stated as follows:

First, irritation caused by the spiny grubs under the hide along the backs of the cattle and occasional formation of large abscesses in that region.

Second, the running of the terror stricken cattle when attacked by the flies during their egg laying period. As a result of these attacks the stock are not only kept from grazing but are so excited that milk flow is often temporarily reduced from five to twenty-five per cent. Cattle on the range, in their wild efforts to escape, are not infrequently driven into bogs and lost.

Third, lameness, soreness and swellings are usually produced by the penetration of the young grubs when they burrow through the hide of the animal.

Fourth, there is considerable irritation caused by the burrowing of the small maggots in the tissues throughout the animal as they work their way first into the chest and abdominal cavities and finally to their resting place under the hide on the back.

Fifth, there is a heavy damage to the hides of cattle on account of the many holes cut through the portion of the back which forms the most desirable leather. This loss has been recognized for years by those who deal in hides and leather. Figured on the accepted basis of loss of one cent per pound due to grub holes the annual loss in this country from this source alone is over two million dollars.

The combined effort of the above mentioned injuries results in a material decrease in milk production, reduced condition of flesh, checked growth of young stock, direct loss due to miring and mechanical injuries and abortion caused by excitement, and damage to hides.

The fact that the warbles or wolves and their parents, the warble flies or heel flies as they are known in different sections of the country, have been present among our herds for many years has led most dairymen to look upon the parasite as a necessary evil and no thought is given to keeping them in control. Many men have been heard to say that there is no use bothering the grubs in the backs of the cattle as they will come out in the spring. But these men fail to recognize the fact that there is a constant irritation by the grubs and also that when they are allowed to come out

Applying iodoform-vaseline ointment to kill grubs on backs of cattle.

themselves they hatch into the warble flies or heel flies which strike terror to the hearts of the cattle exposed to them.

LIFE AND HABITS OF THE WARBLE

Two distinct species of flies are concerned in this injury. Their habits are quite similar and the ordinary observer can not distinguish between the two varieties of grubs in cattle. It is not necessary that the dairyman recognize the difference since the methods of fighting the two are identical. The principal difference in the habits of the two species is that one of them commonly known as the northern warble, found only in the northern states and Canada, appears under the skin of the back later than the common warble, matures more slowly in that situation and the flies are active throughout the greater part of the summer, thus lengthening the period of annoyance to the stock.

In order that the dairymen may have a fuller understanding of the problem it is desirable to briefly review the very interesting and complicated life cycle of the pest. It should be remembered that the seasonal development of the insect is markedly influenced by climatic conditions, the stages appearing earlier in the South. Beginning with the grub or the maggot stage in the back we find that when mature they turn almost black in color and work their way out of the animal. This dropping takes place over a period of about four months during winter and early spring. Upon reaching the ground the grubs seek protection and their outer skin hardens to form a protective shell within which the maggot changes into a fly. This development requires from twenty to sixty days or more, according to temperature.

The flies upon hatching from the shells straighten their wings, mate and without feeding begin attacking the cattle for the purpose of laying eggs. They begin to appear with the first warm days of spring. Many of the eggs are attached to the short hairs on the legs but as the cattle become more and more frightened by the persistent attack they are placed higher on the animal, principally on the hind quarters. The eggs hatch in a few days and the very minute maggots begin at once to bore through the hide at points where the eggs are attached. The maggots burrow through the tissues and are next seen in the body cavity, especially on the surface of the paunch, between layers of the gullet, around the kidneys, and even in the heart. After spending five or six months in these situations where they grow to about three-fourths of an inch in length they begin travelling to the back. As soon as the hide is reached a minute hole is cut through it and growth of the grub proceeds rapidly. At first the grubs are slender and white but as they shed their skins

Female Heel or Warble Fly and eggs on a hair (enlarged).

and grow they become more spiny and dark in color, finally maturing and dropping out in from 35 to 90 days after having reached the back. It is thus seen that the complete life of the insect is complete in one year, about ten or eleven months of this time being spent within the animal and one to two months on the ground and in the fly and egg stages.

CONTROL OR ERADICATION NOT DIFFICULT

After a thorough study of the life and habits of this pest it has been found that the most effective time to fight it is during the period of about four months

when the grubs are present in the backs of cattle. It should be kept in mind that each one of these spiny creatures when matured forms a fly a little later in the spring and that by destroying the grubs the round in the development is broken and the pest is destroyed.

Many dairymen have practiced squeezing the grubs or wolves from the backs of the animals and some have almost completely rid their herds. Usually, however, this work is done intermittently and not thoroughly and enough grubs are left to keep the pest going. Furthermore, there has been a lack of united effort in this direction and one's neighbors sometimes undo much of

Yearling running from an attack of a heel fly. Loss of flesh and oftentimes injury is the result.

the good that has been accomplished. In order to eliminate the pest it is necessary to go carefully over all the cattle more than five months of age during the winter and spring. The date of beginning this work depends upon the latitude. As the grubs keep coming up from the inside of the animals for some time, as explained, the destruction of all at any one time will not accomplish the desired results, but if all the cattle are gone over four times at thirty-day intervals and all grubs extracted or treated each time every grub will be destroyed and no flies will be hatched the following spring to reinfest the animals.

With certain breeds, particularly the Holsteins and heavy beef animals, it is difficult to remove the grubs by squeezing. Experiments have shown, however, that they may be killed by applying a salve consisting of one part iodoform and five parts vaseline to each of the grub holes. The material must be placed inside the hole firmly with the finger. Some of the grubs drop out after they die and the others soon disappear without ill effects to the animals.

The Department of Agriculture is continuing its studies on this destructive pest and plans have been laid when funds are available to make a test of the possibility of eliminating it from a considerable area. If such a method is found practicable it is possible that eradication of the insect from the entire country may ultimately be accomplished.

The cop declared the fellow had
Been tarrying with the cheering cup,
And though his car was minus lights,
Yet he himself was all lit up.

Twenty-Two Years of Tuberculin Testing in One Herd

By A. C. Dahlberg

THE Jersey herd at the Agricultural Experiment Station at Geneva, New York, was started in 1898-99 by the purchase of fifteen cows from nine different herds in New York State. These cattle were carefully selected so that productive, healthy animals of good type would be obtained. They were not tested with tuberculin but their health was considered on the basis of their physical appearance. These animals together with 2 cows raised at the station, and the 11 heifers raised from them constituted the herd in 1900.

During the fall of 1900, one cow that had been purchased in 1898 lost weight rapidly. In November a local veterinarian examined her physically and pronounced her tubercular. She was slaughtered and found to be infested with generalized tuberculosis. Rabbits which were inoculated with the tuberculosis lesions and milk from the udder developed generalized tuberculosis. It was evident that not only did this cow have tuberculosis but that the calves were being raised on milk containing active tubercle bacilli.

Physical examination of the herd failed to detect any other cases of tuberculosis, but there was little doubt that other animals were infected. For this reason all of the animals that were more than six months of age were given the tuberculin test. Eighteen of the 28 animals in the herd reacted. When post-mortem examinations of the carcasses were made in later years, the results of the test were verified and found correct. Physical examination failed to be of any material value in detecting the tubercular cattle.

A healthy herd of proper size was a necessity for experimental work at the station. The breeding of the diseased animals was especially good, and the expense of purchasing animals of equal breeding would have been rather great. To save this quality of breeding it was decided to replace the herd by the calves raised from both the healthy and the diseased animals. In October, 1901, therefore, the herd was divided into a healthy herd and a tubercular herd. These herds were cared for according to the method originally devised by Professor Bang.

The tuberculin-test record of the diseased herd, summarized in table 1, is an object lesson for the present day in eradicating tuberculosis. It illustrates the danger of infection by the purchase of cattle from tubercular herds, even though the cattle pass the tuberculin test. This tubercular herd in 1901 consisted of 17 animals that had reacted to the test. One of these animals in October, 1901, did not react to the second test. In December, 1903, only two out of the remaining six tubercular animals reacted to the test. A total of 64 tests were made on the 17 tubercular cattle and only 53 reactions were obtained. Examination of the carcasses of these animals and inoculation of rabbits with the lesions of some gave positive evidence that every animal was infected with the disease.

TABLE 1.—TUBERCULIN TESTS ON ISOLATED TUBERCULAR HERD

Date Tested	Total Number Tested	Number of failures to react
1901, October	17	1
1902, June	14	0
1902, December	8	1
1903, December	6	4
1904, May	7	1
1904, November	6	2
1905, November	6	2
Total	64	11

This limitation of the tuberculin test has been frequently mentioned and is usually explained as being due (1) to failure of badly diseased animals always to react, and (2) to the encysting of lesions which actually separates the tubercle bacilli from the body tissues. These explanations do not interest the farmer so much as does the fact that these animals are or may become dangerous spreaders of the disease. Cattle should not only be given the tuberculin test before putting them into a herd free from the disease, but they should also come from tested herds if one wishes to take special precautions in protecting his herd.

The cattle that passed the tuberculin test constituted the healthy herd and were isolated and protected against reinfection by diseased animals. Calves of both healthy and diseased animals were handled according to the Bang method and placed in the healthy herd. After six months of isolation, four more animals reacted to the test. They represent the animals that were exposed to the disease at the time of the first test and had contracted it before the second test.

In 1904 one cow reacted and on being slaughtered tubercular lesions were found. This animal had been purchased the previous year but she passed the test. Her history illustrates again the danger of buying animals from infected herds. In 1905 another cow reacted from the test and was immediately removed from the healthy herd.

The healthy herd which had been successfully raised from the diseased herd had now increased to the number desired. The six remaining animals in the diseased herd were slaughtered in 1905 and all were found to have tuberculosis.

Too large a percentage of cattle owners have failed to recognize the fact that protecting the herd against reinfection is just as important as testing for tuberculosis. The natural tendency is to think that the work is done for all time to come after the herd has been tested and the diseased animals slaughtered. The belief that testing the cattle once a year and slaughtering any reactors would free any herd of the disease regardless of general farm practices is erroneous.

The first tuberculin test on the station herd after there were no tubercular animals on the premises was made in 1906. During the period from 1906 to 1922 inclusive, a total of 631 tests were made and only three possible reactions were obtained. Post-mortem examinations, although very carefully made, did not reveal any tuberculosis in two of the animals, and animal inoculation with their tissues failed to produce tuberculosis. It can be truthfully said that since 1905 there never has been a proved case of tuberculosis in the station herd.

The first reactor was a bull which had passed the test in 1914 but gave a typical temperature curve in 1915. He was isolated and kept for three years. He never gave another reaction, although tested in three subsequent years, and careful post-mortem examination failed to reveal any tubercular lesions. In 1919 a heifer born and raised at the station gave a temperature reaction and was immediately slaughtered. No tubercular lesions could be found. In November, 1922, a three-year-old cow gave a very typical temperature reaction, but both the intradermal and ophthalmic tests were negative. She is now isolated awaiting retest. Whether the first two animals were tubercular can never be proved, but it is probable that they were healthy and the test was at fault with them just as it must have been at fault with the cow tested in 1922.

For the sake of argument it may be assumed that the test was at fault in all three cases. How accurate and reliable has this tuberculin test been in the station herd? In the tubercular herd maintained from 1901 to 1905, it was not especially accurate, as it gave a false report in 11 out of 64 tests. The tuberculin tests selected out all the tubercular cattle from the general herd in two years, namely, 1900 and 1901, which is a remarkably fine record. In 1904 and 1905, it showed two other cows to be tubercular and lesions were found in their bodies. In 1915 and 1919, two animals that reacted were probably not tubercular, while in 1922 the test on one cow contradicted itself. Since the healthy herd was established in October, 1901, it has been subjected to 816 tuberculin tests. The test showed six animals to be tubercular which were later proved tubercular. Since 1905, the tuberculin test has shown three animals as tubercular which displayed no lesions of the disease. Three possible errors in 816 tests is as accurate as one could ever expect such a test to be.

SUMMARY

The tuberculin test has been invaluable in securing and maintaining a tubercular-free herd at this station. The test has not been perfect, but it has been so accurate that by its use a tubercular herd was freed of the disease and a healthy herd maintained for 17 years without one demonstrated case of tuberculosis.

The tuberculin test is only a means of diagnosing tuberculosis and as such its greatest accuracy is obtained in herds comparatively free from the disease. It is dangerous to introduce into a valuable healthy herd an animal that has been in a diseased herd, even though no reaction is obtained with the tuberculin test. The animal may possibly have the disease or may be in the process of developing it.

Precautions must always be taken to prevent infection of the healthy herd. The tuberculin test does not prevent infection; it tells when infection has occurred. It acts as a preventive of infection indirectly by locating the diseased animals so that proper precautions may be taken to prevent them from infecting healthy animals.

Extracts from Bulletin 496, published by the New York Agricultural Experiment Station, Geneva, N. Y.

Australian Shorthorn Makes Tremendous Record

THE tremendous record of 1,316 lb. of butterfat equivalent to 1,656 lb. of butter on the 80 per cent basis is reported for an Australian bred Shorthorn cow, Melba 15th of Darbalara. Her milk production is 29,423 lb.

This is not the first time this great producer has attracted attention. As a four-year-old she is credited with 21,635 lb. milk and 954 lb. butterfat on two milkings a day. At the time this was made Melba became the world's champion Shorthorn, displacing her mother, Melba 7th, with 17,364 lb. milk, 870 lb. butterfat. Her four-year-old record is said to be the world's champion milk record, as well as the world's champion butterfat record for all breeds on twice a day milking.

Melba 15th of Darbalara ranges in weight from 1,500 to 1,700 lbs., being the lightest when she is producing the most milk. She is said to carry a splendidly proportioned udder of good size and a great milk vein development for her breed. She was bred and is now owned by the Scottish-Australian Investment Company, Mr. J. T. Cole, manager, Gundagai, New South Wales. She is the result of four generations of constructive line breeding under the management of Mr. Cole who had the original stock before he became manager of the Investment Company. Her sire is Kitchener of Darbalara who was grand champion at the Royal Agricultural Show at Sydney, Australia in 1917.

The tremendous record made by this milking Shorthorn again draws attention to the dual purpose cow. Tradition has it that Durham or Shorthorn cattle were taken from northeastern England to Holland and there is very little doubt that in time past there was considerable movement of cattle between Holland and eastern England, for Shorthorn history, as well as tradition show that there was Holstein blood introduced at various times into the northeastern counties of England, the original home of the Durham or Shorthorn breed. The greater part of the milk used in Great Britain is produced by Shorthorn cows which are handled in very much the same fashion as the Dutch handle their Holsteins. A little more importance is laid on flesh making qualities and many of the leading Shorthorn herds are purely beef cattle, but the great bulk of the red, white and roan stock throughout England is handled in dairies where the cows are milked by hand and the milk shipped to the great cities.

By virtue of her tremendous production, Melba 15th of Darbalara becomes the second highest record cow in the world for butterfat production, surpassing any cow's record in the United States and exceeded only by the new champion, Agassiz Segis May Echo, whose record is 30,886 lb. milk, 1,681.25 lb. butter.

The Value of Junior Club Work

THE Boys' and Girls' Club movement means many things of worth to American agriculture but its most significant meaning, in the long run, is that it is giving us an agricultural population trained to think and act by communities rather than by individual farms. The club movement has already borne sufficient fruit to show that, generally, the farmer who has been a club boy will have a better managed farm than the one who has not; that the farm woman who has been a club girl will be a better home maker than the one who did not have the advantage of club training.

But the benefits will go much beyond that. Club-trained farmers and farm women will know how to work in harmony with other members of their community. They will give the country, in short order, what would have been slow coming otherwise, the community that can work as a unit—the community that will plant a single variety of cotton, the community that will keep a single breed of cattle. They will go a long way toward making impossible the tragedy of the lone farmer in a community fighting for progress and finally achieving failure because nobody sympathizes with him to the extent of working with him. All of this will mean fuller and more satisfactory living not only through better community business, but through better social opportunities, better schools, better churches, a better neighborhood atmosphere. They will work not alone for the day but for the future, near and remote. They will mightily reduce, if they do not eliminate, the too frequent individual attitude of "after me, the deluge." They will organize American farm life, business and social, on the basis of all the good that all can contribute for all the members of the community.

HENRY C. WALLACE,

Secretary United States Dept. Agriculture.

Green Feed for Summer

By H. M. JONES

South Dakota Dairy Specialist.

THERE is probably no feed which excels good pasture grass for economical milk production. To be sure, the highest records of milk and butterfat have not been made on a grass ration, but in economy of production, grass ranks first.

Good grass is not available during all of the summer months. Even though the cows are pastured over a large area containing plenty of grass, there are times in late summer when it becomes dry and of poor quality. If milk production is to be maintained, some provision must be made to furnish the dairy cows a green succulent ration other than grass during such a period. The soiling system has come to be used rather generally in many dairy sections.

By "soiling" is meant the feeding to stock, in stall or yard, of some green feed like corn, sorghum, oats and peas, timothy and clover, Sudan grass, alfalfa and many others. Pasture supplemented by one or more of these green feeds usually results in a higher milk production than when supplemented by grain alone.

The chief disadvantage of the soiling system is the amount of labor required, and the fact that this require-

ment comes at a time of the year when labor is much in demand in other phases of the farm work. Nevertheless, those who have tried it out are convinced that it pays to sacrifice such time as is necessary to supply the dairy herd with green feed.

The time to plan for soiling crops is before the growing season. One should be careful that each crop is sown at a time when there is reasonable assurance that it will be in the proper stage for green feed when wanted. The following is suggestive of a plan which might be varied to suit almost any conditions:

Crop	Average tons per acre (Green weight)	Time to feed
Winter rye	8	May 15-June 15
Alfalfa (first cutting)	7	June 15-June 30
Oats and peas	9	July 1-July 15
Alfalfa (second cutting)	6	July 15-July 31
Late sown oats	9	Sept. 15 on
Corn	8	Aug. 1-Aug. 15
Corn silage	8	Aug. 15-Sept. 15

Cows will do best if allowed as much green feed as they can handle. Caution should always be taken that they do not gorge themselves when they are unaccustomed to green feed. These precautions are especially necessary when cows have been on short, dry pasture for a long time.

Ordinarily a cow will eat about three-fourths of a ton of fresh green roughage per month. On this basis it is a simple matter to figure from the above schedule the necessary average of each kind of feed. As an illustration, the acreage necessary for herds of 10, 15, and 20 cows is given herewith:

Crop	Days feeding	Acres necessary to supply		
		10 cows	15 cows	20 cows
Winter rye	30	1	1½	2
Alfalfa (1st)	15	5/8	7/8	1¼
Oats and peas	15	½	2/3	1
Alfalfa (2d)	15	¾	1	1 1/3
Late sown oats . . .	15	½	2/3	1
Corn	30	1	1½	2

Yields per acre will naturally vary with the locality and with the season. The above figures are given only as a general indication of the amount of each crop to have ready.

Root crops have proven valuable in this connection, not only in supplying succulence but also somewhat as a stimulant for milk production. The greatest value of root crops is for winter feeding although frequently the tops as well as the roots are used for supplying succulence in the fall. A cow will eat about 50 pounds of roots per day. They should be cut or sliced sufficiently to prevent choking.

Sweet corn, cane, millet and Sudan grass give good results as a green feed for summer. As catch crops and as soiling crops they enable the dairy farmer to harvest feed from land which might otherwise go to waste. Frequently a farmer can get two crops of green feed in a season from the same land. On the dairy farm of the South Dakota State College, oats and peas followed by millet have produced a total of 38,760 pounds of green feed per acre in one year. This, however, is exceptional.

If summer dairying is to reach a high point of production beyond the flush months of green grass, the ordinary pastures must be supplemented by some sort of green feed. Soiling crops and the summer silo have given good results. The extra time and labor involved have proven to be more than repaid in increased milk yields. An acre of ground in soiling crops furnishes about two and one-half times as much green feed as the same area of pasture, and in the late summer is of more value to the cow than is the ordinary pasture. The plan has been tried out and found to be successful.

Wall Street, Oil and Wisconsin

SEVERAL issues of THE BREEDER AND DAIRYMAN have carried reports of cattle being purchased in Wisconsin for shipment to Mexico. We did not know, however, that such transactions had induced the Wisconsin legislature to pass a resolution commending President Obregon, until we read *The Wall Street Journal* of February 22d. In that issue, *The Wall Street* paper has this to say: "If Lenin and Trotzky, or the highly personal Soviet government of Russia, bought for real money \$500,000 worth of dairy cattle in our greatest dairy state, Wisconsin, would the legislature of that state give them a certificate of character? The Mexican government has spent \$200,000 in a similar purchase, and the Wisconsin legislature has passed a resolution commending President Obregon as an enlightened government official and 'A stabilizing influence in Mexico.'"

Evidently *The Wall Street Journal* is not kindly disposed toward President Obregon. Perhaps the attitude of the present Mexican government aiming to reserve part of the mineral and oil wealth of Mexico for the use of Mexicans is partly responsible for this display of feeling. There is a growing opinion that most of the Mexican trouble of the past decade has been fomented and in some cases financed, by rival American, British and French oil interests. If the Mexicans are settling down and buying dairy stock; and to care for dairy cattle it is necessary to settle, as we all know, we certainly wish them every success, even if the great oil octopus has a million or two less revenue. Dairy cows are fully as potent a force as oil wells in uplifting a community or nation, mentally or morally.

Dairy Industry Growing in Georgia

THE dairy industry in Georgia is making rapid growth. Farmers are increasing the size of their herds as well as improving the quality of their animals. The native scrub cow is either being bred to purebred sires or replaced by purebred animals brought in from dairy sections of other states.

To-day there are twenty or more Holstein herds located in or near the city of Atlanta. Fourteen years ago, one dairyman coming from Virginia brought with him the first purebred Holsteins ever seen in the county. He has since brought purebred cattle from New York, Wisconsin and Missouri.

The market milk of Atlanta comes from approximately 775 dairies containing 11,750 cows. January

1, 1920, there was only one creamery operating in the state. On January 1st of this year there were 16, of which one made more than 60,000 lb. butter during December, 1922, and nearly 73,000 lb. in January of this year. There are five cheese factories in Georgia and seventeen ice cream plants.

The damage wrought by the boll weevil is one reason for the turn to dairying. The value of livestock in insuring soil fertility is being recognized. But probably the chief reason is the eradication of the cattle tick from the larger part of the state. It is a significant fact that not a creamery, ice cream plant or cheese factory is located in the counties which remain under Federal quarantine for the cattle fever tick.

Foot and Mouth Trouble in Guatemala

THE American counsel at Guatemala City has reported that foot and mouth disease exists in Guatemala. Other reports received through the Department of State indicated extension of the outbreak on the Pacific side to within a few miles of the Mexican border. The government of Guatemala, in reply to inquiries, has indicated that it would be agreeable to have United States veterinary inspectors visit the country to study the situation. So the United States Department of Agriculture has designated two experienced veterinary inspectors, Drs. L. Enos Day and Howard L. Darby for that purpose.

Drs. Day and Darby sailed from New Orleans, March 10th for Puerto Barrios. They will confer with the American Minister at Guatemala City with officers of the veterinary organization of the country, and with commerce officials. Steps will be taken to guard against any direct shipments of possibly infected merchandise to the United States.

Indiana Rejects Filled Milk Bill

THE filled milk bill introduced in the Indiana House of Representatives was defeated despite the fact that it was backed by the Indiana Federation of Farmers' Associations. The bill was an exact duplication of the Wisconsin filled milk law which has been passed upon by the Supreme Court as constitutional. We do not know the arguments used to defeat the bill which is meeting with general approval in a number of states. We believe, however, this is only a temporary set-back for Indiana dairymen and that the time will soon come when imitation milk will no longer be found in the market.

Jimmy had three blocks to go to school and it was time for him to be in his seat. He crept in as quietly as he could, but the teacher saw him and asked him why he was late.

He hesitated and said, "I ran as fast as I could until I came upon a sign."

The teacher, eyeing him closely, asked what the sign was.

"School, go slow," he said.

Pasteurize All Skim Milk or Whey Fed Livestock

OUR esteemed contemporary, *Hoards Dairyman*, whose value as a source of information usually ranks high, is authority for the statement that in three Wisconsin slaughter houses in which 42,951 hogs were killed, no less than 10,395, or more than 24% were tagged as being affected, to some extent with tuberculosis.

The editorial comment on this item is that every community should interest itself in the eradication of tuberculosis but in the meantime no skim milk or whey from any cheese factory should be fed to farm livestock before it is thoroughly pasteurized. This comment infers

that much of the cause of tuberculosis is the feeding of whey or skim milk to hogs.

Evidently the compulsory pasteurization of dairy by-products is not required by law in Wisconsin although it is in some states. It seems remarkable that in the Badger state, which in many respects is a leader in dairy practices, the danger from infected skim milk or whey is not recognized by farmers and dairymen. If those who are the most interested appreciated the extent of their peril they would induce their representatives to pass the required legislation. One can scarcely conceive of a quicker way to spread disease than to have the milk from one badly infected herd taken to a factory, the cream skimmed and the skim milk or whey loaded with live disease germs put into a vat from which all the patrons of the factory take a share.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

March 22, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

More Misrepresentation

IN THE March 10th issue of *The Holstein-Friesian World* on page 18, appears an editorial under the heading, "No Special Election Ordered." After carefully reading this editorial and comparing it with the facts in the case, we can only conclude that the writer had one and only one purpose in view and that "TO DECEIVE HIS READERS."

The editor of the publication mentioned above has previously been accused openly in the press of being a man who, on occasions, was unable to tell the truth and therefore we are reminded of the oft-repeated story; that "the clock which is sometimes right is the one that is most liable to deceive you." The same is true about editors who sometimes tell the truth, therefore, we feel justified in correcting any false impressions in the minds of our readers who might have read the above mentioned editorial and who have failed to receive or read our January 8th and February 22nd issues which contain Justice Charles A. Pooley's Supreme Court decision and court order, the latter dated February 15, 1923.

We are quoting a portion of the editorial referred to above:

"Reports have been current among the membership that under the decision of Judge Pooley in the co-called George Case, a special election of six directors would be held in the State of New York under the proxy system before May 15th. We wish to assure our readers that no such drastic action was actually ordered by the Court."

We are reprinting that portion of Judge Pooley's court order which appeared in our February 22nd issue, and which refers directly to the calling of a special meeting to elect six directors:

"Further ordered, That an election of six directors of the Holstein-Friesian Association of America be held within the State of New York, under the supervision of this Court and that such election be held within ninety days from the time of the service of a copy of this order with notice of entry upon the attorneys for the Holstein-Friesian Association of America and the persons assuming to act as directors of such association, viz., W. S. Moscrip, W. G. Davidson, John A. Bell, Jr., H. W. Norton, Jr., Delancey B. Armstrong, George A. Fox, Thomas E. Elder, W. H. Mott, W. B. Barney, H. V. Noyes, James A. Reynolds, Fred Pabst, Fred F. Field, G. Watson French, Rudolph J. Schaefer and E. C. Schroeder, and it is

Further ordered, That at such election that members of said defendant shall be entitled to vote in person or by proxy."

After the writer of the editorial has told his readers that "No such drastic action was ordered by the court," his conscience evidently pricks a little and he contradicts his first statement and says: "Such an order was granted by Judge Pooley but along with it a stay which specifically postpones the operation of this order until the higher court could have an opportunity to pass upon the whole decision in the case." He concludes his editorial by saying that "That hearing of the appeal of this case in the Appellate Division is expected to take place during the present month."

Notwithstanding the fact that the writer of the editorial tells his readers he expects the hearing on the appeal will be held during the present month evidently overlooking the fact that his readers are intelligent men and do a little thinking for themselves and know full well that the court's and not the editor's decision will be final, yet he tells them, "It may be stated authoritatively, therefore, that the regular election of directors under the delegate system will be held on June 6, at Cleveland, Ohio, and there will be no intervening election in the meantime under the direction of any court."

The editor's conclusion is not based on facts, but is merely propaganda. Whether a meeting can legally be held at Cleveland, Ohio, on June 6th, and directors elected at this meeting, is a thing to be determined by the court and from the evidence now at hand, there is nothing to indicate that there will be a legal meeting held at Cleveland, June 6th.

Bill to Lower Transportation Charges on Purebreds

CONGRESSMAN RAKER, of California, has introduced a bill in the House of Representatives which provides for half rates for the transportation of purebred animals sold for breeding purposes. These rates apply both to freight and express shipments. Certificates of registration have to accompany the way-bills.

If Mr. Raker's bill becomes a law this will be a great aid in the campaign to replace scrub sires by purebred bulls. We understand that some cattle men are opposing it on the grounds that many animals are sold before they are registered, and also that test certificates accompany way-bills are frequently lost. We believe this is a mistaken view. The temporary inconvenience

of keeping animals until the registration certificate comes back from the secretary would be off-set many times by the lower transportation rates. Some arrangement would undoubtedly be made in the offices of the secretaries of the various breed associations to give such applications the right of way, so that the delay would be minimized as much as possible. If sending registry certificates with purebred animals shipped was a regular procedure the certificates would be delivered with the animals, and there would be a very few lost or mislaid. We believe that if Mr. Raker's bill should be passed it would confer a benefit on the livestock industry and at the same time would work very little hardship on the railroad or express companies, for purebred sires increase production which causes increased business for the transportation companies.

The Desirability of a Breed Aristocracy

AT THE recent convention of representatives of the principal dairy breed associations which was held at Washington early in February, a resolution was presented for consideration by Malcolm H. Gardner, superintendent of Advanced Registry of the Holstein-Friesian Association of America. The next of the resolution is as follows:

"Resolved, That it is the consensus of opinion of this meeting that, after January 1, 1926, no prize of any kind should be awarded by any dairy cattle breeders' association to any purebred dairy bull at any national, state, district or county fair that, if less than five years of age, is not the son of an Advanced Registry cow, nor to any bull five years of age or older that has not at least four A. R. daughters. Likewise, no prize of any kind should be awarded to any purebred dairy cow less than four years of age that is not either A. R. herself, the daughter of an A. R. cow, or the sister or half-sister of not less than eight A. R. cows; nor to any cow past four years of age unless she be A. R. herself. Also, that the influence of the dairy breed associations should be used to the effect that after January 1, 1926, no national, state, district or county fair should award any prize to any purebred dairy animal other than as specified."

According to our understanding no action was taken on this resolution which was only submitted for consideration. At first sight this move or a similar one would seem to be a step in the right direction and we believe will at first be so considered by agricultural writers and many breeders, but the more it is studied in its true relation to the purebred industry, the less desirable it appears. It is said that only 15 per cent of the Holstein-Friesian cows ever have an opportunity to make an official record. We believe that the proportion is even less in other dairy breeds. If a rule of this kind is adopted, its tendency will be to create an aristocracy in each of the breeds, and the claim for greatness of this aristocracy will not be that it is superior in the point of production or individuality to the rest of the animals in the breed, but rather on the grounds that the animal itself or some of its near relatives have had an opportunity to make a record under the supervision of representatives of the agriculture colleges or state experiment stations.

The idea that there is an Advanced Registry aris-

tocracy should be combated by every breeder. The Holstein has over 2,000 years of inheritance of pure breeding. All lines of blood whether fashionable or not, when given an opportunity to make Advanced Registry records show their ability to perform. This is true whether the cows are tested for seven days, or in the long time periods. Scarcely a report comes from the Advanced Registry office without showing a very large record made by some cow that previously has not had an opportunity to make an official record. It is still possible to take animals of the Holstein breed of the proper type, well-raised and well-fed, without special Advanced Registry ancestry and obtain the same results as have been and are still being obtained by cows with several generations of ancestors in the Advanced Register.

With 97 per cent of the cattle of the United States, grades or natives, it would seem that the work of the purebred breeder and the efforts of the breed associations should be to make war on the common enemy until the happy day will come when the numerical positions of the common cattle and purebreds be reversed. Eliminate the scrub sire, increase the producing capacity of the grade and purebred, improve the type of the purebred if you will, but if you value the purebred animal from the standpoint of production and reproduction and not as an article of speculation do not attempt to establish an aristocracy within the breed itself, and this applies to every other dairy breed association as well as to the one devoted to black and white cattle.

Clash of Legal Giants in Argument of Cattle Case

UNDER the above headlines clipped from a Rochester daily paper is told the story of the argument in the case of Edward P. George against the Illegal Board of Directors of the Holstein-Friesian Association which took place at Rochester on March 19th.

The Association appealed to the higher court from the order of Justice Pooley of the Supreme Court holding that the Association's directors were illegally elected, abolishing the delegate system and directing an election to be held "Under supervision of the court within 90 days for the election of six directors."

Nathan L. Miller, former Governor of the state of New York, appeared for the Association and Hon. Frank Laughlin, former Judge of the Supreme Court of New York for Mr. George.

In time a decision will be rendered—one side must win and the other side lose. THE BREEDER AND DAIRYMAN is of the opinion that in any event the Association will be several thousands of dollars out of pocket and will be placed before the world as a breed association trying to dodge the law, conducting its affairs illegally and perpetuating in office a political clique that the Supreme Court says is not a legal board. Lawyers will get "fat fees" and the breeders and members will get the "skim milk." How much longer the plain breeders and dairymen will permit the Association to be "milked" to provide "fat" for the politicians is a matter that demands an answer if the \$300,000.00 reserve fund is to be preserved for the men who created it and to whom it belongs.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

March 30—Orono, Maine, Annual Meeting Maine Holstein-Friesian Association.
April 37—Salt Lake City, Sixth Annual Inter-Mountain Livestock Show.
Oct. 2-5—Washington, D. C., World's Dairy Congress.
Oct. 6-13—Syracuse, N. Y., National Dairy Show.

MEYER WILL BE PAID

The Dubuque County Holstein Breeders' Association met recently at Dubuque, Iowa, and elected officers. J. I. Powers was elected president; Henry Vaske, of Dyersville, vice president; and Leo A. Meyer, of Dyersville, who has been secretary for the past two years, was reelected secretary-treasurer and in addition was voted hearty thanks for his efforts during the past year. In the future the association will pay Mr. Meyer a small sum for his time and services.

YORK COUNTY CLUB ORGANIZED

The York County Holstein Breeders' Club was organized February 28th, at a meeting at York, Pa. H. E. Robertson of York was elected president; Fred Slyder, New Freeman, vice-president; Sydney S. Davis of Seven Valleys, secretary; W. S. Grimm, of Red Lion, treasurer.

The tentative program for 1923 will be the encouragement of cow testing associations and a boys' and girls' calf club. A. N. Crissey, the district representative of the National Association gave an address telling what was being done by local associations in different states.

INVESTIGATE MILK BUYING BASIS

An investigation under the direction of the California Milk Distributors' Association will be made in San Francisco into the standard basis of buying whole milk. Following the suggestion made by Sam. H. Greene, Secretary of the California Dairy Council, D. M. Dorman, the recently elected president of the association appointed a committee to make the study. One member of the committee, Frank W. Helm of Fresno is one of the leading Holstein breeders of California. The other members of the committee are: C. A. Fieweger, Oakland; W. A. Haley, San Francisco; Geo. E. Platt, Los Angeles, and Wayne A. Hood, San Diego.

HOLSTEIN FILMS SHOWN

The Holstein Breeders of Fayette County, Iowa, recently organized a county association, at a meeting held at Maynard at which 125 were in attendance. Following motion pictures showing Holstein views and individuals, talks were given by J. P. Eves, secretary of the Iowa Holstein Breeders' Association; C. B. Finley, head of the Cow Testing Association work in Iowa and Fred E. Ferguson, assistant field secretary of the Iowa Dairy Association.

The officers elected were P. P. Stewart, president; J. F. Wilkinson, vice-president; directors Fred R. Ross, Fred Pieplow, A. L. Eitel, W. H. Turner, A. M. Doughty, G. E. Sauerbry and Le Grand Gleim. The dairy breeders in the county are planning on boosting boys and girls club work and making the best showing ever at the county fair this fall.

LAKE COUNTY TOUR

About three hundred Holstein enthusiasts of Lake County, Ill., visited on January 27th, the establishment of Frank Fowler, of Lake Villa. This was part of a tour, and lunch was served at the Fowler place. Despite disagreeable conditions the tour was a great success.

In the Fowler herd is Rose Christine Mercedes, a seven-year-old, who recently produced 98.8 lb. milk in a day and the next day produced 97 lb. She led all the cows in the testing association last month and is still giving around 90 lb. a day. She was much admired.

The visitors showed great interest in the type and breeding of the animals and the production obtained on these Lake Villa Farms. Besides Mr. Fowler's establishment, the party visited the farms of Gordon Bonner, E. F. Clark, Wm. Bonner, Everett Fish, L. G. Hutchings and A. S. Benson.

ANOTHER IDAHO BULL ASSOCIATION

H. A. Hathiesen, Bull Association Specialist of the Western Office of the U. S. Dairy Division, reports another bull association organized in Idaho. The Sugar City Holstein Bull Association of Madison County, Idaho, has made it possible for 30 dairymen, owning 255 cows, to procure five Holstein bulls whose dams' average yearly butterfat production is 767.04 pounds. The concerted effort of these men has made it possible for them to purchase the bulls at a cost of but \$10 per cow, or \$1.00 per cow per year, as the bulls will be rotated on the association plan for ten years. The average yearly butterfat production of the dams of the bulls of 767.04 pounds includes one two-year-old record. The dam of one of the bulls has a record of 33,306 pounds of milk. The increase in production of the future herds of the thirty members will prove these bulls to be a real investment.

Credit is due to F. L. Davis of the First National Bank of Sugar City for his assistance in making the purchase of these bulls possible, to County Agricultural Agent John B. Morrison and to George A. Pincock, one of the progressive dairymen of this section.

BREEDERS FAVOR PUBLIC SALES

The annual meeting of the Eaton County Holstein Association was held at Charlotte, Michigan, January 23d, with twenty members in attendance.

J. G. Hays, extension man for the Michigan Agricultural College Dairy Department, outlined the work contemplated for 1923 by the national and state Holstein associations. Mr. Hays also spoke on county association work and told of a plan whereby the county association employed a sales manager to sell cattle for the members at private sale. This manager worked on a 5% commission basis, of which one-half went to him for his work and the other half went to the county treasury. The breeders present did not fall in with the plan and favored holding a public sale. The matter was referred to the Board of Directors with power to act.

The officers elected for the coming year are: President, E. I. Bruner, Grand Ledge; vice-president, Claude Reader, Charlotte; secretary-treasurer, C. N. Loucks, Charlotte; directors, Gordon Warren, Domondale; John Chaplin, Grand Ledge; Claude Reader, Charlotte; Milton Sprague, Vermontville; J. B. Strange, Grand Ledge.

WOULD PROHIBIT GRADE AND SCRUB SIRES

The Holstein-Friesian Association of Franklin County, Pa., at a recent meeting passed a resolution urging that a law be passed prohibiting the use of grade or scrub sires in public service and also pledging members of the Association to furnish tuberculin tested purebred bulls at reasonable prices. Copies of the resolution were sent to the State Department of Agriculture, the Pennsylvania State College and the United States Department of Agriculture. It is as follows:

WHEREAS, The Holstein-Friesian Association of Franklin County approves of the recommendation of the Dairy Committee of the Agricultural Marketing and Production Conference recently held at Harrisburg under the auspices of the Pennsylvania Department of Agriculture, that the Legislature of Pennsylvania be asked to pass a law prohibiting the use of any but purebred sires in public service on the herds of Pennsylvania.

The Association pledges itself to furnish tuberculin-tested purebred sires to the dairymen of Franklin County at prices easily within reach of our people and directs its president to

appoint a committee of three to appear before the Chamber of Commerce of Chambersburg, Chamber of Commerce of Waynesboro, and the Greencastle Board of Trade to solicit cooperation of these bodies to assist in promoting the interest of their communities in this commendable work and to solicit the assistance of the Pennsylvania Department of Agriculture, the Pennsylvania State College, and its Extension Service, and the agencies of the Federal Government to further the movement of purebred sires.

WISCONSIN SLOGAN ADOPTED

The semi-annual meeting of the Executive Board of the Barron County Holstein Breeders' Association was held at the Court House, Barron, Wis., February 12th. Despite the conditions of the roads all but two of the clubs were represented by their officers.

The report of the state association meeting held at Fond du Lac, the previous week was given by County Agent W. A. Duffy, who represented the Barron County Association at this meeting. The slogan, "Holsteinize Wisconsin and Wisconsinize America," was approved. Bill board advertising was talked and the state association agreed to pay a portion of the cost of the first sign ordered by each county association. Barron County breeders propose to order two of these signs.

The state association has assessed the local association for its support, the amount required from the Barron County Association for the year beginning June 1, 1923, is \$110.00. The county club set the date of its annual spring sale for June 6th and the fall sale for November 7th.

They endorsed a program of Boys and Girls Calf Club promotion for each of the local clubs. The annual membership fee of \$2.00 will give each breeder joining the local club membership in the county and state associations.

PUREBRED SIRES FOR MOWER COUNTY

Bankers, business men, farmers, and breeders of Mower County, met at the high school auditorium in Austin, Minn., February 20th and inaugurated a purebred sire campaign similar to that recently successfully completed in Blue Earth County. At the meeting for the Mower County Bankers' Association a resolution was passed endorsing the drive and agreeing to lend the necessary funds to farmers at 6% for one year. Twelve of the 20 banks in the county were represented.

A banquet was held in the evening at which Ben F. Hormel, of the Geo. A. Hormel Packing Company, announced that his company would pay a premium over the usual market price for every scrub sire in the county displaced by a purebred sire during the campaign.

Addresses were given by W. T. Foley and W. J. Corwin, of St. Paul, J. C. Marlow, Mankato, and Secretary Geiger. F. W. Gleason, president of the Mower County Holstein Breeders' Association was toastmaster.

The annual meeting of the Mower County Holstein Breeders' Association was held February 20th. The sire campaign was endorsed and the following officers were elected: F. E. Gleason, president; Arthur Wright, vice-president; W. W. Walker, secretary-treasurer. Directors elected were: B. J. Husby, of Adams; V. S. Culver, Austin; A. O. Sparks, of Dexter; O. H. Lunde, of Adams; Thomas Lien, of Leroy and L. M. Eggen, Lyle.

THE HOMESTEAD CLUB

The Homestead Club composed of breeders of the Homestead strain of Holstein cattle was organized recently in Watertown, Wisconsin. Jerry P. Riordan, Mayville, Wisconsin, was chosen president. J. M. Kelley was nominated for secretary and chairman of the Publicity Committee but declined, and Francis Darcey, of Watertown was chosen secretary and Owen Mullen, also of Watertown, as treasurer. Vice-presidents are G. W. French, Davenport, Iowa; John A. Bell, Jr., Pittsburgh, Pa.; Clarence Funk, Utah; F. D. Bradkey, Kansas; Boyd Dickinson, Lake Geneva, Wis., and Wm. Moscrip, of Lake Elmo, Minn.

S. T. Jones, grandson of S. R. Jones, original breeder of the Homestead strain, Joseph Cort, manager of the Milford Meadow Farms, Lake Mills, and T. H. Champion, head of the

Milwaukee County Agricultural School, Wauwatosa, were selected as directors.

President Riordan acted as toast master at the banquet and told the origination of the Homestead strain by S. R. Jones and Barber Randall. S. T. Jones, grandson of the originator of the Homestead strain told many interesting incidents connected with the starting of the herd. J. M. Kelley, also spoke and recommended more extensive advertising of this big producing strain of Holsteins.

A very interesting story of the development of the Homestead strain written by Francis Darcey, appeared on page 195 in the issue of March 22, 1922. Better look it up, you will be well repaid for your trouble.

SUPERINTENDENT GARDNER GIVES NOTICE OF THE CLOSING OF VOLUME 34 OF THE BLUE BOOK

Notice is hereby given to owners of Holstein-Friesian cattle making official tests that the official testing year 1922-23 closes on Saturday, March 31st, and that entries to the 34th volume of the Advanced Register Year Book (Blue Book) close on the same day. As beginning with volume 35 many changes are made, a special effort will be made to give owners an opportunity to report all tests closing on or before March 31, 1923. All certified reports of official tests, with tests closing not later than March 31st that may be received in the Advanced Registry Office during the first week of April will be accepted, provided the reports reach this office complete in all respects. Breeders should remember that many state agricultural colleges hold up reports of tests for the conduct of which bills remain unpaid, and should act promptly in the making of payments in order that the reports of their tests may be included in the 34th volume of the Advanced Register Year Book.

Each year breeders forget that no report of official test is complete until such time as it has been certified by the Superintendent of Official Testing in the State in which the test is made, and that when such incomplete reports are sent to this office direct they cannot be accepted until such time as they have been returned to the state agricultural college for certification; and the sending of such incomplete reports actually delays their acceptance instead of hastening it. In many cases such reports are not returned to the Advanced Registry Office in time for inclusion among the entries of the year and have to go over to the next year; and I would here remind our breeders that reports can only reach this office through the office of the Superintendent of Official Testing in their own States. Do not send the reports to this office incomplete thinking that you can thereby get them into the 34th volume, but send them in good time to your state agricultural college, so that you may be sure they will reach this office in time for such entry.

Owners with cows on long-time test that complete their tests during the month of March should send final monthly milk reports as fast as the cows close their tests, seeing to it that the colleges are asked to forward the certified reports of monthly official test periods, so that those reports may also reach this office before the close of the month. No cow in the ten-months division is supposed to have completed her test until such time as she may freshen; and it will not be necessary to hasten the reports of cows completing the 305-day period where those cows do not freshen prior to April 1st. Since at the close of the testing year the whole force of clerks handling long-time tests is employed in the closing up of the tests that are completed during the testing year, the reporting of the January credits will have to be postponed until such times as these closing cows have been taken care of; and the reporting of the January and February credits will be taken up as soon after the close of the testing year as possible.

AGEE ON "WHAT THE FARMER WANTS"

The Farm Bureau of Dauphin County gave a membership luncheon at the Penn Harris Hotel, Harrisburg, Pa., February 15th, in honor of Alva Agee, New Jersey State Secretary of Agriculture. Secretary Agee is the author of a number of books on agricultural subjects. is a prominent educator, and

was formerly director of agricultural extension of Pennsylvania State College. Recognizing the prominence of the speaker, or we should say speakers, for the famous Yale football coach Walter Camp, author of the Daily Dozen also spoke, the Harrisburg Chamber of Commerce and Kiwanis Club joined with the Dauphin County Farm Bureau in its luncheon. Exactly 301 sat down to a tasty feed. Mr. Camp told how he was induced to invent the Daily Dozen exercises and related a number of interesting stories connected with its installation and operation.

Secretary Agee's subject was "What the Farmer Wants." He said that years ago usually after things had been done beyond repair, the farmers got together and held a meeting at which speeches were made deploring the conditions of affairs and no remedial action was taken. Usually part of the proceedings were of a patriotic nature and occasionally the constitution of the United States was read. Gradually it dawned upon some of the leaders that the principal industry in most of the forty-eight states was agriculture; that every state had two, and no more, representatives in the Senate and that the machinery was there to remedy or prevent the complained of conditions. This resulted in the building of a constructive program which the agricultural leaders were now trying to have carried out. The three chief subjects of discussion at the present time are credits or credit extension, coöperation and labor conditions.

In regard to credits, the idea was extension of credits, not more credits, perhaps too much has already been given. The present unrest among the farmer population was partly due to the price drop or deflation. This price drop was unexpected both in time and extent. It was true that land prices had soared tremendously, particularly in the west but the farmer who bought land thinking that high prices of farm products would keep up indefinitely did not make any bigger mistake than the New York bankers who lent money on high priced silks or to push trade with South America which they were doing about the time the farmers were buying land; both made a mistake and had to suffer in consequence. What the western farmer was kicking against was the fact that the restriction of credit was too severe as well as unexpected and that he could not adjust his business to conditions that applied to mercantile circles. For instance, it took the livestock breeder three years from the time he purchased his breeding animals before he could market his crop; that is, their progeny. Farming interests were now trying to get done what would have been done had agriculture been in its rightful position as the leading industry of the country. Then credit would have been adjusted to the needs of agricultural interests instead of to the requirements of the mercantile industry where turnover was rapid.

The second great thing was coöperation. The coöperative efforts of the farmer were restricted. No other business in-

terests were operated by individual action yet some thought it was wrong when six or seven million farmers thought that coöperative action was better than individual effort.

The farmers' attitude on labor was briefly that farm prices are practically on the 1914 level while other prices at the present time are on the level of 160 compared with the pre-war standard of 100. Immigration had been restricted by war and law for practically eight years and this in a country that had never been able to produce its own unskilled or rough labor. He believed that the present immigration law should be changed and that a sifting out process should be done across the water.

The great problem at the present time was reparation. A board composed of business men from different countries, Germany included, should meet on a representative board and the sum that Germany should rightfully pay as being the instigator of the war should be ascertained. Then France should be told that her share was all she could get. In no other way could the European tangle be straightened out. Then it would be possible to float loans in America to be spent here for goods and food. This would benefit the American business man and the American farmer, stabilize the mark and restore international trade.

SOUTH DAKOTA ASSOCIATION MEETS

On March 1st, Holstein breeders and members of the South Dakota Holstein-Friesian Association met at Huron. There was a good attendance and much enthusiasm.

Dr. Kutnewsky of Redfield, the association president, called the meeting to order and introduced Mrs. Henyon, the acting Mayor, who welcomed the visitors. Chas. Gile of Brookings responded. The president gave a short address, pointing out the accomplishments and possibilities of the association. He then called upon Herdsman James Daugherty, to tell how the cows under his care in the Redfield herd made such high records during the past year.

Professor Olson of Brookings summarized the records made in the state during the past year. The highest record was that of Clothilde Vernon Rose, 35.77 lb. butter, 604 lb. milk, in 7 days as a senior three-year-old. One year ago there were only 44 cows in the world that had made 1,000 lb. of fat in a year, to-day there are 65.

Frank Johnson of Hetland, owner of Clothilde Vernon Rose, was called upon to tell "How Come." He told in detail how the animal was handled, and of the rations used in fitting the cow and fed to her while on test. Mr. Johnson stated that the real beginning of the record was when he and Mr. Crothers bought the sire King Korndyke Veeman Vale and bred some of their heifers to him.

P. R. Crothers of Badger gave a short summary of the Kansas City convention and urged any member fortunate enough to be selected as a delegate this year to attend.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The chief address of the afternoon was made by Dean C. Larsen of Brookings, one of the founders of the association. After two years of dairy marketing work in Illinois the Dean recently returned to South Dakota. He said he had just attended a price-fixing conference in the Twin Cities and was of the opinion that the black and white cow was the most successful price fixer. "South Dakota is distinctly a livestock state," he said. Dean Larsen recommended four lines of activity to breeders of Holstein cattle: 1, Health of their animals; 2, type and straightness; 3, making records and establishing cow testing associations; 4, a state sale or similar event.

Mr. P. R. Crothers was elected secretary, a position he held from 1910 to 1919. S. E. Jones, Yankton; H. M. Jones, Brookings; F. E. Johnson, Hetland; A. F. Test, Mitchell, and F. C. Cardinal, St. Onge, were chosen as directors.

A committee consisting of P. R. Crothers, T. E. Gage and H. M. Jones, drew up a series of nine resolutions which were adopted. These expressed appreciation to the City of Huron, the Marvin Hughitt Hotel and the Commercial and Kiwanis Clubs for entertainment given; gratitude to the Regents of Education for bringing back to South Dakota Mr. Larsen as Dean of Agriculture; requesting the State Fair Board to create a Dairy Cattle Department; favoring state and national legislation prohibiting the manufacture and sale of filled milk and butter substitutes and favoring the enactment of laws prohibiting the use of such words as cow, butter, cream, cheese, milk, etc., in advertising except when used in connection with true dairy products; urging the use of purebred sires on native and grade cows for the building up of South Dakota dairy herds in preference to extensive importation of grade cows from other states; urging the organization of county and district Holstein-Friesian associations; urging all breeders of black and white cattle to become members of cow testing associations and to aid in their organization; encouraging the formation of junior calf clubs; and commending Frank E. Johnson for the development of the new state champion senior three-year-old, Clothilde Vernon Rose.

DAIRY LEAGUE WITHDRAWALS

Much interest has been taken in the possible number of withdrawals from the Dairymen's League Coöperative Association, Inc. Each year dairymen who sign contracts with the association have the privilege of serving a withdrawal notice during the two weeks of each year ending February 28th. The total number of withdrawals this year were 10,768. The larger number of these cancellations were from the more remote sections of League territory such as Jefferson, Lewis, St. Lawrence, and Franklin Counties in the north where a great deal of the milk is made up into cheese and some of the counties in the northwestern portion of the state and in Western Vermont, also some Western New York Counties. The final statistics show, according to the officials of the League, that the old standby fluid sections of the territory, especially where the League has its own marketing facilities or where the Borden plants are located, returned comparatively few cancellations.

It was also announced that during the year which began March 1, 1922, and ended March 1, 1923, the association has received new contracts amounting to 9,263. This shows an excess of about 1,500 cancellations above new contracts for the year but this loss is more than offset by the fact that 1,600 of the cancellations received were from inactive poolers or farmers who, for different good reasons, did not contribute any milk to the pool during the past year.

More than 4,000 cancellations were from the butter and cheese sections of the territory. Officials of the Association state that this lessens the surplus burden which the association has to carry and will have the effect of eventually benefiting the pool price. THE BREEDER AND DAIRYMAN fails to follow this argument. It looks to us that the surplus will be thrown on the market whether the League handles the milk or not. If the League handles the milk it has its own way of dealing with a surplus. If the milk is shipped to New York by individual dealers it looks to us as if it is competing with the League product. But if the League is satisfied, so are we.

SELLING THE BULLS IN BLUE EARTH COUNTY

About a year ago a small group of Minnesota purebred Holstein breeders were discussing the livestock industry, and the question of actually placing purebred sires on the dairy farms of their state. The census had revealed that, in percentage of purebred bulls heading dairy herds, Minnesota ranked very low, tying with Kentucky for 34th place, and that the average yearly production of her cows was below the average production of the entire country, this despite the fact that Minnesota was the home of more than 1,600,000 cows, ranking third in the number of dairy cows owned and the amount of milk produced. The party decided that when breeders went out and sold the idea of the purebred bull, they had no trouble in selling the animal himself.

Shortly after the National Dairy Show, the Minnesota Holstein-Friesian Breeders' Association decided to launch a statewide purebred sire campaign similar to that one so successfully conducted in Sonoma-Marin Counties, California.

The committee appointed to supervise this campaign consisted of Chairman, J. C. Marlow, president of the Mankato Holstein Farm, Mankato; John B. Irwin, proprietor of the Woodlake and Clover Farms, Minneapolis; V. S. Culver, manager of the Minnesota Holstein Company, Austin; Robert Geiger, secretary of the Minnesota Holstein-Friesian Breeders' Association; and C. D. Stevens, who had, a year ago, successfully conducted a purebred sire campaign in Northwest Minnesota.

Blue Earth County was selected as a starting point because the Holstein breeders, Guernsey breeders, and beef breeders were active and well organized and have the full coöperation of the local bankers and business men in developing the livestock industry. Every precaution was taken to prevent anyone connected with the organization from favoring any particular breed of cattle, as the success of the campaign has been possible because of the coöperation secured by including all breeds.

Following a general meeting at Mankato, January 20th, a meeting of the County Bankers' Association was called on January 23d by President W. A. Streater. The campaign was strongly endorsed and the bankers agreed to loan the money to purchase purebred sires at 6 per cent interest, the notes to run a year.

Three days later, a meeting of the livestock breeders, creamery men, bankers, newspaper men, business men and Farm Bureau men of the county was held at Mankato and after listening to addresses from state agricultural leaders, whole-hearted support of the campaign was pledged.

More than 200 farmers attended a meeting at Good Thunder, January 29th, and active selling started. A total of nineteen purebred sires were sold around Good Thunder by four salesmen on January 30th and 31st. Meetings were held at other towns and were followed by two or three days of active selling in each community. The campaign terminated February 28th and resulted in placing 106 purebred sires on

LAST CALL FOR

H. R. Remley's Sale, Watsontown, Pa., March 24th.

Walter K. Sharpe Sale, Chambersburg, Pa., March 26th.

Sixth Annual Inter-Mountain Livestock Show, Salt Lake City, Utah, April 3d-7th.

the farms of Blue Earth County, of which 43 were Holsteins, 37 Guernseys, 21 Shorthorns, 1 Hereford, 2 Ayrshire, 1 Angus, and 1 Brown Swiss. Of this number 85 per cent were placed on farms formerly using scrub bulls. Much credit for the success of the campaign is due County Agent L. E. McMillan who actively cooperated in conducting the campaign by giving the work due publicity and lining up available purebred sires.

In starting the campaign the county agent sent questionnaires to all the purebred breeders in the county explaining the purpose and requesting them to list their available purebred sires. There were 160 listed. Approximately 100 were accepted after being inspected either by representatives of the extension department, the county agent, or competent breeders in order that only good individuals should be offered. Prospects were lined up through the cooperation of the breeders, creamery men, bankers and business men so that no time or effort should be wasted. When the bankers recommended a prospective purchaser, it was the understanding that in case the man purchased a bull the banker would back him financially if necessary.

When a sire was listed at a specified price it was with the understanding that in case the animal was sold the breeder would receive that price. As the breeder had no selling expenses the prices they put on the animals were very low and after the expenses of transportation, selling and overhead were added, the price to the purchaser was approximately the same as the breeders were asking before the campaign started.

An illustrated circular telling of the value of a purebred sire in building up production was sent each farmer in the county together with a request that the farmer specify whether or not he was interested. Many sales were made as a direct result. The newspapers in all the towns of the county gave the campaign much publicity, carrying write-ups regarding the progress of the work, donating advertising space and emphasizing the value of the purebred sire in building up the herd and increasing production. Farm papers carried regular display advertisements and reading matter and radio talks were also given. The daily papers of the towns and cities printed news articles on the development of the work and gave the campaign much space.

When any breeder lists animals for sale he must give the color markings and explanation of the breeding, with all production records, showing winnings, description of individuality, etc. All animals are guaranteed as represented, and every animal offered for sale is sold with a privilege of a 60 day retest for tuberculosis, providing of course, that the sire is isolated from the remainder of the herd for that period of time, or unless he goes into a federal accredited herd. All animals are guaranteed to be breeders under the usual conditions provided that the sire is not allowed to run with the herd.

The value of a campaign of this kind, conducted in a cooperative way and with the idea of placing sires of all breeds at actual cost, can conveniently be classified under four headings:

First—There is the value a purebred sire has in building up the individuality of a herd as well as the production. The purebred sire will pay for himself many times over through the production of his offspring. Numerous instances of this kind were brought to light through the campaign. Art Rosine of Good Thunder drew a cream check of \$222.65 earned by nine cows during the month of January; Clarence Peterson, Eagle Lake, for the same month received \$210 from ten cows; S. D. Whiting, Mankato, also with ten cows, received \$223.40; on the other hand, a seven scrub cow dairy owned by a farmer living near Rapidan earned only \$15.95; while another farmer near Amboy milked 25 scrub cows and received a check of \$140 for what his dairy produced during the same time. The increased production of the first three herds mentioned is directly credited to the use of purebred sires in building up the herds.

Second—A campaign of this kind opens up a market for all surplus males a livestock breeder has on hand. It relieves him of selling expenses which enables him to list the animals at a lower price which places the sale organization in a position to sell the animals at a figure not above the average market price. As the campaign develops from year to year it will be instrumental in finding a market for male animals of breeding age and will enable the breeders to raise more good bull calves instead of vealing them.

The *third* important point is the value to the livestock industry because of the enormous amount of publicity secured. Wherever one goes in the county where a campaign is being carried on, everyone is talking purebred sires and this is bound to result in a better understanding of the value of purebred sires in building the prosperity of a community.

Fourth—And considered by some first in value, is the cooperation of the farmer on one hand and the business man, professional man and banker on the other. Invariably where we have these forces cooperating there is steady progress toward general community betterment. As this work develops in a county, each one begins to realize that if any advance is to be made, it must be through the cooperation of all forces and we need only look at the progressive communities to bear out this statement.

Pat—"Have you christened your new baby yet?"

Mike—"We have."

Pat—"And phwat do you call it?"

Mike—"Hazel."

Pat—"Sure, bad cess to ye, with two hundred and twenty-three saints to name the kid after, ye had to go and name it after a nut."

FOR FIVE YEARS IN SUCCESSION Hampshires have won grand championships over all breeds, all ages and all weights of hogs in the carload lots at the International Live Stock Show 1918, 1919, 1920, 1921, 1922.

FOR FIVE YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this show.

HAMPSHIRE ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains, and **Because They Are Recognized Market Toppers.**

409 Wisconsin Ave., Peoria, Ill.

DAIRYMEN'S LEAGUE PRICE FOR FEBRUARY

The Dairymen's League pool price for February was \$2.31 for 3 per cent milk at the base zone. Ten cents of this sum is credited on certificates of indebtedness. This price is ten cents per hundred pounds higher than the price received by the farmers for January milk and thirty-four cents above the pool price of February, 1922.

The February report shows an increase in the quantity of milk handled by the pool plants in their higher classifications—that is, utilized as fluid milk or as sweet cream or evaporated and condensed milk. Milk used for these purposes brings higher returns than when marketed as butter and cheese.

In February, this year, the League plants marketed nearly 21,000,000 pounds of fluid milk as against 5,000,000 pounds a year ago. They also marketed 13,500,000 pounds as condensed and evaporated milk as against 6,500,000 pounds a year ago.

According to President Slocum's report for the month of January, the total value of sales made for the month was \$6,731,745.93. Of this amount, \$5,986,041.13 was for fluid and skimmed milk and \$745,704.80 for condensed and evaporated milk, sweet cream and other miscellaneous milk products. This is an increase of \$1,205,024.03 over the sales for January, 1922.

Letters to the Editor

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

March 10, 1923.

Dear Editor:

I have been receiving your magazine for nearly a year and you have been kind enough to make it a complimentary copy to the county agricultural agent for which I wish to thank you very much.

Your particular interest, giving several pages in each issue to the Cow Testing Association activities should receive very favorable comment from breeders and dairymen not alone within your own state, but also from enthusiasts from all states in cowdom. Mr. Wm. A. Markley and R. S. Heisey, together with other fellow testers whose reports I have read, are to be commended for their efforts.

It sure seems that the county cattle associations in Pennsylvania are making rapid strides. The annual and special meetings which I read about in your excellent dairy magazine, the cow testing activities, the printing of new records for fat and milk and the frankness in correcting and stimulating practices in organization and sales all help to make your paper or magazine live a good reputation.

Yours very truly,

WISCONSIN COUNTY AGENT.

March 12, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

I was well pleased with the copies received of THE HOLSTEIN BREEDER AND DAIRYMAN. Can you send this complimentary to our office so we can show it to our new Holstein breeders and urge their subscription to same. I like your stand on inflation of prices, the unsound policies of the old board of directors of the Holstein-Friesian Association. I have felt that the transfer fee was too high and the association run too much for the big breeder.

We have some men in our state that have made Holstein cattle a speculation and we have others that sell grade cattle or cattle they cannot furnish papers with as purebreds. I am

Sincerely,

MINNESOTA COUNTY AGENT.

EDITOR, HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.,

Dear Sir:

I am thanking you very much for sending me those two copies of your paper and for the good news I received in them. In regard to the bunch that have been running the Holstein-

Friesian Association, they ought to be put at hard labor for 99 years. I am mighty glad there was one man that stepped forward and declared his rights. I would like to shake hands with him.

VERMONT BREEDER.

March 6, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.
Gentlemen:

I have received my first number of THE HOLSTEIN BREEDER AND DAIRYMAN and I am more than pleased with your cogent editorials. It was the one in the sample copy of January 22d that decided me to take your paper. I am glad there are some who will perform the duty of being the "watch dog" over the treasury. If there is anything you can say to prevent the Extension Service from thrusting this "tin cow" on the landscape say it by all means. I do not want my pretty Holsteins disgraced.

OHIO LADY.

A BREEDER'S VIEWS ON MANAGING THE NATIONAL ASSOCIATION

I have watched the association from its infancy to the present. When it started, the directors were men who wore overalls, shoveled manure, milked their cows and were real dairymen, but there has been a great change in the leaders of the association. At first when its earning capacity was not great and their money had to be guarded, then, and only then, the men who had the welfare of the Holstein cow at heart were willing to put their shoulders to the wheel, but not so now when the Association's earning power is so much greater. Then comes the white shirt men along and steps in and takes the place of our old stalwarts who were the real backbone of the association. Just as soon as the Association's income got to be of real value, then our white shirt men took a high hand in affairs and raised the fees, thereby increasing the earning capacity to such an extent that they gave their president \$12,000 a year; for what? I see no other motive than that was the beginning of "Passing the Rocks," as it were.

I always questioned the legality of the business that was transacted outside of the State of New York. It appears to me that as long as the association's income was only enough to run the association then the small breeder could run the affairs, but when the association became an earning concern then the big white shirt men nailed it. Why? Because there was a lot of money to play with? I see that these white shirt men have been fighting Houghton and Gardner and I wish to say that in my opinion that just as soon as they succeed in displacing Houghton, just that soon there will be launched a campaign for another Holstein-Friesian Association and it will come fast as a horse can run and in my opinion would be one of the best things that could happen for our black and white cows' welfare. Then let the white shirt men have their association and we can have ours. A number of the different hog associations have two or more places of registry which is working out fine. Mr. Houghton is too honest and too fair to suit some of those so called large breeders. I for one, feel that the sooner we can throw off the yoke of this present mixup the better, just as has been printed in your journal from time to time. The cartoon that appears on page 174 illustrates just what I have in mind. All we small breeders can do is to see our money go in large quantities and we have no redress whatever. These men have taken or tried to take all our rights away by the system that they have adopted. Let the small breeder have their say by their vote or by their Proxy is my conviction.

A MEMBER OF THE NATIONAL ASSOCIATION.

The Client: "I bought and paid for two dozen glass decanters that were advertised at \$16.00 per dozen, f. o. b., and when they were delivered they were empty."

The Lawyer: "Well, what did you expect?"

The Client: "Full of booze. Isn't that what f. o. b. means?"

A California preacher has resigned because "the movies have outstripped the church." The movies might outstrip everything else in the world if it weren't for the board of censors.—
Cleveland Plain Dealer.

Cow Testing Association Reports

LEADING TEN ARE BLACK AND WHITE

The South Gibson Cow Testing Association operates in part of Susquehanna County, Pa., and the tester is J. C. Morse of New Milford. The ten highest producers for both December and January were black and white cows, Segis Prilly Johanna Beets, owned by J. M. Felton, being first each month. In December she produced 1,587 lb. milk, 61.9 fat while in January she is credited with 1,761 lb. milk, 68.7 lb. fat. A grade Holstein was second in December with 56.3 lb. fat, the registered Holstein, Lady Mary Isadora of the C. L. Snyder herd was third with 1,375 lb. milk, 55.8 lb. fat and Sadie Hengerveld De Kol, owned by H. L. Adams was fourth with 1,565 lb. milk, 49.7 lb. fat. Grade Holsteins hold the next two places; a registered Holstein owned by A. L. Howell & Son have the two next and then comes a grade Holstein and then another registered Holstein of the Howell & Son herd.

A grade Holstein owned by M. J. Stone was second in January with 52.2 lb. fat, 1,373 lb. milk. Lady Mary Isadora is third with 1,488 lb. milk, 50.6 lb. fat. A grade Holstein is fourth with registered Holsteins in the next six places. Six different registered Holstein herds are represented in the list of ten highest cows. They belong to J. M. Felton, C. L. Snyder, O. P. Walker & Son, R. C. Lewis, A. L. Howell and H. L. Adams. The average for the ten leading cows is 1,412.2 lb. milk, 49.96 lb. fat and an average test of 3.5 per cent.

STURDEVANT LED THREE SUCCESSIVE MONTHS

The reports for November, December and January of the Great Bend-Montrose Association which operates in Susquehanna County, Pa., came to this office at the same time and show that the Holstein breed is well represented in this association. The leader for November is Segis Clothilde Pontiac Velela, owned by A. F. Sturdevant. She is a four-year-old and made 1,632 lb. milk, 58.8 lb. fat. Johanna Wayne De Kol Pietje, owned by Perry Goff was second with 1,479 lb. milk, 53.2 lb. fat. Floyd Mack has a registered cow that made 1,443 lb. milk, 51.9 lb. fat and Pietje Princess Bess, owned by the Lathrop Estate is in fourth place with 1,533 lb. milk, 50.6 lb. fat. The ten highest producers are all registered Holsteins, Mr. Sturdevant, Mr. Mack, Mr. Goff and S. Griffing & Son each have one in the list while Lathrop Estate and C. C. Rose each have one; each animal on the list exceeded 46 lb. fat. During the month Tester W. B. Jones supervised the production of 25 herds containing 314 cows in milk and 71 dry.

The December list is headed by Irene Clothilde De Kol Pietje of the Sturdevant herd with 2,325 lb. milk, 76.7 lb. fat. Pauline Joe at the Lathrop Estate is second with 1,937 lb. milk, 69.7 lb. fat, a registered Ayrshire was third and Segis Clothilde Pontiac Velela, the November leader, was fourth with 1,708 lb. milk, 63.2 lb. fat. Eight of the highest producers are registered Holsteins, one is a registered Ayrshire and the other a Guernsey. During the month 318 cows were tested in 24 herds and fifteen made over 50 lb. fat.

Irene Clothilde De Kol Pietje again led the January report, so that Mr. Sturdevant owned the producer for three successive months. During January she produced 2,155 lb. milk, 69 lb. fat. A grade Holstein owned by Fred Hollenback is second with 61.2 fat, a registered Ayrshire was third; a registered Holstein owned by S. Griffing & Son was fourth with 1,615 lb. milk, 59.8 lb. fat. Bush Bros. owned registered Holsteins that stood fifth and seventh; a Sturdevant cow was in sixth position, while Mack, Perry Goff and Floyd Hollenbeck each owned registered Holsteins on the honor list of ten highest producers. The lowest one reported produced 54.5 lb. fat and the average for the ten is 1,544 lb. milk, 58.8 lb. fat. No less than nineteen exceeded 50 lb. and 51 exceeded 40 lb.

TEST WORK IN THE WESTERN STATES

Washington leads for average production in the eight states under the supervision of the Western office of the United States Dairy Division. The January average is 31.73 lb. fat for 2,688 cows. The Idaho associations are in second place with 31.24 lb. fat for 654 cows. California is in third place with an average of 31.09 lb. fat from 17,507 cows enrolled in sixteen associations. This state has 3,529 cows that made over 40 lb. or more butterfat in the month and there are only 5,015 such cows reported in the eight states. Colorado shows an average of 29.98 lb. fat while Utah, Arizona, Nevada and Oregon follow in the order named. In the entire district there were 25,287 cows tested in thirty-nine associations.

The highest producing herd of over fifteen cows is the registered Holstein herd of F. F. Pellissier, Whittier, Calif., enrolled in the Los Angeles Association. Mr. Pellissier's eighteen Holsteins averaged 1,577 lb. milk, 56.2 lb. fat. The Model Dairy, Holly, Colo., followed closely with an average of 1,580 lb. milk, 55.4 lb. fat for sixteen registered Holsteins. A registered Holstein herd is in third place for R. T. Davis of Weiser, Idaho, has a herd of eighteen registered black and whites that averaged 1,442 lb. milk, 48.8 lb. fat.

Black and white cows show well in the small herd division. Four registered Holsteins owned by R. Anliker of Goble, Ore., averaged 1,645 lb. milk, 69.6 lb. fat. The three registered Holsteins owned by Rev. N. L. Browning of Hemet, Cal., averaged 1,740 lb. milk, 68.6 lb. fat.

The first eleven leading producers are black and white cattle. The first five were registered Holsteins and each exceeded 100 lb. fat in the month. Iris De Kol Canary, whose picture has appeared in the columns of the BREEDER AND DAIRYMAN is first with the production of 2,855 lb. milk, 137.1 lb. fat. She is now a member of the great herd owned by Fred Hartsook of Lankershim, Cal. Sharlet De Kol is second with 2,835 lb. milk, 116 lb. fat. Helm Colantha Walker is third with 3,078 lb. milk, 111 lb. fat. A registered Holstein, name not mentioned, owned by Glenwood Stock Farm, Riverside, is fourth with 105 lb. fat from 3,280 lb. milk, while a registered cow of the Model Dairy is fifth with 2,716 lb. milk, 105.9 lb. fat.

HOW WASHINGTON COWS ARE IMPROVING

By FRANK W. KEHRLI, ASSISTANT DAIRY EXTENSION SPECIALIST, W. S. C.

That splendid progress is being made by Washington dairymen belonging to cow testing associations in the way of a larger and therefore more economical milk and butter production is conclusively shown by the January report of this work. Comparing the monthly records of January for the past three years, we find a steady increase both in average production and number of cows on record. The corresponding figures are: Jan. 1921—1347 cows ave. 27.7 butterfat Jan. 1922—2437 cows ave. 30.5 butterfat Jan. 1923—2688 cows ave. 31.8 butterfat

How is this increased production being obtained? There is no secret involved, simply a matter of applying good dairy practices, using cow testing records as a guide. First, attention to economical feeding, a ration balanced and fed according to the needs and production of the cow. Second, weeding out such cows that failed to come through with a profitable production after having been given a fair trial; and third, better breeding, which underlies all efforts at dairy improvement. Results from the first two steps come quickly, from the last necessarily more slowly.

If all cows in the state of Washington had made the same increase in production, as cows on record in testing associations made, the result would be a one-sixth greater production from the same number of cows, or from 198,000 cows the same production that we are now getting from 238,000 cows. Think of this, 40,000 cows less to feed, house, milk and care for, and no loss in total production, simply by a more efficient cow machine.

Some of our testers are rendering real service to their members in other ways than just keeping of the herd records. Donald Saunders in Snohomish County is working out rations for many of his members and advising on changes in feeding, with very good results. In one instance his suggestions followed by a member resulted in an increased production from 29 cows that netted the owner better than \$2.00 per day. Other testers reporting service to their members along feeding lines are Clarence Wivell in the Thurston and Grays Harbor Counties associations, and Claude Anderson in Lewis County. K. B. Cushman, in Clallam County is working hand in hand with the County Agent in disposing of surplus heifer calves from high producing cows in his association.

A summary of the testers' reports for the state shows that a total of 3,608 cows were on record during January in 188 herds. Of the above number, 2,688 cows were actually milking, and these averaged 760 pounds milk and 31.8 pounds butterfat. This production average places Washington state at the head of all western states for January.

Among the associations, Thurston County takes the honors for high average butterfat production, with 182 cows tested averaging 790 pounds milk and 34.7 pounds fat. Grays Harbor County is second with 205 cows tested averaging 913 pounds milk and 33.3 pounds fat, while Clallam County is third with 437 cows tested averaging 687 pounds milk and 33.1 pounds fat.

The Valley Gem-Farms herd at Arlington comes back for the fifth month in succession with the highest average in the state for Class I, 15 cows and over milking. This herd of 27 purebred and grade Guernseys produced an average of 943 pounds milk and 48.0 pounds butterfat apiece during January, placing it fourth in average production in its class for the entire West. In Class II, herds under 15 cows milking, John Haggloff, of Oak-

ville, heads the list with 8 purebred and grade Holsteins averaging 1,361 pounds milk and 53.4 pounds fat.

Thurston County Association takes further honors by virtue of the fact that high butterfat cows for all associations in both the purebred and grade cow classes are owned by its members. The six-year-old grade Jersey Cow Bess, owned by Mr. C. C. Aspinwall, of Olympia, was highest producer for the month, with a production of 1,141 pounds milk and 77.6 pounds fat. Mr. John Haggloff, owned the highest purebred producer; Grace Gerben Prilly Gelsche, a four-year-old Holstein, with a production of 1,730 pounds milk and 74.2 pounds fat.

In the Snohomish Valley Association the high herd consists of 13 purebred Holsteins owned by Earl Bailey, of Snohomish with an average production of 1,388 lb. milk, 42.6 lb. fat. The high cow is a purebred Holstein owned by B. D. Hillis, Monroe, with a production of 1,566 lb. milk, 61.2 lb. fat.

The high herd in the Grays Harbor County Association consists of 14 Holsteins owned by W. J. Berns, of Montesano, with an average production of 1,128 lb. milk, 42.4 lb. fat. A grade Holstein, owned by Rufus Arland is high with 1,721 lb. milk, 63.7 lb. fat.

The high herd in the Walla Walla Valley Association, is owned by Chas. Baker, of Walla Walla, and consists of 12 Holsteins with an average of 962 lb. milk, 45.1 lb. fat. His townsman, W. J. Greenway, has the high cow, a grade Holstein with 1,804 lb. milk, 76.8 lb. fat.

Alex Wiggins, of Fall City, has three grade Holsteins enrolled in the Snoqualmie Valley Association that averaged 1,098 lb. milk, 44.1 lb. fat. A grade Holstein owned by the Methow Valley Livestock Co., of Tolt is high with a production of 1,922 lb. milk, 71.1 lb. fat.

The high herd in the Skagit Valley Association consists of six grade Holsteins owned by H. F. Hastings, Mt. Vernon,

with an average production of 1,328 lb. milk, 46.9 lb. fat. The high cow is a grade Holstein with 1,698 lb. milk, 69.6 lb. fat, owned by Calhoun Bros., Mt. Vernon.

NEW YORK STATE TESTING

Holsteins show prominently in the February news letter of the New York State Dairy Improvement Associations. There are 26 associations listed but the South Genesee appears twice, the December and the January leaders being given. Of the 27 leaders twenty-three are Holsteins, either grade or purebred; two are grade Jerseys; one is a grade Guernsey and the other a Brown Swiss.

The leader is a Holstein owned by J. C. Cooley, of the Livonia Association. She produced 1,956.8 lb. milk, 95.9 lb. fat. There are 89 cows in this association that produced 40 lb. or more fat in the month. A Holstein-Friesian owned by the Laurel Stock Farm is in second place with a production of 1,856 lb. milk, 90.9 lb. fat and is the leader of the Blooming Grove Association which operates in part of Orange County. A purebred Holstein owned by J. B. Harbeck and Son enrolled in the West Allegany Association is in third place for fat production with 88.8 lb. but her milk production of 2,777 is far in the lead of any cow reported. A Holstein owned by Ed Bingham in the Inter County Association is in fourth position with 2,217 lb. milk, 86.5 lb. fat and a grade Holstein owned by P. E. Trask is fifth with 1,286 lb. milk, 86.4 lb. fat. She is enrolled in the Hamilton Association which operates in Madison County.

Chief Supervisor G. W. Tailby, Jr., says that the feed market shows only slight changes from the past two months and feeds continue firm. He recommends a grain mixture for dairy cows, made up with 60% high protein feeds so as to render it suitable for feeding with timothy hay and corn silage. That approxi-

This is Cornucopia Plum Johanna

1,056.78 lb. butter in a year, the maternal granddam of my junior herd sire, ORIGIN SIR NAPOL CORNUCOPIA. She has two 1,000-lb.-year record daughters besides his dam, whose 731.6 lb. butter in 10 months as a senior four-year-old is a Pennsylvania State Record.

HARRY C. REYNOLDS
SCRANTON, PA.

Herd under the Accredited Plan

mate analysis of the mixture is protein 23%; fibre 9%; fat 4.5%. It is as follows:

200 lb. wheat bran.
400 lb. ground oats.
200 lb. hominy, corn meal or ground barley.
700 lb. gluten feed.
300 lb. cottonseed meal, 43%.
200 lb. linseed oil meal.

Mr. Tailby states that owing to the high price of commercial feeds, farmers can afford to pay more attention to home grown feeds especially roughages high in protein. He also says that the lack of mineral matter may frequently be the limiting factor in growing young stock and in milk production. The mineral matters lacking is especially lime and phosphorus, both essential elements of bone and milk. Wheat feeds, cottonseed meal and linseed oil meal contain considerable phosphorus. Lime, however, must be obtained from roughages, and if roughages rich in lime are fed, live-stock will be enabled to make more efficient use of the grain.

The production of legumes means an increase in the feeding value of home-grown feeds and when wisely used to a reduction in feed costs. In most of New York State, lime must be used in fairly large amounts to produce legumes successfully but the cost and trouble of applying lime is more than counterbalanced by the increased fertility added to the soil by growing legumes.

WISCONSIN TESTING

A purebred Holstein, owned by Leo Preuss, led the Manawa Union Association for both milk and butterfat for the month of January. She produced 1,763 lb. milk, 65.2 lb. fat. A grade Holstein was second for fat production with 1,395 lb. milk, 64.2 lb. fat. She was owned by R. C. Bigford, and was a member of the herd making the highest average for the month. This herd averaged 999 lb. milk, 37 lb. fat.

Three hundred and sixty-three cows were tested in the Ladoga Association during January. The high cow for both milk and fat production was a purebred Holstein, owned by J. F. Braatz & Son, she producing 1,826 lb. milk, 73 lb. fat. Second for both milk and fat was another purebred Holstein, owned by E. H. Braatz. She is credited with 57.9 lb. fat from 1,755 lb. milk; while third on the list was a member of the purebred Holstein herd owned by C. C. Hazen with the production of 57.1 lb. fat from 1,732 lb. milk. Mr. Hazen's herd held high average, it being 1,047 lb. milk, 38.2 lb. fat for fifteen head.

The highest production in three years is shown in the January testing of the Richfield Association. Of the 350 cows tested six produced more than 70 lb. fat; 36 were over 50 lb. and 74 made over 40 lb. Ruby Bess a purebred Holstein, produced 1,696 lb. milk, 84.8 lb. butterfat. This fifteen-year-old leader of the association is owned by Henry Held. Barbetta, a purebred Holstein, owned by J. F. Mayer, is second with 81.6 lb. fat from 2,325 lb. milk.

High herd average was held by the nine cow dairy of Adolph Kurtz of Jackson. These purebred Holsteins averaged 46.6 lb. fat, 1,305 lb. milk. A. A. Wiedmeyer, Jr., had second high herd with eleven purebred Holsteins averaging 1,272 lb. milk, 42.9 lb. fat.

There were 330 cows tested in the Thorp Testing Association during the month ending February 4th. Of these 28 produced more than 40 lb. fat. The leader was a registered Holstein, Colantha, owned by John Barth, she producing 66 lb. fat from 1,739 lb. milk.

Korndyke, a registered Holstein, six years of age led the Comstock-Cumberland Association for the month of January. She produced 1,519 lb. milk, 56.5 lb. fat and is owned by Charles Oldeen & Son. There were 259 cows tested in the association of which 21 made more than 40 lb. fat.

H. F. Pieper of Campellsport owned high cow as well as high herd in the Eden-Osceola Association for the month of January. The leader, a registered Holstein, produced 2,277 lb. milk, 68.3 lb. fat while the herd of seven cows, all registered Holsteins, averaged 1,360 lb. milk, 41.8 lb. fat.

Three hundred and eight cows in 32 herds were tested during January in the Greenleaf Association. Thirty-eight of these produced more than 40 lb. fat while eight have more than 50 lb. to their credit. The leader was Netherland, a purebred Holstein owned by Frank DeCleene, produced 1,426 lb. milk, 64.2 lb. fat.

John Farner of Colfax, had the two leaders in the Dunn County No. 6 Association for the month of January. The leader was a purebred Holstein with 53.9 lb. fat from 1,587 lb. milk and she was closely followed by another purebred Holstein with 53.2 lb. fat from 1,438 lb. milk.

FIRST

Dairymen of Ravalli County, Montana, organized and financed a cow testing association at Hamilton, February 6th. This is the first cow testing association in the state. May it be successful and the first of many.

Spotted Poland China Bred Sows and Gilts Due to Farrow in April

Choice gilts at.....\$40.00
Extra choice gilts at.....50.00
Yearling gilts at.....60.00
Tried sows at.....75.00

FRANK BUCK

Brookmead Stock Farm, Metamora, Ohio

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

BIG PRODUCERS IN A LITTLE HERD

Fred C. Lehman of Carlisle, Pa., only has a small milking dairy but it contains good producing animals as was demonstrated in a recent official test. Ideal Winkje Korndyke, No. 513153 freshened at the age of 4 years, 4 months, 16 days and produced 30.53 lb. butter, 719.6 lb. milk in a week which is the Pennsylvania state record for milk in the junior four year old class. In ten days she produced 1,008.6 lb. milk and in thirty days, 2,918.8 lb. milk, which is also a state record. Her best day's milk was 108.3 lb.

IDEAL WINKJE KORNDYKE

30.53 lb. butter, 719.6 lb. milk in seven days; 2,918.8 lb. milk in thirty days, 108.3 lb. milk in a day. Owned and developed by the Greiger Stock Farm, Carlisle, Pa.

The sire of this cow is Ideal King Netherland and her dam Arlep Walker Korndyke 2d. She was bred by A. F. Howes, Conyngham, Pa. and was bred and developed at Greiger Stock farm, the establishment of Mr. Lehman.

On the Greiger Stock Farm, there is a daughter of this cow, Beauty Konigen Korndyke, No. 676696. She freshened at two-years-nine days old and without any preliminary fitting was put into test 84 days after freshening and she produced 16.05 lb. butter, 390.5 lb. milk in a week,

DUTCH CORNER FAYNE WALKER

103.4 lb. milk in a day, 656.5 lb. milk, 29.71 lb. butter in seven days. Owned and developed by Fred C. Lehman, Carlisle, Pa.

a very creditable record under the circumstances. She was born on the Greiger Stock Farm; is large and a very fine individual promising to make an even better record than her dam when she matures. Her sire, King Diona Konigen is a 36-lb. son of King Segis Pontiac Konigen whose daughters are making such large milk and butter records at Dutchland Farms.

Another member of this herd is Dutch Corner Fayne Walker, No. 473191. She freshened at five years, seven days old and in seven-day official test produced 29.71 lb. butter, 656.5 lb. milk, producing

103.4 lb. milk in a day. She was developed at the Greiger Stock Farm and made her record with no preliminary fitting. Her udder and milk vein development is something out of the ordinary. Dutch is a real foundation animal as her two daughters in the Greiger herd show great dairy type and are fine individuals. She is a daughter of Governor Walker Lyons and her dam is Dutch Corner Segis Fayne 3d.

The head of the Greiger herd is Dulcevista Echo Sylvia Ormsby. His dam is a good daughter of King Pontiac Hengerveld Ormsby and he was sired by Sir Echo Sylvia Johanna, a bull who is seven-eighths brother to Carnation King Sylvia, who was sold for \$106,000 at Milwaukee.

The Greiger herd is fully accredited, in fact, it was the first accredited herd in Cumberland county so it can be seen that this Pennsylvania breeder and dairyman establishment combines health, production and individuality.

GERMAN AGRICULTURAL TEACHER HONORED

On the 7th of March, the noted German agricultural chemist and investigator, Dr. Paul Wagner of Darmstadt, completed his 80th year, and his numerous friends and pupils in Germany held a celebration at Darmstadt in his honor.

Fifty years ago, on the 30th anniversary of his birth, Doctor Wagner became Director of the Experiment Station at Darmstadt, which had just been founded, and has since won for this institution a world renown, through his investigations on plant foods. Doctor Wagner certainly deserves to receive great commendation for having, with the help of his own method of pot experiments, substantially extended, and firmly established the foundation for the use of commercial fertilizers.

He was the first to recognize and correctly estimate the fertilizing effect of Thomas Phosphate or Basic Slag.

By a steady improvement in the methods of fertilizer experiments in the field, he succeeded in making of these field experiments a practical means of exact investigation.

Doctor Wagner, furthermore, has clearly shown the results of his investigations in the vegetation house, field, and laboratory, to the practical farmer, either in articles which are easily understood, or in inspiring lectures; and in this way he has contributed in an enormous degree, toward the proper use of commercial fertilizers in agriculture.

Here in the United States, many of Doctor Wagner's articles are known, having been translated or summarized by numerous writers, to the great advantage of American agriculture.

"How many commandments are there, Tommy?" asked the Sunday school teacher.

"Ten."

"And if you were to break one of them, what would be the result?"

"Then there'd be nine!" he triumphantly answered.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year. A good investment. Subscribe today.

DAIRY COWS NEED BONE MEAL

Recent experiments in cattle feeding have stressed the need of feeding extra minerals to dairy cattle in order to keep them in a healthy condition and maintain maximum production. Results of experiments carried on at Wisconsin Agricultural College and at various experimental stations show that cattle can be very greatly benefited by the feeding of a simple mineral mixture which will supply the minerals which are contained in the grain rations in insufficient quantities.

These experiments have demonstrated the superiority of a simple bone meal for cattle feeding, as it supplies calcium and phosphorus in the quantities which they are needed without being loaded with drugs and other unnecessary ingredients.

There are several bone meals which are sold for feeding purposes which are fit only for fertilizing. Care should be taken to avoid these and to select a bone meal which is known to be pure and palatable.

Special Steam Bone Mineral Meal is a pure bone meal made from gelatine manufactured for human use. It is carefully designed to meet the mineral requirement of the dairy cow and is prepared so as to be as palatable as possible.

Many dairymen feed it to their cows regularly as they find that it not only keeps the cow in a healthy condition, but it facilitates better milk production and better calves. They recommend it as an ideal supplement to the ordinary grain rations.—P. V. Ewing.

QUADRUPLETS

A Holstein cow owned by Geo. McGallicher, of Leola, Penna., recently gave birth to four fully developed calves and on Sunday morning too. However, one was dead when found.

Nov. 15—Kansas State Association Sale, W. H. Mott, Mgr.

THE BUTTERS DISPERSAL

The herd of E. E. Butters of Coldwater, Michigan, was dispersed March 7th on the Butters Farm. This herd had been established 22 years and had passed four clean tuberculin tests. In all, 38 animals were sold for a total of \$4,430. Some were very young calves and, following the usual custom of listing these with their dams as one number, the average would be \$144.41 for 30 lots. The top price was \$250 and was reached twice, once for Nancy Pietertje Alcartra a granddaughter of King Segis Pontiac Alcartra, purchased by Sue Shirts of Coldwater and the other time for Maggie Wa Wa Segis a nice three-year-old bought by W. B. Green also of Coldwater. The auctioneers were W. H. Krause of Thorpe, Wis., and Homer Green of Brunson, Mich.

Animals bringing \$150 or more with names and addresses of their purchasers are:

1	Kate Segis Pontiac, 5 yrs., W. B. Green, Coldwater, Mich.	\$200
2	De Kol Maud Pontiac, 5 yrs., Green Bros., Batavia	205
5	Nancy Pietertje Alcartra, 4 yrs., Sue Shirts, Coldwater	250
6	Helen Wa Wa Pietertje Alcartra, 4 yrs., Clifford Sangwell, Batavia	175
7	Nell Pietertje Alcartra, 4 yrs., C. E. Conklin, Coldwater	165
8	Aida Wa Wa Segis, 4 yrs., C. E. Conklin	165
9	Maggie Wa Wa Segis, 4 yrs., W. B. Green	250
10	Molly Wa Wa Segis, 4 yrs., N. D. Smith, Jackson	200
12	Maggie Wa Wa Segis De Kol, 4 yrs., B. M. Zeluff, Coldwater	165
13	Babe Segis Pontiac, 3 yrs., C. L. Williams, Coldwater	155
25	Fannie De Kol Pietertje ad, 7 yrs., John W. Gray, Coldwater	225
26	Neeltje Terzool Segis, 8 yrs., Green Bros., Batavia	225
28	Paul Pietertje Wayne Prince, 4 yrs., Green Bros.	150

NEWMAN HERD SELLS WELL

The C. W. Newman herd was dispersed on March 8th on the Merryall Farms, Wyalusing, Pa., and again showed that the breeders appreciate a good herd which has been operated on a producing basis. Mr. Newman, in company with J. G. Kerrick, Towanda, owned the bull, King Sylvia Johanna Pontiac, a son of the 40-lb. cow, Otego Valley Christmas Belle. Mr. Kerrick was induced to offer his interest in the young sire who was purchased by the well-known breeder Bernhard Meyer of Finderne, New Jersey, for \$1,400. In his new home, the young bull will have an even better opportunity than he had in the past and we shall expect to hear of him again. Mr. Kerrick put a few young calves by King Sylvia Johanna Pontiac in the sale so that in all 40 animals were offered and sold for an average of \$246. With the bull and the calves from the Kerrick herd taken out of the figuring the Newman herd averaged \$234.56.

Merryall Farms was sold to A. L. Burlington, who purchased some of the best females offered. Mr. Burlington will carry on the Merryall establishment and Mr. Newman owns the Farms will, under his management, become more popular and will attain even more Holstein prestige.

Merryall Lilit Hengerveld, a 22.8-lb. four-year-old with a good cow testing association record topped the sale bringing \$355. Her dam and granddam are in the herd at State College, Pa., while her sire is by Korndyke Abbekerk from the former four-year-old world champion for year butter production, Milanhurst America De

Kol. She was purchased by Mr. Burlington, who also took the 26-lb. cow, De Kol Klasse Hillside for \$280. In addition to her 26-lb. seven-day butter record, this cow had two cow testing association records of 850 lb. butter. D. M. Rosser of Berwick took Pietje Pride Homestead for \$325. She had a year record of over 2,100 lb. milk, 800 lb. butter. L. L. Allis of Rummerfield, took the almost 27-lb. cow, Titusdale Beauty Veeman for \$340. She too, has a large cow testing association record. Mr. Burlington took Milanhurst Johanna Queen for \$350. As a three-year-old this cow made 20 lb. butter in seven days, no less than 123 days from freshening, and has a year record of 800 lb. butter. F. J. Fisher of Rummerfield purchased Merryall Pietje Homestead for \$310. She is a daughter of Pietje Pride Homestead and was sired by Korndyke Abbekerk Netherland.

Most of the animals went in the State of Pennsylvania but a number of young ones were purchased by the New Jersey breeder Bernhard Meyer, while F. L. Hawes of Ithaca, New York, took a number of nice young females. Baxter was the auctioneer while R. Austin Backus was pedigree man.

Animals bringing \$150 or more with names and addresses of their purchasers are:

A	King Sylvia Johanna Pontiac, 2 yrs., Bernhard Meyer, Finderne, N. J.	\$1,400
1	Merryall Lilit Hengerveld, 5 yrs., A. L. Burlington, Wyalusing, Pa.	355
2	Pietje Pride Homestead, 8 yrs., D. M. Rosser, Berwick, Pa.	325
3	De Kol Klasse Hillside, 8 yrs., A. L. Burlington	280
4	Merryall Pauline Pontiac, 5 yrs., B. Meyer	250
5	Titusdale Beauty Veeman, 7 yrs., L. L. Allis, Rummerfield, Pa.	340
5½	Heifer calf, 3 mo., Ernest Brown, Stevensville, Pa.	165
6	Beauty Clothilde Abbekerk, 8 yrs., F. L. Hawes, Ithaca, N. Y.	175
6½	Milanhurst Johanna Queen, 5 yrs., A. L. Burlington	350
7	Merryall Neia De Kol, 2 yrs., E. A. Bart, Wyalusing, Pa.	175
10	Merryall Pride Pietertje, 7 yrs., D. M. Rosser	250
11	Aruna Belle Korndyke, 7 yrs., B. Meyer	250
13	Merryall Pietje Homestead, 5 yrs., F. J. Fisher, Rummerfield	310
18	Merryall Pauline, 2 yrs., M. L. Jones	175
19	Merryall Beauty Artis, 2 yrs., M. L. Jones	255
20	Merryall Lilit Pietertje, 3 yrs., F. L. Hawes	160
20½	Bull calf, 5 mo., Wm. Jayne Meshoppen, Pa.	235
21	Merryall Beauty Veeman, 3 yrs., M. L. Jones	165
21½	Heifer calf, 3 mo., Fred B. Keeney, Laceyville	250
22	Merryall De Kol Klasse, 3 yrs., A. L. Burlington	150
24	Merryall Beauty Pietje, 1 yr., M. L. Jones	165
25	Merryall Lilit Hengerveld ad, 1 yr., E. E. Brown, Rome, Pa.	175
38	Female, H. B. Parkhurst, Ulster	205
39	Female, B. Meyer	225
40	Female, B. Meyer	225

SALE OF THE REMLEY HERD

The herd of twenty-three registered Holsteins, owned by H. R. Remley will be sold at public auction, Saturday March 24th, on the Remley Farm which is situated two and one-half miles from Watertown and one and one-half miles from Dewart Station, about half way between Sunbury and Williamsport on the main line of the Pennsylvania Railroad.

The Remley herd is federally tuberculin tested and will be sold subject to a sixty-day retest under the usual rules and regulations. In this sale will be offered a number of splendid young bulls nearly all ready for service and whose dams are excellent producers. Some have A. R. O. records and nearly all have good cow testing association records. One of the cows in this sale has a seven-day butter record of 29.42 lb. with a milk average of 80 lb. a day; her daughter with a 25.58 lb. seven-day record and nearly 600 lb. milk is also in the sale. There are several daughters of a cow that made 34 lb. butter in a week and a number of others with very creditable milk and butter records.

The animals in the Remley herd are closely related, practically all being by four sires. The animals are big and shapely and are producers. Their cow testing association records rank up to 18,000 lb. milk in a year.

An advertisement of the Remley sale was received in the office of this paper just too late to be incorporated in the issue of March 8th. The next issue of the BREEDER AND DAIRYMAN is due to leave this office March 22nd and the date of the sale is March 24th. As second-class matter (magazines) travels slower in the mail than first class (letters), we figured that an advertisement that left this office two days before a sale would not reach all our subscribers in time for possible customers to get to the event, so Mr. Remley's copy was returned to him with a letter of explanation. We don't want anybody's money unless we can give at least 100 cents' worth of value for every dollar received.

DR. PEASLEY'S HERD TO BE SOLD

The herd of Dr. A. A. Peasley will be dispersed on the Farm, April 12th. This herd was founded in 1910 by Dr. Peasley and his brother Judge Frederick M. Peasley of Cheshire, Conn., the Judge buying the foundation animals in New York State. Some time in 1915, the Doctor bought out his brother's interest and since that time has been going it alone. He has been handicapped by having a large professional practice and reliable help has been hard to keep so he has decided to sell out. Some of the best animals in the Nutmeg herd are descendants of heifers that originally came from the Peasley herd in Ohio and were shipped to the Peasley herd in Connecticut.

There are six A. R. O. cows in this herd. One has an official seven-day butter record of 26.58 lb. butter made as a six year old and has three daughters in the sale. The other A. R. O. cows each have one or more daughters that will be offered so it can be seen that this is a producing and reproducing herd. The cattle are in good working condition and have been fattened for sale purposes. The production

(Continued on page 222)

WONDERFUL JERSEY RECORD

The purebred Jersey, Darling's Jolly Lassie, on February 17th, finished a year record of 1,141.28 lb. fat or, figured on the 80 per cent basis, 1,426.60 lb. butter. This is the world's record for a Jersey, world's record for either of the Channel Island breeds and is also the world's record for a junior four-year-old of any breed as it displaces the record of 1,389.45 lb. butter or 1,111.56 lb. fat made by our own Queen Piebe Mercedes which has stood supreme over the performances of all other heifers in the junior four-year-old class since it was completed sometime in July, 1916.

The new champion is owned by Pickard Brothers of Marion, Oregon, who also own Vive La France. She was handled during the year by Mr. Ovid Pickard and it is reported that she was milked only three times a day during her test year and that she carried calf seven of the twelve months she was on test. She is a daughter of Old Man's Darling ad, 983.68 lb. fat in a year as a junior four-year-old which was the world's Jersey record in that class until the new champion came along. This is believed to be one of the only two instances on record of a daughter taking a world's championship from her dam, the other instance being in the shorthorn breed.

THE HOLSTEIN BREEDER AND DAIRYMAN extends congratulations to the owners of the new champion, the Jersey breeders and the A. J. C. C., but we warn them that a number of black and white ladies are also after that championship.

THE VALUE OF TEST RECORDS

When the Charles Tomlinson herd at Wales Center, N. Y., was dispersed, November 11th, the benefit of three consecutive year records in Dairy Improvement Association work was shown when a four-year-old grade Holstein with a record of 11,627.3 lb. milk and 4507 lb. fat was sold for \$135. Her junior two-year-old daughter was sold for \$100 largely because of the dam's record. Eleven head in this sale had Association records and their average price was approximately \$100.

"MAKING ANIMAL TAGGING EASY"

Ketchum Clincher
EAR TAG
The new Ear Tag for Cattle, Sheep and Hogs, 3 sizes, simplest, best and cheapest. Requires but one movement to pierce ear and clinch itself. Made of bright steel, light but durable. Stamped with name (and address on larger) and numbered. Already endorsed by government, states, veterinarians, breeders and farmers that have used them. Write for description and prices.
Dept. E. Ketchum Mfg. Co., Luzerne, N. Y.

NEW 40-LB. CANADIAN COW

A new 40-lb. cow is reported by W. H. Clemons, secretary of the Canadian Holstein-Friesian Association. She is Queen Calamity Ormsby, a five-year-old, owned by E. L. Sweet, Belmont, Ont. The production credited to her is 583.5 lb. milk, 40.04 lb. butter; for fourteen days her record is 1164.8 lb. milk, 79.15 lb. butter.

Echo Sylvia Hartog, owned by Winterthur Farms, Winterthur, Del., heads the senior four-year-old class with 563.5 lb. milk, 30.72 lb. butter. Only two animals are reported in this class for February and the other also made a 30-lb. record. She is Richfield Korndyke Goldie, owned by M. W. Locke, Williamsburg, Ont., and her record was 624.1 lb. milk, 30.37 lb. butter.

Two junior four-years-olds crossed the charmed circle, Colony Cora McKinley, owned by Colony Farm, Essonvale, B. C., with 569.8 lb. milk, 32.18 lb. fat in a week and Pontiac Atlas Francy 4th, owned by J. J. Fox, Guelph, Ont., with 456 lb. milk, 30.05 lb. butter.

Korndyke Beauty Johanna, the property of David Jeffrey, Sr., Simcoe, Ont., led the senior three-year-olds with 547 lb. milk, 29.95 lb. butter while the junior three-year-old leader is Manor Elzevere Keyes with 555.2 lb. milk, 22.06 lb. butter. She is owned by Noble and Hambly of Bronte, Ont.

Ontario breeders owned both the two-year-old leaders. Joseph Barnett, Currie's Crossing, having the senior two-year-old, Dewdrop Segis Payne, 556.8 lb. milk, 8.40 lb. butter while W. J. Wood of Cainsville had the junior two-year-old, Midnight Comet Tensen with 453.4 lb. milk, 20.77 lb. butter in a week at twenty-six months of age.

BEATS McSPARRAN COWS

A registered Holstein cow owned by Ervin C. Rhodes led the Fulton County, Pennsylvania, Cow Testing Association during the recent-ended association year by producing 13,648 lb. milk, 486 lb. butterfat as a four-year-old. She stands some 25 lb. fat ahead of a Guernsey owned by John A. McSparran, president of the Pennsylvania State Grange. A grade Holstein herd owned by Dr. W. T. Webb shows very prominently as it has five members in the list of the 12 highest producers.

A GOOD MAN IN THE BOX AT PUBLIC SALES

points out the strong points of the pedigrees and directs attention to the choicest individuals, with the result that competitive bidding compels better prices. If you are planning a sale, get in touch with

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 221)

of each cow has been weighed at each milking and written on a milk sheet. Those attending the sale will have the privilege of looking over these records and they will know what the animals have produced with ordinary dairy care. Practically all the animals have been raised on the establishment and are backed by several generations of home breeding, while the herdsires used have been from high record cows. F. G. Johnson is manager of the sale and to him requests for catalogs should be addressed.

AVERAGE OF PUREBREDS HIGHER THAN BEST GRADE

Fifteen purebred Holsteins, as well as four head of grade cattle and three young calves owned by James J. O'Neil were sold on his establishment, Hillcrest Farm, Waterville, N. Y., February 21st. There were more than 100 present but very few appeared interested in purebred stock. The top price was \$180.00 which was obtained for Ina Burke Pontiac, a three-year-old purchased by F. J. Walton, Watertown. The top price for a grade was \$99.00, G. W. Smith being the purchaser. The average was \$126.00 for the purebred stock of all ages. There was very little demand for horses, one team bringing \$375.00. Farm machinery and equipment went low. The auctioneer was James Rush.

Animals bringing \$125.00 or more with names and addresses of their purchasers are:

Johanna Segis Girl, 8 yrs., Geo. N. Smith, Watertown, N. Y.	\$162.50
Minnie Jewel Spofford Girl, 7 yrs., L. S. Stoddard, Rutland, N. Y.	145.00
Johanna Aaggie Segis Girl, 6 yrs., L. S. Stoddard, N. Y.	150.00
Lena Segis Girl, 5 yrs., F. J. Walton, Watertown, N. Y.	160.00
Clarice Wayne Segis Girl, 4 yrs., F. J. Walton, Watertown, N. Y.	137.00
Laura Segis Girl, 4 yrs., F. J. Walton, Watertown, N. Y.	167.50
Ina Burke Pontiac, 3 yrs., F. J. Walton, Watertown, N. Y.	180.00
Johanna King Burke Girl, 3 yrs., F. J. Walton, Watertown, N. Y.	155.00
Lena Pontiac Girl, 3 yrs., L. S. Stoddard, Rutland, N. Y.	146.00
Laura Burke Pontiac Girl, 3 yrs., F. J. Walton, Watertown, N. Y.	157.50

THE TIFFDALE DISPERSAL

The dispersion of the Tiffany herd will be held March 27th at Tiffdale Farm, Brooklyn, Pa. This herd is fully accredited and is only sold because the owner Wm. S. Tiffany, is in the insurance business, which requires so much of his time that he wishes to rid himself of the responsibility of the farm and so has rented the establishment. The Tiffany herd has been run from a dairy standpoint. No official records have been made nor has the herd been enrolled in cow testing work. The individuality and promise shown by the animals themselves indicate that this sale offers an opportunity for breeders to buy prospects and develop them.

The herdsire is Lathrop Valdessa Homestead, who is only twenty months old. He is grandson of King Valdessa Pontiac whose daughters have been making such splendid records in the Bell herd. Several of them hold Pennsylvania state championships. Nine of the ten nearest dams of Lathrop Valdessa Homestead have official seven-day butter records above 31 lb. and the average for the nine is over 34 lb.

There are forty females to be sold of which 27 are cows and 13 heifers. Luncheon will be served and the sale will be held under cover, starting right after lunch. Brooklyn is, unfortunately, off the railroad. The nearest station is Foster or as it is sometimes called Hopbottom, on the D. L. & W. The Scranton, Montrose and Binghamton electric reaches Brooklyn and busses will meet all cars. A good macadam road runs to Hopbottom (Foster), from Brooklyn which is on the Lackawanna Trail, running from Scranton to Binghamton, New York. The Tiffdale Farm is located on the edge of the village of Brooklyn so is very easy to reach. This opportunity to obtain animals from a fully accredited herd should not be overlooked.

COWS SELL WELL AT LENKER SALE

The best Holstein auction sale we have had the opportunity of enjoying for a long time was held at Sunbury, Pa., March 14th, when the Bon Lacta herd, owned by J. Harris Lenker was dispersed. There were a number of reasons why this herd sold well. First of all, the animals were good ones, showing high-class individuality and the capacity to produce. Then, while there were few A. R. O. records, the animals and their maternal ancestors had fine cow testing association records, in fact, several of the animals had three generations back of them with records above 10,000 lb. milk in a year. Mr. Lenker was personally popular. His neighbors turned out in good force. The sale had been well advertised. The reputation of the herd and health of the animals drew representatives of accredited herds in the neighboring Pennsylvania counties. To sum up, there were good cattle and the buyers were there and these two alone make a good sale.

There was a uniform high standard although high prices were reached. The top figure was \$400 which T. R. Auker of Mifflintown, Pa., paid for Duchess Bos Beets Spofford 2d, with a year record made as a junior two-year-old of 527 lb. butter and nearly 12,000 lb. milk made in cow testing association work. C. D. Raker, Dornsife, Pa., paid \$360 for Ormsby Segis Jeanette, a five-year-old cow with a record made as a two-year-old of practically 18 lb. butter in a week. Her dam and granddam both had large cow testing association records. The Home Farm of Center Valley, Pa., purchased several good ones including Velma Segis De Kol Pledge, a four-year-old, for \$300. Calving at twenty-four months old this young cow produced over 10,000 lb. milk in a year. Seven other females brought between \$200 and \$300. The Belle

Ellen Stock Farm of Branchville, New Jersey, represented by Manager J. L. Hamilton took at least ten head including the herdsire King Lunde Pontiac Korndyke 53d. This four-year-old bull went for the low price of \$190. He was truly a bargain for his calves show fine individuality and promise.

In the entire sale there were forty-eight animals of all ages which brought \$8,235 an average of \$171.56. The forty-three females averaged practically \$180.50 but this average does not exactly show how good the sale really was for there were so many young calves that Mr. Lenker felt called upon to make an explanation that every calf present was from one of the females in the herd and the large number indicated freedom from disease of any kind.

The twenty-nine females over a year old averaged \$223.10. The top price for heifer calves was \$275 for Bon Lacta Korndyke Sylvia, born October 29, 1922, sired by Alcartra King Sylvia. One of the very pleasing features of the sale was the sale of Bon Lacta Korndyke Marcella. She was a daughter of the herd bull and of Velma Segis De Kol Pledge. She was owned by Master Lenker, grandson of the owner of the herd and was exhibited at the Rockefeller township calf club show where she won first prize. She was a good individual and was reported as producing 40 lb. milk a day on two milkings. Her youthful owner held her in the ring and dissented vigorously when Col. Mead struck her off to Belle Ellen Stock Farms for \$295. A little later, we hope to show a picture of this heifer and her young owner in our junior department.

The sale was held in the open barnyard. A strong chilly wind caused considerable discomfort but auctioneer Glenn R. Mead and pedigree reader Backus got right down to business and hustled proceedings right along. The work of each brought forth many favorable comments. It was Col. Mead's first appearance in this vicinity and he made such an impression that it was freely predicted that he would be called upon to officiate at other sales before very long.

Animals bringing \$150 or more with names and addresses of their purchasers are:

1 King Lunde Pontiac Korndyke, 53d, 4 yrs., Belle Ellen Stock Farm, Branchville, N. J.	\$190
3 Ormsby Segis Loretta, 5 yrs., Home Farm, Center Valley, Pa.	205
5 Ormsby Segis Korndyke Gladys, 3 yrs., John A. Fitzpatrick, New Hope, Pa.	180
7 Ormsby Segis Jeanette, 5 yrs., C. D. Raker, Dornsife, Pa.	360
8 Bon Lacta Korndyke Erma, 1 yr., W. H. Greenough, Sunbury, Pa.	200
10 Duchess Bos Beets Spofford 2d, 4 yrs., T. R. Auker, Mifflintown, Pa.	400
11 Bon Lacta Korndyke Ethel, 2 yrs., C. D. Raker, Dornsife, Pa.	230
14 Velma Segis De Kol Pledge, 4 yrs., Home Farm, Center Valley, Pa.	300
15 Bon Lacta Korndyke Marcella, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	295
16 Korndyke Superba May, 4 yrs., Home Farm, Center Valley, Pa.	285
17 Korndyke Superba Josephine, 4 yrs., C. D. Raker, Dornsife, Pa.	200
18 Bon Lacta Korndyke Reba, 2 yrs., Ivan Huff, Fishers Ferry, Pa.	165
19 Korndyke Superba Lucille, 4 yrs., Belle Ellen Stock Farm, Branchville, N. J.	275
21 Korndyke Superba Valley, 4 yrs., John A. Fitzpatrick, New Hope, Pa.	225
24 Ona Fedora Cornucopia, 5 yrs., E. J. Dewire, Sunbury, Pa.	280
25 Ferndale Sadie Vale Cloverleaf, 3 yrs., J. A. Leister, Cocolamus, Pa.	245
26 Bon Lacta Marzette, 3 yrs., Belle Ellen Stock Farm, Branchville, N. J.	295
27 Bon Lacta Lillian Loraine, 2 yrs., Home Farm, Center Valley, Pa.	205
33 Prilly Cornucopia De Kol Boon, 2 yrs., C. D. Raker, Dornsife, Pa.	150
34 Bon Lacta Korndyke Cornucopia King, 4 mo., W. H. Greenough, Sunbury, Pa.	150
35 Bon Lacta Evelyn, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	215
37 Bon Lacta Korndyke Bess, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	255
38 Sylvia Inka, 2 yrs., C. D. Raker, Dornsife, Pa.	275
39 Bon Lacta Korndyke Sylvia, 4 mo., Hayswout Bros., Sunbury, Pa.	205
40 Bon Lacta Korndyke Christine, 2 yrs., Home Farm, Center Valley, Pa.	200
42 Bon Lacta Korndyke Mada, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	200
43 Bon Lacta Korndyke Roxie, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	200
45 Bon Lacta Korndyke Jean, 2 yrs., Belle Ellen Stock Farm, Branchville, N. J.	195

THE BENNETCH DISPERSAL

The Clear Spring Farm herd, owned by M. H. Bennetch was dispersed at Richland, Pa., March 5th. Thirty-eight animals, many of them young, were sold for \$6,542, an average of \$174.79. The top price was \$325 reached by both a male and a female. The female was the three-year-old Millview Tilly Boon, the first prize two-year-old heifer in a class of twenty at the Lebanon County Fair last fall. She was purchased by that good Pennsylvania breeder, Abner S. Deysher. The bull was Berks Sir Clyde Pontiac, a son of King Tweede Spring Farm and the 30 lb. three-year-old, Avon Belle De Kol Pontiac 2d. He was bid off by that good judge A. M. Gehman of Center Valley. C. H. Cook of Langhorne took the ARO cow, Susie Segis Frindaella for \$315. Wayne Light of Annville, Pa., bought a number of good ones, including Welleson Hengerveld Alcartra, a granddaughter of King Segis Pontiac Alcartra for \$305 and Queen Silva Brookside an eight-year-old ARO cow for \$310. S. R. Miller of Chambersburg, was the sale manager and explained the pedigrees.

Animals bringing \$150 or more with names and addresses of their purchasers are:

EMBARGO OFF CANADIAN CATTLE

Canadian cattle may now be imported into England, the bill removing the previously existing embargo having been given royal assent January 22th—*News Item*.

Canada is in consequence expecting a heavy movement in cattle. The shipping companies are making extensive arrangements to handle the business. Each animal is to be accompanied by a health certificate and be identified with an Ear Tag. The Canadian Government, after checking results for the past three years, with the Ketchum Tag has placed with the Canadian Factory of this Company an order for 1,500,000 Ketchum Clincher Ear Tags for the purpose of taking care of these regulations, as well as for their other requirements.

This not only constitutes the largest order ever given by a large margin for ear tags but the most important. It is so essential that these tags do not lose out, for if they do an animal cannot be allowed to land.

By this action the Canadian Government shows that it places the greatest confidence in tags which are manufactured in the U. S. at Luzerne, N. Y., by the Ketchum Mfg. Co.

THE MIRACLE OF MILK

There is something new or nearly new in the science of Physical Culture. Bernard Macfadden, whose articles on physical development have appeared in many magazines and who is the head of a society cult that specializes in bodily exercise for the sake of beauty, has discovered some of the virtues of milk. He is putting out a six-lesson course styled "The Miracle of Milk." The charge for this course is \$2. After reading over the preliminary advertisements and the claims made for Milk—The Master Healer—we respectively suggest that The National Dairy Council and the Extension Department of the Holstein-Friesian Association, can, with advantage to themselves and the dairy industry, study Mr. Macfadden's methods and we say this without endorsing this gentleman in any way. For one thing, he says, "Milk contains three vitamins" instead of four. But, oh Boy, don't he give the product of the dairy cow some write-up. We'll say he does.

MATURE JERSEY MAKES 1,100 LB. FAT IN YEAR

After the item telling of the great record made by the Jersey Darling's Jolly Lassie was written, we learned that a mature Jersey cow, Prince's Emma of H. S. F. had produced 18,437 lb. milk, 1,100.99 lb. butterfat in a year, closing her test February 28th. She is the second Jersey to make 1,100 lb. fat in a year and would have been the breed champion had she completed her test a couple of weeks earlier. As it is she becomes the breed champion of the mature class. She is owned by the Hartman Stock Farm, a 3,600 acre establishment at Columbus, Ohio.

"The doctor generally comes in a hurry." "He knows if he delays you might not need him."—*Louisville Courier-Journal*.

Catalog No. 67, purchased by Marquette Co. Asylum, Marinette, Wisconsin		

WAUKESHA HAS GOOD SALE

The midwinter consignment sale of the Waukesha County Holstein breeders' Association was held February 27th and resulted in an average of \$207 for 66 head, cows and heifers. The top price was \$750 which George H. Bies & Sons paid for the two-year-old heifer Queen Ina Ormsby, consigned by Aitken Bros. She was a daughter of King Bess Johanna Ormsby from Woodcrest Ina De Kol 4th, 1,026.92 lb. butter in a year.

The auctioneers were Mack, Krause, Walker and Mann while Secretary Baird and Frank Everson explained pedigrees.

The animals bringing \$250 or more with names and addresses of their purchasers are:

Queen Ina Ormsby	Purchased by Geo. H. Bies & Son, Wisconsin	\$750
Jane Terracelawn Segis		325
Eldon Pontiac Hengerveld Piebe	Purchased by Norris Farm and Camp, Mukwonago, Wisconsin	300
Substitute for No.	Purchased by O. L. Gridley, Wauwatosa, Wisconsin	340
Corona Pontiac Johanna	Purchased by Lee Burlingham, Fort Atkinson, Wisconsin	290
Ashburn Segis Pontiac Dean	Purchased by Rock River Falls, Byron, Illinois	305

Beauty Ormsby Pietertje De Kol	Purchased by H. E. Dickinson, Oconomowoc, Wisconsin	250
Melvina Princess De Kol	Purchased by Frank Hauerwas, South Milwaukee	300
Fayne Johanna Segis	Purchased by W. Weinbrenner, Wisconsin	275
Babe Yeslet		290
Highland Queen Clothilde		300
Garvendale De Kol Beets Princess		325

THE MUSCOTT AND GRAHAM DISPERSAL

The dispersal of the Muscott and Graham herd was held at the farm at Ithaca, Michigan, February 27th. This herd of 60 animals was fully accredited and has a reputation of never having a reactor. There were 30 animals cataloged, 28 females and 2 bulls. All the cataloged animals averaged \$141.56, the females averaging, \$144.71. In addition to these there were 9 yearling heifers, daughters of King Korndyke Sadie Vale 25th, bred to Charlevoix Ormsby Netherland, which sold at an average of \$107.00. There were also 13 heifer calves, the majority of which were by Forest City Pontiac Ormsby King, who was the reserve grand champion at the Gratiot County Fair in 1922 and whose dam Matilda Prague of Cooley Farms has a record as a junior-two-year-old of 712.5 lb. butter in a year. She was a daughter of Lady Ormsby Prague, 1,223.51 lb. butter in a year. In addition seven young bull calves brought an average of 23.00.

Wood explained the pedigrees and J. D. Helman and Son were the auctioneers. The top price was \$270.00 which Lamont Litwiller of Perrington, Michigan, paid for Pledge Canary Johanna, a five-year-old whose sire was a grandson of Pontiac Korndyke and whose dam was a 24-lb. granddaughter of Johanna Rue 3d's Lad.

Animals bringing \$150.00 or more with names and addresses of their purchasers are:

1 Queen Esther Korndyke Canary, 7 yrs., Arthur Loudenbach, Carson City, Mich.	\$180.00
2 Queen Dot, 8 yrs., Lamont Litwiller, Perrington, Mich.	225.00
8 White Houwtje, 5 yrs., Ed Clark, Alma, Mich.	230.00
9 Beauty Fay Johanna, 8 yrs., Vern Russell, Ithaca, Mich.	200.00
11 Pledge Canary Johanna, 5 yrs., Lamont Litwiller	270.00
12 Fairy Belle Korndyke, 4 yrs., Fred Puffball and Son, Stanton, Mich.	155.00
15 Violet Pledge Johanna, 5 yrs., H. C. Schlarf, Ashley, Mich.	162.50
17 Rainbow Butter Boy Hengerveld 3d, 4 yrs., Lee Williams, Wheeler, Mich.	150.00
19 Rainbow Butter Boy Hengerveld, 7 yrs., J. B. Steere, Stanton, Mich.	200.00
24 Female, 3 yrs., Wm. Giles, Ithaca, Mich.	157.50
26 Female, 3 yrs., Geo. Keller, St. Johns, Mich.	160.00
28 Female, 3 yrs., Asa Biglow, Merrill, Mich.	152.50

THE MCKELVEY DISPERSAL

Owing to the owner extending his operations in the timber business the F. R. McKelvey herd was dispersed at Covedale, Pa., March 15th, with Baxter as auctioneer and Austin Backus as pedigree man. The senior herdsire, King Diona Konigen brought \$900, being struck off to J. B. Norris of Cove Forge. The junior sire, King Walker Echo Sylvia went for \$405 to E. Little of Waterside. The top price for females was \$300 and was reached twice, Neta Mollie Korndyke a 25.92-lb. granddaughter of Sir Rag Apple Korndyke and Vanderkamp Segis Nell, a daughter of Judge Segis, each bringing that figure. G. C. Wilson of Tyrone, Pa., bought both.

This sale strikingly shows the influence one or two good bidders have on prices as Mr. Wilson and Mr. E. W. Fluke of Williamsburg, Pa., took every female that reached \$200. The total was \$6,990 for 41 head, an average of \$170.50. During the sale the staging for the seats gave way but fortunately no one was hurt, and the accident was the source of much amusement.

Animals bringing \$175 or more with names and addresses of the purchasers are:

1 King Diona Konigen, 6 yrs., J. B. Norris, Cove Forge	\$900
2 King Walker Echo Sylvia, 3 yrs., E. Little, Waterside	405
6 Merland Hengerveld Burke, 7 yrs., G. C. Wilson, Tyrone	250
9 Hengerveld Konigen Burke, 1 yr., G. C. Wilson	210
11 Bertha De Kol Hartog Boon, 7 yrs., G. C. Wilson	270
13 Neta Mollie Korndyke, 8 yrs., G. C. Wilson	300
14 Leila De Kol Walker, 6 yrs., E. W. Fluke, Williamsburg	270
15 Leila Konigen, 2 yrs., E. W. Fluke	200
17 Jennek Pietje 2d, 7 yrs.	175
21 Speck Segis Alcartra, 7 yrs., G. C. Wilson	185
22 Speck Segis Alcartra, G. C. Wilson	175
28 Vanderkamp Segis Nell, 7 yrs., G. C. Wilson	300
29 Segis Konigen Nell, 3 yrs., G. C. Wilson	275
40 Lyons Butter Girl Korndyke, 2 yrs., G. C. Wilson	190

SLYDER CATTLE SELL WELL

Due to the fact that he has sold his farm, J. E. Slyder of Seven Valleys, Pa., sold his entire herd of registered Holsteins, March 12. There were 18 purebreds besides one grade in the herd. The grade brought \$120, the 18 purebreds including several heifer calves and a bull calf brought \$3,743, an average of \$207.90. The top price was \$450 for the four year-old Albina Pontiac Lilith. She was purchased by Kenneth Swam of New Freedom, who took a number of good ones including the ten-year-old, Queen Halmide Lyons, for \$405. This cow had a record of practically 16 lb. butter made in a week, six months after freshening. Fred Slyder took Alida Colantha, a 21-lb. cow for \$390. The auctioneer was V. McCullough with Davis in the box.

Animals bringing \$150 or more with names and addresses of their purchasers are:

1 De Kol Creamelle Pontiac Ravenna, 1 yr.	\$195.00
4 Alida Colantha, 6 yrs.	390.00
2 De Kol Pauline Lyons, 3 yrs.	240.00
6 De Kol Hillside Pontiac, 3 yrs.	300.00
7 Hengerveld De Kol Colantha Lass, 2 yrs.	205.00
8 Albina Pontiac Lilith, 4 yrs.	455.00
10 Queen Halmide Lyons, 10 yrs.	405.00
15 De Kol Pontiac Beets Clothilde, 4 yrs.	250.00
9 Heifer, 10 months	230.00
11 Heifer, 11 mo.	160.00
17 Ravenna Creamelle Colantha Segis, 9 mo.	190.00
13 Winono Ella, 12 yrs.	152.50

ANOTHER \$400 SALE AVERAGE FOR CALIFORNIA

The C. W. Anderson dispersal held on the Edgemont Farm, Burbank, California, was one of the greatest Holstein sales ever held on the Pacific Coast. Our readers will remember that THE BREEDER AND DAIRYMAN told some time ago that Mr. Anderson purchased the herd of E. C. Schroeder, formerly of Moorhead, Minnesota.

California and Nevada breeders seemed to appreciate the opportunity to get Ormsby blood although we are frank to say that they showed appreciation of the animals offered them of strictly California breeding.

The total was \$50,505 and the average was \$406 for 124 head. Nine different animals, all females, exceeded \$1,000. The top price was \$2,200 which A. W. Morris & Son paid for Fytje De Kol Ormsby. This daughter of Sir Pietertje Ormsby Mer-

(Concluded on page 226)

FULL SISTERS MAKE STATE RECORDS

To make state records on full sisters in one test is something unusual but was the good fortune of Frank E. Johnson, proprietor of the Lucerne Herd, Hetland, South Dakota. Clothilde Vernon Rose, a senior three-year-old, produced 604 lb. milk, 35.77 lb. butter in a week and her full sister, Clothilde Bell Veeman, produced 421.2 lb. milk, 27.99 lb. butter in seven days as a senior two-year-old. The pair was bred in the Johnson herd. They are from Clothilde Vernon Bell 2d, and were sired by King Korndyke Veeman Vale a son of King Korndyke Sadie Vale and Isabelle Pontiac Veeman, a 30.74 lb. daughter of Sir Korndyke Pontiac Artis from one of the good daughters of Sir Veeman Hengerveld.

LIZZIE GOT BUMPED

A farmer living near Fremont, Nebraska is threatened with a lawsuit because he didn't have a tail light on a Holstein heifer that strayed onto the highway, reports the *Fremont Tribune*. An autoist bumped into the heifer and damaged his car to the extent of \$229.52. No damage to the heifer is reported.

"Your new auto is sixteen horse power, isn't it?"
"Um! Sixteen balky-horse-power!"

LATHROP HERD DOINGS

We are informed by assistant herdsman, K. S. Bailey, that K. P. A. P. Pietertje, a daughter of King Pontiac Alcartra Pietje, recently completed a record of 705.5 lb. milk, 28.1 lb. butter. She is the fourth cow in Susquehanna County to produce more than 700 lb. milk in a week and becomes the highest record daughter of her sire. She was raised by A. E. Robinson and Son of South Montrose, and is now five years of age.

Winterthur Inka Prilly Segis Blif, first prize yearling at the 1922 Brentwood sale, dropped a fine heifer calf sired by King Valdessa Pontiac Homestead. This bull is a son of King Valdessa Pontiac and so is brother to a number of young cows who are making wonderful records at the Bell Farm. Blif is on official test at the present time and is running at a 20-lb. gait, as is her sister Winterthur Inka Prilly Segis Beres. Both these heifers are daughters of Sir Inka Prilly Segis. These three heifers are owned on the Lathrop Farms, Susquehanna County, Pa. The Lathrop Herd now numbers nearly 80 head of which 50 are young stock and calves. The Lathrop herd is accredited and the animals composing it are of high quality.

As the stage coach careened toward the edge of the cliff the timid tourist gazed anxiously down at the brawling stream 300 feet below.

"Do people fall over this precipice often?" she asked.

The driver clucked to his broncos. "No madam," he returned, placidly, "never but once."

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 225)
cedes had a 32-lb seven-day butter and over 800 lb. milk record and was again making a very large year record. The twins, Glen Ina Ormsby and Glen Mina Ormsby went for \$1,425 each being purchased by D. L. Wright & Son of Lamanda Park, who also took Glen Canary Ormsby Lass for \$1,225. Sargent Bros. of Whittier, took Aaggie Wayne Burke Ormsby and Colantha Ormsby Lass for \$1,200 each. The Price Ranch of Los Alamos took Jenny Pietertje Ormsby 2d for \$1,750 while Mark J. Kellogg of Fresno paid \$1,025 for Jenny Pietertje Ormsby Skylark.

The sale was managed by the California Breeders' Sales and Pedigree Co., with C. L. Hughes as pedigree man. The auctioneers were the firm of Rhoades & Rhoades. Animals bringing \$250 or more with names and addresses of their purchasers are:

RECENT TESTS AT THE LOS ANGELES COUNTY FARM

The center of the stage at the Los Angeles County Farm continues to be occupied by Hollywood Lilith Palmyra Abbecker, who has just completed another 7 days' official test beginning 112 days after calving. Her production is given as 36.05 pounds of butter from 720.9 pounds of milk, her fat test still holding up above 4% average. Her best weeks' milk since freshening was 844.4 pounds and her best week's butter production was 38.64 pounds.

Holland Magda Colantha 2d, age nine years, made 27.53 pounds of butter from 531.5 pounds of milk. This is her second record above 25 pounds, and she is holding up very well on semi-official test. The County Cow Testing Association last year reported her for the equivalent of 914.2 pounds of butter from 17,570.5 pounds of milk. She is a beautiful cow that has won several awards on the show circuit during the past year; and the County Farm is fortunate in having two A. R. O. daughters that will profit by her increased records.

De Kol Korndyke Alcartra Phoenix that last year made 20,781.8 pounds of milk containing 804.52 pounds of butter in 298 days, has qualified in the 305 day class by calving again within the fourteen months' limit. For several weeks past she has averaged over 100 pounds per day and promises considerably to increase her last year's record. Although she is a small cow, she is perhaps the nicest example of dairy conformation in the entire herd, and her bull calf by King Korndyke Pontiac Mead is a prize. Her oldest son is now in service in the herd of Victor Magee, Oceanside, California.

Mercedes Canary Belle De Kol has completed a year's test with 26,140 pounds of milk containing 967 pounds of butter.

Fobes Clothilde Ormsby Skylark, a daughter of Sir Ormsby Skylark, has completed a senior two-year-old 7-day record of 20.50 pounds of butter from 450 pounds of milk, this being her second 7-day record over 20 pounds.

Every one at the County Farm is looking forward with a great deal of interest toward the freshening of the first daughters of King Korndyke Pontiac Mead, who are expected to calve May and June. As they develop they are showing more and more the well-known characteristics of the De Kol of Valley Mead strain that has accomplished so much in the hands of California breeders.

WM. R. HARRIMAN,
Superintendent L. A. County Farm.

"Nope," retorted the wary native in answer to a question from the stranger, "I dunno a place in this whole county where liquor can be bought."

"What a wonderful opportunity!" ejaculated the traveling bootlegger, preparing to unload his baggage from the car.

"Know thyself," says the optimist. "Familiarity breeds contempt," says the pessimist.

PRECAUTION

Before the sultan ate, his cook and prime miniser tasted each dish; that guarantee against poison comes back in prohibition.

A maiden lady, living in a big hotel, thinks she requires a little whisky for her stomach's sake. A trusted bell-boy is her purveyor. Warned that she might swallow wood alcohol some day, she said: "Every month when George brings my new bottle I make him take a good drink of it before my eyes and before I

pay him. Then I put the bottle away and watch George for three days. If he does not die or go blind, I know it's safe for me to use it."

"I want to be procrastinated at de next corner," said the negro passenger to the street car conductor.

"You want to be what?" demanded the conductor.

"Don't lose your temper. I had to look in de dictionary myself befo' I found out dat 'procrastinate' means 'put off.'"

Balanced Fertilizer

FERTILIZERS are used to increase crops and profits. The right kinds and amounts of plant food make profits by reducing the cost of production of a unit of crop, by improving the quality, and by increasing the yield.

One-sided fertilizers may be unprofitable. Today Potash is the cheapest ingredient used in fertilizers, even cheaper than before the war.

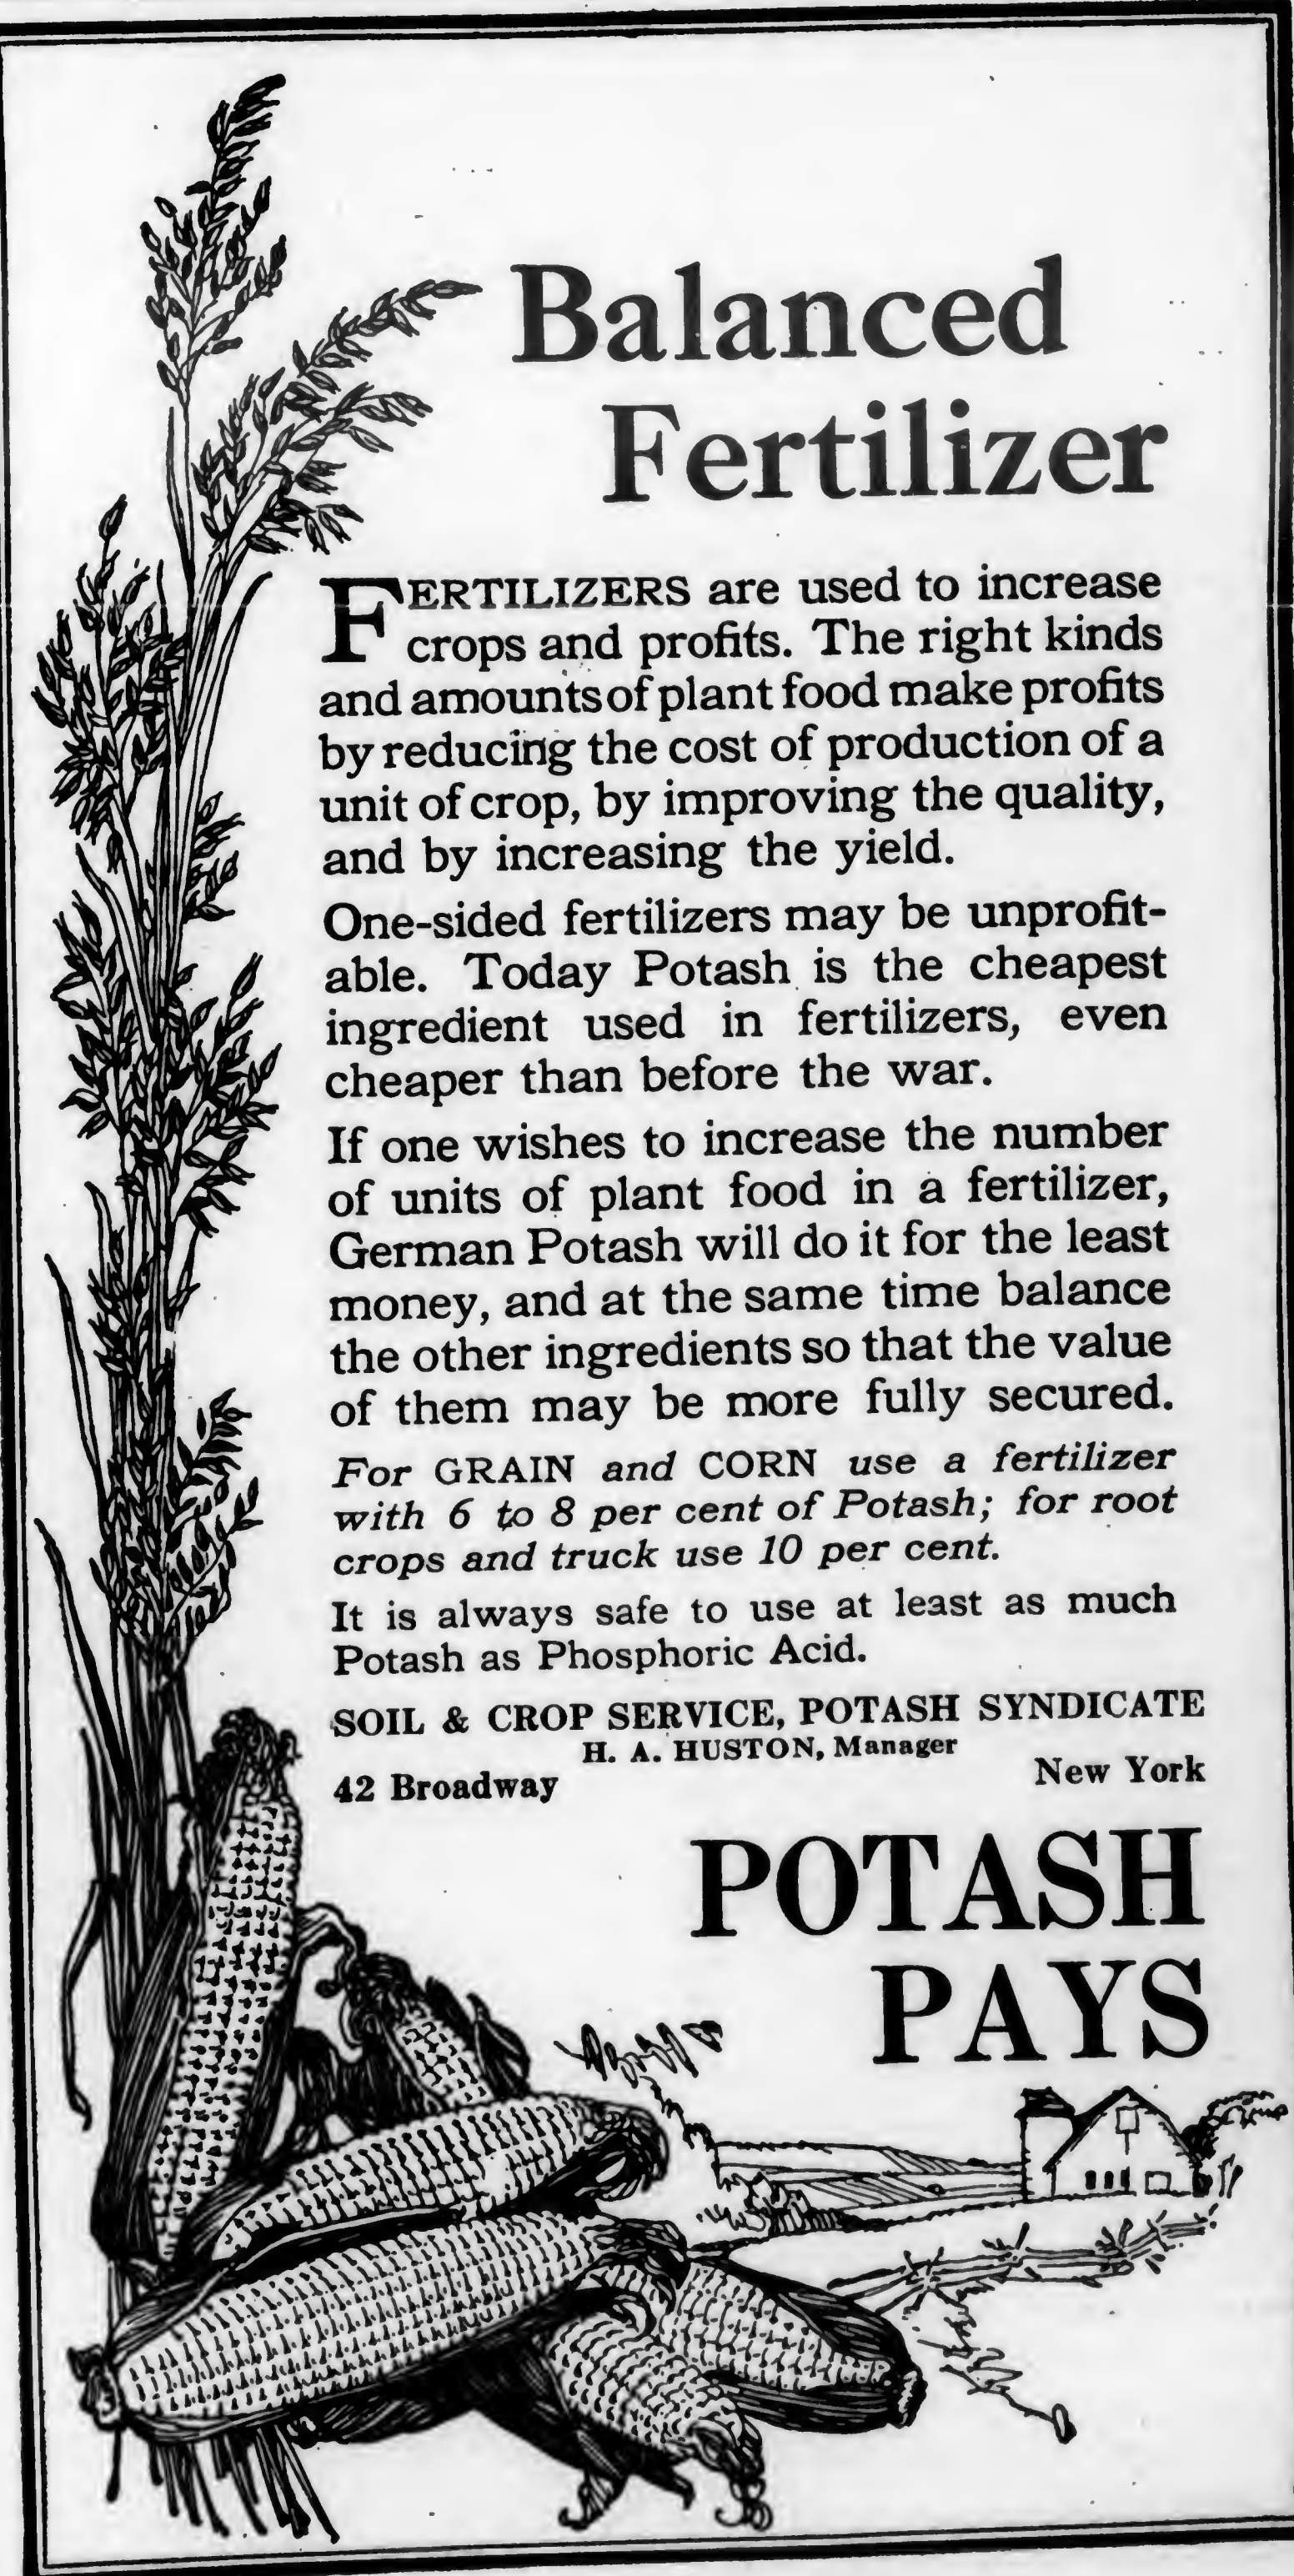

If one wishes to increase the number of units of plant food in a fertilizer, German Potash will do it for the least money, and at the same time balance the other ingredients so that the value of them may be more fully secured.

For GRAIN and CORN use a fertilizer with 6 to 8 per cent of Potash; for root crops and truck use 10 per cent.

It is always safe to use at least as much Potash as Phosphoric Acid.

DAIRYLEA AND THE CITY BOY The Dairyman's League is getting considerable advertising in New York City. After hearing for years the story that many children born in the metropolis had never seen a cow the League presented the Central Park Zoo with a good Holstein cow named Dairylea. When the editors of *The World* or similar papers need a little matter to fill up they set a writer to work on a cow story. Recently *The World* reporter hunted for boys who had never previously seen a cow and located one named Lawrence Dunn, aged nine, of 321 East 30th Street. The experiences of the reporter and Lawrence made a story that was given a prominent position in the March 3d *World* and was illustrated with pictures of the boy and the animal. But it all helps and we think the one live animal will create more interest than several dozen bill boards. What do you think?

BUTTER IN DEMAND IN NEW YORK

The importance of New York City as a butter market was shown during the middle of March when shipments were received from Argentina, New Zealand and California, the New Zealand shipment coming via the Panama Canal. Despite the new supplies and the fact the producing season of the United States is not very far away, prices strengthened during this period. There were rumors that some of the New Zealand butter was to go to England and to Canada but only a limited quantity went to Canada and some went into storage in this country. No definite sales was reported to English buyers but the New Zealand shipment had very little influence on the market and did not depress prices. The 2,000 boxes of Argentine butter which arrived in New York on the 13th was not of high quality. California butter, of which there were several cars came by rail and was offset by purchases of Chicago merchants. There seems to be very little butter on hand throughout the country. Creamery butter in storage is not much more than 1-3 the quantity on hand March 1st, last year or of the five years average. The amount of packing stock on hand is very low.

COUNTY AGENT BUCHER HONORED

Floyd Steinmetz Bucher, county agent of Lancaster County, Pennsylvania recently completed ten years of service as agent of Lancaster County, and on February 22d, was presented by some of his friends with a Hamilton gold watch, an enameled fob showing the various townships in Lancaster County, the "Garden Spot of the World," a watch chain and knife, a book of presentation, and an engrossed resolution of appreciation.

County agent Bucher also received a large number of telegrams from prominent agriculturalists including Henry C. Wallace, United States Secretary of Agriculture, President Thomas of Pennsylvania State College, O. E. Bradfute of the American Farm Bureau Federation and others prominent in national and state agricultural circles.

THE OTHER WAY ROUND

"I want to get a divorce from my husband." "On what ground?" asked the lawyer. "Insanity." "Was he crazy at the time of your marriage?" "Oh, dear, no; I was."—*Boston Transcript*.

LIVESTOCK LANTERN SLIDES

A series of 40 lantern slides illustrating the United States Department of Agriculture exhibit at the International Live Stock Exposition last December, is now available. The slides are reproductions of photographs of various portions of the exhibit. They include discussions of breeding and feeding of animals, facts and figures on extent of live stock industry, equipment for live stock farms, results of experimental work, market grades and standards, market news service, and selection and use of meats.

A series of lantern slides have also been prepared illustrating the principal parts of the department's exhibit at the National Dairy Show, last fall. The slides deal with various branches of the dairy industry including breeding, feeding and care of dairy cows, dairy manufacturing problems, statistics of the industry and allied topics. The slide service makes it possible for those who are unable to attend the National Dairy Exposition to obtain the information displayed by the department at that time.

Both series are accompanied by an outline suitable for lecture purposes. The slides were prepared jointly by the Bureau of Animal Industry and the States Relations Service, largely in response to requests from extension workers. Requests for loan of the slides should be made to the office of cooperative Extension Work, United States Department of Agriculture, Washington, D. C., through state directors of extension.

"What are you cutting out of the paper?" "An item about a California man securing a divorce because his wife went through his pockets." "What are you going to do with it?" "Put it in my pocket."

HOLSTEIN-FRIESIANS

Monday, March 26th, at 11 o'clock

This is an ACCREDITED HERD and will be sold subject to 60-day retest privilege.

Sale held on the Walter K. Sharpe Farm, situated along the Cumberland Valley Division of the Pennsylvania Railroad between Newville and Oakville. By special arrangement the two morning trains and the two evening trains will stop at the Farm.

READ CAREFULLY THE OWNER'S STATEMENT:

I am selling my entire herd consisting of the herdsire, a few choice young bulls and bull calves, and a number of very fine, large and well-bred cows, heifers and heifer calves. The foundation of this herd was laid 20 years ago. The first herdsire was a direct descendant of Sadie Vale Concordia 30 64 lb. butter in seven days. She was the first 30-lb. cow and at the time was World Champion. My second herdsire was also a grandson of this great cow.

In 1907 I bought a son of King of the Pontiacs and a son of King Segis, the two greatest bulls of the breed and since then purchased another son of King of the Pontiacs.

You can see the bloodlines represented in the pedigree of the offerings. A number of good A.R.O. records have been made in this herd, and the animals have the capacity to do far better.

I am not selling because I am no longer interested in Holstein cattle nor because I think they do not pay but on account of a large law practice and other business interests I am not able to give the herd the necessary attention.

Pedigree Director: S. R. MILLER, Chambersburg.

FOR SALE or EXCHANGE

My Herdsire

KING KORNDYKE SADIE VALE LONA

No. 299662, born May 2, 1919. He is about three-fourths white, very nicely marked and in every way is a real good bull.

His dam made 23.13 lb. butter in a week, averaging better than 75 lb. milk a day. She is from a cow that produced 24 lb. butter and 619 lb. milk in a week.

The dam's sire is Granville Kriemhilt, who was from a 26.5 lb. cow and was by a son of the great old foundation cow, Canary Mercedes.

His sire, King Korndyke Sadie Vale, has a daughter that made 40 lb. butter in seven days and has a long list of other high record daughters. He was by a son of the first 37 lb. cow and his dam was Sadie Vale Concordia 4th, a 41 lb. daughter of the first 30 lb. cow.

King Korndyke Sadie Vale Lona sires individuals that will please you and every line of his pedigree shows production. The only reason I will part with him is to avoid inbreeding.

Come and see him and his daughters and you will want him.

THE COWS

A real herd of 27 good producing, clean, healthy cows—FULLY ACCREDITED HERD—mostly bred to the bull we have described. Among the number are some splendid daughters of Sir Hengerveld Beets Lyons, a son of the Century Sire, Pieter Hengerveld Segis from a 32-lb. daughter of Hengerveld De Kol; daughters of Sir Burke, whose dam has two 32-lb. records and five records averaging almost 30 lbs.; daughters of The Sixth Korndyke, a son of Spring Farm King Pontiac 6th; daughters of Napol Prince, who is from a full sister to the World's Champion Keystone Beauty Plum Johanna. A FINE LOT OF COWS FOR FOUNDATION PURPOSES.

THIRTEEN NICE HEIFERS

The young heifers are from some of the best cows in the herd and should go with their dams. Eleven of them are sired by a double grandson of Polly Aagie Queen, a 27-lb. cow with two 30-lb. daughters. The other two are sired by a son of Judge Lyons from a 22-lb. four-year-old daughter of a 29-lb. cow. **THESE HEIFERS WILL SOON BE COWS—THE KIND YOU LIKE TO OWN.**

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the act of March 3, 1879.

Your Opportunity to Buy A Richly Bred Young Bull

A son of the \$106,000 bull out of a daughter of Matador Segis Walker.

KING SYLVIA SEGIS ORILLA

The sire of this fellow, Carnation King Sylvia, better known as the \$106,000 bull, is just coming into the limelight through his first tested daughters that are averaging well over 20 lbs. as two-year-olds.

The dam of King Sylvia Segis Orilla has a seven-day record of 15.58 lbs. of butter and 393.2 lbs. of milk as a two-year-old.

Directly back of the sire and the dam of this bull you find such sires as Matador Segis Walker, with 65 A. R. O. Daughters; King Segis 10th, with 44 A. R. O. Daughters; Inka Sylvia Beets Posch, with 48 A. R. O. Daughters; Avon Pontiac Echo, with 58 A. R. O. Daughters, and such dams as old May Echo Sylvia, with 41 lbs.; Belle Model Johanna, with three records from 32 to 37 lbs.; Matador Twisk Minnette 4th, with 33 lbs., and old May Echo Verbelle, with 29 lbs., considered by many as one of the greatest transmitting cows the breed ever knew.

This is just the bull that you need to head your herd. He is ready for heavy service. Better secure him at once. Pedigree sent on request.

20 PUREBRED HOLSTEINS
15 HIGH GRADES

Included in this herd are animals carrying some of the best blood lines of the breed:

A son of the great Count Paul Posch, grand champion at leading shows; a daughter of King Segis Champion. The rest are just as good.

All of the purebreds will be Fresh with Calves by their side.

Remember: This herd is CLEAN.

The Idaho University Herd

THE splendid record of 1,259.26 lb. butter from 26,812.5 lb. milk in a year made by Idaho Violet Posch Ormsby again calls attention to the good producing herd owned by the University of Idaho. This great cow has held a number of state records and for two previous years has made year records of 1,000 lb. butter and 21,000 lb. milk. She and the herd from which she comes are examples of what it is possible to do with a small investment in the Holstein business.

The University Herd was founded by the purchase of a few foundation animals and an investment of only a few hundred dollars. The herd now contains 33 animals and two bulls and is conservatively valued at \$20,000. Recently an offer of \$1,000 was made for the senior herd bull, a grandson of one of the foundation cows and sired by a bull which the University leased because in those days there were no funds available to purchase a herd sire. At the present time there is only one cow in the Holstein herd that was not bred on the University Farm.

The present herd has been built around two females, Alaska Yukon Colantha No. 126465 and Cascade Violet Cornucopia No. 108317. The other animals first purchased have been disregarded. The chief contribution of Cascade Violet Cornucopia was her great daughter, Idaho Violet Posch Ormsby, who appears in the pedigree of almost 50% of the present herd. Alaska Yukon Colantha is still in the herd although she is now nearly fourteen years old. She is still a profitable producer and has transmitted her capacity to her granddaughters and great-granddaughters, most of which are yet young and have not reached the age of maximum production.

During the first six or seven years the University leased the service of four different bulls, but most of the animals in the herd trace to the two foundation cows and the sire, King Segis Matador Walker. King was one of the greatest bulls ever in the northwest. He was leased from G. D. Hodge, Moscow, who then operated a farm near Lapwai. The bull was only used in the University Herd for about two years and as there was a very small number of females in the herd of breeding age at that time, he left only 13 daughters of which 11 are still in the herd. His daughters are very young cows but that they are good ones is shown by the fact that seven of his daughters made year records in their two-year-old form showing an average increase of 115 lb. butterfat over the records of their dams at the same age. Some of these daughters have made subsequent records and at the present time the seven at an average of three years, three months, five days have year records that average 19,500 lb. milk,

650 lb. butterfat. Among the number is a junior four-year-old that recently finished a record of approximately 24,000 lb. milk, 815 lb. butterfat or 1,020 lb. butter. A senior three-year-old daughter has made approximately 23,300 lb. milk, 825 lb. butterfat, or 1,031 lb. butter. Idaho Segis Lily, a junior three-year-old produced 19,366.2 lb. milk, 760.73 lb. butter, making a state record, while another has just finished a year record of 19,039 lb. milk, 770 lb. butter. Idaho Segis Lily has freshened again giving 103 lb. milk in a day and her record for the first four months of her new test indicates that barring accidents, she will break all previous records for the state of Idaho. As a senior four-year-old, she made 30.08 lb. butter from 608.1 lb. milk in a week.

Naturally many of the breeders of the northwest have inquired what was done with King Segis Matador Walker, after the University sent him back to his owner. He was sold for use in another herd which proved to be badly infected with tuberculosis and in due time he was slaughtered; thus one of the greatest sires ever known in the northwest came to an untimely end.

In the present herd Alaska Yukon Colantha has one daughter, five granddaughters and three great-granddaughters. Three of her daughters have made advanced registry records, one producing 23,000 lb. milk, 1,000 lb. butter in a year as a senior three-year-old. The old cow herself was never given an opportunity to make an official or year test.

Idaho Violet Posch Ormsby has two sons, three daughters, five granddaughters and one great-granddaughter in the University Herd. She is undoubtedly the best known cow in the state. She was not officially tested until she was five years old when she produced in seven days 593 lb. milk 27.56 lb. butter. She was tested semiofficially as a six-year-old and as a seven-year-old, the first time making 1,001.21 lb. butter, 21,339 lb. milk and as a seven-year-old making 21,379.3 lb. milk, 1,007.39 lb. butter in a year. Her last record just completed was made as a nine-year-old and as Superintendent Gardner states is 26,812.5 lb. milk, 1,259.26 lb. butter. During the year, she made an official seven-day record of 687.6 lb. milk, 32.22 lb. butter which is the state record for seven days butter production, while her present year record is easily the state record as were her previous year records.

Two daughters of Violet are now on test, one is expected to make over 900 lb. and the other 800 lb. butter in the year. Two sons of this cow are now in service in the herd. They were both sired by King Segis Matador Walker and they are the two first Holstein

herd bulls ever owned by the University. Both animals have been prize winners at western livestock shows. The older bull is King Segis Violet Posch Idaho and it is this animal that the eastern breeder tried to purchase for \$1,000. The younger bull is Matador Violet Idaho and much is expected from him.

The University of Idaho and the professors in charge of the livestock department have certainly done a great

work in building up such a dairy herd in face of obstacles like limited capital, isolation from other purebred breeders and inadequate stabling facilities. Today the herd at Moscow is one of the best college Holstein herds in the country and is an example of what any dairyman can do who starts on a conservative basis, selecting his best animals to breed from and giving his stock proper care and adequate feed.

New Zealand—The Workers Paradise

A Land Where Dairyman Eliminate the Middleman

IN many respects, New Zealand is the most advanced country on the face of the globe and this after only a century of civilization. This century, however, has contained thirty years of experimental legislation and five years participation in the greatest of all wars. The conditions prevailing in that so distant country at the present time are some that should have careful study from many angles, in fact, the New Zealanders themselves are studying conditions carefully and while they are proud of what they have done, they are not quite certain how much farther in the same direction they intend to go.

The islands of New Zealand are blessed with a fertile soil, a temperate climate and abundant water, but are isolated and so distant from the principal market, Britain, that, to the cost of all machinery and manufactured goods must be added the sea freight. Her exports which are, of course, agricultural, are handicapped by a seven weeks' journey. Until artificial refrigeration was successful, there were very few exports.

The legislative scheme has been devised to avoid the creation of paupers and millionaires by establishing equal opportunities for all. In the days of early settlement large blocks of land were purchased at a low price but in course of time, laws were enacted restricting the amount of farming land one man might own.

New Zealand is a land of coöperation. Dairyman have grouped themselves into coöperative societies, erecting creameries, cheese and butter factories and have dealt direct with buyers in London, New York, and San Francisco, eliminating the middleman and his profits. To facilitate the closer settlement plan the government made loans to enable thrifty young people to go on the land. Where the large land owners evaded the demands for closer settlement and held to their property or purchased more land, a graduated land tax usually proved effective and they gradually broke up their large holdings. The result of this land legislation has been to open up the country and to induce the growth of numerous small towns instead of having large unproductive areas and the population crowding in large cities.

One thing that has done much to establish the reputation of New Zealand goods is government grading of all produce exported. No inferior products can be sent out of the country. Experts do the testing and all home brands are obliterated in the grade store. The object of this is to make the term "New Zealand" and

"first grade" synonymous in the world's markets. London buyers often accept the report of the government grading as a guarantee of quality and do not trouble to inspect the goods before settlement.

The great war considerably hampered the development of this progressive country by taking away forty percent of her men and costing her entire population \$350 per capita. As in other countries, high prices were the rule, then, came the world-wide slump in 1921 which affected agricultural production very much more than it did manufacturing production. Some of the sheep farmers after selling the wool clip had a deficit instead of a credit.

New Zealand labor laws are the envy of the labor unions. There is no sweating or no child labor and everything is done to avoid underpay and overwork. In many respects this country is a workers' paradise. Yet this condition has its drawbacks. Drastic laws have prevented the exploitation of men, women and children by unscrupulous owners of capital but they also have the natural reaction of discouraging industrial development.

There are forty-two unions operating under arbitration court awards. While this quasi-judicial tribunal is not a cure-all for all labor troubles yet it has been very successful by establishing a minimum wage and reasonable working conditions. It has eliminated causes of friction in their early stages before they have developed into the proportions of an industrial menace. It is preventative rather than curative.

At the present time the relations of the owners and the workers are somewhat strained. During the world war, wool and frozen meat brought phenomenally high prices and high wages were paid. When the sudden slump came labor demanded the same rate of payment which the farmer and manufacturer claimed they were unable to pay. Living expenses showed little decrease and the workers fought a wage reduction while the employers, owing to lower prices, are unable to continue payment of the former wage scale. The sheep owners are in a bad plight as sheep must be shorn annually and either they must accept the shearers' terms or they have no clip to sell.

All working hours are regulated by an arbitration court which also fixes wages. Stringent laws govern the employment of women and children. The effect is to raise the standard of living and lower the profits on invested capital. In normal times there is little unemployment and practically no abject poverty, largely

because hordes of unskilled immigrants are not invited to the country, there being no way to absorb them. Rigid tests are applied to all who desire to enter the Dominion with the result that the population is less than one-and-one-half million and the growth is slow and steady. New Zealand is almost totally free from illiteracy and the population is 97% English speaking.

New Zealand has unlimited water power which is gradually being used to develop electricity for power and light. Roads and tunnels are needed to bring this energy from among the mountains and this in turn requires machinery which has to be imported. If cheap labor was available one problem would be solved but cheap labor probably will never be available. At the present time wool is exported 12,000 miles to Europe to be manufactured into cloth and other material and then is brought back again because European labor is cheap and the New Zealand conditions, while wise and humane, do not encourage the investment of large sums in industrial concerns. Markets and prices fluctuate but the minimum wage remains. The district where the raw material is raised should be an admirable place for its manufacture but the men with money are reluctant to invest in the manufacture of local products on a large scale under prevailing conditions.

Despite the fact that New Zealand is considered a workers' paradise no labor government has ever held office and while the women have had the privilege of voting for thirty years no woman has yet had a seat in Parliament. Without any separate organization the vote of the worker and the female vote has directly supported humane and progressive measures for the betterment of the poorer classes and rigid safeguards are in force for the protection and health of the mother and child.

All railroads, telegraphs and telephones are state owned and most of the transportation systems in towns and cities belong to the municipality. The opening up of state coal mines has had a steadying effect on coal prices and the competition of the state has kept dividends in the fire, life and accident insurance companies

down to a reasonable rate for capital invested. Government competition has had a smothering effect on "get rich quick investments."

Profits derived from state enterprises are used for paying interest on loans for non-productive developmental works and for reducing general taxation. The main view has not been to make profits but to provide a necessary service at a minimum cost.

Despite these conditions that almost may be termed "Bolshevik," New Zealand is sound financially. Her people have the lowest death rate of any country in the world and the per-capita export is the second highest of any country. She has limitless supplies of coal and vast forests and her resources have been scarcely touched.

The New Zealanders have had to decide on the question "mankind or money." If all the people are to have enough, the surplus profits won't make millionaires. The raw materials, the coal and water power are there ready to use. If the status of labor was reduced, wages decreased or the hours of work increased, the Dominion of New Zealand could become one of the great industrial countries.

Occasionally the U. S. dairymen meet competition from this country. The great market for New Zealand dairy products is London but occasionally shipments are sent to San Francisco and New York City when the price warrants. New Zealand butter, shipped in boxes, was bringing fifty cents a pound on the New York City docks around the middle of March this year. However, the amount brought to the United States is very small.

The 1921 New Zealand Yearbook tells that there are less than a million dairy cows in the Dominion, 993,472 to be exact, and just over three million head of cattle. Trade and navigation reports show that during the year ending July 31, 1921, 160,911,000 lb. of cheese were exported and 71,531,000 lb. of butter, although it is only fair to say that the normal butter exports are only half this amount. As a butter using nation New Zealand ranks third in point of per capita consumption, being exceeded only by Canada and Australia.

Markets for Dairy Products

By H. M. Jones, *South Dakota Dairy Specialist*

HIGH producing cows, combined with a low cost of production, go a long way toward making a success of dairying but are seriously handicapped if there is no suitable outlet for the products milk, cream, butter or cheese. With the development of the dairy industry has come the machinery of marketing.

The old custom of churning on the farm and selling butter at the country store has given way to the selling of milk and cream. According to the latest report of the State Dairy Expert, about 84 percent of the butterfat produced in South Dakota leaves the farm in the form of cream, about 3 percent as whole milk, about 4 percent as dairy butter, and the remaining 9 percent is used in the farm homes. South Dakota produces practically no cheese.

It is only natural that the trend should be toward more cream and less butter marketed from the farm. Churning on the farm is beset with difficulties, requiring a great deal of time and equipment and returning very little, if any, more than cream does on the market.

The farmer who is located near a town of any size markets milk at a fairly good profit. This requires a great deal of time and equipment but gives good returns so long as there are not too many "peddlers" in the field. The milk producer always has recourse to the creamery and can usually switch to selling cream when the fluid milk market is glutted.

A great deal is often heard about overproduction of milk during certain seasons of the year. This "overproduction," however is seasonal and can be avoided by having more of the cows freshen in the fall of the

year. During the months of May and June it is not uncommon to hold mass meetings and appoint committees to investigate the possibilities for a cheese factory or a condensed milk plant to utilize the surplus milk. Such gatherings and committees often lose sight of the fact that this surplus is only temporary and that by the time a plant could be put in operation there would cease to be a surplus.

A great many creameries have been started during a flush season of the year only to fail later because of insufficient business at other times of the year. A certain creamery organizer, when asked the volume of cream produced in the territory in which he was seeking to establish a creamery, replied that 93 cans had been shipped out on the previous Monday morning. He could give no further information but a survey by disinterested parties revealed the fact that there was not enough cream to maintain a creamery the year around. No creamery was started in this particular case but in a great many similar situations the organizers have gone ahead, sold their stock, sold creamery equipment and then left the country to leave the stockholders, the directors and sometimes the bank holding the sack. A creamery failure causes a setback to dairying in its community for a long time to come.

The local creamery is by all means the best market for cream when there is enough within a proper radius to keep it going. The cream from 800 cows or an assurance of 100,000 pounds of butterfat per year is necessary for the success of a creamery. The local creamery is in a position to make higher quality butter than the centralizer, but frequently they fail to do so because of low quality cream which is delivered to them.

The Cost of a Scrub Sire

By Louis H. Klaas

IN taking a bird's-eye view of the dairy status in the United States to-day we see about twenty-four million cows in active service; one-third of this vast army does not even pay its board, to say nothing of making a profit; the second one-third barely breaks even, while the remaining one-third is profit earning.

Assuming that on the average one man takes care of eight cows, two million men are required to care for the unprofitable two-thirds, or 16,000,000 cows. Two million men working year after year, early morning, late at night, regularly and continuously without thought of profit or hope of progress—two million men enslaved to the worthless cow. Two million slaves in the United States to-day!

Why do these conditions exist? Feed, care and breed are the important factors to determine dairy production. But granted that proper feed is supplied and the best of care given, maximum dairy production is impossible unless the cows have dairy capacity, dairy conformation and dairy temperament. How can these best be secured? Feed and care, unlike above, are but minor factors, breeding is the item of supreme importance, the corner stone, as well as the open gateway to

A few cans of poor quality cream will spoil an entire churning.

The question is often raised, why not have more cheese factories in South Dakota? One popular misconception is that the climate is unsuitable for curing cheese. This is not the case. The real drawback to cheesemaking in South Dakota is the difficulty of securing enough first class milk in a comparatively small area. Successful cheese factories hardly ever take in an area of more than nine square miles. Milk must be delivered within a few hours after it is drawn and there are very few places in South Dakota where the necessary volume can be secured within a small enough area.

So it seems, for the present at least, that the creamery offers the best market for South Dakota dairy farmers. In the case of isolated districts with farmers widely separated the most practical thing is to sell to the cream station or ship to the centralizer. If there is a local creamery, however, it is worthy of support. So long as the quality of cream delivered to local creameries is of a high standard they are able to pay the maximum price for it, but when cream is delivered in bad shape and in small quantities the local creamery is not at fault if the price must be lowered. Give the local creamery a square deal with plenty of good cream and under good management it cannot fail to provide a satisfactory market.

The selling of cream is the mainstay of the dairy farmer. He should plan to take advantage of the high market of the winter months, deliver a product of good quality and sell to the highest bidder, never losing sight of the fact that this market of the future deserves his patronage.

successful dairying. It is said "The sire is half of the herd and if a poor one, he is the whole of it." A poor sire produces a poor herd; a poor man with a poor herd is likely to continue in poverty, if not in adversity.

At the Illinois College of Agriculture, experiments were conducted to determine the influence of different classes of sires upon the production of their daughters as compared with that of their dams. A number of cows whose annual production was 5,380 lb. of milk and 234 lb. fat, were bred to an inferior sire. The daughters from these matings produced annually 1,050 lb. of milk and 18 lb. of fat less than their dams. In the case where a fairly good sire was used 2,545 lb. of milk and 110 lb. of fat were produced by the daughters in excess of their dams. This suggests the possible cause of the many millions of poor cows—scrub sires, inferior sires with reference to dairy conformation and dairy temperament and the dairy production of their ancestors.

The lamentable and astounding fact is that so many farmers and dairymen consider the price of a registered sire too high for them to pay. The Iowa experi-

ment station has conducted some extensive and very useful tests regarding the possibility of increased and economical dairy production through the use of the purebred sire. It was found that in two generations fat production was increased from 175.13 lb. fat to 399.48 lb. or 128 per cent., while milk was increased from 3,688.3 lb. to 10,325.5 lb. or 180 per cent. through the use of purebred Holstein sires.

This increase in milk production averages 10 lb. daily, counting 300 days as a lactation period, and amounts to 3,000 lb. for the year. This amount at \$2.00 per cwt. is worth \$60.00, which represents the annual gain in the value of product of each female sired by a purebred sire.

In a herd of twenty cows, ten heifers may be expected annually. In three years, the average life of a sire under common dairy conditions there may be thirty.

An annual increase of \$60.00 from each of the thirty females amounts to \$1,800.00. To compute the increased value of their product during their entire period of service would present figures that are staggering, not to mention their increased value individually. Simply figuring one year's increased income of \$1,800.00 through the use of the purebred sire, shows what the real cost of the scrub is, less the difference in purchase price between the two animals. The scrub may cost \$50.00, while a fairly good purebred may be had for \$200.00. Deducting the excess cost of \$150.00 from \$1,800.00 leaves a net gain of \$1,650.00 in favor of the purebred sire. What the purebred sire earned beyond the scrub shows what the scrub lost for us and what he lost or failed to produce is his actual cost, which according to the above conservative figures is \$1,650.00. Think of it, \$1,650.00 for a scrubby, worthless robber sire! While a good purebred from profit-making ancestry may be secured for about one-tenth of the above amount.

Advance Overpayments Can Be Recovered

A NUMBER of cooperative associations, handling farm products have been having trouble because advances were made to the purchasers which were more than the product brought after the expense of storing, selling and handling were deducted. Over payment is said to have caused the failure of a number of cooperative organizations. The California Prune and Apricot Growers' Association made advances to growers on the 1920 prune crop. The market collapsed and the net price was lower than the amount advanced. The association recently brought a number of actions against growers to recover the overpayments and a test case was fought before Superior Judge P. F. Gosbey at San Jose, Santa Clara County.

The association sued Mrs. Paola Castello and won a verdict of \$801.34 which the association claimed was in excess of the amount actually due the defendant under her agreement with the Association. Mrs. Castello in a cross complaint contended that her prune crop was worth more than the price she received and that she could have obtained this price from other buyers. The court held that this claim was immaterial and irrelevant and that the market value of personal property

cannot be thus established. The plaintiff used "its best efforts to resell such prunes." When the market broke many buyers refused to honor contracts with the association and the association also decided not to make deliveries of prunes to firms whose credit was weak as a result of the business collapse of 1920.

Junior Champion at the Southwestern

HOLTEX Cadalac Echo Wayne was the first prize senior bull calf at the recent Southwestern Exposition held at Fort Worth, Texas. He was exhibited by the Holtex Farms of Dallas. In the contest for junior championship he was shown against his stablemate, the junior yearling Holtex De Kol Echo Wayne, and also against the Rainbow Farms entry, the senior yearling, Colantha Beets De Kol Johanna, who

HOLTEX CADALAC ECHO WAYNE
Senior bull calf and junior champion at the Southwestern Exposition, Fort Worth, Texas. Owned by the Holtex Farms, Inc., Dallas, Texas.

has won a number of prizes the past season. Cadalac won in the junior division but went down to defeat for the grand championship before Dutchland Aaggie Tidy Prince 2d, the grand champion made at the National Dairy Show last fall, a bull now heading the herd of the Texas A. & M. College. In the aged bull class, Echo Sylvia King, also from the Holtex herd, met his first defeat of the year, taking second place to the champion. The judge was J. B. Fitch of Manhattan, Kansas, with C. L. Blizzard of Stillwater, Okla., as associate.

Swiss Dairymen Co-operate

THE Central Association of Swiss Milk Producing Corporations is Switzerland's greatest national organization, built up on the cooperation of some 100,000 farmers possessing herds of over half a million cows, or one-seventh of the total number in the country. A representative, Director Dr. E. Wissman, will attend the coming meeting of the World's Dairy Congress next October.

He is the biggest fool in town,
But the girls all like to call him honey,
For, though he has no brains at all,
He surely has a lot of money.
—Cincinnati Enquirer.

Steady Progress in Wincowis Herd

BY REID MURRAY

A GOOD herd of Black and Whites is located near Neenah, Winnebago County, Wisconsin and is owned by Chas. Hughes & Son. Though this herd has been established but a few years it has made steady progress. It is the home of Piebe Uneeda Parthena 2d, Wisconsin's state milk record two-year-old with 24.11 lb. butter and 649.7 lb. milk.

The first herdsire, Admiral Walker Hengerveld, who is a 26 lb. son of the famous Admiral Walker Prilly, is one of the handsomest bulls in service in this

PIEBE UNEEDA PARTHENE 2d 382102
694.4 lb. milk in seven days as a senior three-year-old; 649.7 lb. milk in seven days as a senior two-year-old, Wisconsin State record in class. Owned by Chas. Hughes & Son.

part of Wisconsin. He has several tested daughters, the first one making 27.03 lb. butter and 545 lb. milk as a senior three-year-old.

The new herdsire is in keeping with the strong Homestead demand that is so apparent. This bull, King Jess Homestead 2d, is sired by a bull whose dam produced 31 lb. butter in a week and 1,266 lb. butter in a year, while he was by Canary Oak Homestead De Kol. The dam of King Jess made a 30 lb. seven day butter record from 635 lb. milk, and 1,040 lb. butter in a year and she is one of the seven A. R. O. daughters of Sir Gewina Homestead De Kol, three of whose daughters have produced over 600 lb. milk in a week.

King Jess Homestead 2d has a full sister that made 1160 lb. butter and 27,173 lb. milk in a year. In addition to these fine milk and butter records he is a splendid individual, and formerly headed the herd of E. E. Randall & Son of Hustisford where he has 25 very typy daughters.

King Jess is owned jointly with Louis Sorenson, Larsen, and Ed. Jorgenson, Neenah, who both have splendid purebred herds headed by a son of Sir Pietertje Ormsby Mercedes 37th from a cow with a year record of 947 lb. butter.

The crossing of this strongly bred Homestead sire on the Admiral Walker Prilly daughters should produce splendid results. The Wincowis herd has the active interest of Mr. Chas. Hughes, and of his son, Earl, a graduate of the State Agricultural College.

The Holstein fraternity can expect the continued development of this herd as it has real foundation cows who have had the development for size, individuality and production.

The Shorthorn Champion

HOLSTEIN breeders all over the country are greatly interested in the wonderful Australian Shorthorn who produced 29,423 lb. milk, 1,656 lb. butter in a year, surpassing the American Champion, May Walker Ollie Homestead and the former world's champion, the Canadian Bella Pontiac and failing to become the world's champion because of the recently completed record of Agassiz Segis May Echo, 1,681.25 lb. butter.

It was somewhat of a sudden jolt to owners of the so-called dairy breeds to have a Shorthorn cow make such a remarkable record, but it would have been a very much harder jolt had it not been for the recently completed test of the British Columbia cow. Through the kindness of Prof. H. H. Wing, head of the Department of Animal Husbandry at Cornell University, we have the privilege of showing our readers a picture of Melba 15th of Darbalara, taken as she was grazing in alfalfa pasture, as far as we know the only picture of her ever printed in this country. Two years ago Professor Wing then on his Sabbatical vacation made a tour of the antipodes. He visited Darbalara, New South Wales January 1921 and saw the cow. She was then in the 10th month of her lactation and at that time Mr. Wing saw her give 25 lb. milk at a milking. She had then produced more than 21,000 lb. milk in her four-year-old form. It will be remembered that as a four-year-old she produced 21,634 lb. milk in a year, milked twice a day. She became the world's champion for both milk and butterfat production on twice a day milking. It is interesting to note that as a breed Champion she displaced her own mother, Melba 7th. The picture shows Melba 15th of Darbalara in alfalfa

MELBA 15th OF DARBALARA
29,423 lb. milk, 1,656 lb. butter in a year. World's champion shorthorn and 2d highest record cow in the world. Owned by Scottish-Australian Company, J. T. Cole, Manager, Gundagai, New South Wales.

pasture and gives some idea of her size and substance. Remember that she was only a four-year-old then and had been in milk 10 months. She is reported as weighing 1700 lb. while still in milk, and is a cow of great capacity and substance.

Professor Wing pays tribute to her breeder Mr. J. T. Cole, who has had four generations of the Melba stock and who has by skillful selection and mating developed a herd of big producers from a comparatively small number of animals by using what the general run of stock men consider as very close breeding. Mr. Cole sold his herd and establishment to the Scottish-

Australian Investment Company and was appointed manager of the farm and herd so that he has had the satisfaction of seeing this great cow come to maturity and make a record that has attracted the notice of live-stock owners throughout the world.

Argentine Cattle Market Demoralized

THE Argentine cattle industry is in a demoralized condition as a result of over-production due to high prices during the war, according to D. S. Bullock, representative of the United States Department of Agriculture just returned from a two years study of the situation in Argentina.

During the war Argentine cattle raisers kept all female animals for breeding purposes. This resulted in a tremendous over-supply for which there is now practically no market and in January of this year five and six year old cows were selling for less than \$10.00 apiece.

Breeding operations in Argentina are now practically at a stand-still. Hog prices have dropped about 30% since the year, beef cattle 60 to 70%.

Argentina enjoyed seven years of high prices and unprecedented prosperity. The last two years have seen a depression which is gradually becoming more and more acute. Bills are now before the Argentine Congress to regulate the packing houses and auction markets to provide combinations in restraint of trade and finally to establish a Government-owned packing house.

Increased Farm Capitalization

A RECENT report on the amount of money the present-day farmer has under his control in comparison with that of his father a score of years ago tends to show the increased attention farmers are giving to the question of capital. While the total number of acres under cultivation has increased but 100 million in the last 20 years, the value of farming land has increased from 13 billion in 1900 to almost 55 billion in the last survey in 1920. The present farmer has buildings on this more valuable farm, which total 11 and one half billions of dollars—a generation ago, their value but slightly exceeded three and one half billion. Implements which the farmer has found necessary—to save labor and increase yields—have assumed a value five times as great as in 1900 and now total three billion, six hundred million and are paid for by animals which have a market value of eight billions in cold hard American cash.

The price of present day farm land is at a higher point and the farmer, in order to make this valuable land pay a dividend must put more money in buildings and equipment than ever before.—*The Iowa Agriculturist*.

"Uncle Pete, how old are you?"

"I'm close to a hundred, son," said Chiggerville's oldest inhabitant.

"Been using tobacco all your life, haven't you?"

"No, son. Up to the time I was 10 years old I'd never had a chew in my mouth."

Uncle Sam Aids the Cattlemen

SPEAKING at the eleventh annual meeting of the Southern Cattlemen's Association, March 13, at Roanoke, Virginia, Dr. J. R. Mohler, chief of the Bureau of Animal Industry, told of some of the progress that has been made in animal husbandry research since the work was begun by the Department of Agriculture less than 20 years ago.

Extensive studies in animal genetics have been carried on for 17 years investigating the effects of inbreeding and crossbreeding. The work has been done with guinea pigs, and the number used thus far exceeds 30,000. Other studies in breeding have been made with dairy and beef cattle, horses, hogs, sheep, goats and chickens and some results of incalculable value to the live-stock industry of the Nation have been obtained. Experiments in animal feeding and nutrition have been carried on under local conditions in many sections of the country, and the data obtained on cost of production and economical rations for farm animals have been of great value to live-stock feeders.

An extensive experiment covering a number of years is now being conducted in the corn belt to determine the cost of beef production in terms of feed and other factors.

Letters to the Editor

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dear Editor: We have been reading with interest your publication and like it. The writer formerly lived in Elk County, Pa., and knows Pennsylvania conditions. You have a dairy country in the Southern part of your state and you are doing the dairymen a lot of good in pushing the Holstein. She is the cow for Alabama.

Do you know anything about the Black Soil Belt of Alabama? If you don't you have missed something. This is the coming dairy section of America. We get five cuttings of alfalfa per year and have the best grazing in America. Strong lime land with plenty of good artesian water.

ALABAMA.

THE HOLSTEIN BREEDER AND DAIRYMAN,
Harrisburg, Pa.

Dear Editor: I am enclosing \$1.00 for two years' subscription to your paper solely for the good you are doing the little breeder on the hillside. I am an old-time breeder, having joined the old Holstein Association in 1880. There are only a few of us left. Wishing you success, I am,

Yours very truly,
VIRGINIA BREEDER.

"Billy," said the teacher, "what does c-a-t spell?" "Don't know, sir," said Billy. "What does your mother keep to catch mice?" "Trap, sir." "No, no." "What animal is very fond of milk?" "The baby, sir." "You stupid! What is it that scratched your sister's face?" "My nails, sir." "I am out of patience. There, do you see that animal on the fence?" "Then tell me what does c-a-t spell?" "Kitten, sir."

EFFECT OF BILLBOARD ADVERTISING

"Every Chinaman knows," says a Chinese editor, "that condensed milk comes from contented cows and that bulls give tobacco."—*Commercial Artist*.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.
Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

April 8, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Propaganda

JUST as we are closing the forms for this issue we received from a breeder in a distant state, a communication addressed "To the Members of the Holstein-Friesian Association" signed by the secretary and Mr. James A. Reynolds, of Cleveland. Mr. Reynolds, according to his own printed statement, has had 25 years in politics in the City of Cleveland, was one of the Aitken Hand Picked Board of Directors that assumed control at the Philadelphia meeting, and voted Mr. Aitken a \$12,000 salary. During Mr. James A. Reynolds' short tenure in office which the Supreme Court of the State of New York ruled he has held illegally, he has drawn from the Association's treasury for services and expenses upwards of \$12,000.

We will not endeavor to go into details relative to this communication in this issue but will handle the matter fully in our issue of April 22nd. We have continuously and persistently told the readers of THE HOLSTEIN BREEDER AND DAIRYMAN of the extravagance and mismanagement that prevailed in the Association's affairs and on receipt of the communication above referred to and in glancing over it hurriedly, we can only conclude that the "Rule and Ruin group appreciates as well as we, that their administration has been a failure and are fearful of the consequences that will eventually befall them for their illegal and extravagant expenditures of the Association's funds. They are desperate and are appropriating additional sums from the Association's treasury to finance the printing and mailing of a communication that is nothing more or less than propaganda to endeavor to further deceive the breeders as to the true conditions that exist. The Association, before it was gobbled up by the "Rule and Ruin" group in 1919, was able to conduct its business on a 25c Transfer Fee and was in a healthy and pros-

perous state. But this group, after levying a \$1.50 transfer fee, six times what it previously was, comes back with the weak apology for their extravagance and failure and ask the members to give them \$93,000 from the Reserve Fund so that they can continue their reign of extravagance and exploit themselves and the industry as long as they are able to dodge the law. They deem "The present to be the opportune time to make use of the accumulated funds." The question naturally arises, *Is the present an opportune time?* For the "Rule and Ruin" group it may be, because the Supreme Court of the State of New York has ruled that the present directors do not constitute a legal board and has ordered the election of six and not sixteen directors.

Scrub Sire Costly

THE article in this issue entitled "The Cost of a Scrub Sire," written by Louis H. Klass, of Maple Park, Illinois, contains a fund of selling talk for all who have purebred bulls to sell. No less a dairy authority than Hugh G. Van Pelt has pronounced this article one "which points out, logically, definitely and conclusively, the great loss suffered by the man who uses a scrub sire." After pointing out the loss the owner of the scrub bull suffers, day by day and month by month, the question, "Can you afford to stand this loss?" should be asked. Usually the prospect is asking himself if he can afford to buy the animal offered.

Mr. Klass is a dairyman-breeder and knows whereof he speaks. He keeps purebred Holstein-Friesians, not for speculative purposes but for the reason that he believes them to be the greatest and most profitable producers of milk and butterfat. He does not neglect type, but he stresses production and profit. His herd is a living monument to his work. For the month of January, the Milky Vale Herd ranked highest in the three cow testing associations in Kane County and the names of three of the inmates appeared in the list of the ten highest producers. The average for the entire herd was 1,303 lb. milk, and 41 lb. fat, one member finishing a lactation period of ten and one-half months with 15,000 lb. milk to her credit, while another, in her ninth month and at a time when she might be expected to be about dry, produced 50 lb. fat in the thirty days.

Read the article over and over until you get the figures by heart, then try them out on some neighbor who has not yet seen the light and beefed his scrub or grade herd bull. Mr. Klass makes good use of them for he says "I am getting more demand for stock than I can supply."

The Secret of Success

IT is strange how people differ. John M. Kelley and the Extension Department of the Holstein-Friesian Association of America claim that the demand for Wrigley's chewing gum is a direct result of generous advertising.

The Wm. Wrigley, Jr., Company in announcing that they are entering on their 32d year of successful chewing gum manufacture has this to say: "Our various factories supply a major portion of the world's

chewing gum, and we can assure you that this enormous sale was built up because of the excellent quality of the product and the extreme care taken in marketing the goods so that they reach you in electrically sealed (dustproof) packages."

You are at liberty to accept whatever version you choose. But bear in mind that one stick of gum put out by this great firm is exactly the same as any other stick in the same package and that the goods are standardized. Perhaps that is where the secret lies.

Illinois

WE are in receipt of a clipping from an Illinois breeder stating that a Mr. C. M. Long, field secretary of the Illinois Holstein-Friesian Association, has been loaned to the Holstein-Friesian Association of America on half time. Accompanying this News Item the breeder writes that "Illinois would like to loan this man out *All The Time* instead of half time. When the Hillside breeders have to dig up \$6,000 a year for a Field Secretary to sit in a Chicago office, it rather gets their goat."

The sentiment expressed by this Illinois breeder is similar to that expressed by hundreds of other breeders living in states where State Paid Secretaries have been employed, and we believe it is only a question of time before the breeders will cease to be taxed to employ a State Paid Secretary for political purposes.

Pennsylvania Falls in Line

PENNSYLVANIA has joined the states prohibiting the manufacture and sale of filled milk. The bill passed the House and Senate and has been signed by Governor Pinchot. Then the Keystone State went a step farther and passed another bill against adulteration of ice cream and established food standards for that product.

Prevention of Waste in Dairying

By H. M. JONES, *South Dakota Dairy Specialist*

NO business enterprise attains its greatest degree of success unless it reduces to a minimum the amount of material wasted. Efficient production and the elimination of waste are dependent one on the other. The dairy industry is burdened with considerable waste and lost effort, much of which is entirely preventable.

Some cows consume a dollars worth of feed and return as high as three dollars worth of milk as a result. Other cows take the same amount of feed and return only the bare cost of it, the farmer getting nothing for his labor, shelter and investment incurred by having such a cow in the herd. Figures from the 500 cow testing associations in the United States reveal the fact that one cow out of six, on an average, falls in the "no profit" class. Obviously such cows cause a great loss. Their places in the barn ought to be occupied by more profitable animals.

The feed or manner of feeding are often sources of

waste. Success depends upon feeding cows to their full capacity and using feeds in such combination as to get the highest returns. Corn fodder and wild hay alone are not conducive to high milk production. They furnish a surplus of one class of feeds and fail to supply sufficient of the other, protein. The use of soybeans, alfalfa and clover overcomes this difficulty.

Cows having access to none other than ice water, especially during the winter months, use considerable of their feed for the purpose of warming this water up to body temperature. This either curtails production or else requires more feed, thus resulting in a direct loss which is preventable.

An item, often overlooked, which causes an enormous loss every year is the inefficient separation of cream. Skim milk is usually disposed of immediately after separation, but when a can of skim milk is allowed to remain undisturbed for twelve hours it sometimes accumulates a slight covering of cream. The separator or the method is at fault. The application of the Babcock test has substantiated the fact that a large amount of butterfat is lost annually in this way.

The results of a few separator tests made in South Dakota recently show the following results:

Separator	Pounds skimmilk per month	Per cent butterfat	Pounds Butterfat lost	Loss @ 40c lb.
A	2400	.11	2.64	\$1.06
B	6000	.08	4.80	1.92
C	1800	.01	.18	.07
D	1350	.03	.41	.16
E	1050	.26	2.73	1.09

Separators C and D are skimming about as close as is ordinarily possible. Separators A and B are letting too much cream through into the skim milk and separator E is probably ready for the discard. A trace of cream in the skim milk soon mounts up into a considerable sum. When skim milk tests as high as .05 per cent something about the separator or the method needs remedying. When the test gets above .10 per cent and the ordinary corrective measures fail, it is time to get a new separator. It will pay for itself in a comparatively short time in cream saved.

The separator is not always at fault. If the milk is allowed to cool to below 90 degrees before separation there is always sure to be some loss. If the machine is turned too slowly much of the cream passes into the skimmilk. The operator should time his turning and adjust it to the speed called for on the crank of the machine. If the cream screw is improperly adjusted or if the cream opening becomes clogged with hardened casein or foreign matter, inefficient separation is likely to occur.

Some people present the argument that even though the butterfat does pass through into the skim milk much of its value is recovered when fed to pigs and calves. These animals are profitable users of skim milk, but do not give so high returns for butterfat as does the creamery. When butterfat is worth 40 cents a pound

on the market, it is worth only 10 cents for hogs, that is, feeds that would furnish the hog with the same nutrients could be supplied for 10 cents. Butter is indispensable as a human food but is unnecessary in the diet of a hog.

The loss occasioned by thick cream adhering to utensils often entails considerable loss. The use of boiling water on the outside of the utensils or a steam jet applied to the inside reduces such loss to a minimum.

It may seem that there are a great many avenues for loss in the dairy business. It should be borne in mind, however, that these losses usually constitute a minor part of the business. Nevertheless, they are a direct profit if saved, and it is worth while to do so. Time wasted with poor cows, feed wasted in improper feeding, and butterfat wasted by inefficient separation are factors which are under the control of the farmer himself. It is to his advantage to eliminate their combined loss which in the course of years amounts to enormous figures.

"I think you said that you had a brother in the mining business, didn't you, Rastus?"

"Yeh, boss, that's right."

"What kind of mining—gold mining, silver mining, copper mining?"

"No, sah, kalsomining, sah."

What a Calf Club Will Do

Three registered Holstein calves from the Annie Donders' herd was distributed to high school boys of the San Joaquin Calf Club which is composed of agricultural students in the high school agricultural department, Tranquillity, Cal. Joe Valsechi of San Joaquin, a freshman in the school purchased a bull calf for \$75. A full brother of this animal, a year older, was sold for \$750 on February 17. Susie McClenaghan also of San Joaquin purchased a heifer of the Gelsche Walker strain for \$75. There are now five registered calves from high producing strains in this district, all introduced during the past three months by members of the local calf club.

Won Gold Medal at Ithaca

Albert Coon of the West Little York road near Homer, New York, has received a gold medal from the College of Agriculture, Cornell University, for his work in judging cattle during Farmers' Week recently held at Ithaca. There were 60 boys that judged rings of Holsteins and Jersey cattle. Albert Coon got the highest marks although the Homer team failed to carry off the prize.

Tommy—"Pop, has a cat nine lives?" Tommy's Pop—"So we are told, my son." Tommy—"A frog can croak oftener than that, can't it?"

The Junior Breeder and Dairyman

A Junior Club Song

(Tune—"Sing a Song of Six-Pence.")

(1)

Sing a song of springtime,
Best of growing weather,
Four and twenty boys and girls
Planning all together,
Poultry clubs and gardens,
Calves and pigs and corn
Make us country boys and girls
Glad that we were born.

(2)

Sing a song of summer,
Time to hoe and till
Four and twenty boys and girls,
Working with a will.
Spading, raking, weeding,
Feeding calves and chicks,
When a country boy or girl
Starts a thing he sticks.

(3)

Sing a song of autumn,
Growing time is done,
Four and twenty boys and girls
Sharing harvest fun.
Ears of golden seed corn,
Pumpkins ripe and rare,
Ribbons blue and ribbons red,
Winners at the fair.

—Louisiana Club Leader.

Boy's Cow Makes 32-lb. Record

Jeanie Veeman of Sunnyside, is a six-year-old cow owned by Earl Ahman, Bakersfield, California. Earl is a member of the Kern County High School Agricultural Club. When the herd of registered Holsteins owned by Alex Whaley, Tulare, was dispersed in October, 1921, a representative of the Kern County High School was present buying cows for a boys' club. Jeanie Veeman of Sunnyside then a four-year-old heifer was struck off to W. J. Higdon for a good price but after the sale Mr. Higdon was induced to turn his purchase over to the club at the price he had paid.

Recently Jeanie Veeman of Sunnyside dropped a pair of fine twin heifer calves, sired by Sir Aaggie De Kol Mead 5th. Her youthful owner must have handled her like a veteran for he placed her on official test in which she produced over 32 lb. butter in a week averaging better than 100 lb. milk a day. She thus becomes the high record animal of Kern County. She is a daughter of Sir Veeman Korndyke Pontiac and the 30-lb. cow Melba Hengerveld, who recently made a second 30-lb. seven-day butter record in the herd of M. P. Christensen of Norwalk.

In the Christensen herd, Eldorado Veeman Segis, a daughter of Jeanie, has made 31.20 lb. butter in seven days as a three-year-old thus forming a new California three-generation group of 30-lb. cows.

Some people say that there is no such thing as luck but they are not Holstein cattlemen. There is a great deal of luck in the cattle business but generally luck and skill go together. Skill and the natural ability to produce was mainly responsible for the splendid showing Jeanie Veeman of Sunnyside made in her own official test but Lady Luck certainly smiled on young Earl Ahman when Jeanie's daughter in another herd made a 31-lb. seven-day butter record as a three-year-old and her own dam became a 30-lb. repeater. Earl has the skill and it looks as though he also had luck with him.

After the above was written we learn that S. V. K. P. Melba, of Sunnyside, a full sister of Jeanie Veeman, of Sunnyside, tested in the herd of Earl Graham, of Compton, Cal., had been put on test 116 days after freshening as a senior four-year-old and made a seven-day record of 35.66 lb. butter from 756.6 lb. milk. It never rains but it pours. Earl, you're a lucky boy.

Annual Contests

Nearly 35 boys are enrolled in the Allen County Calf Club which is backed by the First National Bank of Iola, Kansas in coöperation with the Chamber of Commerce and County Agent Milham.

The club will be made up of boys between the ages of 10 and 18 who live on Allen County farms and the only requirement will be that the boy own a purebred dairy calf. At the Allen County Fair this fall there will be a special contest with a number of very attractive prizes in addition to the regular premiums which any of the calves might win in the open classes. A similar contest will be held at the county fair in 1924 and then there will be a contest each year until the calves have grown into cows and have calves themselves. Then there will be a closing contest for the cow and their calves.

The First National Bank will obtain good calves of whatever breed the boy selects at the lowest possible cost and will lend the boys enough money to buy the calves at a nominal rate of interest and for as long a time as the boy cares to carry the note providing he takes good care of the animal.

A Rapid Growth in Utah

No less than 84 purebred Holstein heifers will be purchased in Wisconsin for boys of Cache County, Utah. In addition about 50 boys of the Jordan high school have signified their intention to join a local dairy calf club which was organized February 14 by I. V. Ball of the State Department of Vocational Education and Hugh J. Cannon, Deputy State Dairy and Food Commissioner.

Junior Club Heifer Brings Good Price

John Lenker of Sunbury, Pa., was, until the sale of the Bon Lacta herd on March 14th, the proud owner of Bon Lacta Korndyke Marcella, No. 702978. This heifer was a daughter of the Bon Lacta herdsire King Lunde Pontiac Korndyke 53d and of Velma Segis De Kol Pledge, a nice young cow with a record made at 24 months old of 411.13 lb. butter, 10,118 lb. milk in a year in the North Branch Cow Testing Association. The sire is a grandson of King of the Pontiacs and was from Greenwood Johanna Spofford, 29.01 lb. butter, 646.2 lb. milk in seven days.

BON LACTA KORNDYKE MARCELLA, No. 702978 and her former owner, John Lenker, Sunbury, Pa.

John raised his heifer from a calf and exhibited her at the Rockefeller Township Calf Club Show where she easily won first prize. She was born December 3, 1920 so was past three years old when the sale was held. John regretted to part with his pet but consented when the rest of the animals were sold. He led her into the sale ring wearing her prize rosette and put her through her poses for the benefit of the audience. She was struck off by Col. Glenn R. Mead to J. L. Hamilton manager of the Belle Ellen Stock Farms, Branchville, New Jersey, for \$295. Our picture was taken the day after the sale and shows her as she appeared at the time of the sale.

Good New Jersey Club Heifer

Buttonwood Marie Pontiac Korndyke, owned by Harold Bowne, of Pemberton, N. J., recently completed a seven-day official record of 300.7 lb. milk and 10.5 lb. butter as a two-year-old. She is the first heifer in New Jersey owned by a junior club member to make an official record.

Marie completed her record early in December after she had been milking about two and a half months. She is enrolled in the Burlington County Cow Testing Association and held third position in October and fourth in November while for December she ranked tenth. Her production in the association, month by month is as follows:

October	1,240 lb. milk, 50.8 lb. fat.
November	1,560 lb. milk, 51.5 lb. fat.
December	1,318 lb. milk, 36.9 lb. fat.
January	1,178 lb. milk, 33.0 lb. fat.

Her total for the four months was 5,296 lb. milk, 172.2 lb. butterfat. She is also a show animal. Harold has exhibited her at the Mount Holly and Trenton

Fairs during the past two years and has won eight first premiums and three championships. You can see that she is a real good heifer and that she is getting good care and feed, two of the essentials of success with livestock.

New Club Forming

A group of farmers of Reno County, Kansas, with county agent B. S. Crippen and Dave Voran, president of the Reno County Breeders' Association recently made a trip to Mulvane and purchased 12 high class Holstein heifers for a junior calf club. The dams of these calves have seven day official records ranging from 15 to 27 lb. and the price of the animals range from \$100 to \$225 each. Options were secured on nine other calves which may be taken later.

From Fifteen to Twenty-Seven

The Lions Dairy Calf Club was organized March 2 at the Fishers' School house, Hastings, Nebraska. Officers were selected and committees appointed to compose the constitution and by laws. The County Agent Davis and Carl Jones of the University Extension Department aided in the reorganization of the club which last year had seven members. This year there will be fifteen in the Holstein division and twelve in the Jersey division.

Boy's Cow is Half Dairy

The average amount of milk produced by the four cows in the Durr herd is 72 lb. per day and half of this is the production of a purebred Holstein heifer owned by Lester Durr. Lester is a farm boy of Crawford County, Ohio, and obtained the heifer in 1920 when he enrolled as a calf club member. He has taken care of her and according to the leaders of junior extension at the Ohio State University has made an excellent record during the past two years.

Generous Oregon Breeder

Marvin Daniels of Cove, Oregon, is a member of a calf club and has made a brilliant record in stock judging and herd record keeping during the past two years winning first prize in his county and second prize at the state fair. As a premium, Dr. W. T. Phy, proprietor of Hot Lake sanitarium presented him with a purebred Holstein heifer calf sired by the Doctor's son of Carnation King Sylvia.

Learn While You Work

The Fairfield Livestock Club consists of seventeen members, most of which are going to the high school at Fairfield, Nebraska. These boys continued their club work so as to earn school credits in animal husbandry. Another livestock club organized in Clay County has eight boys of Eldorado and will be called the Blue Valley Livestock Club. Three of these boys will have purebred Holstein calves and two will have pigs, while three will feed bees.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

Oct. 2-5—Washington, D. C., World's Dairy Congress.
Oct. 6-13—Syracuse, N. Y., National Dairy Show.

INDIANA BREEDERS GET TOGETHER

The Holstein Breeders of Delaware County, organized at a meeting held at the Merchants National Bank, Muncie, Ind., March 10th. Officers were elected as follows: President, John Williams; vice-president, Samuel Drago; secretary-treasurer, Ray Meeker.

Plans were made for the formation of a junior calf club, for which the association will purchase ten purebred Holstein calves.

GOOD FOR FREUDENBURG

Dr. J. A. Freudenberg of Markesan, Wis., donated a purebred Holstein calf, a grandson of the famous Iowana Sir Ollie as a prize at a judging contest held February 24, on his farm. The prize was won by Milan Klettke of Mackford. County agent J. J. Lacey gave a talk on the dairy cow and Mr. Hancock, manager of the Berlin-Carnation Milk Plant also spoke on the points of good dairy cattle and then acted as judge.

DISCUSS MEMBERSHIP DRIVE

The Broome County Holstein-Friesian Association held its annual meeting March 13th in the Chamber of Commerce rooms at Binghamton. James N. Allan of Vestal presided. The principal speaker was Chas. Bigler, president of the state Holstein-Friesian Association. Plans for a membership drive were discussed and officers for the coming year were elected as follows: President E. E. Franklin of Ithaca; vice-president, James Quinn of Nimsburg; secretary and treasurer, Dr. Gray T. Stone of Fuller Hollow.

FOUND COUNTY ASSOCIATION

Representatives of the Northwest Holstein-Friesian Association met at Norton, Kansas, March 12th with Holstein men of Sheridan County and founded a local organization. August Wegener was elected president and Hall Cope, secretary-treasurer.

Prof. J. B. Fitch of the Kansas State Agricultural College, explained the possibilities of dairying. Omer De Metz, Harland, president of the Northwest Kansas Association spoke on the Holstein cow as an all purpose animal. The breeders and their friends were entertained by the Commercial Club.

WE HAVE TROUBLE TOO

H. B. Kellicut, secretary of the Vernon County Holstein-Friesian Association is having considerable trouble because the members of his association are not paying their dues promptly. Three members are still delinquent on 1922 and up to the middle of March the only dues received for 1923 were those of three new members admitted this year. This state of affairs is all the more embarrassing as the Vernon Association pledged itself to affiliate with the Wisconsin State Association which means that the local association has to pay part of the 1922 deficit of the state organization as well as contribute dues for the current year.

FORM CALF CLUB IN OREGON

Breeders of Tillamook county, Oregon owning about 300 purebred Holsteins, held a meeting late in February and laid plans for a campaign for calf club work. Officers were elected and W. E. Meyers, extension specialist of the National Association gave an address. The officers are:

Charles Kunze of Nehalem, president; F. R. Beals, Vice president; Hugh Barber, secretary-treasurer; Jack Rupp and

John Shield, executive committee, all except Kunze being of Tillamook. Rupp was elected a deputy to work with County Club Leader Kennedy and a calf club membership of at least 25 is expected within the next two months.

PLAN TO ELIMINATE OLEO

The Hammond and Vicinity Holstein Breeders' Association was formed March 10th at a well attended meeting at Hammond, Wisconsin. Constitution and by-laws were adopted. J. Dornink and H. B. Olsen, were appointed to solicit members and officers were elected as follows: President, Geo. Knifel; vice-president, Tom Carew; secretary, W. G. Hall; treasurer, John Stelsel.

A cow testing association will be formed. The question of getting local merchants to cease handling Oleo was discussed and it was decided that as Hammond was a dairy locality and Oleomargarine was the worst enemy of the dairy business the merchants, being dependent on the farm trade, should be asked to quit handling imitation butter.

FAIR TO HAVE JUNIOR HOLSTEIN DAY

Members of the Marshfield local of the Wood County Holstein Breeders' Association met at Marshfield, Wis. March 1st and decided to have a purebred bull sale in connection with the annual market day on May 15th. The market day gives farmers an opportunity to assemble and exchange products and is an annual event of great interest.

A resolution was adopted to name the second day of the county fair, Junior Holstein Day, for the purpose of creating more interest among the Junior Breeders in holding calf club meetings and raising black and whites. County Agent, R. A. Peterson strongly urged the breeders of the county to encourage junior stock raising clubs.

The following officers were elected: President, Frank Palacek; vice-president, Herbert Molter; secretary-treasurer, Herman Schroeder; directors, Frank Fleisner, J. R. Esser, and Frank Redig.

BLAIR COUNTY LEADERS TO HAVE WATCH FOPS

Holstein breeders of southern Blair County met March 5th at the vocational school, Martinsburg, Pa. The meeting was called by President H. K. Metzker, in order to initiate the Holstein Calf Club. Allen Crissey, the state Holstein fieldman spoke on the desirability of Holsteins and the importance of business methods in milk production.

The association will, at the annual meeting each year, present the dairyman who owns a purebred Holstein cow that has made at least 14,000 lb. milk in a year in cow testing association work with a silver watch fob cast in the shape of Morrison Cove and engraved with the name of the owner, the cow and her record of production. A similar fob of gold was voted to the owner of an animal producing 18,000 lb. or more in the year. But one man can only win one prize.

A committee was appointed to select calves for a junior calf club and a man will be selected to do cow testing work for semi-official testing A. R. O. records. The members of the calf club will automatically become junior members of the association.

NEBRASKA BREEDERS MEET

The Nebraska Holstein-Friesian Association and the Midwest Holstein Association held their joint annual meeting at Kearney, Nebraska, March 1st and 2d. A banquet was provided by the Kearney Chamber of Commerce and was greatly enjoyed by about 100 visiting members and friends. The meeting was addressed by D. M. Hildebrand, president of the Nebraska State Holstein Association; J. H. Frandsen, formerly of State College and now dairy editor of the

Nebraska Farm Journal; Professor H. P. Davis of State College, and Kirk Griggs of Hastings. The toastmaster was Dr. E. A. Meservey of Kearney.

At the business meeting F. C. Haeger, of Beatrice, was elected president; W. H. Swartsley, Riverdale, vice-president; J. E. Palm, Lincoln, secretary; H. N. Otto, Aurora, treasurer; Fred Putnam, of Beatrice, director.

The next day a sale of 50 head of purebred Holsteins was held in the gymnasium of the Kearney Industrial School. The average is reported as \$167.00. The top price was \$300.00, which William Rydlund of Kearney paid for a fine heifer consigned by C. J. Furry of Franklin. A number of the animals sold went to start new Holstein herds.

CHANGE DATE OF ANNUAL MEETING

In response to a special call the annual meeting of the Holstein-Friesian Breeders' Association of Lake County was held at Libertyville, Ill., March 3. After dinner the meeting was called to order by President George White. The constitution was amended to permit the annual meeting to be held the second Friday in January instead of the second Saturday in June, which has been the annual meeting date in the past.

The area plan of tuberculosis eradication was endorsed and a resolution passed asking for the support of the Senate and Representatives in the state legislature, and the appropriation of suitable indemnities for reacting cattle.

H. K. Vose, said that a special article on some county breeders' herd would be published in the Lake County Register each week. R. N. Thompson, secretary of the state association addressed the meeting and the following officers were elected: President, G. R. White; vice-president, L. Ritzenhaler; secretary, H. K. Vose; treasurer, R. E. Olson; directors, E. F. Clark, Ralph Rouse and Chris Jensen.

It was planned to create the office of Field Secretary, who will be under the board of directors and M. H. Peterson, was elected to this position.

WASHTENAW BREEDERS RESOLVE

The annual meeting of the Washtenaw County Holstein-Friesian Association was held at Ypsilanti, Michigan, March 16. Owing to inclement weather only 35 members with their families were present at the banquet. R. B. Watrous, Chelsea, spoke on advertising milk. James Hays talked on animal breeding and popularizing milk. J. Sanderson of Ypsilanti told of his trip to the National Dairy Show at St. Paul, Minn., last fall, which trip was awarded him for showing the best Holstein calf in the boys' club competition at the Washtenaw County Fair.

At the business meeting Glenn Bird of Ypsilanti was re-

elected president; Harvey Day of Willis, vice president; Walter Spaulding, Chelsea, secretary; and A. A. Snyder, Belleville, treasurer.

The association voted \$25 for a prize for the best purebred Holstein calf shown by a junior at the Washtenaw Fair this fall. A resolution was adopted favoring bovine tuberculosis eradication as now being carried on in the state. It asked for suitable appropriations for indemnities and operating expenses for the next two years. Copies of the resolution were ordered to be sent to the senators and representatives; the Governor of Michigan; the Chairman of the House and Senate Committees of Agriculture; Chairman of the House of Ways and Means Committee; and Chairman of the Senate Financial Committee.

MURRAY DISCUSSES LIVESTOCK MARKET

Otto F. Toepfer of Madison, Wis., was reelected president of the Dane County Holstein Breeders' Association at its annual meeting at Madison, March 5th. Other officers elected were: C. O. Ruste, Mount Horeb, vice president; Arthur Alling, Oregon, secretary-treasurer; J. D. Stone, Oregon, M. M. Veal, Stoughton, and Fred Wittwer, Madison were elected members of the executive committee.

After considerable discussion it was decided to affiliate with the state association but the county fees were not raised under the affiliation plan. The directors were given power to set aside funds for junior calf club awards at the Dane County fair this fall. Prizes for Dane County Holstein exhibits at the fair were voted by the association. J. D. Stone was appointed to arrange for a Dane County Holstein show herd to be exhibited next fall. A County Holstein picnic will be held some time this coming summer.

The principal speaker was Reid Murray, secretary of Wisconsin Livestock Breeders' Association, who discussed the livestock market at the present time and the possibilities for the future. He said these possibilities hinged largely upon its progress in the development of close business-like relations with prospective buyers. Some 33,000 head of dairy stock were sold by Wisconsin men to out-of-state buyers last year. A few counties have adopted methods which inspire confidence of the buyer which enabled them to dispose of as high as 3,000 head.

COUNTY AND LOCAL ASSOCIATIONS

The secretary of a county breeders' association assumes the burden of the detail work of the organization. To his lot falls the necessity of maintaining the correspondence of the association, of introducing visiting buyers, of sending news items to the Breed papers and other interested publications, and a host of other irksome duties must be assume.

The county associations should see to it that their secretaries are provided with all useful information, data, or statistics, and also with the tools of his trade, stationery and postage stamps. The secretary must have this assistance if he is to efficiently execute the duties of his position.

It is evident that in a number of cases, the county secretary has not this coöperation, because many inquiries addressed to them are not answered. Courtesy alone requires a reply to a communication in the business world, but among the breeder's associations, a prompt reply is even advisable from a purely mercenary standpoint. Any request for information to a breeder's association was prompted by an interest in that community. Hence, it is for the best welfare of the organization receiving any communication, to acknowledge its receipt and provide information, if requested. The mere fact that a breeder or a community of breeders has no surplus stock for sale, should not cause him to disregard letters received. A year in the future, the barns may be full of surplus stock and the interest of possible buyers is maintained by correspondence.

A breeders' association that does not carefully conduct its correspondence, is an organization in name only, and is actually not functioning as an association of breeders,—all good business men,—should function.—*Guernsey Breeders Journal*.

GROW MORE LEGUMES

Speaking before the sixteenth annual convention of the Virginia State Dairymen's Association, March 9, Wilbur J. Fraser, Professor of Dairy Farming at the University of Illinois said that most dairy farmers lose money by not growing more legumes, which would aid the farmer in balancing the dairy ration. The ration problem to the practical dairy farmer is not merely the composition of feeds and food elements to meet the requirements of the cow in making milk but also its adaptability as a ration to meet his situation and circumstances. The fundamental basis and unchanging goal of dairy farming is the production of the most milk per acre and per man at the least cost. The speaker illustrated by stories of actual experience in six years testing at the University of Illinois. Another out of state speaker, C. F. Bigler, president of the New York State Holstein-Friesian Association, spoke on "Future Dairymen and Holsteins." Dairy cattle feeding and management were discussed by several of the leading members of Virginia Cow Testing Associations.

R. E. Hunt, Professor of Animal Husbandry at the Virginia Polytechnic Institute, spoke on important blood lines in the dairy cattle of Virginia. Professor Hunt is a noted student of dairy breed pedigrees.

J. C. McDowell, dairy husbandman from the Dairy Division at Washington, brought an interesting message in his work with cow testing association records. We have tabulated, he said, "the yearly records of more than 21,000 testing association cows. From that table we have found that as butterfat production increased from the lowest producing group to the highest the income over cost of food increased very rapidly, and almost uniformly as production increases. As production increased, the cost of food increased, but all the records tabulated show conclusively that it pays to keep good cows and to feed them well."

The association elected the following officers: President, J. V. Nichols, Purcellville; vice-president, M. H. Rhodes, Broadway; secretary-treasurer, Frank A. Buchanan, Blacksburg.

BARRON COUNTY WELL ORGANIZED

Meetings of the Barron County Holstein Clubs were recently held at Brill, Rice Lake, Chetek, Almena, and Cumberland in a circuit of meetings outlined by the county executive board.

The Brill Club endorsed the plan of dairy advertising and also the plan of tuberculin testing to be paid for coöperatively by the breeders and from a fund created by the Barron County Board. It is expected that a Black and White Auxiliary for the women will be founded in the near future. A community stock fair in June and a junior calf club project are also in contemplation.

The Almena Club is considering founding a Black and White Auxiliary, indorsed tuberculin testing and will hold a community fair in June jointly with the Almena Cow Testing

Association. Most of the club members are also members of the testing association. The club appropriated funds and offered to go into partnership with the Cumberland and Poskin Clubs in the purchase and erection of a Holstein advertising sign. It is proposed to erect the sign at the junction of the state highways near the village of Almena. The Poskin Club has already approved the matter and the Cumberland Club did so at its meeting.

Besides endorsing the advertising scheme, the Cumberland Club decided to hold a social early in May at which time the auxiliary plan will be discussed. This club will hold a purebred sale May 26th and will employ home talent to discuss pedigrees and as auctioneers.

The Chetek Club endorsed the fair plans and the accredited herd plans. Will hold a community Holstein show in June and invited the local Guernsey Club to take part. About half of the members were present and everyone signed up for the new year which begins in June.

The outstanding projects adopted by clubs for the year's work are as follows: community fairs, club sales, calf club promotion, community show herds, promotion of cow-testing association work and official testing, promotion of accredited herd testing, membership drives, formation of Black and White Auxiliaries, thus securing the coöperation of the women, and perhaps of outstanding importance the erection of Holstein advertising signs and the pledge of support in the statewide plan of dairy advertising as well as of the Barron County Advancement Association in its more local plan of operation for the coming year.

HUNTERDON COUNTY HOLSTEIN BREEDERS HOLD BANQUET

By W. W. Wetmore

One hundred breeders of Hunterdon County, New Jersey, gathered at the Baptist Church in Flemington, Thursday evening, March 22d, for what proved to be one of the best affairs of its kind ever staged in the State.

While everyone happily did his duty in putting away a share of the bounteous supply of eats, Mr. I. C. Francis of Caldwell, New Jersey led in the singing of old community songs. Several splendid baritone renditions were given by Mr. J. Shoemaker, also of Caldwell.

Mr. J. M. Hunter, a former head of the Dairy Department at New Brunswick and now Superintendent of Gobel Farms, Annandale, N. J., acted as toastmaster and first introduced Professor Meyer of Columbia University, who gave a splendid fifteen minute address on his findings in research work for the College and related statistics showing the advisability of an agricultural education for the farmers sons of to-day.

Prof. J. W. Bartlett told of the dairy instruction they were giving at New Brunswick, where he is Dairy Husbandman, and his desire to see the farmers of New Jersey take full advantage of their opportunities.

The Toastmaster then introduced Allen N. Crissey, District Representative for the National Association. Everybody knows Crissey in New Jersey as former Editor of the "Black and White Bugle," Holstein worker and Chamber of Commerce Secretary, and he always gives some real facts straight from the shoulder. Anyone who hears him cannot help absorbing some of his enthusiasm and what is more they will realize that the National Extension Department is thinking deep and doing work which is bound to show its influence. In the last two months he has organized four new County Associations. His address struck an extremely responsive cord, for he told the possibilities of Hunterdon County through a definite policy of dairy improvement work, publicity and advertising.

Mr. John Tine, President of the County Association, urged the program of work and took occasion to thank the ladies for the banquet, and he was followed by Thos. Hunt, an elocutionist of Lambertville, N. J., who in costume recited Riley's poems.

W. W. Wetmore, Secretary of the New Jersey State Association was the next speaker introduced. Mr. Wetmore brought home to everyone the things which the State Association is endeavoring to do through the editing of the "Black and White Bugle," the County Shows, Calf Clubs work, etc. After all he said, "We are all toads in the same puddle boost-

FOR FIVE YEARS IN SUCCESSION Hampshires have won grand championships over all breeds, all ages and all weights of hogs in the carload lots at the International Live Stock Show 1918, 1919, 1920, 1921, 1922.

FOR FIVE YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this show.

HAMPSHIRE ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains, and **Because They Are Recognized Market Toppers.**

For information about Hampshires or for names and addresses of breeders near you, address

HAMPSHIRE RECORD ASSOCIATION

E. C. STONE, Secretary

Dept. 35

409 Wisconsin Ave., Peoria, Ill.

ing the Holstein cow all for the same purpose, so let's coöperate."

Another speaker was Mr. James Stuart, Manager of the Hunterdon County Coöperative Association, who very interestingly illustrated the advantages of coöperation to the farmer.

Hunterdon County adopted a program of work and this banquet was the first event on the program. The various events of the season including Calf Club work, tours, etc., will culminate in a real County Show herd at Trenton Fair in the fall.

DAIRYMEN'S LEAGUE TO EXTEND MILK ADVERTISING

As the next big step in widening their markets for milk and milk products the 70,000 dairy farmers who belong to the Dairymen's League Coöperative Association have launched an advertising and sales campaign in New York City which is the first real big advertising boost that milk has ever had. For the last two or three years there has been a great deal said and written as to why farmers should advertise their products more but now the League farmers are actually doing it and doing it in the biggest way it has ever been done.

The largest part of the advertising last year was done on Dairymen's League ice cream and it brought real results. The League ice cream will be advertised this year but the great stress will be put upon the advertising of "Dairylea," the new trade name of the League evaporated milk. This campaign will center in New York City but it will be extended to other large consuming centers over the entire eastern half of the United States. Advertising authorities have declared that it is the best and most comprehensive food advertising campaign ever put on in New York City or anywhere else. It is planned to use the pages of *Good Housekeeping*, *The Saturday Evening Post*, and other publications, as well as selected groups of newspapers in the large consuming centers to put the "Dairylea" brand on the market. Within the last three weeks three thousand new accounts have been opened with storekeepers in New York and Philadelphia.

A large number of outdoor billboards in New York City and elsewhere will be used, some of which will be illuminated at night. It is expected that it will not be long before the name "Dairylea" evaporated milk and other milk products of the League will be as much a household word as Uneda biscuits or any one of a dozen other nationally known names of food products.

LEAGUE PRICES FOR APRIL MILK

The Board of Directors of the Dairymen's League Coöperative Association announced their recommendation of prices for April milk as follows:

Class 1, \$2.80, milk sold in fluid form.

Class 2, \$2.20, sweet cream or milk manufactured into ice cream and soft cheeses. In this classification some differentials were established applying to the sale of skim milk as follows: 25 cents for skim milk made into powder, plain or sweetened skim condensed; 15 cents for skim milk made into casein and milk sugar or skim milk cheeses. As heretofore, a charge of 5 cents will be made if no profitable disposition is made of the skim milk, and the regulation regarding the sale of skim milk to farmers is continued as heretofore, namely, a change of 10 cents per 100 pounds.

Class 3, the differential will be the same as for March, or 59 cents per 100 pounds above the average New York City quotations for butter. Sub-divisions A and B under this classification are eliminated so that class 3 now includes all milk manufactured into condensed or evaporated milk, powdered milk, or hard cheeses.

Class 4-A, the same recommendations as for March, namely, the average official New York City quotations for butter. This includes all milk made into butter. The same charges will be made for skim milk under this classification as are made under class 2.

Class 4-B, the average official New York City quotations for cheese. This includes all milk made into American cheese.

The above prices are for 100 pounds of milk testing 3% butterfat at the base zone of 201-210 miles from New York City.

GARDNER BARS MINERAL MIXTURES

Owing to extravagant claims made by salesmen of proprietary mineral feeds and mixtures Malcolm H. Gardner, Superintendent of Advanced Registry of the Holstein-Friesian Association of America, has felt himself compelled to make a ruling on the feeding of such mixtures to cattle on official test. The ability of the Holstein-Friesian cow to manufacture milk and butterfat from her food is sometimes limited by the absence of something in the ration. The usual limiting factor is lack of protein of which farm mixtures are likely to be deficient. Another limiting factor may be water but it is the belief of many scientists that a ration may be deficient in minerals such as phosphorus or calcium and it was to meet this deficiency that mineral mixtures were devised. Superintendent Gardner's announcement points out that the rules of the A. R. O. prohibit anything "of a stimulating or medicinal nature." A mixture that enables an animal to make better use of the food furnished her should not be classed as stimulating or medicinal. These terms can only be used to such food additions as have a temporary effect. Many years ago ex-Governor Hoard is reported as saying that the darkest place in America is the inside of a cow and while we have made great progress in the past few years it is very evident that we have a lot more to learn in the subject of mixing rations to get the

maximum lifetime production from a cow. Superintendent Gardner's announcement which is preliminary to number 14 of Reported Tests of Holstein-Friesian Cows is as follows:

"During the last few weeks I have received quite a number of inquiries from supervisors and owners in regard to the feeding of what is known as mineral feed, of which there seems to be several different makes, and have in every instance advised that it was not allowable to feed such feeds to cows on official test. I have also lately had my attention called by Superintendents of Official Testing to the use of these mineral feeds, one Superintendent stating that agents for one of the feeds were promising high results in testing for advanced registration or no pay. Also, my attention has been called to methods of advertising such feeds, the advertisers instancing cows showing very large productions, with the implication that the large production was because of the cow having been fed the particular mineral feed. These advertisements refer mostly to long-time testing, with no mention whether the feed was fed during the monthly official test periods or during the non-official part of the month, but carry the impression that the feed increased the production.

It has surprised me that owners were willing to have the claim virtually made that the great production was not because of the general excellence and great productive capacity of the cow, but because she was fed the special feed. Some owners do not yet seem to understand that Rule 5, as found on pages 15 and 26 of the revised Hand Book, means just what it says, and that it is not allowable to feed anything of a stimulative or medicinal nature to cows on official test, except as provided by the rule. The makers of the several mineral feeds specifically claim that they are not medicines and not stimulative, to which claim some of the agents evidently do not confine themselves. If the formulas given are trustworthy there would seem to be little in any of these feeds which the owner is not allowed under the rules of the Holstein-Friesian Association to feed in some form, provided he himself prepares the feed; and if the public get the idea that production is dependent on any special feed given the cow, it will credit the feed and not the cow with that production. Any such attitude would be bad for the owner and bad for advanced registration. It has always been allowable to feed bone meal, salt, sulphur, charcoal and wood-ashes; and these substances contain all that any cow can possibly require in the line of mineral feed for herself, for her milk or for the foetus. If the feeding of any mineral feed can get results beyond the normal capacity of the cow when fed such substances as the rules allow, there must be some substance of a stimulative nature in that feed not allowable under the rules of the Association. In order to clarify the situation as to these so-called mineral feeds and make it plain to all, as Superintendent of Advanced Registry I announce as follows:

The Advanced Registry Office will not knowingly accept any test for advanced registration where the cow has been fed any proprietary mineral feed while under official test; and if after a certificate has been issued it comes to the knowledge of the Superintendent that such feed has been fed to any cow, it will be held as evident that it was the intent of the owner to stimulate the cow during test or to try to obtain an advantage contrary to the rules, and the matter will be laid before the Board of Directors with a recommendation that the certificate or certificates be cancelled."

IDAHO VIOLET POSCH ORMSBY AGAIN

To All Interested: I am pleased to announce that the Holstein-Friesian cow Idaho Violet Posch Ormsby, No. 337275, has just closed a long-time test and is credited with 26,812.5 lb. milk containing 1,007.41 lb. fat in 365 days, thus showing an average of 3.76 per cent fat in the milk. She freshened at the age of 9 years, 5 months, 18 days. Her sire is Hazelwood Posch Ormsby, No. 64222; her dam is Cascade Violet Cornucopia, No. 108317. She was bred and is now owned by the University of Idaho, Moscow, Idaho. Her first official test was at five years of age, she showing in seven days 593 lb. milk and 22.05 lb. fat. During her next two lactation periods, tested semi-officially only, she showed 800.97 lb. fat from 21,399 lb. milk and 805.91 lb. fat from 21,379.3 lb. milk respectively, the average per cent fat for the two years being almost exactly the same as for the test just completed. During this last test she

was officially tested for one period of 51 days, one of 20 days, and ten of two days each; two of these monthly test periods being conducted by the Washington Agricultural College. Twelve different supervisors were employed in the conduct of the test. Her 365-day production of 1,007.41 lb. fat, equivalent to 1,259.26 lb. butter on the 80 per cent basis, gives her 60th place among cows producing above 1,000 lb. fat, she being the 66th Holstein-Friesian cow to gain the honor of producing 1,000 lb. fat in 365 days.

March 23, 1923. MALCOLM H. GARDNER, Supt. A. R.

HOLSTEINS AT THE SOUTHWESTERN EXPOSITION

The Holstein show at the Southwestern Exposition held at Ft. Worth, Texas brought out a small number of females of good quality and a splendid array of Holstein bulls. The males included the 1922 National Dairy Show grand champion, Dutchland Aaggie Tidy Prince 2d; Echo Sylvia King, twice champion at the Texas State Fair; Colantha Beets De Kol Johanna who has carried off a number of good prizes in the past year; and the 1922 Texas State Fair champion, Castine Sir Johanna Nig Ormsby.

The Dutchland bull was exhibited by the Texas Agricultural College for which he was purchased by Prof. Geo. P. Grout, the new head of the Dairy Husbandry Department. He won first in his class and the senior and grandchampionships. The junior champion was Holtex Cadalac Echo Wayne, shown by the Holtex Farms, Inc., of Dallas, Texas, but a number of judges present at the ringside favored Colantha Beets De Kol Johanna.

Prof. J. B. Fitch, of the University of Kansas, Manhattan, Kan., was the judge and awarded the female senior and grand championships to Johanna Ormsby Cornucopia, shown by Diggsfield Farm, Ft. Worth, Texas. Holtex Farms won all the group of first prizes and their exhibit included the junior champion Holtex Alcartra Sylvia Colantha, who was shown as a junior yearling.

US FARMERS

Us farmers in the country, as the seasons go and come, Is purty much like other folks,—We're apt to grumble some! The Spring's too back'ard fer us, er too for'ard—ary—one—We'll jaw about it anyhow, and have our way er none! The thaw's set in to suddent; er the frost's stayed in the soil Too long to give the wheat a chance, and crops is bound to spoil!

The weather's eether most too mild, er too outrageous rough, And altogether too much rain, er not half enough!

Now what I'd like and what you'd like is plane enough to see: It's jest to have old Providence drop around on you and me And ast us what our views is first, regardin' shine er rain, And post 'em when to shet her off, er let her on again! And yit I'd ruther, after all—considerin other chores— I got on hands, a-tendin' both to my affairs and yours— I'd rather miss the blame I'd git, a-rulin' things up thare, And spend my extry time in praise and gratitude and prayer.

—James Whitcomb Riley.

LATE SOME DAY

A recent movie comedy showed on the screen a bevy of shapely girls disrobing for a plunge in the "old swimming-pool." They had just taken off their shoes, hats, coats and were beginning on—a passing freight train dashed across the screen and obscured the view. When it had passed, the girls were frolicking in the water.

An old railroader sat through the show again and again. At length an usher tapped him on the shoulder.

"Aren't you ever going home?" he asked.

"Oh, I'll wait awhile," was the answer. "One of these times that train's going to be late."

"How can a fellow hold his end up unless he can make both ends meet?"

Life is a test of the survival of the fittest, but unfortunately lots of us don't fit.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

Cow Testing Association Reports

PENNSYLVANIA TESTING

Eighteen Pennsylvania associations report 447 herds tested with a total of 4,925 cows, of which 576 cows gave more than 40 lb. butterfat for the month and 757 more than 1,000 lb. milk. Forty-five cows are reported as being on official test. Forty-one unprofitable cows were sold during the month and seven purebred bulls were purchased. Three associations report 100 per cent purebred bulls and one association reports all members weighing milk daily. The highest individual record was 2,622 lb. milk, 91.2 lb. butterfat made by the registered Holstein cow owned by I. V. Otto of Carlisle, Cumberland County association. The second highest yield of butterfat was 85 lb. made by a purebred Holstein owned by C. S. Chaffee of Ulster, enrolled in the Laurel Hill Association. The highest ten cow average was 2,069 lb. milk, 69.6 lb. butterfat in the Cumberland County Association. West Chester Association is second with the ten cow average of 1,817 lb. milk, 68.4 lb. fat.

HOLSTEINS MAKE GOOD SHOWING IN ILLINOIS

During February the highest producer in the 14 Illinois Cow-Testing Associations was a purebred Holstein owned by the Buffalo Creek Farm at Arlington Heights. She is credited with 2,310 lb. of milk and 90.1 lb. of fat. A grade Holstein owned by Eugene Nagel of Madison County is second with 2,198 lb. milk, 76.9 lb. fat. A purebred Jersey is third, and a purebred Guernsey fourth, another Nagel grade Holstein is fifth with 1,540 lb. milk, 73.2 lb. fat. A grade Guernsey is sixth, a purebred Brown Swiss seventh and a purebred Holstein

eighth and tenth. Ferde Wente of Effingham had one that made 1,512 lb. milk, 66.5 lb. fat and A. D. Cornue of Hebron had one that produced 1,543 lb. milk, 64.8 lb. fat. In the list of the ten highest producers there are three purebred Holsteins, two grade Holsteins, two purebred Guernseys and a grade Guernsey, a purebred Jersey and a purebred Brown Swiss.

The black and white breed makes a splendid showing in the list of the highest producing herds, as everyone of the leading 10 has more or less Holstein blood. First place is held by a herd of 25 grade Holsteins with an average production of 1,240 lb. milk, 42.6 lb. fat. They are owned by Storm & Jensen of Will County. In second place comes 14 purebred Holsteins owned by Elmer J. Newton of Orland, Cook County. This dairy averaged 1,243 lb. milk, 42.1 lb. fat. Mr. Cornue's 14 purebreds take third place with an average of 1,018 lb. milk, 41.9 lb. fat. In five of the associations reporting, the leader is a purebred Holstein and in four others a grade Holstein. In 12 of the associations, the leading herd contains more or less Holstein blood.

HOLSTEINS IN WASHINGTON

A herd of 19 Holsteins owned by Andy Seifert of Elma, Washington, averaged 1,205 lb. milk and 40 lb. butterfat in the Grays Harbor, association for February. Holstein herds were second and third in class 1. The leader for fat production was the Holstein, Bertha owned by C. F. Brittain with 1,744 lb. milk, 71.5 lb. butterfat and Whitefoot from the same herd was second with 1,604 lb. milk and 69 lb. butterfat.

FINE AVERAGE IN SAN JOAQUIN

There are 76 members of the Testing Association connected with the San Joaquin county farm bureau and during February they had 1,257 cows tested. The average production for the 28 days was 688 lb. milk and 23.88 lb. butterfat.

The grade Holstein herd of B. Meulink of Ripon averaged 37.01 lb. butterfat, while 56 grade Holsteins owned by M. Borges of the same town averaged 35.36 lb. fat. Twenty-one grade Holsteins owned by L. B. Johnston of Elk Grove averaged 34.24 lb. The small herd list was also headed by Holsteins. P. Barber of Thornton having ten grade cows that averaged 1,050 lb. milk, 38.72 lb. fat and C. A. Nutt of Ripon having nine that averaged 952 lb. milk, 38.13 lb. fat.

TESTING IN SOUTH CAROLINA

The largest butterfat record made in February in the State of South Carolina was 99.4 lb. from 2,179.6 lb. milk. It is credited to O. K. L. Mamie, a daughter of the great Ormsby Korndyke Lad, owned by V. M. Montgomery of Spartanburg. During the progress of the test this cow made a 7 day official record of 14.9 lb. milk, 24.853 lb. fat or 31.07 lb. butter. This is the second 30 lb. record made at Springdale Farm this season and adds another 30 lb. daughter to the credit of Ormsby Korndyke Lad, the noted sire of Beaver Dam Stock Farm.

Leafy Veeman Fobes De Kol, another member of the Springdale herd stands second on the list with 93.1 lb. fat, 2,318 lb. milk. She is credited with an official record of 579.5 lb. milk, 23.263 lb. fat or 29.08 lb. butter. This cow is a daughter

of the 40 lb. cow Leafy Veeman De Kol who in turn is a daughter of Leafy Dawn De Kol, 43.19 lb. butter. The 30 day milk record is the highest reported in this news letter. The third highest record reported is credited to Princess Nell Ormsby a senior four-year-old of the Springdale herd with 85.5 lb. fat, 1,976 lb. milk. Mr. Montgomery has twelve cows on the honor roll. J. T. Willard of Spartanburg has four. One of which produced 50.6 lb. fat in her twelfth lactation month. The Clemson Agricultural College has two two-year-olds on the honor roll.

During the month 82 cows were on test of which 43 made the honor roll. There were 20 Holsteins tested of which 18 made the honor list.

NEWS FROM ROBERTSON HERD

Jesse Maida Ruth, owned by H. E. Robertson of York, Penna., is milking regularly 100 lb. a day and has given 107.8 lb. in 24 hours. She is said to be the first cow in York County that ever produced 100 lb. milk in a day. She was the milk and butter champion of the York Valley Cow Testing Association last year and as a heifer produced 20,380.6 lb. milk. Other members of the Robertson herd are also making a splendid showing in year test.

NICE YEAR RECORD

Nooksack Della Segis, senior three-year-old owned by H. J. Evans of Ferndale is credited with 24,319.5 lb. milk and 720.328 lb. butterfat in a year according to the report of the Washington Experiment Station.

ASSOCIATION LEADER

A purebred Holstein-Friesian owned by Storm & Jensen produced 2,068 lb. milk and 72.4 lb. butterfat during February, and led the Will County, Illinois Cow Testing Association.

FOUR FIRST FROM REYNOLDS HERD

The ten highest cows in the Volant Association which operates in part of Lawrence County, Pa., averaged during the month of February, 1,495.5 lb. milk, 57.3 lb. butterfat. According to the tester, Paul J. Stonebraker, 252 cows, enrolled in the 26 herds were tested and 12 cows each produced over 50 lb. fat while 47 produced more than 40 lb. The purebred Holstein herd of D. B. Reynolds made a remarkable showing, there being eight members of this herd that each produced more than 30 lb. while the four leading producers came from this establishment. A four-year-old made 2,022 lb. milk, 66.7 lb. fat; an eight-year-old 1,904 lb. milk, 64.3 lb. fat; a five-year-old, 1,478 lb. milk, 62.1 lb. fat and a three-year-old 1,712 lb. milk, 61.5 lb. fat. T. S. Minor and W. McMillin & Son each have purebred Holsteins enrolled in the honor list.

AN INVESTMENT THAT PAID

Speaking at Stockton, Cal., before the Dairy Department of the San Joaquin Farm Bureau, tester George Wolfe said that one of his dairymen some years ago had paid \$250.00 for a purebred bull and considered the price rather high. However, the first group of heifers that were sired by this bull increased the earnings of the herd by \$502. As the average milking life of a cow is computed to be five years, this bull actually and directly added to that farmer's pocketbook the sum of \$2,500.00 or 1,000% on his investment.

HEISEY STILL ON THE JOB

Despite the fact that R. S. Heisey resigned his position as tester for the Southern Franklin County, Penna., Testing Association several months ago, his successor has not yet been appointed, and

he has continued the work so as to give the officers of the Association an opportunity to secure a new man.

Mr. Heisey has Holsteins of his own including one cow that has produced over 20,000 lb. milk in a year. He thinks considerable of a young bull calf he has from this cow and sired by a son of Ormsby Korndyke Lad. In his report of the February testing, Mr. Heisey states that the three leading producers in the Association are Holsteins. Number one owned by H. F. Stoner & Brothers produced 2,220 lb. milk, 66.6 lb. butterfat. Number two owned by W. L. Young made 1,607 lb. milk, 62.7 lb. butterfat. Number three owned by E. S. Grim is credited with 1,515 lb. milk, 56.1 lb. fat. Stoner Brothers have two, E. S. Grim, two, W. L. Young, one, and W. F. Barkdoll, one, Holsteins in the list of 10 highest producers.

FIRST AND SECOND

The high cow and high herd in the El Paso, Colorado Association for February are owned by Geo. T. Sinton and are purebred Holsteins. The cow Beauty produced 100.3 lb. butterfat and 2,134 lb. milk while the herd averaged 44.4 lb. butterfat, 1,132 lb. milk. The Modern Woodman of America's herd stood second with an average of 40.9 lb. butterfat, 1,391 lb. milk and furnished the second highest cow, Zwingara with a production of 70 lb. of fat, 1,39 lb. milk.

HAGLOFF HERD FIRST

Seven purebred Holsteins owned by John Hagloff of Oakville, Washington, averaged 1,094 lb. milk, 44.6 lb. butterfat. Red, the great Durham cow owned by Mr. Hagloff produced 1,591 lb. milk with 62.4 lb. butterfat, but she was surpassed by Katrina De Kol Pontiac Butter Girl owned by Sommers Brothers with 1,705 lb. milk and 72.6 lb. fat says the February report of the Thurston County Association.

Keystone Plum Johanna

1052.96 lb. butter in a year is the dam of the sire, and the granddam of the dam of my junior herdsire ORIGIN SIR NAPOL CORNUCOPIA. She produced 29.35 lb. butter in 7 days and during the year made 22,190.7 lb. of milk testing 3.8% fat. We are breeding for her type and producing capacity.

WANDA TOBE SEGIS

The biggest producing cow in the Williams County, Pennsylvania Cow-Testing Association for the month of February is the purebred Holstein Wanda Tobe Segis, owned by Albert Kalber. Her production is reported as being 2,657 lb. milk and exactly 101 lb. fat. Ten different cows produced over 55 lb. of fat and 32 exceeded 40 lb. There are 226 cows enrolled in the association, of which 202 were in milk and tested.

MANKATO COW LEADS

The highest record made during the third year of operation of the Blue Earth County association was made by a purebred Holstein owned by the Mankato Minn. She produced 26,046 lb. milk and 906 lb. butterfat. A highgrade Holstein, Belle owned by the Clovercrest Farms at Amboy is credited with 19,050 lb. milk, 675 lb. butterfat. The average cost of feed per cow was \$52.32. The gain above feed cost was \$112.68.

MAKE NICE SHOWING

A Holstein owned by A. Kuhle led the Mower County, Minnesota association for February with a production of 1,674 lb. milk and 60.26 lb. of butterfat. The Kuhle herd averaged 1,006 lb. milk, 33.33 lb. butterfat with an average test of 3.3. The Holstein herd of A. F. Ellinghuysen averaged 960 lb. milk, 37.59 lb. butterfat which is the highest average reported.

TESTING RECORDS HELP PRICES

When the herd of Frace and Davis of Elburn, Ill., was dispersed at public sale, February 20th, a grade cow brought \$222.00 and 21 grades averaged \$104. This herd had been enrolled in the Kane county association several years and when the animals were brought into the ring and testing records were told to the assembled buyers.

HOLSTEINS TAKE HONORS

First place in the February report of the Biscay, Minn. Association for February is taken by 18 registered Holsteins owned by August Block & Sons. They averaged 1,565.6 lb. milk and 50.61 lb. butterfat. A herd of registered and grade Holsteins was second, a purebred Holstein herd third, and a grade Holstein herd fourth.

COWS DIE FROM RABIES

Three herds of cows on farms in Onondaga County New York are reported as losing one or more animals from rabies caused by the bite of a dog. So far 13 cows have been affected, 10 owned by one dairyman living between Fabius and Apulia Center. The state authorities are taking every precaution to stamp out the disease and are ordering that all owners keep strict watch on their dogs.

SWEDISH SHOW AND SWEDISH DAIRYING

Every fifth year there is held in Sweden a General Swedish Agricultural Show arranged by the various agricultural societies, and supported by a grant from the Government. Exhibits are made of horses, cattle, sheep, swine, poultry, seeds, dairy produce and general agricultural produce, machinery and implements employed in agriculture, and the results of experimental work. In the last show, which was held before the war, there were shown more than 2,900 head of live stock and poultry, as well as 530 collections of machines and implements, 1,250 agricultural products, 221 forestry products, 213 fishery products, and over 100 results of scientific experimental work. The 1923 Show is to be held in connection with the Jubilee Exposition at Gothenburg, May 8 to September 30, celebrating the 300th anniversary of the foundation of the city, and is the 22d event of its kind.

Dairying is the oldest of Swedish industries. There are 600 milk recording societies. The principal breeds of dairy animals are Ayrshire and Swedish Friesian. Animals of the latter breed average 1,100 gallons per year with an average test of 3.5 per cent fat.

The Swedish Government wages a perpetual fight against tuberculosis and practically all purebred herds in the country are tested once or twice each year with tuberculin and found to be free from infection.

The following paragraph describing the rules for entry at the 1923 show to be held at Gothenburg, give a good indication of the stage of development that has been reached by Swedish agriculture:

"All animals exhibited must have been entered in the pedigree book or bred from animals so entered and, if full-grown, must have been passed by an authority responsible for the admission of exhibits. All cattle must be free from tuberculosis and bred from stock which has passed the tuberculin test and in which no other infectious disease has been discovered."

FULL SISTERS MAKE NICE RECORDS

Another 20-lb. junior two-year-old daughter has been officially reported for King Tweede Spring Farm, the present head of the Berks herd, owned by the popular Pennsylvania breeder, Abner S. Deysher. This heifer is Tobe Korndyke Pontiac Lass No. 684718, who at the age of two years, one month, twenty-six days, is officially credited with producing 485.2 lb. milk, 20.01 lb. butter. In the same report appears the name of Tobe Tweede Pontiac Lass No. 605577. At the age of three years, two months, nineteen days, she is credited with producing 532.6 lb. milk, 28.29 lb. butter in a week. These heifers are full sisters and were bred by their present owners, B. F. Jones & Son of South Montrose, Pa. Their dam is Segis Tobe Korndyke, a daughter of a former Jones' herdsire, Tobe Rag Apple Korndyke, so that in every way they are products of Springdale Farm, the Jones establishment.

PROFESSOR KILDEE HONORED

Holstein men will be glad to learn that Professor H. H. Kildee, head of the Animal Husbandry Department of Iowa State College, has recently been appointed Vice-Dean of Agriculture of that institution. Professor Kildee is an Iowa State College product, graduating from that institution in 1908. Except for the period of 1917-18, when he headed the dairy husbandry department at the University of Minnesota, he has been continuously in the service of his Alma Mater.

Professor Kildee was born on a farm near Osage, Iowa. During his college course he worked his way by taking care of the college stock. When a senior he was a member of the judging team and ranked highest in the International Contest at Chicago.

While head of the dairy husbandry department at Ames, Professor Kildee placed the dairy farm on a paying basis. He was instrumental in starting the famous Iowa experiment illustrating the influence of a purebred sire in dairy cattle breeding. From 1910-15 he coached the dairy cattle judging team and is regarded as one of the leading livestock judges of the country. He is on the list of approved judges of all or nearly all the breed associations, was recently selected as one of the twelve approved Ayrshire judges, is a member of the executive committee of the National Dairy Association and has many friends among the Holstein breeders.

THE PUREBRED SIRE MOVEMENT

A law requiring all sires used in public service to be purebred went into force in the state of West Virginia on January 1, 1923.

The members of the Franklin County Holstein-Friesian Association at a recent meeting urged the enactment of a similar law for Pennsylvania.

Dr. J. A. Kiernan who has been in

charge of the tuberculosis eradication work of the Federal Government since the beginning of the work, recently entered his herd in the better sires movement and was given emblem No. 9334.

Officers of the United States Department of Agriculture believe that any great improvement along one line of livestock work in a community or state is usually accompanied or closely followed by general progress along many lines. Farmers interested in the better-sires movement are also interested in better livestock feeding, which in turn brings better returns and more profits.

ADVICE TO COW KEEPERS

The Pennsylvania State College is calling attention to the great importance of clover, alfalfa and other legumes in the dairy cow ration. It is not too late to plan for an increased acreage of these crops for this season. Legume crops are the cheapest and best farm source of the protein and mineral matter so essential in profitable milk production. Do not turn cattle on pastures too early. It is better to let the grass get well started. A better pasture all summer will result. When the cows are turned to pasture accustom them gradually to this change in diet by turning them out but a short time each day. Grain feeding to high producing cows should be continued but in smaller amounts.

CONFIDENCES

In the sweet silence of the twilight they spooned upon the beach.

"Dearest," she murmured, tremblingly, "now that we are married, I—I have a secret to tell you!"

"What is it sweetheart?" he asked softly.

"Can you ever forgive me for deceiving you?" she sobbed. My—my left eye is made of glass."

"Never mind, lovey," he whispered gently: "so are the diamonds in your engagement ring."

REORGANIZING THE SUN MAID GROWERS

The Sun Maid Raisin Growers probably the greatest cooperative society in America, is undergoing reorganization. The sixteen departments of the association's work will be consolidated into four divisions.

The plans involve an issue of two million dollars in preferred stock, the floating of a three million dollar bond issue and the mortgaging of the company's properties in return for a three million dollar loan already negotiated.

Issuance of the preferred stock will, it is claimed, solve the financial difficulties which have troubled the association during the past few years as a result of the tremendous growth, by giving the officials more working capital to operate with.

"The organization has been like an inverted pyramid. The growers have been capitalized at three million dollars and their properties are worth four million dollars. Through the stock issuance the strength will be put at the bottom of the pyramid and the peak at the top," is the explanation given by manager-director, Ralph Merriitt.

A loan of three million dollars to finance the balance of the 1922 crop has been negotiated through a syndicate of banks headed by the Pacific Southwest and First National of Los Angeles and the Anglo & London Paris Bank of San Francisco.

Four divisions will be created: operating; sales; administration; and membership service. At a recent meeting of stock holders the entire board of directors were reelected.

"Father, what is the difference between cannibals and other folks?" questioned young Albert.

"Well, my boy, cannibals eat their enemies; as a rule other people go no further than to live on their friends and relatives."

ILLINOIS COOPERATIVE SELLS BUTTER TO CUBA

Owing to discontent caused by the low price received for milk by the farmers of Stephenson County, Ill., the Stephenson County Marketing Co., was organized September, 1921. A modern creamery and receiving plant was erected at Freeport with receiving stations at Damascus, German Valley, Lena and Dakota. The company was incorporated with a capital stock of \$50,000 and a membership of about 500. Since this time the membership has doubled and the capital stock has been increased to \$75,000. A wholesale plant has been started at Rockford. All the property including the creamery and a large warehouse for storing salt, twine and other supplies sold to farmers is owned by the farmer stockholders. A short time ago the company sent a large shipment of butter packed in tins to Cuba.

WELL-KNOWN EDITOR DEAD

Jason W. Stockbridge, editor of *The Maryland Farmer*, died March 7th at the Homewood Hospital, Baltimore. Mr. Stockbridge was stricken with pneumonia about three weeks ago, but had apparently passed the crisis of the disease when a sudden collapse brought an unexpected fatal end of the illness. Mr. Stockbridge is survived by his wife and seven children, the youngest less than a month old.

Mr. Stockbridge had a host of friends. He did good work as editor of *The Maryland Farmer* and was a keen student of agricultural affairs. His former work as a reporter and financial editor aided him greatly in his position with *The Maryland Farmer* and added materially to the value of that periodical.

CLOTZ-BRADFORD DISPERSAL

The dispersion of the Clotz Bros., and B. L. Bradford herds was held at Des Moines, Iowa, March 7th-8th, under the management of Hargrove and Arnold. The top price was \$1,525 which Fairburn & Wood, Fonda, Iowa paid for King Pietertje Ormsby Piebe 27th, a son of K. P. O. P. from a 33-lb. cow. A Texan buyer, O. L. Ward paid \$700 for Loretta Colantha De Kol, a show cow, with a 27-lb. seven day butter record. Twenty-three other animals brought \$200 or more; eleven \$300 or more; five \$400 or more; three over \$500, one brought \$650 and another \$665. The Board of Control of Public Institutions of Iowa secured a number of good ones and bid on others.

THE IOWA BREEDERS' SALE

The Iowa Holstein-Friesian Breeders' Association held their annual spring sale at Waterloo, Iowa, March 15. Sixty-one animals were sold at an average of \$233.70. Although weather conditions were unfavorable there was a good attendance. The top price was \$450 which Frank Chikak of Elma, paid for Lady Butter Maid Colantha consigned by P. P. Stewart of Maynard. Cerro Gordo Farms, Mason City, consigned the top price bull, King Pietertje Ormsby Piebe 29th. He was purchased by Hauge Bros., A. E. Markham and C. E. Bell for \$400. Seven bulls were bought in the sale for an average of \$261; while the fifty-four females averaged \$230. The high average quality of the sale is shown by the fact that only four animals brought \$400 or more and only a dozen above \$300, yet the average was well over \$233.

THE ALLENDALE FARM SALE

A sale will be held on Saturday, April 14th, at the Allen Farms at Montoursville near Williamsport, Penna. The animals will be tuberculin tested and sold subject to a 60-day retest. Among the offerings will be the senior herdsire whose dam made 25 lb. butter in seven days as a three-year-old. Ten of his daughters will also be on sale. Nearly all the animals are of milking age and will be fresh or due soon after sale time. Some of these cows are bred to King Ormsby Crijntje whose sire was the King of the Ormsbys and whose dam, Lady Pietertje Trijntje Segis is a 30 lb. cow that as a junior four-year-old produced 21,627.5 lb. milk, 971.86 lb. butter in a year. She is a daughter of Pietertje Hengerveld Segis.

A young bull that should attract considerable attention is a son of King of the Ormsbys from a 27 lb. cow that has a year record of 953 lb. butter and 21,488 lb.

milk. Sons of King of the Ormsbys are always in demand and the great record recently made by Bess Johanna Ormsby, full sister to the sire, again calls attention to the producing ability evidenced by so many animals of this line of breeding.

There are a few good Guernseys in this sale as well as the Holsteins which ought to bring buyers from a distance as there is quite a demand in this state for Guernseys while the supply is very limited.

The owner of the Allendale Farms is Carl G. Allen of Williamsport and he assures us that everything will be done to insure the comfort of the visitors to reach the farm. Purchasers should take the Montoursville trolley at Williamsport and journey to the end of the line where automobiles will carry them from the cars to the place of sale.

OVERLEIN HERD DISPERSAL

The herd of Palmer Overlein of Black River Falls, was sold March 27 at Irving, Wis. and attracted a good crowd. The average price realized for females of all ages was \$129 while bulls brought an average of \$74.50. Mr. Overlein had a good reputation as a breeder and his cows were known to be producers. The top price was \$277 which Hugh Sharpe of Black River Falls paid for the four-year-old Maple Grove Pauline 3d. Mr. Sharpe bought a number of good ones and paid \$470 for an eight-year-old cow and her five-year-old daughter. The animals bringing \$150 or more with names and addresses of their purchasers are:

Maud Korndyke De Kol, 6 yrs., L. McDonald, Black River Falls	\$150.00
Nora Colantha De Kol Korndyke, 3 yrs., Fred Kehler, Melrose, Wis.	197.50
Ruth Nora De Kol Segis, 8 yrs., Hugh Sharpe, Black River Falls	175.00
Maple Grove Pauline Pieter, 8 yrs., Hugh Sharpe	215.00
Maple Grove Pauline Pieter 2d, 5 yrs., Hugh Sharpe	255.00
Maple Grove Pauline 3d, 4 yrs., Hugh Sharpe	277.00
Marjorie Johanna Piebe, 2 yrs., Young Bros.	152.00
Nora Colantha Molly, 3 yrs., Shirley Lee	167.50
Maud Korndyke Segis Piebe, 2 yrs., Alfired Wadel	155.00

THE REMLEY DISPERSION

The H. R. Remley herd was dispersed on the farm at Watsontown, Pa., March 24. There were 23 animals sold for an average of \$274.13, the grand total being \$6,305. Seven bulls averaged \$126.42 and sixteen females averaged \$338.75. Eleven animals exceeded \$200, and of these ten went to two different purchasers, Dr. E. Hogg, of Wilkes-Barre and H. J. Sheffer of Dewart. Dr. Hogg's six animals cost him \$2,920. He purchased the two highest priced animals in the sale, giving \$750 for Highland Pleiades Hartog, a 29-lb. daughter of Dutchland Colantha Hark. This cow had a number of good records made in the cow testing association work. The Doctor paid \$650 for Highland Lassie Mooie, a 25-lb. junior three-year-old daughter of Oakland Sethje Mooie from the 33.9 four-year-old Highland Korndyke Lassie. Highland Looing Belle Hark, another daughter of Dutchland Colantha Hark was struck off to Mr. Sheffer for \$525. She had no official records but had two splendid year records made in cow testing association work. Baxter was the auctioneer, and R. Austin Backus pedigree man.

The animals bringing \$200 or more with names and addresses of their purchasers are:

Purchased by Dr. E. Hogg, Wilkes Barre, Pa.	
1 Highland Quine Hark, 6 yrs.	\$500
3 Highland White Hark, 6 yrs.	415
5 Highland Pleiades Hartog, 6 yrs.	750
6 Highland Lassie Mooie, 3 yrs.	650
7 Highland Hartog Lassie, 5 yrs.	360
9 Colantha Highland Lassie, 1 yr.	265
Purchased by H. J. Sheffer, Dewart, Pa.	
2 Highland Plum Hark, 6 yrs.	455
4 Highland Looing Belle Hark, 6 yrs.	525
19 Female, 3 mo.	385
21 Female, 2 mo.	225
Purchased by Harris Crispin, Milton, Pa.	
8 Inka Twin Brook, 1 yr.	230

THE TIFFDALE DISPERSAL

The Tiffdale Dispersal Sale was held at Brooklyn, Pa., March 27. Tiffdale herd was fully accredited and every animal was sold subject to a 60-90 days retest. There were quite a number of young animals; 11 calves bringing \$710. The thirty animals over a year old averaged \$146.33, the total being \$5100 for 41 head.

The herdsire Lathrop Valdessa Homestead was twenty months old and was a son of King Valdessa Pontiac Homestead from an untested daughter of the 31 lb. cow Aaggie Cornucopia Pauline Girl 2d. He was struck off to E. W. Tiffany for \$160. The top price was \$300 which the W. A. Lathrop Estate of Montrose, Pa., paid for Nancy De Kol Princess, a five-year-old daughter of the polled bull Napol Prince. All the animals went to Pennsylvania parties with the exception of seven which were purchased by the well known New York Holstein breeder G. A. Abbott. Baxter was the auctioneer with R. Austin Backus in the box.

Animals bringing \$150 or more with the names and addresses of their purchasers are:

Purchased by E. W. Tiffany, Brooklyn, Pa.	
Lathrop Valdessa Homestead, 1½ yrs., Male	\$160
9 Lady Johanna Madrigal, 10 yrs.	165
22 Dijkstra Segis Beets Lyons, 5 yrs.	255
Purchased by G. A. Abbott, Cortland, N. Y.	
7 Jessie Pontiac Buttercup, 5 yrs.	175
36 Ridge Farm Belle Segis Rag Apple, 3 yrs.	215

(Continued on page 260)

ST. LOUIS MILK CAMPAIGN

The per capita consumption of milk in St. Louis is said to be about half as much as it is in other great cities of the United States. To remedy this condition, the producers and distributors have been putting on a milk campaign and invoked the cooperation of the National Dairy Council. Billboards, newspaper publicity and the movies are being used and valuable work is being done with the children in the public schools. A number of the big stores have donated the use of part of their display windows and in these animals that have been fed milk and animals that have not received milk are shown to point out the resultant difference in growth. Approximately \$5,000 a month is being raised locally to finance the campaign which has its headquarters in the Chamber of Commerce building and is backed by the Health Department and other Civic Organizations.

A PAYING DAIRY

David Swenson of Dovre, Kandiyohi County, Minn. has a herd of thirty Holstein cows and delivers cream to the New London Creamery. For his December production Mr. Swenson received a check of \$595.00. This was handled by the Bank of Willmar. Its unusual size caused inquiry and the incident received considerable publicity.

The skim milk was fed to calves and formed part of the ration of the drove of 35 pigs. Then the Swensons sold \$72.00 of eggs during the month besides what the family used. Mr. Swenson is finding that diversification pays.

ASH GROVE FARM

offers purebred Holstein calves both sexes from 29-lb. sire at farmer's prices.

BLACKWELL BROS., Damascus, Pa.

WANTED.

Twenty high producing cows, 2d or 3d calf, fresh or near springers, by May 15th. Will consider entire herd or individual animals. Must be accredited. Give brief description of breeding and records, if any. Address

E. J. SCAMMELL,
814 Third Ave., Williamsport, Pa.

Box 45E Mexico, New York

ELMER R. ZIMMER

Elmer R. Zimmer, secretary of the New York Holstein-Friesian Association, died at his home in Syracuse, March 22d, from pneumonia, having been ill only 12 days. Mr. Zimmer was born at Constableville, N. Y., Sept. 5, 1886. He was a special student in the college of Agriculture at Cornell University, 1912-13, and was an instructor in Animal Husbandry 1913-15. Mr. Zimmer then became county agent in Tioga County, New York, and it was his success in building up the farm bureau in that county that caused him to be appointed secretary of the New York State Holstein-Friesian Association in 1920. Mr. Zimmer was sincere, conscientious and a hard worker. He was quiet and unassuming and a general favorite with all cattle men with whom he came in contact. He is survived by his wife and three small children.

MILO D. CAMPBELL

Agricultural interests regret the death of Milo D. Campbell which occurred suddenly at Washington, March 22d. Mr. Campbell was playing golf with former Senator Townsend, of Michigan, with whom he had long been friendly. It is nearly a year ago since Congress passed the bill increasing the membership of the Federal Reserve Board and arranging that the new member should represent agriculture which formerly had no representation on the Board, although farming is the largest business interest of the country. President Harding did not fill the appointment for several months, but finally settled on Mr. Campbell who was confirmed by the Senate shortly before the close of Congress. Mr. Campbell had only served eight days of his term of ten years.

Mr. Campbell became nationally prominent by his work in the organization of the milk producers of southeastern Michigan and when a national milk producers' organization came into existence he was elected president. While primarily a farmer, Mr. Campbell had the advantage of legal training. He was prominent politically, had been mayor of Coldwater, Mich., a member of the Michigan Legislature and had served as Insurance and Tax Commissioner.

OUTLINE OF OPERATIONS AT ALLENDALE FARMS

By CARL G. ALLEN

Allendale Farms started their breeding operations in August 1919 purchasing as foundation stock young cows strong in blood lines of Colantha, Johanna Lad and King Segis Prospect. We used on these animals the bull from Duchland Colantha Lad whose pedigree is outlined in our advertisement and subsequently purchased a Junior Herd Sire from the Winterthur Farms, a son of King of the Ormsbys from a dam producing 971 lb. butter and 22,000 lb. milk.

We started out as a market milk operation and remodelled our barns and equipment to enable us to produce Certified Milk, which grade of milk we are producing to-day.

Since starting our breeding operation we have consistently held all female offspring so that due to the capacity of our barns, we now find ourselves overstocked and it is now necessary to hold a reduction sale to bring our herd down to barn capacity.

Our milk is sold on the retail market of Williamsport and to some wholesale outlets including leading hotels and hospitals in the central part of Pennsylvania. We have the only Certified plant in a radius of 100 miles and one of the few certified plants in Pennsylvania. The herd is of course, on the accredited plan and on account of the rigid inspections and the necessity of holding only high producing animals this sale presents an unusual opportunity to pick up some splendid producers that will make fine foundation stock for any herd.

Last fall, with the assistance of W. E. Davis, State Secretary of New York State Guernsey Association and H. E. Babcock, Head of Farm Management, Cornell University, we augmented our herd by 24 head of registered Guernseys and a bull strong in the blood lines of May Rose. This addition to our herd has made it more imperative for us to hold a reduction sale as it has overcrowded our capacity.

FOURTH ANNUAL DELAWARE BREEDERS SALE

The thirty-three animals sold in the Fourth Annual Sale of the Delaware Holstein-Friesian Association brought a total of \$5,930, an average of \$179.69. Every animal consigned was from a federally supervised herd and sold subject to a sixty-day retest. The top price was \$420 which Abner S. Deysher of Reading, Pa., paid for Winterthur Cornucopia Cedarcrest, a daughter of McKinley Pietertje Beets from a daughter of King Segis Pontiac. She was consigned by the Winterthur Farms and had been bred to King of the Ormsbys. C. H. Cook of Langhorne, The Delaware Land Development Co. of Mortonville as well as W. R. Smith of Oxford were other Pennsylvania buyers who took good stock. Delaware and Pennsylvania were the only two states represented on the list of purchasers.

The top price for a male was \$310 which J. D. Reynolds of Middletown, Del. paid for the nine months old bull King Ormsby Sadie Vale Pontiac. This bull was first prize junior calf at the 1922 state fair. He was by King of the Ormsbys from the 27-lb. four-year-old, Queen Sadie Vale Pontiac. The sale was under the management of the State Holstein-Friesian Association.

Animals bringing \$150 or more are herewith listed together with the names and addresses of their purchasers and prices paid.

Consigned by B. V. Armstrong, Middletown, Del.			
1	Countess Hengerveld Butter Boy, 3 yrs., C. C. Webster, Edgemoor, Del.		\$195

THE D. H. YAUKEY HERD DISPERSED

The D. H. Yaukey herd was dispersed at Fayetteville, Pa. on March 21. Mr. Yaukey, for some fifteen years had been building up this good herd of Holsteins and it was owing to his death that the cattle were thrown on the market. A party of bidders from Maryland were present but practically all the animals went in the immediate vicinity. The animals had not been fitted for sale but they showed evidences of being producers. A number of the cows were recently fresh and with calf at foot.

The total was \$6,514.50 for 42 head, an average of \$155.10. No bulls were sold. The sale took place in the open barnyard and was favored with glorious weather. The auctioneer was a local man, N. G. Henry, while the well known Holstein breeder, S. R. Miller of Chambersburg, was sales manager and pedigree expert.

The top price was \$275 which L. B. Valentine of Womelsdorf paid for Maple Knoll Alcartra Forum, a granddaughter of King Segis Pontiac Alcartra from Forum Gold Leaf 4th, who has a seven day record of 25.37 lb. butter, 676.8 lb. milk. Mr. Valentine also bid \$240 for Maple Knoll Alcartra Pride, a half-sister of Forum, from a 25-lb. daughter of King Korndyke Hengerveld Ormsby. J. C. Bream of Gettysburg paid \$260 for Emma Valdessa Netherland, a nice three-year-old granddaughter of King Valdessa. Her dam was an ARO granddaughter of Hengerveld De Kol. J. L. Myers of Mercersburg took a number of good ones and bid on several others.

Animals bringing \$150 or more with names and addresses of their purchasers are:—

Purchased by J. C. Bream, Gettysburg.			
1	King Hill Gem Alcartra, 5 yrs.		\$162.00
4	Emma Valdessa Netherland, 3 yrs.		260.00
Purchased by Frank R. Keller, Chambersburg.			
2	Queen Pontiac Metis Colantha, 7 yrs.		156.00
Purchased by L. B. Valentine, Womelsdorf.

MUSOLFF BROTHERS HAVE GOOD SALE

The Musolff Brothers herd of Holsteins was dispersed at South Lyon, Mich. on March 10, and resulted in an average of \$229.91 for the 53 animals. There were four bulls and ten heifers under a year old and these averaged \$116.07, the top price being \$260 for a six months old son of King Ona Champion and the 31 lb. cow Mercedes Pietertje Aaggie Texal 3d. The young fellow goes to head the herd of Edw. Fell & Son of Lansing.

The 39 animals over a year old averaged \$270.77. Two animals exceeded \$600, two others went to \$500 or more and three went between \$400 and \$500. The top price \$610 was reached for two animals Johanna Korndyke Walker De Kol and Wabeek Fancy 2d. The first named is a daughter of Beauty Walker Pietertje De Kol and had recently completed a seven day record of 29 lb. butter as a junior four-year-old. She was on year test and making a nice showing while her dam had just completed a thousand pound year butter record. She was struck off to W. M. Tyson of Washington, Mich. Wabeek Fancy 2d has a junior three-year-old record of 689.25 lb. butter 16.601 lb. milk made in ten months and was sired by Maple Crest Application Pontiac. She was struck off to J. B. Jones of Romeo, Mich. The sale total was \$12,185.00, and every animal went within the state. The herd was under state supervision and all animals over six months of age were sold subject to a 60 day retest. Wood read the pedigrees and L. W. Lovewell and F. J. Boyle were the auctioneers.

Animals bringing \$200 or more with names and addresses of their purchasers are:

Purchased by L. S. Hunter, South Lyon, Mich.			
2	Ona Tesal, 2 yrs.		\$280
Purchased by Frank Nixon, Dexter, Mich.			
4	Cluny Pontiac Hazel, 5 yrs.		500

(Concluded on page 262)

TWO SONS OF ORMSBY SENSATION GO TO CHILE

Some time ago, the Senors Susaeta from Chile called at Beaver Dam Stock Farms to look over the young bulls. Senior Felix Susaeta, one of the brothers, is the representative of Messrs. Mitrovich Hermanos of Valparaiso. These gentlemen were looking over a number of high quality herds in the eastern states and told us that they were looking for two animals of outstanding individuality. A few weeks ago they came back and bought from us two bulls, both sons of Ormsby Sensation, our great young herdsire.

The dam of one of the young bulls is Geertje Queen De Kol Posch 2d, who as a senior four-year-old produced 1,211.68 lb. butter, 28,866.9 lb. milk in a year, which was world's record when made for combined milk and butter. This cow two different years has produced over 31 lb. butter in a week and is a daughter of Geertje Queen De Kol Posch, a 31-lb. cow that made 624.7 lb. milk in seven days. Geertje Queen De Kol Posch 2d is one of the many good daughters of Ormsby Korndyke Lad, who in proportion to number of daughters tested has more over the 1,000-lb. mark than any other bull that ever lived and in number of 1,000-lb. daughters has only one equal and no superior.

This young fellow is about the nicest calf we have ever raised, of faultless individuality, and is one that makes you sit up and take notice when you take him out of his stall. We feel reluctant to see this young bull leave our farm and this country. An animal of his makeup and breeding should make good wherever he goes. Senior Susaeta told us, however, that Messrs. Hermanos have a very fine herd of purebred Holsteins in Chile, which they imported from the United States sometime ago, and that in the selection of this herd they had taken great care to not only have animals from the best producing families, but also faultless individuals. Surely with a bull of such excellent breeding and wonderful individuality and such a herd,

STEVENS TANK & TOWER CO.

AUBURN, MAINE

they have a right to expect gratifying results and to improve the producing qualities of Holsteins in Chile.

The second bull they selected was a son of Beaver Dam Fayne Segis Alcartra, a very fine young daughter of King of the Alcartras. Although this young cow had a hard time when freshening, yet she made as a senior three-year-old, 500 lb. milk, 29.1 lb. butter in a week. She is running on test for the year and will make a real good record. This bull is also a very fine individual and will make a good side partner for Geertje's son.

It afforded us great pleasure to meet in Senor Felix Susaeta a gentleman of such sterling qualities who certainly used good judgment in picking out these animals. He took great pains to take every precaution to have these animals started right on their long journey. The steamship company makes it a rule that livestock for Chile must be shipped in crates large enough so they can make the trip in these crates without being taken out until they arrive in Chile, and Senor Susaeta had therefore, two special box stalls built for the animals, and took them personally on a truck to New York, going on the same steamer with them in order to give them his personal attention while en route.

Senor Susaeta told us that the climate in Chile was splendidly adapted to the breeding of Holstein cattle and that with the abundance of alfalfa, their herd was not only doing exceptionally well, but kept in good flesh always. The young animals which were raised there are very large and growthy and give promise to develop into large producing cows.

We are proud to have been able to supply Messrs. Hermanos with their wants and will watch with great interest the future development of their herd. We are glad to say that we find a ready sale for the sons of Ormsby Sensation who with their good size, masculine appearance and wonderful individuality, seem to appeal to the eye of lovers of Holsteins. THE HARRINGTON FARM SALE

New Hampshire as well as New York was represented at the dispersal sale of the Harrington Farms, which was held at Syracuse, March 7. There were 38 animals sold for \$5,530 and the average was \$145.52. The top price was \$335 which C. J. Warbass of Syracuse paid for Netherland Echo Wayne a nice, large daughter of Sir Riverdale Echo Segis, a son of old May Echo. Mr. Warbass took a number of other good ones as did J. C. & S. T. Judd of Cannonsville, N. Y.

The animals were tuberculin tested and sold with a 60 day retest privilege.

Animals bringing \$150 or more with names and addresses of their purchasers are:

2	Lady Boness Pietertje Korndyke, 6 yrs.	Purchased by C. J. Warbass, Syracuse, N. Y.	\$180
11	Dell Korndyke Maid, 6 yrs.	Purchased by C. J. Warbass, Syracuse, N. Y.	290
12	Alice Mercedes De Kol 4th, 8 yrs.	Purchased by C. J. Warbass, Syracuse, N. Y.	210
13	Netherland Echo Wayne, 5 yrs.	Purchased by C. J. Warbass, Syracuse, N. Y.	335
14	Netherland Echo Wayne 2d, 2 yrs.	Purchased by C. J. Warbass, Syracuse, N. Y.	160
20	Emadel Tulip Segis Johanna 2d, 3 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	180
3	Inka Posch Dinah 2d, 6 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	160
10	Dell Artis Korndyke, 6 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	210
23	Laura Aaggie Pietertje Hartog, 4 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	155
24	Lady Jane Pietertje Hartog, 4 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	155
30	Topsy Canary De Kol, 4 yrs.	Purchased by J. C. & S. T. Judd, Cannonsville, N. Y.	160
6	Lady Rosalie, 9 yrs.	Purchased by Joseph Coleman, Manlius, N. Y.	195
9	Dell Walker, 6 yrs.	Purchased by Joseph Coleman, Manlius, N. Y.	150
7	Korndyke Johanna Burke, 6 yrs.	Purchased by Baldwin Farms, Walpole, N. H.	150
21	Tippet Wayne Lyons, 3 yrs.	Purchased by Baldwin Farms, Walpole, N. H.	160
28	Princess Aaggie Pontiac Lorie, 4 yrs.	Purchased by H. S. King, Chittanooga, N. Y.	185

GRADE HOLSTEINS SELL FOR GOOD PRICES

Late in February a grade Holstein sold for \$141.00 at Greenwood, Ind. Several others exceeded \$100.00.

At a sale in Tipton, Iowa the first week in March, 23 head of grade Holsteins averaged \$109.04. Prices ranged from \$88.00 to \$136.00.

At the F. A. Pecoy dispersal of Cresco, Iowa, about the middle of March seven grades averaged \$126.00, while the seven purebred cows averaged \$270.00.

Prices for grade Holsteins are reported as having an upward tendency. A grade Holstein sale was held at West Salem, Wisconsin the last day of February and 81 head were sold at an average of \$88.72.

The entire herd of S. E. Clark of West Salem, Wis. consisting of 22 grade cows, three yearling heifers, seven calves and two purebred bulls were sold recently to L. C. Plog and Ernest Peterson of Alta, Iowa for \$2700.00. Mr. Clark's herd had a record for profitable production.

DEYSHER COWS MAKING FINE RECORDS

Some splendid records have been made recently on the Berks Farm, the high-class breeding establishment owned by Abner S. Deysher of Reading, Pa. The record of 30.26 lb. butter in seven days and over 600 lb. milk made by L. H. C. Princess Annetje Alcartra has already been reported. Charlotte Lyons Korndyke, one of the foundation cows of the herd made 28.8 lb. butter, 687 lb. milk in seven days and in thirty days produced

young cows made fine records. Two junior three-year-olds exceeded 21 lb. butter and the yearling O. K. L. Bessie 2d made 19.9 lb. butter, 394.30 lb. milk when only 22 months old.

Perhaps the best record in the whole list was made by Lady Thyrsa Walker Segis. This heifer was only 2 years, 19 days old when she freshened, yet she produced in a week 440 lb. milk, 25.41 lb. butter, making the second highest record ever made in Pennsylvania by a junior two-year-old.

Congratulations are due Mr. Deysher

LADY THYRSA WALKER SEGIS
25.41 lb. butter, 439.9 lb. milk in 7 days; 96.90 lb. butter, 1,989.8 lb. milk in 30 days, calving at 2 years and 19 days old. Owned by Abner S. Deysher, Berks Farm, Reading, Pennsylvania.

113.82 lb. butter, 2,575.4 lb. milk. Wynola Korndyke Pontiac Abbekerk, a senior four-year-old, produced 26.79 lb. butter in a week and averaged practically 70 lb. milk a day, while in thirty days she exceeded this 70 lb. average and made exactly 100 lb. butter. A number of other

and superintendent Clark F. Berry. The nine animals average in seven days test 23.958 lb. butter and 499.6 lb. milk; two of the cows were full age and the other seven were tested at an average age of three years and one month.

The list of records made are as follows:

Name	Age	Length of Test	Milk	Butter
Charlotte Lyons Korndyke	7-6	7 days	687.0	28.80
L. H. C. Princess Annetje Alcartra	6-5	30 days	2,575.4	113.82
Wynola Korndyke Pontiac Abbekerk	4-9	7 days	602.0	30.26
Red Cross Heroine of Grayfields	4-9	30 days	2,319.4	113.56
Lady Thyrsa Walker Fayne	3-1	7 days	485.6	26.79
Lyons Sarcastic Korndyke	3-7-16	30 days	2,112.1	100.00
Lady Tweede Pontiac Lass	2-1	7 days	508.0	23.46
Lady Thyrsa Walker Segis	2-0-19	30 days	2,190.1	93.94
O. K. L. Bessie 2d	1-10	7 days	387.3	21.31
		30 days	559.7	21.09
		7 days	2,455.1	85.24
		30 days	431.9	18.60
		7 days	1,860.2	77.06
		30 days	439.9	25.41
		7 days	1,989.8	96.90
		30 days	394.3	19.90

TWO SETS OF TRIPLETS

Three heifer calves at one birth is reported for a registered Holstein cow owned by Albert R. Hollnagel, Forest Edge Farm, Randolph, Wis. The dam, now eight years old, as a six-year-old made an official record of 26.20 lb. butter, 590.6 lb. milk in a week. The owner estimated the weight as between 50 and 60 lb. each. They were born January 27, 1923.

Triplet heifer calves are also reported for Edna Juno Betz Pauline Soldene No. 553751, owned by Arthur W. Colburn of Dracut, Mass. The sire was the Colburn herd bull King Dichter Pontiac. The Colburn herd was started 18 years

ago by the purchase of a bull and a few registered heifers and now numbers 53 head but this is the first instance of such a happening.

BUILT FROM A SMALL FOUNDATION

One of the most interesting exhibits of Farmers' Week at the Missouri College of Agriculture was the University dairy herd. This herd is made up of three breeds, Jerseys, Holsteins and Ayrshires.

Don't lose your temper. Greet your enemy with a smile and he will give you the laugh.

GREEN FEEDS AND MILK FLAVOR

The United States Department of Agriculture has been doing some investigational work on variations in the flavor and odor of milk and find that the principal causes are the internal or physical condition of the cow; absorption within the body from highly-flavored feeds; absorption into the milk after it is drawn; and the development of bacteria in standing milk.

The odors from green alfalfa are not found when five or more hours elapse between feeding and milking time. It is recommended to remove cows from alfalfa pasture four or five hours before milking if milk of the best flavor and quality is desired. The feeding of green alfalfa at the rate of 30 lb. to the cow one hour before milking resulted in milk of pronounced odor and flavor. A ration of 15 lb. per animal fed an hour before milking still showed off flavored milk but of less intensity.

Green corn, although flavoring the milk to some extent, was not so objectionable and quantities up to 25 lb. per cow were fed at any time without producing milk that would be objected to by the average consumer on account of its characteristic flavor and odor.

A ration of the milk was found to reduce relatively strong off flavors and to remove entirely slight ones. Many objectionable feed flavors and odors get into milk through the body of the cow and not by absorption from the air of the stable, milk room or surroundings.

STARTED WITH GOOD ONES

Mr. James C. Wiley who will operate one of C. W. Rimsnider's farms at Hinckley, Ill., on March 1st, recently visited the Milky Vale herd at Maple Park and there secured five cows and two calves from the owner, Louis H. Klaas. These animals are to form the foundation of a purebred Holstein herd. They include two of the ten highest producers in the Kane County Cow Testing Associations during January, in which there were 1,984 cows on test.

Mr. Wiley is a former test supervisor, has a good knowledge of feeds and feeding and there is every reason to believe that he will be successful.

Live Stock Auctioneer

E. Newlin Brown,

Wycombe, Pa.

Reference on request. Terms Reasonable.

"MAKING ANIMAL TAGGING EASY"

The new Ear Tag for Cattle, Sheep and Hogs, 3 sizes, simplest, best and cheapest. Requires but one movement to pierce ear and clinch itself. Made of bright steel, light but durable. Stamped with name (and address on larger) and numbered. Already endorsed by government, states, veterinarians, breeders and farmers that have used them. Write for description and prices.

Balance ten days before shipping. A hatch every week. Parcel Post Paid. BAYLEY & SOMERVILLE, MONKTON, MD.

POSSIBILITIES IN THE NEW SOUTH

By GEO. E. BROWN

The section now called the New South, embraces a portion of Mississippi, Alabama and Georgia; a large tract of country devastated by the boll weevil, forcing cotton growers to change to diversified farming, stock breeding and dairying.

The dairy interests are increasing so rapidly, that it is predicted by those well informed that it will in a few years equal or surpass the northern dairy interests.

The first I learned of the great natural advantages of that country was when I went on a casual visit to an old schoolmate in Selma, Ala., in the winter of 1917. I was so strongly impressed with the possibilities that I decided to go back the following summer and thoroughly investigate the conditions favorable and the reverse.

I went via the Mobile and Ohio R. R. from St. Louis. I continued my investigations to what is known as the "black belt." I went on South to Meridan then east through Alabama, via Demopolis and Selma to Montgomery. I found rich land, good farms and successful dairies all the way and bottom land that would grow nearly, and in some cases quite 100 bu. per acre of corn.

At and around Meridan I found large dairies, but the land not quite as good as I found farther up the river.

The black belt across Alabama is on an average 50 miles wide. The soil varies from rich black loam to strong sandy loam and to light sandy loam all suitable for some profitable crop; the black loam—Indian corn and various kinds of grain; the strong sandy land, sweet potatoes and castor beans; on the lighter soil, peanuts will make a profitable crop and also improve the land.

The long growing season and mild winters enable the growing of two full crops per year; wheat, oats or rye sown in the fall will afford good pasture till February and can be harvested in time for corn or potatoes to be planted.

On limed soil, alfalfa will grow four good cuttings and then pasture all winter, Johnson grass on good land not dry enough for alfalfa, will cut two crops of 1½ tons of hay per acre equal to timothy for horses. Land once seeded to Johnson grass only needs turning or pulverizing once in three years to renew it. Bermuda grass when well set furnishes very rich permanent pasture, from early spring till frost comes in the fall.

The whole country from Demopolis to Montgomery is underlaid with pure soft limestone; it is struck at from four to ten feet below the surface. In drilling wells, casing is only needed till the limestone is reached which drills nearly as easily as chalk. Flowing wells are obtained by drilling through the limestone. The water overflows on nearly all level land, where it does not overflow it rises very near, if not quite, to the surface. On one farm I saw four flowing wells and one that came so near the surface that water could be dipped out.

Any land that will grow alfalfa, will grow immense crops of sweet clover hay, the latter can be pastured at the same time hay is maturing. In many places on rolling land, the soil is washed from the lime which can be quarried easily and when run through a crusher can be spread on land that needs it so fitting it for alfalfa and sweet clover.

This combination of conditions renders the "black belt" an ideal stock and dairy country. It affords an unlimited market for dairy cattle of which Jerseys and Guernsey breeders were first to avail themselves but now Holsteins are gaining fast. They received a bad set back at first because inferior cows were taken and found ready sale because they were of the regulation "black and white."

Another mistake was made by taking mature cows there. Because of the change in climate and other conditions some died and others failed in milking.

Yearlings or those coming two years and not yet fresh, soon acclimate.

I arranged with a friend who had been buying and selling dairy cows for many years to join me in the business of supplying the southern market, but he died suddenly and spoiled my plans. I then began corresponding with prominent Holstein breeders; told them of the opportunity and advised forming a syndicate; buying a good centrally located farm and using it as a distributing point for their surplus young stock. I found such a farm and got an option on it at \$35 per acre making it a sure profitable investment. Nearly every man I approached admitted it could be made a safe and profitable venture, but not one was willing to start it. That farm of 900 acres has since been divided into smaller farms and sold at \$65 to over \$100 per acre. There are still good bargains available—large cotton plantations of good land that can be bought and by dividing can be sold at from 50 to 100% profit.

Swine breeding in connection with dairying is very profitable. Hogs make rapid growth on alfalfa pasture, with very little extra feed. The mild winters permits two litters a year.

When I was there there was a fine creamery at Demopolis others at Selma and Montgomery. It was predicted that Selma or Montgomery would soon be the Elgin of the South. New creameries have been built since I was there and others will be added as fast as dairy interests increase. Ever since my visit to the "black belt" I have tried to interest Holstein breeders in the unequalled opportunities there and the unlimited market for their cattle.

When farmer Bassett decided to send his son to college, and selected one exploiting the advantages of its physical training system, he had a plain talk with the president.

"John don't need no setting-up exercises. He sets up too late already, so I'd rather you'd cut them out. But say, if you've got any good getting up exercises that are a sure thing, go to it with John!—Wayside Tales.

COMBINES HENS AND HOLSTEINS

It is just about eight years ago that Molly Johanna Korndyke made her seven-day butter record of 30.62 lb. on the H. R. Weiskopf Farm, Cleveland, Wisconsin, and became the first 30-lb. two-year-old.

Her performance caused her owner to become famous. A few words about him now will be in order.

On December 22, 1905, the Weiskopf's purchased Vickery Johanna, No. 75517 for \$75. Since that time they have sold 115 of her descendants for over \$35,000. This includes her granddaughter Molly Johanna Korndyke, who was purchased by the Carnation Stock Farms. Nine different descendants of Vickery Johanna made state records and it is claimed that they won more money for milk and butter records than have the descendants of any cow in the state.

A great young cow that attracted much attention was Cleveland Pontiac Maid who as a junior three-year-old produced 32.31 lb. butter in seven days and 129.09 lb. butter in thirty days. The seven-day record has since been broken but the thirty day stands supreme in the state although made seven years ago.

The Weiskopf herd at present is quite small numbering 25 head as the owner held a dispersal in 1920, selling practically all his animals. Since that time he has specialized in poultry and he has White Plymouth Rocks and Rhode Island Reds and recently purchased a pen of Jersey Black Giants.

The present herdsire is Cleveland Ormsby Lad, a son of King Pietertje Ormsby Piche 7th from Cleveland Pontiac Imogene, 24,613.2 lb. milk, 1,028.8 lb. butter in a year as a three-year-old. The Weiskopf farm has been in the family for three generations. It was homesteaded by Fred Weiskopf in the 50's. His son Henry Weiskopf, the actual owner at the present time, was born and reared on the place and his son H. R. Weiskopf, the present active head, assumed the management seventeen years ago when he was only eighteen years old.

The farm combines 110 acres of which 35 are in permanent pasture and 75 acres are under cultivation. While still noted for the quality of its Holsteins it is getting quite a reputation for its poultry.

STATE INSTITUTION HAS PRODUCING HERD

The Springfield State Hospital at Sykesville, Maryland, has a good herd of purebred Holsteins. During the month of January, 25 of these cows were on official test and made records up to 25 lb. butter in seven days and 80 lb. milk a day. They now are on ten months semi-official test. During January, 30 cows of this herd were enrolled in the Frederick County Testing Association. Fourteen of the number made over 50 lb. butter, 5 made over 80 and the high cow produced 101.4 lb. butterfat and averaged 88 lb. milk a day. As far as we know this is the highest average ever reported in Maryland for a dairy of equal size.

All the cattle in the herd with the exception of the calves born since were purchased last November. On January 13th they were tuberculin tested and passed clean. The hospital is receiving almost twice as much milk in the present dairy as they received in the past from double the number of cows and this milk is used for the 1,600 patients.

During the past three months, eleven bull calves have been sold to farmers of Howard and Carroll Counties and an equal number of heifer calves are being raised. There is room for quite a number more cattle as the new barn has accommodations for 58 head in the stanchions and also has a dozen box stalls.

MARYLAND FARMS

Maryland Farms is one of the show dairy establishments around Grand Rapids, Michigan. The farms cover about 500 acres, nearly all of which are under cultivation. The dairy barn is one of the best in the district.

The main dairy barn is of frame construction, stuccoed on the outside and lined inside the stable with enameled brick. The cow stable is 40 feet wide and 220 feet long, and one story high. Here are 106 single stalls. The stable floor is of concrete and the stall floors of cork brick. Steel stall partitions are set into the floor, while steel stanchions hold the animals. Many windows light the stable, while the air is kept pure by a modern system of ventilation.

This main building, of which the cow stable is the largest part, is built in the shape of a cross. One wing, 40 by 96 feet, is for horses, while at the front is another, 30 by 40 feet, which contains the milk room, test room, office and locker room, creamery and bottling room. Overhead is a dormitory equipped with shower baths and containing a club room for the farm employees.

Two vitrified tile silos, 55 feet high, have a capacity of 700 tons of feed, while the mow floor of the central building will hold 300 tons of hay. On the main floor of this building are feed storage and feed rooms. In the rear of the feed room is another large space devoted to box stalls. At the south end of the cow barn is connected a calf and heifer barn 100 feet long, with room for forty head of stock.

The Maryland herd numbers 150 head. The senior herdsire is Colantha Sir Korndyke Clothilde a twelve year old son of Colantha Johanna Lad and a sterling sire himself. The best known female in the herd is Changeling Queen who has a seven-day butter record of 38.92 lb. made as a seven-year-old, while as a five-year-old, she produced 36.02 lb. butter in a week. Maryland Farms is the property of Dudley E. Waters, one of Michigan's leading Holstein veterans. Mr. Waters became internationally famous by his work in aiding the devastated regions of Belgium and France to secure purebred Holsteins bulls which were donated for that purpose by American owners of black and white cattle.

TESTING ASSOCIATIONS IN CACHE VALLEY

Cache County, the dairy center of Utah, is now the leading county of the state in the number of cow-testing associations. On March 20th, County Agent R. L. Wrigley and W. S. Murdock, of the Western Dairy Division, completed the organization of the South Cache and the Central Cache County Cow-Testing Associations. The first association, at Richmond in North Cache County, was organized six months ago with approximately 500 cows on test. At the present time there are five associations in Utah with three of the largest in Cache County. This increased interest in keeping records of the production of each cow in the herd and the feed cost of producing butterfat and milk linked with the present interest in the organization of a number of Bull Associations in Cache County will make it possible for this county to retain the honor of being the leading dairy county of Utah.

W. S. MURDOCK.

A WEEK-END FRACAS

Little Johnnie had just started to school. He became interested in a little miss of five years and was very attentive on all occasions. One morning another boy appropriated the young miss's pencil. Little Johnnie, indignant, went over to the desk and took the pencil away from him. After school he was telling his story to his dad about the schoolmate and remarked: "I am going to lick him Friday."

"Why Friday,"

"Well, 'cause the teacher will forget all about it by Monday."—Judge.

GREAT JERSEY DEAD

All lovers of good cattle as well as Jersey breeders everywhere will regret the loss of the great cow Vive La France, who died March 16th, of blood poisoning following a case of milk fever. Vive La France was less than ten years old, being born August 8, 1913. In six years she is credited with a production of 78,461 lb. milk, 5,331.95 lb. fat. She made two consecutive year records, each above 1,000 lb., and had seven living calves. She was owned by Pickard Bros., Marion, Oregon.

"Does yo' take this woman for thy lawfully wedded wife?" asked the colored parson, glancing at the diminutive, watery-eyed, bow-legged bridegroom, who stood beside 210 pounds of feminine assurance.

"Ah takes nothin'," gloomily responded the bridegroom. "Ah's bein' tooked."

Harold Rhoades, the junior member of the firm of Rhoades and Rhoades, well known California auctioneers is the proud daddy of a boy born March 3d. The family have already decided upon the youngster's future profession and he is scheduled to make the fourth generation of auctioneers.

King Beauty Sylvia Lyons

Our young herdsire is by KING ECHO SYLVIA MODEL, whose seven nearest dams averaged 35.49 lb. butter in a week and whose first five tested daughters averaged 21.29 lb. butter in a week as junior two-year-olds. His dam is a 26-lb. three-year-old that averaged 71.5 lb. milk a day,

His individuality is equal to his breeding for he was awarded second prize at the 1922 New York State Fair in a class of sixteen bull calves.

He will be bred to daughters of WOODMONT ECHO SYLVIA CHAMPION the first prize three-year-old at the 1922 New York State Fair, whose sire is a son of Champion Echo Sylvia Pontiac and whose dam, Butter Boy Empress, made 30.27 lb. butter in a week, milked 100 lbs. a day and was first prize aged cow, first in the A.R.O. class and grand champion at the 1921 New York State Fair.

My Herdsire

KING KORNDYKE SADIE VALE LONA

No. 299662, born May 2, 1919. He is about three-fourths white, very nicely marked and in every way is a real good bull.

His dam made 23.13 lb. butter in a week, averaging better than 75 lb. milk a day. She is from a cow that produced 24 lb. butter and 619 lb. milk in a week.

The dam's sire is Granville Kriemhilt, who was from a 26.5 lb. cow and was by a son of the great old foundation cow, Canary Mercedes.

His sire, King Korndyke Sadie Vale, has a daughter that made 40 lb. butter in seven days and has a long list of other high record daughters. He was by a son of the first 37 lb. cow and his dam was Sadie Vale Concordia 4th, a 41 lb. daughter of the first 30 lb. cow.

King Korndyke Sadie Vale Lona sires individuals that will please you and every line of his pedigree shows production. The only reason I will part with him is to avoid inbreeding.

Come and see him and his daughters and you will want him.

COMPLETE DISPERSION SALE

OF DR. A. A. PEASLEY'S HERD OF

40 REGISTERED HOLSTEIN-FRIESIANS 40

THURSDAY, APRIL 12, 1923, at 10.30 O'clock A. M.

THIS HERD IS UNDER STATE SUPERVISION

This herd consists of animals born as follows: 1-1913, 2-1914, 2-1915, 5-1916, 2-1917, 2-1918, 2-1919, 6-1920, 4-1921, 11-1922 and 2-1923 all females except 2 bull calves and herdsire, born February 8th, 1921.

THE HERDSIRE'S DAM has a four-year-old record of 25.08 lb. the seven dams in his pedigree average 29.87 lbs. butter in 7 days. He carries 37½ per cent. of the blood of the great COLANTHA JOHANNA LAD. All animals in calf are bred to this sire.

Most of these animals were bred on this farm, the first bull used was from a 27-lb. cow, the second from a 30-lb. cow and the present herdbull is the third sire to be used. The Doctor is selling this fine herd because he cannot give his personal attention on account of his profession and he finds it almost impossible to retain competent help. The sale will be held on the Doctor's farm 10 miles north of Columbus, Ohio, STOP 28 on the Columbus and Delaware Traction Line.

THESE GREAT ANIMALS TO BE SOLD

The Senior Herd Sire—from a 25-lb. three-year-old with 19 lb. as a two-year-old, and by a good 28-lb. son of Dutchland Creamelle Korndyke Lad. This bull with ten of his daughters will be sold.

A daughter of a 29-lb. cow that made 1,000 lb. of butter and gave nearly 22,000 lb. of milk.

An A. R. O. cow that gave nearly 15,000 lb. of milk in ten months, a daughter of Dutchland Colantha Sir Inka Prince, who is a full brother to Dutchland Colantha Sir Inka, with fifteen 30-lb. daughters.

The majority of these animals are of milking age and many will be fresh or soon due at sale time.

Remember—that many of the animals are in calf to a son of King of the Ormsbys from a 30-lb. cow that made 971 lb. of butter in a year as a four-year-old, and she by Pietertje Hengerveld Segis.

A son of King of the Ormsbys ready for heavy service will be sold, and his dam is a 27-lb. cow that made 953 lb. of butter and 21,488 lb. of milk in a year. Twice above 26 lb.

Location: To reach the farm, take the Montoursville trolley from Williamsport. Get off at the end of the line on Broad Street. Automobiles will meet all cars on day of sale. Sale starts at 10:30. Lunch served at the farm.

Write for Catalog to Owner.

Vol. II

HARRISBURG, PA., APRIL 22, 1923

No. 8

Published Semi-Monthly. Price, 75c. Per Year

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the act of March 3, 1879.

Which Will Be Your Choice of These Three 26-lb. Bulls

The dams of each one of these three bulls have made an A.R.O. Record of at least 26-lbs. of butter in seven days, one of them as a four year old.

BULL No. 1 is BERKS SIR PONTIAC KORNDYKE, born Jan. 7, 1923. Priced at \$150. This fellow is $\frac{7}{8}$ white and an exceptionally fine calf for his age. He is by Chief Pontiac Segis Ormsby who was first prize Senior Yearling at the New York State Fair in 1922 and first at four other shows. His dam, Dora of Grayfields has the following records: at three years of age butter seven days 21.99-lbs. milk 471.70-lbs., at four years of age butter seven days 26.03-lbs. milk 468.60-lbs.

BULL No. 2 is BERKS PIETJE LYONS, born March 11, 1923. Priced at \$150. This fellow is $\frac{7}{8}$ black and very well built, will make a very large bull. He is by our Senior Herdsire, King Tweede Spring Farm, whose daughters are making splendid records. His dam, Mapleway Lyons Amleto Pietje has the following records: at four years of age butter seven days 23.04-lbs., milk 480.2-lbs., at five years of age butter seven days 26.51-lbs., milk 494.6-lbs.

BULL No. 3 is BERKS SIR HENGERVELD DE KOL, born Feb. 7, 1923. Priced at \$200. He is by the same sire as Bull No. 1 and very nicely marked. His dam Gwyneth of Grayfields, a daughter of a 33-lb cow, has the following records: at the age of three years butter seven days 24.29-lbs., milk 422-lbs., at the age of five years butter seven days 26.73-lbs., milk 540.8-lbs.

Pedigrees of these bulls sent on request. You will be surprised how well these bulls are bred for the money. Don't wait, Write to-day about them.

Lackawanna County Holsteins

The herds of Lackawanna County consist of stock directly descended from cattle imported direct from Holland in early Holstein days by old time Lackawanna County breeders—pioneers of the breed.

These men were capable judges and selected their animals for type, individuality and producing capacity; desirable characteristics readily apparent in the present cattle of the county.

Lackawanna cattle are healthy—many of the herds are under Federal jurisdiction.

Quotations will be cheerfully given on single animals or carloads—and it is a pleasure to show the goods.

VOL. II

HARRISBURG, PA., APRIL 22, 1923

No. 8

The Huntsdale Herd and Stock Farm

A Small but Growing Holstein Dairy

A SHORT distance from the pleasant village of Huntsdale, Pa., is located the Huntsdale Stock Farm, the home of W. H. Sheaffer. It is also the home of a small herd of Holsteins—small in number but great in quality. One of the members of this herd is Colantha Echo Korndyke. She is a daughter of King Lunde Pontiac Korndyke, who was by King of the Pontiacs and her dam is Mary Colantha Echo 2d, a daughter of Sir Veeman Boon, with a seven-day record of 656.3 lb. milk, 27.56 lb. butter and a year record of

placed udder show her dairy capacity, while her straight topline, broad square hips as well as her depth show that she is of the type most appreciated by Holstein breeders.

Colantha Echo Korndyke is the first cow you see when entering the Huntsdale barn and right next to her is a showy individual that would catch the eye of any critical judge. This is Fayne Pontiac Pet, a daughter of King Pontiac Pet Cornucopia and Finderne Perfection Hengerveld. This cow has an official record made as a five-year-old of 24.98 lb. butter, 577.6 lb. milk and a 30-day record of 97.24 lb. butter, 2,411.5 lb. milk while her best day's milk was 94 lb. She was a very fine daughter in the herd, Huntsdale Fayne Pontiac Pet, who was sired by Bonnymeads Butter Boy. As a junior two-year-old, in fact, at twenty-five months of age, this heifer produced 17.11 lb. butter, 408.9 lb. milk in a week and 66.35 lb. butter, 1,676.7 lb. milk in 30 days. She produced 63 lb. milk in a day and averaged 55.8 lb. a day for 30 days. She is a deep bodied heifer, is straight on the back and her milk and udder

COLANTHA ECHO KORNDYKE

105.3 lb. milk in a day; 30.13 lb. butter, 689.9 lb. milk in seven days; 121.17 lb. butter, 2,861.9 lb. milk in thirty days.

786.91 lb. butter and practically 19,000 lb. milk. Colantha Echo Korndyke who previously had a record of 27.28 lb. butter, 589 lb. milk, recently freshened at the age of six years, twenty-one days and was again placed on official test in which she made 689.9 lb. milk, 30.13 lb. butter in seven days and 2,861.9 lb. milk, 121.17 lb. butter in thirty days, producing 105.3 lb. milk her best day. For twenty-one days of the month she was on test Echo averaged over 100 lb. milk a day. She made her seven-day record in less than a year from the time of making her previous 27-lb. record and these two seven-day official records made less than twelve months apart average 28.7 lb. butter, 639 lb. milk. In other words, her daily average during these two tests is 4.1 lb. butter and a trifle over 91 lb. milk. The thirty-day record recently completed is the highest strictly official record in Cumberland County for both milk and butter.

Colantha Echo Korndyke is a cow of magnificent proportions, carrying a large and well placed udder with tortorous milk veins and large clean-cut milk wells. The full eye, wide muzzle, roomy chest and capacious barrel as well as her extensive and well

FAYNE PONTIAC PET

94 lb. milk in a day; 24.98 lb. butter, 577.6 lb. milk in seven days; 97.24 lb. butter, 2,411.5 lb. milk in thirty days.

vein development is quite remarkable for an animal of her age.

Another daughter of Bonnymeads Butter Boy, who by the way was purchased from the Bonnymead Farm, near Harrisburg, Pa., is Colantha Ultra De Kol, No. 472540. This young cow was tested as a senior four-year-old and produced 82.5 lb. milk in a day, 19.84 lb. butter, 538.4 lb. milk in seven days; 78.22 lb. butter, 2,184.4 lb. milk in 30 days. She has a daughter in the herd that is in the A. R. O. list and she in turn has a heifer calf so that although this cow is only just past

her fifth birthday, she is a grandmother and the foundation animal of a three generation family which, by the way, will be consigned to the Cumberland County Breeders Sale at Carlisle, the second day of May.

Huntsdale Pontiac Vale De Kol the daughter of Colantha Ultra De Kol was sired by Allamuchy Pontiac Vale. This heifer, in her second lactation period after she had milked for thirteen months without any rest between calving, made official records of 13.12 lb. butter, 346.7 lb. milk in seven days, 53.79 lb. butter, 1,428.8 lb. milk in 30 days. Windsor Hill Queen Korndyke, as a senior three-year-old, tested no less than 231 days from freshening made 1,241.8 lb. milk, 48.99 lb. butter in thirty days. She is a very handsome cow that is capable of making splendid records.

A very fine young thing is Ormsby Tuna Lady. Tested at just 3 years, 23 days-old, she produced 21.93 lb. butter, 480 lb. milk in seven days. Her best day's milk production was 75.9 lb. She is a granddaughter of King of the Ormsbys being sired by King Ormsby Abbekerk Helena, a show bull himself, who was from Allamuchy K. A. Helena, 20.58 lb. butter in seven days as a junior three-year-old, she being by Korndyke Abbekerk. The five nearest dams of this show bull have seven-day records that average 30.67 lb. butter. It will be remembered that a daughter of King Ormsby Abbekerk Helena was shown at the Brentwood Sale when a yearling. Competing in a class of 32 heifers she won first place and was awarded a prize of \$100 and was afterwards sold in the sale for \$900, a pretty good price for a yearling heifer. Several of the younger members of the Huntsdale herd are sired by King Ormsby Abbe-

COLANTHA ULTRA DE KOL
82.5 lb. milk in a day as a senior four-year-old; 19.84 lb. butter, 538.4 lb. milk in seven days; 78.22 lb. butter, 2,184.4 lb. milk in thirty days.

kerk Helena, including a son of Colantha Echo Korndyke and a son of Fayne Pontiac Pet. These young bulls will be in the Carlisle Sale.

King Ormsby Abbekerk Helena is owned by Mr. Sheaffer's good friend and neighbor, W. A. Woods and these two gentlemen work together to their mutual advantage. The Huntsdale herd has recently been headed by King Korndyke Quality De Kol, a very handsome young bull of masculine appearance, straight on the back, deep barreled and showing lots of constitution and vigor. His dam is Pride Klaare De Kol Korndyke, who as a junior four-year-old produced 108.3 lb. milk in a day, 30.53 lb. butter, 719.6 lb. milk in

seven days; which is still the Pennsylvania champion milk record in the junior four-year-old class.

Space forbids giving individual mention to many of the other splendid animals in the Huntsdale herd. They must be seen to be appreciated. These animals are in good condition showing that their owner is a good feeder as well as a good caretaker. Asking about the feed he uses, he said that he used a mixture of Union Grains and farm-raised feed, varying the proportions according to the effect desired.

Besides breeding Holsteins, Mr. Sheaffer has some splendid Poland China hogs and they too, are worth

KING ORMSBY ABBEKERK HELENA
Sire of the junior members of the Huntsdale herd.
Owner, W. A. Woods.

looking over. While the representatives of the BREEDER AND DAIRYMAN was visiting the farm and looking over the cattle, "Willis" and his Dad were called away to load a dandy gilt for a buyer who came after his purchase with a truck. If we were better posted about hog families we might write another story, but we are compelled to end right here. Yet we can say that we can add a whole lot to the cattle story and then not tell all the good things that might be said.

Advertising Milk In Ceylon

MY milk Misters and European ladies droppeth as the gentle dew and is always yours to command at the most moderate price please walk in and taste before placing esteemed order you will rejoice to buy from an honest one but soft a footstep in my direction will always be welcomed."

This appealing advertisement appeared in one of the leading papers of Colombo, the capital of Ceylon, and was inserted by a dusky Singhalese dairyman who must, at some time or the other, heard of John M. Kelley and his favorite theme. Anyway, it is very evident that he had heard of Shakespeare.

A competitor, perhaps a harder business man and certainly not as poetical inserted in the Kavta Kathikaya, another Colombo paper, the following gem of business English, "Undersigned is always at service of ladies and gentlemen requiring first class milk goods Monthly accounts to approved clients Punctual delivery guaranteed Misters."

There is no punctuation and the advertisements are strictly in accordance with the custom of the country, says George Cecil in the *Jersey Bulletin*. The results are entertaining, to say the least.

The Other Side of Dairy Farming

By J. H. Lewis

THE thriving business of to-day is based upon knowing the cost of a thing and then, when the article is sold, realizing that cost together with a profit. In the dairy business we have a slight complication. We build our own machines, the milk producer, and we also use them to manufacture the milk we sell. In a purebred herd we raise all the heifers possible and we shall continue to do so until purebreds become more numerous than grades, which will not be until far in the future. With half the cows giving heifer calves and all these calves raised, the owner soon has females to sell.

In his foundation stock, the purebred man has a larger investment than does the owner of grade cattle, but he has a larger source of income. Purebred heifers bring more than grades. This is true at any age and is especially so when the animal becomes A. R. O. for her record is regarded as indisputable evidence of her capacity. Then she will bring a good price for the money her owner has invested in her. Often he has little idea of how much this is.

In the following story, which is believed to show the state of affairs in the southwest section of Wisconsin, the writer has been aided materially by books in the keeping of Lawrence Tracy, a young and efficient dairy farmer whose picture appeared in the Nov. 22, 1922 issue of this publication. Lawrence not only uses a good system of farm bookkeeping but he sedulously follows the work of keeping up his books day by day. Entries are made while the details are fresh in the memory.

To begin with the service fee on the dam of a young calf that is to be produced, whether the dairyman owns his own herdsire or pays service fees, will amount on the average to \$25.00 per cow.

We must take into consideration that the sire is of high class breeding, and the owner had to invest a goodly sum of money when he was purchased, and in connection we must figure feed and care for one year, insurance, taxes, veterinary fees and incidental expenses.

At the same time the dairy farmer carries the hazard that his calf may be born dead, or die at birth. However, for the purpose of our story our calf arrives in normal, healthy condition.

The calves are the future herd, and the construction dates from the time they are born. If you desire size and capacity, which every good dairy animal should have, you must develop these qualities and that is accomplished through care and good feeding.

We will set a date, as a starting point is imperative. Our calf was born September 10, 1921, and should have new milk at the rate of 12 to 18 lb. per day, depending on age, size and condition. It should be fed all the good grain mixture it will eat as well as hay. The cost of the feed, bedding and care for the first four months of its existence will amount about as follows: A fair average consumption of milk will be 15 lb. per day, for 120 days at \$1.64 per cwt., the of-

ficial Wisconsin average price for milk for the state for 1921. This will amount to \$29.52; grain feed, 120 days, rate 2 lb. per day, 240 lb. at \$1.60 per cwt., \$3.84; bedding and care, 4 months, \$3.00. Total \$36.36 plus service fee, \$25.00, brings cost of calf at age of four months to \$61.36.

For the next six months, our charge should have an average of 29 lb. of skim milk per day, 3,600 lb. in six months, worth \$0.80 per cwt., or a total value of \$28.80. Grain feed, six months, \$11.52; silage, 600 lb. at \$0.35 per cwt., \$2.10; care and bedding, \$8.00. Our heifer is now 10 months old and for the next three months it will be more economical feeding her. Pasture and a little grain mixture will cost, conservatively estimated, another \$5.00 so that at 13 months of age the heifer will stand us in money, \$116.78. We are back again into the season when the animal must be housed, so back to barn calculations we must go.

No heifer should freshen before the age of 27 months, if size, type, and development is desired, characteristics which every good dairy cow must possess.

The heifer will now have to be fed for six months.

She will consume 30 lb. of silage daily or 5,400 lb. in the term, at \$0.35 per cwt., or \$18.90; 8 lb. of grain per day, 1,440 lb. at an average cost of \$1.60 per cwt., amount, \$23.04. Her bedding and care will cost us in these six months, \$18.00. Our heifer is now 19 months of age and she already costs us \$176.72.

She is again ready to go to pasture.

Pasturage for five months costs \$6.00. Total, at age of 24 months, \$182.72.

She is due to freshen in three months, is now in good condition and growing and gives promise of developing into a real dairy cow. She must, however, in the next three months, be conditioned for the hard year's work which is ahead of her. She must have 35 lb. silage per day for 90 days, 3,150 lb., at an average price of \$0.35 per cwt., or \$11.32; also 15 lb. of grain per day for 90 days, 1,350 lb. at an average cost of \$1.80 per cwt., or \$24.30; bedding and care, three months, \$5.00. The heifer now is fresh, and she is a producing cow. Up to this moment we have not received one cent of income, all going out and nothing coming in, but she is prepared now to bring in revenue. She has cost us up to this long and anxiously awaited stage in actual investment, \$223.34.

This is the money side of the proposition. It has cost \$223.34 to develop a dairy cow, but we are not through as yet. It is going to cost still more money to put official class into her before we have an A. R. O. purebred Holstein-Friesian dairy cow.

In every good cow is invested toil, treasure and blood. So far we have given the heifer the best raising that it has been humanly possible to bestow upon her. We have taken it for granted that she lived through the shaping up period and that no mishaps befell her. In all fairness to our dairymen let us take into account a few of the things that occur around most dairy barns

which frustrate the best plans, intentions and efforts of the dairy farmer.

We will overlook fire, lightning and tornado losses. Every alert business dairy farmer has the herd blanketed with ample insurance. Losses among young dairy cattle are due to white scours, black-leg, hemorrhages, septicemia, rickets, bloat, pneumonia, indigestion and many other infectious diseases and accidents. In the second six month period, or until the heifer becomes one year old, we still have these diseases to contend with. In the yearling state all the ailments mentioned, with one of the worst added. Will the heifer breed?

Every year thousands of well-bred heifers are sent to the slaughter pens to be converted into beef because they are found to be non-breeders. Through abortion also, dairy farmers sustain painful losses. Tuberculosis exacts a heavy toll in dairy cattle annually. Udder troubles are ever present and a source of endless, cruel worry. Garget, infectious mammitis, milk fever cases, blood poisoning, accidents and many infectious diseases abound, and the possibility of hoof and mouth disease is never far remote, as heavy losses occurred a few years back from this disease. Of all, none is more dangerous to the life of the cow and the herd than infectious mammitis, an acute inflammation of the udder, which attacks the gland ducts and follicles, causing deep-seated, hard, nodular swellings. One Iowa County Holstein dairyman lost a herd of 22 fine cows from this particular disease.

In addition, therefore, to the figures we have arrived at in developing a purebred dairy cow, class A, it will be but fair to add an additional \$5.00 to cover veterinary fees, a fair average to most dairy farmers, some being free to confess the average is much higher. This conservative estimate brings the cost of our dairy cow to \$228.34.

Against Extravagance

RECENTLY there has issued from the Secretary's office of the Holstein-Friesian Association of America a circular directed to Members of the Association and which seems to be propaganda in favor of the continuation of the extension work by the Association. Extension work of an educational character that was carried on by the Association for a long period should be continued beyond any manner of doubt. Generally speaking, the writer of this letter is in favor of extension work. At the same time, after reading the circular above mentioned, I feel the desire to ask what results the Extension Department is accomplishing. Is the work being done economically, in the best way and are the efforts being put forth in the most fertile field?

On the first page of the Circular just sent out from the Secretary's office, dated Brattleboro, Vermont, March 22, 1923, and signed by James A. Reynolds, Chairman of the Executive Committee, appears this paragraph:

"In this time the Holstein cow has demonstrated her-

In order to increase the value of our heifer and her offspring, we will give her an A. R. O. record of production.

A supervisor with cost of feed and incidental expense will amount to \$35.00, approximately. We have an exceptionally good heifer and she makes us a record of 22 lb. of butter in seven days as a junior two-year-old, giving about 500 lb. of milk, so she pays us back about \$10.00 in milk production, cutting the cost of the official test to \$25.00. To date then our heifer stands us with an A. R. O. record of 22 lb. and of good individual type, the snug investment of \$253.34.

Ordinarily under favorable conditions, a good purebred dairy cow will bring at public sale, with this record, from \$325.00 to \$350.00. She has a calf that will sell at two weeks of age for at least \$100.00, and the cow still has a year's dairy production in her, from which must be deducted her care, bedding, feed, veterinary fees, and all such other contingent expense as may arise.

It is a hard, rough, thorny path the dairy farmer has to tread until he arrives at the point where he can extract a bit of consolation from his business. Hard work, diligent care, great anxiety and often sleepless nights account for his time. If he succeeds in developing a high class A. R. O. heifer he is the first to congratulate himself, because the hero worshipers and those who attend the big shows see only the circus side of the industry and have no adequate idea of the effort invested in securing such results as have been pointed out here.

There are more heifers receiving care and attention and feeding that will not make the A. R. O. grade than those which do. It is all the more argument in favor of raising good purebred animals with good lines of production and breeding back of them, as these will pay back the extra cost of development once they qualify for the top producer class.

self to be the greatest of the dairy breeds, combining the highest yield of dairy products with great constitutional vigor, beauty of form and profit, under all conditions of climate and location and with her grades occupying the leading place as the producer of milk for direct use and consumption."

If this is true, and it is unquestionably true in the mind of the writer, then what need is there of Extension Work of a character that is now being conducted?

In the kingdom of Holland, which is the oldest and greatest Holstein-Friesian breeding country in the World, they breed purebreds for type and individuality and economical production. They have never resorted to the making of records as is done in America. They have, nevertheless, buyers coming from all over the world to buy their cattle and pay very good prices for them. While they have many well-written pamphlets to give visitors and travellers, they have no elaborate Extension Department such as our Association seems to see fit to establish. They seem always to confine

their efforts to extending rather than exploiting the breed.

British South Africa sent, last summer, a shipload of purebred Holstein-Friesian cattle to England where they were sold at Public Auction and brought very good prices. If a country that had been so short a time in the breeding industry as this British colony can accomplish such results, why is it necessary for us to spend such a vast sum of money to perfect and maintain an elaborate Extension Department with such a wide variation of purposes? Why is it necessary that the Extension Service should be so elaborate as to call for the attention of the Executive Committee, the Directors and President of the Association?

This work was, in the past, carried on in an excellent manner by one gentleman, Prof. Wm. M. Rider, who

EUGENE B. BENNETT
Former President of the Pennsylvania
Holstein-Friesian Club.

had his headquarters at Brattleboro, Vermont, and did his work in connection with the Secretary's office.

Further in the Circular it is stated that there are to be many pamphlets issued, devoted to Calf Club Work, Bull Clubs, Cow Testing, Judging, Advertising, Showing and County Clubs. All of these pamphlets might have their value, and when Mr. Wm. M. Rider had charge of the Extension Department and it was located at Brattleboro, Vermont, a similar list of pamphlets were available and sent out to the State and Local Secretaries, breeders and prospective breeders of Holsteins. Why was it necessary to undo the good work that Prof. Rider was doing and have the same work attempted by a group of so-called Extension Workers at ten times the cost and have it ten times less efficient or effective?

It is stated that a broad and comprehensive program for the Extension Service is laid out. It would be interesting to know just what this program contains. There is Extension Work going on in certain parts of the Country where the breed is well established and

there is no need of it and in other parts where Extension would be of great value, there is absolutely nothing being done. It seems unnecessary that there should be a District Field Man for the State of Pennsylvania, New Jersey, and Delaware. Generally speaking, in these three States the prevailing breed of dairy cattle is Holsteins, either Grade or Purebreds, and there are many big establishments for the breeding of purebred Holstein cattle; Advanced Registry Testing is carried on extensively and Cow Testing Work is rapidly increasing; the exhibits at Fairs are excellent and Holsteins predominate over other dairy breeds.

The Agricultural College in Pennsylvania has recognized the ability of the Holstein breed by making most of their dairy herd Holsteins. Under such circumstance, why is a Field Man necessary? Wouldn't it be more profitable for breeders in these states—Pennsylvania, New Jersey and Delaware—to employ an Extension Worker to devote his time in a district where Holsteins are not prevalent and thus create a market for their surplus cattle? The Southern States offer the most fertile field for doing Extension Work as there are very few Holsteins in the South and their value does not seem to be realized nor do they have the popularity that they deserve. On a recent visit to the great Southern City of New Orleans, I learned that there are very few Dairy men who keep Holsteins or seem to appreciate their superior Dairy merits.

I believe in Extension Work when conducted conservatively along educational lines for the purpose of extending rather than exploiting the breed. I am opposed to the present method of doing Extension Work as it is not only an unnecessary waste of the breeders' money, but it is working injury to the Breed, the breeders, and the Association.

I am not in favor of drawing \$93,000 from the Reserve Fund for the purpose set forth in the pamphlet recently mailed to the Members, as I am in favor of Economy and Efficiency and against Extravagance.

(Signed) EUGENE B. BENNETT.

Cattle Buying By Radio

IS the time coming when instead of advertising in breed papers and agricultural journals buyers and sellers of purebred cattle will do their preliminary business by radio? Recently, the Chamber of Commerce of Okmulgee, Okla. through the Donaldson Radio Company broadcasted an inquiry for two carloads of milkers and five bulls. Dean Rein of Cherokee, Wis. was listening in and caught the inquiry so he at once notified Walter Wurthman, Secretary of the Cherokee Holstein Breeders Association. Mr. Wurthman got into communication with the Chamber of Commerce and quoted prices on two carloads of grade Holsteins and five purebred Holstein-Friesian bulls. It is expected that a deal will be consummated.

Okmulgee boasts of having more millionaires than any other town of its size and on all the literature sent out to advertise this town appears the quotation "Where the oil flows like the wind blows."

A hick town is a place where the same man is chairman of everything.

Time to Call a Halt

I AM in receipt of a communication addressed to the members of the Holstein-Friesian Association signed by the Secretary and James A. Reynolds, Chairman of the Executive Committee, whose home and office is in Cleveland, Ohio. This communication contains the following:

Membership of the Association	22,000
Number of cattle registered, over	1,000,000
Surplus and Reserve Fund, in round figures	\$460,000
Estimated Annual Revenue for 1923	\$475,000
Cost of administering affairs of the Association, exclusive of extension and publicity work	\$348,000
An addition to Surplus and Reserve, if not otherwise expended, on December 31, 1923	\$127,000
Expenditures estimated by present Board of Directors as desirable to conduct the extension and publicity work	\$220,000

In order to do this they propose to take from the Surplus and Reserve \$93,000.00, to use for advertising and publicity.

GEORGE E. STEVENSON

As I believe it to be the right and duty of every member of the National Association to express his convictions concerning the proposed plan, I am writing you a brief outline of my opinion.

First, I am opposed to the present method of so-called extension and publicity work, for the reason that I fail to see any direct benefit to myself and associate breeders who keep small herds only as a result of this extravagance, and therefore, I object to being assessed by an extravagant transfer fee to carry out the circus advertising advocated by the present officers.

I fail to see the merit of advertising Holstein cows and the excellence of their milk in those breed papers that are devoted to Holstein breed only, and believe the only ones benefited by the kind of advertising are the stockholders or the owners of these breed papers.

Perhaps I should except from those benefited, the millionaire and large breeders who carry page advertisements in the same breed papers, in that they may secure lower rates because of their having directed the National Association's advertising toward these breed papers.

Second, I believe the rank and file of the breeders are in favor of the reduction of the transfer fees and a reduced expense account of the Officers of the National Association, and would advocate a return to the legal Board of Directors of six, in accordance with Judge Pooley's decision.

Third, I am in favor of and I will join with other members, if a sufficient number desire it, to seek the assistance of the New York State courts and ask for an injunction restraining the present illegal Board of

Directors from further depleting the surplus and reserve fund of the Association and from any further collection of the excessive transfer fee now demanded, and I am willing to assume more than my portion of all court costs and legal expense of conducting such legal procedure.

It is time for the small breeders to wake up and take charge of the National Association, or the inevitable end will be the dissolution of the organization and its disruption into smaller units.

George E. Stevenson

Veterinarians on the Lookout

UNDER the supervision of Dr. T. E. Munce, Pennsylvania's popular and capable state veterinarian, a disease prevention organization has been built which has received much commendation from veterinary authorities in other states and from Washington. The menace of foot-and-mouth disease is again and has been for some time, hanging over the livestock industry. It is now existing in Central America and in the British West Indies and experience both in this and in other countries show how easy it is to get this scourge of the livestock industry into a country and how difficult it is to eradicate. The authorities at Washington are fully alive to the gravity of the situation and, in his letter to livestock leaders of the Keystone State, Dr. Munce quotes from a letter received from Dr. J. R. Mohler, Chief of the Federal Bureau of Animal Industry. Dr. Munce, of course, was writing to inhabitants of his own state but we understand that a copy of Dr. Mohler's letter was sent to the chief veterinarian of every state and the importance of watchfulness cannot be too strongly impressed. It is no time for men to lose their heads for the country is healthy now and no effort will be spared by those in authority to keep it so. Owners of livestock should coöperate with the veterinary authorities in every possible way. As Dr. Munce says "It is better to report and cause the investigation of many suspected cases than to let one escape." The letters follow, the quotation from Dr. Mohler's letter being in quotation marks.

"Ever since the close of the World War we have been flanked on every side, except the north, with an increasing amount of foot-and-mouth disease and we have feared that at any time there might be an outbreak reported in this country. Great Britain has fought the disease continuously for more than four years. In June, 1922, an outbreak appeared in Jamaica and to date more than thirty thousand cattle have been involved. More recently it appeared in Guatemala. It is believed that the infection was carried there from Honduras.

"Our danger increases as the disease draws nearer and nearer. Mexico would form a convenient bridge for carrying the infection from Guatemala and Honduras to our herds in the Southwest. Dr. L. E. Day

and Dr. Howard L. Darby have been sent to Guatemala and Honduras to investigate the situation, and permission has been asked of the Mexican Government to send a Bureau representative into that country.

"The Department has not relinquished its precaution and it is hoped that the States are ready, as the Bureau has urged repeatedly, to coöperate with it promptly in eradicating an outbreak of foot-and-mouth disease should one occur."

The 1908 and 1914 outbreaks of foot-and-mouth disease were introduced into Pennsylvania through cattle shipped from Western markets and occurred during the shipping rush of the feeder-cattle season. Our cattle-shipping season is near at hand and it is extremely important for every person who comes in con-

DR. T. E. MUNCE
State Veterinarian of Pennsylvania.

tact with livestock to be on the look-out for foot-and-mouth disease.

The prevalence of foot and mouth disease in Pennsylvania would, among other things, necessitate the destruction of thousands of valuable farm animals, the placing of embargoes, and the expenditure of hundreds of thousands of dollars of State funds.

Cattle, sheep or swine with sore mouths or feet should be immediately reported to a local veterinarian or the nearest agent of the Bureau of Animal Industry for investigation. It is better to report and cause the investigation of many suspected cases than to let one escape.

Please pass the word along and thus help keep foot-and-mouth disease out of Pennsylvania.

Very truly yours,
T. E. MUNCE,
State Veterinarian.

Patience—"And did you scream when he kissed you?"

Patrice—"Of course! But he said he liked to hear me scream, so he demanded several encores!"

A St. Joseph woman has just been divorced a second time. Her first husband's name was Chance and the second Guess. Evidently a poor chance and a bad guess.

Send Fee in When Asking Permission to Test

IN announcing the semi-official monthly milk and butterfat credits of Idaho Violet Posch Ormsby in the 15th number of *Reported Tests of Holstein-Friesian Cows*, Superintendent Gardner supplements the information given in the article entitled, "The Idaho University Herd" carried in the April 8th issue of *THE HOLSTEIN BREEDER AND DAIRYMAN*. Mr. Gardner says that Violet is the second University cow to produce over 1,000 lb. fat in a year. The other cow is LaVerna Lincoln bred and owned by the University of Nebraska.

As both cows were bred as well as owned by the two universities the high production of each confer the greatest honor on those universities. Violet's average test for the entire year was 3.76% the high monthly average being 4.2% during February, 1923, the month ending 11 days before her year test ended. The lowest average test was 3.27% in August, 1922, the 6th month reported. The highest month for milk was April, 1922, with a production of 2,800.7 lb. for the 30 days while the high month for fat was May with 102.84 lb. for the 31 days.

Superintendent Gardner calls attention to the fact that applicants for permission to officially test cows must forward a fee of \$2.00 at the beginning of each testing year or at the first time after then that they apply for permission to test. In return for this fee, each applicant will receive a copy of the current volume of the *Advanced Register Year Book*, or as it is generally called, "The Blue Book." The words of the Superintendent are: "As was announced in No. 9 of the *Reported Tests Bulletin*, beginning April 1, 1923, our Board of Directors has established a yearly fee of \$2.00 to be paid by every breeder testing for advanced registration during any year or having tests entered in the *Advanced Register Year Book* of that year. While the fee is nominally a testing fee its real object is to determine how many copies of the *Advanced Register Year Book* of any year shall be printed to supply all likely to need the book and yet not to have a surplus left on hand. As each fee is received a receipt card will be sent advising the breeder that he will receive a copy of the current volume of the *Blue Book* when printed free of further charge. The fee is now due and should be sent in promptly by those with cows on test, as well as by those making application for permission to test. Compliance with this request will save the holding up of reports in the *Advanced Registry Office*."

A Tri-City Program

THE World's Dairy Congress will be something of a perambulating affair for the opening sessions will be held at Washington, D. C. on October 2 and 3, then the members will meet at Philadelphia, October 4, then journey on to Syracuse for meetings, Oct. 5 to 10 which will be in coöperation with the National Dairy Show. The Philadelphia visit is for the purpose of examining the work of the Dairy Councils, both State and National, Philadelphia having perfected dairy work to a degree that is worthy the emulation of her sister cities.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

April 22, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Price Prospects Encouraging

THE preliminary report of cold storage holdings in this country April 1st is encouraging reading to owners of milk cows. On the first day of this month the United States Bureau of Agricultural Economics figures that there are four million three hundred thousand pounds of butter less than there were at the corresponding time last year and not much more than a third of the average amount in storage for a five-year period. The figures for this year are 4,791,000, last year 9,113,000 lb. and the five-year average 12,588,000 lb.

The cheese situation is not quite as good although the holdings this year are practically two million pounds below the five-year average. There are three million, nine hundred thousand pounds more in storage this year than there was a year ago. On the first day of this month there were in the various storage plants of this country 14,645,000 lb., last year at the same date there was 10,745,000 lb. and the five-year average on April 1st was 16,637,000 lb.

The approaching season of flush production and the uncertainty of relief buying were of considerable influence on the condensed and evaporated milk markets during February. From the standpoint of actual trading, a fairly good volume of business was done, but these uncertain factors of supply and demand kept the markets sensitive most of the time. Except for European relief purchases, sales for export lent very little strength to the situation. The latest export figures which cover February reveal a slight increase over January, but a material decline under the quantities ex-

ported during February last year. The first two months of this year total exports of condensed and evaporated milk amounted to 22,800,000 lb. while during the same period a year ago total exports were 38,200,000 lb. Regardless of the smaller quantities shipped out of the country this year, however, it appears that some difficulty was experienced in filling some of the relief orders during February and March, but this scarcely added any strength to the markets for the reason that with a policy established of keeping floors cleared, manufacturers welcomed this outlet as an additional means of avoiding the possibility of being caught with a surplus on hand when the new-production season gets under way. Although some apparent increase in production occurred during February except where there was severe weather in producing sections, the tendency of a good many manufacturers was to work close to orders, and this may explain the difficulty which was encountered in supplying relief buyers who came on the market unexpectedly.

Export demand is naturally of considerably influence on the markets because it offers an outlet for surplus, but domestic trade is what absorbs the bulk of the condensed milk produced in this country. Demand for domestic consumption has been generally good this year. In addition to regular trade which had been taken care of during the winter, ice cream manufacturers began to buy actively during March for the approaching season. A good many manufacturers are optimistic as to the outlook for the spring and summer, and expect that goods will move well during the next few months.

Stocks in manufacturer's hands on March 1st, were approximately 83,500,000 lb. This is a slight increase over February 1st, but in relation to March 1st a year ago, represents a decrease of 46%.

Venerable Proxy Voter

THE Pennsylvania Railroad is said to have more stock holders than has any other business corporation in the world, about ten times as many as the Holstein-Friesian Association of America has members. Yet it still clings to the proxy system and the members have shown no inclination to start a delegate system. The annual election of the company was held recently and, attached to a proxy sent in by a Mrs. Yarnall of Philadelphia was a memorandum to the effect that the stock holder was 104 years old. President Samuel Rea investigated and found that the lady had owned the shares of stock since March 1, 1877. For 46 years she had retained her stock, regardless of market fluctuations or price or dividends.

Now it is in order for some one to rise and say that under the delegate plan the lady would have been better represented. The delegate plan advocates will gnash their teeth in rage and envy when they think of Mrs. Yarnall choosing who should vote her wishes and elect the directors of her choice for nearly five decades. Evidently the venerable lady not only believes in proxies but also believes in having her say in matters.

Newrich—"A man can get along without ancestors."
Friend—"True, but his children can't."

A Chinese College with a Holstein Friesian Herd

IN twenty-two years the Canton Christian College has grown from an institution housing 20 students to one that now has 1,102 boys and girls. The Chinese consider the Canton Christian College their college and despite the rapidly changing politics of South China, the Kwangtung provincial government has never failed to give financial assistance. Of the budget of 1922, \$303,000 came from Chinese and \$90,000 came from other sources which is a remarkable record for a Christian college in a pagan land.

The college teaches the ethics of Christianity without the dogmas of doctrine. Each member of the faculty conducts the chapel services during one week of each semester and is unhampered in the selection of subjects. He may talk on religion, politics, economics, agriculture or whatever he chooses.

Most of the students come from aristocratic families but American games like football, tennis and basketball place them all on the same level. The college stands for the western idea. No officer of the old school would have degraded himself by manual labor but on Arbor Day the Governor of the province threw off his coat, took a spade and planted a tree on the campus.

Kwangtung Province makes an annual appropriation for the school of agriculture. The livestock comprises goats, swine, cattle and water buffalo and includes a herd of Toggenburg goats and Holstein-Friesian cows. Fruits and vegetables are being developed and at the present time experiments are being carried on to decide which of the 200 varieties of rice are best suited to the locality. The United States Department of Agriculture has a citrus expert at the college while two men of the staff come from the Pennsylvania and Kansas State Agricultural Colleges.

Three times a week free instruction is given young men from nearby villages and occasionally seeds and plants are distributed to farmers. This work makes but very little impression on Kwangtung province in which there are twenty-eight million people engaged in agriculture.

When the sericulture school produced silk worms of which only 3% instead of 80% were diseased, the Chinese farmers did not like them because the healthy worms ate too many mulberry leaves. To-day a sheet of 156,000 eggs from the college sells for three times the price of other eggs and the demand is greater than the supply.

The two buildings of the sericulture school were given by the Silk Association of America and Marcus Frieder of New York City. The Canton silk exchange is deeply interested in the school which is already responsible for a great improvement in Canton silk, the lustre of which is so greatly admired. Around Canton six or seven silk crops a year are possible—thirty-five days for the metamorphosis from egg to egg.

Canton is China's most progressive city and the Christian college makes a strong bond of sympathy between China and the United States. This year 120 Canton college students are studying in this country.

The careers of 400 graduates taken at random show that the college is making a good impression on the country. Of this number there were 83 educators, 36 engaged in agriculture and manufacturing, 176 in business, 45 were public officers, 10 were army officers, 18 physicians, 21 engaged in religious work and the careers of 11 were unknown.

There are 42 college buildings of which wealthy Chinese have donated 15, the funds for most of the others were given by loyal supporters in the United States. The Chinese are more apt to assist the erection of buildings—something which can be seen—than they are to give to executive work. Of the teaching staff 116 are Chinese, 48 Americans and 2 British.

The president, Chas. K. Edmunds has been with the college since 1903. He is an engineer by profession and was director of the Carnegie Institution magnetic survey in China. Chung Wing Kwong, the vice president, is a former commissioner of education for Kwangtung province and came to the college in 1900. The executive secretary, the Rev. James McClure Henry is a former pastor of Peck Memorial Church in Washington. The directors are Chinese, American, and British and included Wm. W. Comfort, president of Haverford College; Dean Warren P. Laird, of the University of Pennsylvania; Prof. David Eugene Smith of Columbia University; and Prof. Ralph L. Watts of Pennsylvania State College.

The Origin of the Holstein-Friesian Breed

THE question arises in my mind as to why the Holstein breeders do not date back to Genesis 30th Chapter and verses 31 to 42 inclusive—1746 years before Christ, where Jacob turned the trick on his father-in-law by peeling the poles and placing them in the watering troughs and drinking places so when the cattle drank they would scare at the poles and thus mark their offspring—producing ringstraked, speckled and spotted cattle, all of which were to be Jacob's wages after being disappointed in a love affair with Laban's elder daughter, Rachel, etc, etc. It is interesting reading. Look it up."

The above is from the Jersey Bulletin and was penned by a Kentucky Jerseyman named Hobson. It places the origin of the Holstein-Friesian breed 3669 years ago. If the patriarch Jacob, the father of the Hebrew race, really did originate the Holstein-Friesian breed, he certainly planned well as might be expected of one of the shrewdest men of whom sacred history tells. No wonder the Holstein cow is a profit producer, she has been bred along that line for nearly four thousand years. Mr. Hobson deserves the thanks of the present extension department for an idea that apparently has not occurred to Mr. Koenig and his staff. If it had they would have issued a special pamphlet on the fact or else inserted a so-called news item in all the papers in which the so-called breed extension advertisement appears. The members of the Holstein-Friesian Association of America owe a vote of thanks to Mr. Hobson and the Jersey Bulletin for publishing the discovery and so saving the National Association money.

How the Attempted Reserve Fund Steal Looks to the Breeder and Dairyman

A detailed analysis of the propaganda recently sent out to the members of the Holstein-Friesian Association of America, signed by James A. Reynolds, Chairman of the Executive Committee. The members are not informed as to whether this document was prepared at the Chicago Extension Office where the \$93,000 asked for will be dispersed, or at the office of the Chairman of the Executive Committee at Cleveland, Ohio. The senders of this propaganda, however, want, if possible, to implicate Mr. Houghton and the Secretary's Office in their \$93,000 reserve fund steal, so they had the pamphlet printed and mailed from Brattleboro and had this fact set forth in bold type at the beginning and end of their communication.

The Junior Breeder and Dairyman

Continuous Leadership

They may tell about some novice doing more than one whose skill
Has been tried by years of practice in a place that's hard to fill,
But experience has taught us, those who have the most to give
Of their talent, time and labor for a cause that ought to live
Keep continuously active, day by day, and year by year,
Ever helping, guiding, serving, smooth the way with words of cheer.

Club work leaders most successful find their labors lighter grow
With the progress of each season, and it's well worth while to know
That they got a lot of pleasure doing things for girls and boys,
Training them for lives of service, coupling work with youthful joys.
Leaders now get inspiration from those who have longer served,
Cares and trials have surmounted and from duty never swerved.—A. L. T. CUMMINGS, *Main Club Echoes*.

A Banker and a Calf Club

By L. J. JELLISON, IN THE IOWA NORTHWESTERN BANKER

It has remained for a banker, John Rider Wallis, cashier of the Federal Bank and Trust company, of Dubuque, Iowa, to furnish the incentive that has brought the second Holstein Calf club to Dubuque county.

Purebred herds have been urged repeatedly for all of Iowa, year after year with but little result. In Dubuque County the movement was given moral and coöperative support, but until the bank officials stepped into the breach and pointed the way for 20 youngsters of Dubuque county to own purebred Holstein calves without a cent of outlay, nothing had been really done.

When Miss Mary Brueck, teacher of the Derby Grange school, conceived the idea of a calf club in her school district the matter of finance at the outset was not considered. She secured six youngsters whose parents were able to finance the purchase. Others were unable to do so. Matters stood at that stage for some time.

Mr. Wallis entered the scene, guaranteed to finance the venture and make all arrangements. He called into conference County Agent N. G. Malin to see where the calves could be procured and outlined the plan upon which the bank has offered to assist any purebred calf club in the county, or other ventures that will bring to the fore, Iowa as a purebred herd state.

The calves were bought and shipped to Dubuque. Each animal was labeled and a drawing held to decide

the ownership. Following that the bank, which had advanced funds to make the initial purchase, either accepted payment in cash for the calves, or took parents' notes dated for a period of three years in payment. Insurance to protect the bank against loss was another feature.

Payment for the calves was made from the proceeds of a calf sale held at the county fair at Dyersville in the fall of 1922. It is one of the provisions of the calf club rules that all members show their animal when matured and first offspring at the county fair. The calves were sold and payment made for the note in that manner, or cash taken.

There is a two-fold object in the plan. The first is to bring to Dubuque County the nucleus of foundation herds that in years to come will make the state rank first as a dairy and purebred stock producer. The second is to create an interest, through exhibition, in purebred herds.

Although behind the scenes the greater part of the time, Mr. Wallis is an ardent exponent of the banker meeting the farmer more than half way. The calf club that he has fostered and launched is one of his methods of inculcating a love of better animals and more valuable stock.

Every member of the club is under fourteen years of age. Their ages range from five years upwards. The work of securing the coöperation of parents in the venture, was in some cases hard tasks, but with their favor won, the interest of the youngsters came easily.

The proud possessors of purebred Holstein calves from first rate herds of Lake Mills, Wisconsin, the 20 Dubuque County youngsters have taken up the care of their purchases which will, in years to come, be the foundation of the purebred herds that Dubuque County will boast.

Chosen from the cleanest herds that could be found in Wisconsin and with an idea only as to the breeding and individuality of the calves, the herd of 20 animals has been characterized by J. P. Eves, state dairy expert, as the best representative group of foundation animals ever brought into Iowa.

"The purchase means a great deal to the Holstein breed and Dubuque County citizens in general," was the statement of N. G. Malin, county agent, before the drawing took place, "It will interest the coming generation of our men and women in pure bred cattle."

"If there were purebred cattle in Dubuque County the income and prosperity of its citizens would be multiplied ten-fold. It will develop markets and the time has come when it is necessary for the farmer to take his neighbors of Dubuque into partnership."

Painting a picture of the country from which the calves were brought to form the nucleus of Dubuque County's purebred herds of years to come, Mr. Eves told of the many farms visited in order to pick out the animals that are now housed on various farms throughout the Derby Grange district.

"It takes a great deal of care to select and choose calves for foundation animals in Dubuque County," said Mr. Eves. "Dubuque County offers a future for dairy development second to none in the state. There is cheap grass here and the county as a whole is better adapted to the handling of purebred dairy herds."

The dairy cow is economic and transfers Dubuque County products into money realizing marketable articles, easier than any other methods.

"I believe that members of the calf club here have secured the best group of calves of any in the state, bar none. They were bought at reasonable prices. Last year on an average they would have cost \$225. We purchased one animal for \$150. A full sister was sold by the same man for \$325. That will give you an idea of the bargains we secured."

"Prices of these calves will range from \$130 to \$175 depending on breeding and individuality. There should be a spirit of coöperation here, yet withal a bit of rivalry to see, a year hence, what you have made of your animals. It is a great step for you in the right direction. I wish you the success that will be yours if you treat the herds and individuals as they should be."

John Rider Wallis, of the Federal bank, spoke on the coöperation that he felt should exist between the city and country. He spoke of the 12 calf clubs in the state, and stated that four were located in Dubuque County.

Speaking of the best group of calves in the state, he declared that the bank which he represented would be ready at any time to further interest in calf clubs where purebred cattle was the object.

The Federal bank has sponsored and financed four calf clubs in Dubuque County to date, including those of Holstein and Guernsey breeds. From \$100 to \$200 was advanced by the bank on each animal. Over 600 miles was traveled to get the stock.

Every calf club member, ranging in age from five to 14 years was given an equal chance on all the animals. They were numbered with duplicate numbers placed in a hat. A drawing took place each lad taking the animal he drew.

In some instances, youths were able to pay for their animals at once. Where they were not, the bank advanced the money, and accepted the note of the parents to cover the cost with insurance on the animals.

As a result of the activity of the bank and the securing of four foundation herds here, more than 80 head of the best dairy stock in the United States has been secured for Dubuque County alone. It is one of the dreams coming to realization to make fertile hills of Dubuque County bear their just burden in making this county the ranking one in the state.

Business Firm Starts Junior Club

The George Schweser Co. of David City, Nebr., on February 10 donated a registered Holstein heifer calf to five boys of Butler County. These boys are to give the animals good care and to exhibit them this year and next year at the county and state fairs. The members of the club are: Gerald Wallace, president; Joe Porkorney, vice-president; Archie Shrader, secretary; Gerald Kindler and Boyd Wrede.

Boys Compete in Test Association

Milkers cared for by juniors carried off the two of the highest records in the Hazel Green Cow Testing Association during the month of February. Clarence Kuhl, the younger member of the firm of Leo Kuhl and Son is only 18 years old and he is the owner, feeder, caretaker and the milker of Canary, a grade Holstein that has produced 704 lb. butter in eleven months. Last month it is reported that she produced 98.9 lb. butterfat her highest day's milk being 96.2 lb. During the month of February, the dozen cows in the Kuhl dairy, a number of them purebreds averaged 64.4 lb. and dur-

THOMAS HARVEY AND HIS COW STAR
January production 1,747 lb. milk, 74.8 lb. butterfat; February production 1,815 lb. milk, 78 lb. butterfat.

ing March averaged 67.7 lb. The third cow for February in the Hazel Green Association is Star, who is owned, and cared for by the twelve-year-old boy, Thos. Harvey. She was just beaten out for second position but produced 1,815 lb. milk, 78 lb. butterfat during the month. There is quite an interest taken by breeders in Grant County, Wis. in the competition between these two juniors. The story of Star and her young owner was told in the March 8th issue of the BREEDER AND DAIRYMAN, and our boys and girls will be pleased to learn that Star is still doing well.

Lady Students Have Dairy Food

Knapp Hengerveld Johanna De Kol owned by the Alabama Technical Institute and College for Women at Birmingham, Ala., was recently tested for seven days and produced 669 lb. milk and 22.7 lb. butter. She averaged 95.5 lb. per day and two different days gave 100 lb. milk. Last year in 10 months this cow produced 11,631.5 lb. milk. She was milked twice daily and given no special feed. She was born March 7, 1918 and so is not yet five years old.

The Alabama Technical Institute and College for Women has a herd of Holstein cows, five of which are registered. During the past 12 months five purebred heifer calves have been added to the herd. The college developed this dairy to supply the students with pure milk. At present each girl is furnished one quart of milk per day, besides what is used in cooking the food. Ice cream supplied three times a week is also part of the dietary. The dairy is also used to illustrate the course in dairying which is an elective study. During the Summer school many women and girls find this course attractive.

Preparing for the Fall Fair

A conference was held at the St. Laurence Inn, Gouverneur, N. Y., March 23, by the representatives of Ayrshire and Holstein breeders and Prof. H. L. Sosline instructor in the agricultural department of the Gouverneur High School. The subject discussed was the calf club, to which five boys, members of the agricultural class have already pledged themselves.

A special prize contest will be staged at the coming fair of the Gouverneur Agricultural and Mechanical Society. Calves entered must be born since February 1 of this year and the time limit for joining the club and participating in the contest was set at May. Everett Lumley has offered a purebred Holstein heifer calf as a prize to be given to the boy or girl exhibiting the best calf of any breed at the fair. This year the animals will be judged without considering the cost basis. The boys will keep individual records, not only for the benefit of the club but also for the personal experience they will thus gain.

Louisiana Boys Did Well

Louisiana competed for the first time in the dairy cattle judging contest at their recent Fort Worth Exposition and livestock show. The new team made a splendid showing obtaining second place in dairy cattle judging and winning the loving cup for the highest team score for judging Holstein-Friesians. One of the four Louisiana boys, John D. Sobert of Assumption parish won the gold medal for the highest score, all breeds considered.

Texas was first in judging all classes with a score of 2,235 out of a possible 3,000. The Louisiana boys were second with 2,158 points and Oklahoma was third with 2,120 points. This is the first time boys from Louisiana have competed in stock judging against other college teams. Judging contests have been conducted each year at the Louisiana state fair, but they have been confined to boys of the state.

Lenawee Boys Receive Cups

The cups won by boys of Lenawee County at the Michigan State Fair were received March 23 by the county club leader, Miss Marjorie Place. Theodore Knopf of Blissfield won the cup for the best Holstein-Friesian male. Gerald Emaus of Jasper received the cup for exhibiting the champion steer. This cup was given by a Detroit cattle man and is very handsome.

The Lenawee clubs are regretting the loss of Miss Place who has been club leader for several years and who has been very successful in that position. Her resignation became effective the middle of April.

Starting A Calf Contest

A purebred Holstein calf contest was started March 9, 1923 at the County Farm, Downey, Cal. About 150 were present. The program consisted of an explanation by the county club leader of the purpose of the contest and he introduced each one of the members. There was a formal acceptance on behalf of the club

of a purebred heifer given by Mrs. Anita M. Baldwin. This will be the prize for which the nine boys will compete. E. H. Agee of Rivera told how the breeders of purebred Holsteins are advocating and supporting calf clubs, then a committee consisting of Messrs. Agee, Frank Pellissier and Wm. R. Harriman scored the 10 calves on the basis of individuality, size and condition. This committee will serve in a supervisory and advisory capacity and can be consulted by the boys at any time.

Maine Junior Work Increasing

Junior work in the state of Maine is showing a decided gain over the corresponding period of last year. Returns received at the extension service office of the College of Agriculture show an enrollment of 1,596 on April 1st compared with 1,306 a year ago. This is for all boys and girls club activities.

Penobscot County shows the highest percentage of gain the present enrollment being four and one quarter times that of April 1st last year; while Waldo County has trebled its club members during the year.

Oxford has the largest enrollment with 231; Waldo is second with 203; York is third; Cumberland fourth; and Penobscot is fifth. Ten countries are ahead of their enrollment of a year ago.

Will Resume Index Publication

HOLSTEIN-FRIESIAN cattle owners and others who have had occasion to use volume 48 of the Holstein-Friesian Herd-Book soon noticed that this volume lacks the usual index for the animals. All other volumes thus far issued have had one index for males registered therein, one for females and one for the breeders and owners mentioned in the recording data. The printed index of animals, alphabetically arranged by names, was omitted for the purpose of reducing the cost of the book and allowing room for more entries in a volume we were informed.

The experiment did not meet with unanimous approval. If the user of the book does not know the breeder of an animal or in whose name the animal was registered, the only way to find the recorded particulars is to hunt, laboriously page by page, until the desired information appears. There are a number of other disadvantages but this to our mind is the chief one. We are therefore glad to learn from Secretary Houghton under date of April 12th, that the animal index will appear in future volumes including the books in preparation. While we are strong for reduction of expenditures we believe this is one case where the saving was overbalanced by the loss of efficiency and we are glad to announce that the old practice will be resumed.

It was the stranger's first and positively last visit to the not-so-thriving community of Waxhaw.

"Much doing around this town?" he asked on his arrival.

"I reckon not so much," admitted a veracious native. "Last Thursday a man fell dead in the post office and we didn't discover the body till the next Tuesday."

Business Transactions of Our Association

The business report of the Secretary's office for the first quarter of 1923 shows a slightly encouraging condition in Holstein circles. The Association has taken in more money than it did in the first three months of either 1922 or 1921. This, of course, is largely due to the fact that the transfer fee is three times the amount it was in the first quarter of last year. The earnings from the transfer certificates is not, however, three times as large. During the first quarter of 1922, there were 25,515 transfer certificates issued, an average of 8,505 a month. During the first quarter of the present year there were 24,564 certificates issued, an average of 8,188. The transfer certificates indicate the condition of the business much more clearly than does any other table and it is a pity that speakers and writers who pretend to know what is going on in the Holstein world do not study this table a little more carefully, learn the truth and then tell it.

In January of this year there were nearly 1,000 certificates less issued than during January, 1922. During February there was an increase of practically 500 and during March a corresponding decrease, so that the grand total for February and March of the two contrasted years are almost the same. February shows a gain. This is the first month since August, 1922, that there has been a gain over the corresponding month of the previous year, and these two months are the only ones since the transfer fee was trebled at Kansas City which have shown any gain over the corresponding month of the previous year.

The number of registrations during the first three months of the year was 33,033 which is 1,730 less than the registration for the first quarter of 1922. The number of new members show quite a gain over the first three months of 1922 and exceeds by eleven the first three months of 1921. This is encouraging but we believe that the true condition of affairs is shown best by the number of transfers made; in view of the fact that so many months have shown a decrease we can at least congratulate ourselves that for the past two months the business is at least holding its own.

DAIRYMEN'S LEAGUE MARCH PRICES

According to a statement issued at the offices of the Dairy-men's League Coöperative Association, April 13th, the pool price for March milk at the 201-210 mile zone testing 3% butterfat will be \$2.13 per 100 pounds. The prices which individual farmers will receive will vary according to butterfat, freight differentials, etc.

This the association states may be considered a record price for March milk in the territory covered by the League. It is 53c higher than the price received by pooling dairymen in March a year ago. With the exception of the three abnormal war prices years of 1918, 19 and 20, it is the highest price which dairy farmers who deliver to the New York market have ever received for their March milk. The comparison seems still more favorable when we consider that the pool price represents milk that is marketed in all forms whereas the prices of years previous to the pool represented only fluid milk.

The March report of the association shows that the total volume of sales through the association plants during February, 1923, was more than double that of February, 1922, or a total of \$1,394,557.40 for this February as against \$649,621.75 in last February. Nearly \$1,000,000 of this amount represents sales of fluid and skim milk and cream through association plants as compared with only \$280,000 in February a year ago. The total volume of sales for February, 1923, as reported by the association amounts to \$5,925,371.53.

 May 17—Belvidere, N. J., Warren County Association.
 Oct. 2-5—Washington, D. C., World's Dairy Congress.
 Oct. 6-13—Syracuse, N. Y., National Dairy Show.

A SPENDID SHOWING

The Hancock County Farm Bureau is coöperating with the Federal and the Maine State Animal Husbandry Department in an effort to eliminate all cattle which react to the tuberculin test. During the past year more than 1,000 animals were tested of which only 13 reacted.

ALL OFFICERS RE-ELECTED

The Kent County Holstein Breeders' association met March 17 at Grand Rapids, Mich., reelected their entire board of officers which are as follows: President, D. R. Edgerly of Jenison, Vice president, J. Neal Lamereaux of Comstock; secretary-treasurer, Dudley Waters of Grand Rapids; directors, Otto Fischer of Caladonia, J. W. Spanenberg of Sparta, T. Blanchard of Cedar Springs, John Buth of Grand Rapids.

PLAN MORE LOCAL CLUBS

The Tipton County Holstein Breeders' Association met March 23 in the office of the county agent at Tipton, Ind., and elected officers as follows: C. E. Findling, president; J. S. Batzner, secretary-treasurer, and James Robinson was elected director to represent the Holstein breeders in the Tipton County Livestock Breeders' Association. It is planned to build local clubs throughout the county.

PRIZES GIVEN BY HENRICO CLUB

The Henrico Holstein Club will exhibit at the Virginia State Fair next fall and a committee has been appointed to arrange for this as well as to select herds to represent the county. Prizes were given to Gertrude Drinker, Elizabeth Nuckols and Helen Drinker for essays on "A Trip to the Seward Holstein Farm at Petersburg." The club voted an appropriation of \$50 to be given as extra Holstein prizes at the Henrico County Fair which will be held at Varina previous to the Virginia State Fair.

LEWIS CLUB HAS NEW SECRETARY

At a meeting of the Lewis County Holstein Club held at Chehalis, Washington, March 24th, Thomas Nisbet resigned as secretary and E. A. Donaldson who formerly was secretary was elected to the position. H. R. Shoultes, state and county president presided. State Secretary Geo. A. Gue said that prices were good, heifer calves are hard to get and things look better for dairying than in any other line of farming. Fieldman W. E. Meyers said there would be an excursion of Oregon breeders and club members to the State of Washington about June 26th.

WALKER RE-ELECTED

At a recent meeting of the Virginia Holstein Breeders' club, Frank S. Walker of Woodberry Forest was elected president, a well-deserved honor. Some idea of the quality of Mr. Walker's herd can be gained by looking over the cover illustration of the April 8 issue which shows this great aggregation of Holstein beauties at pasture. J. A. Clarkson of Brookwood was elected first vice-president; James McL. Ruffin, Petersburg, second vice-president; G. L. Oliver, Richmond, secretary-treasurer; E. E. Wamsersie, Orange; J. A. Clarkson, Brookwood; G. L. Oliver, Richmond; Joseph A. Turner, Hollins; Dr. G. L. Smith, Newport News, and J. W. R. Wingfield, Albermarle, directors.

DALLAS CLUB HAS SPECIAL MEETING

At a special meeting of the Dallas Holstein club held at the town hall, Dallas, Wis., March 30th, an extensive program was discussed. L. W. Jewitt was elected as club leader in the place of Fred Johnson and Wm. Owens as secretary-treasurer in place of Jos. Hansen. The club endorsed the method of sales through the county association in which a commission is charged members on the sales made for them. A community meeting and movie show will be held late in April and the Dallas community dairy show will be staged in June, while Dallas Holsteins, both grades and purebreds will be seen at the Baron County Fair next fall.

ANOTHER HEIFER FOR STATE COLLEGE

The Washington County Holstein Association met at Washington, Penna., March 27 and heard several good addresses and also presented a purebred Holstein heifer to State College.

Washington County has been the home of good cattle since 1879 when Messrs. Henderson, Buchanan and Paxton founded herds. John G. Paxton one of this trio of early breeders made a brief talk. Talks were given by John A. Bell, Jr., President of the Pennsylvania Federation of Holstein-Friesian Clubs; John M. McKee, now state Deputy-Secretary of Agriculture; Fieldman A. N. Crissey and Professor A. A. Borland of State College. Accredited herds, testing for production and county advertising were the subjects urged.

The following officers were chosen to serve for the ensuing year: President, John W. Quincy, Houston; vice-presidents, H. A. Jones, Fredericktown, R. L. Carter, Hickory, and A. W. Mawhinney, Cecil; secretary J. Clarence Paxton, Houston; treasurer, W. G. Wilson, Eighty-Four; executive committee, John Paxton, Houston and C. A. Daisey, West Brownsville.

LINN BREEDERS ENJOY GOOD PROGRAM

The Linn county Holstein cattle club held a well attended annual meeting in the county agent's rooms at Albany, Oregon, March 15. C. R. Evans of Halsey was elected president for the ensuing year; H. L. Grimes of Harrisburg, vice-president; G. A. McCart of near Harrisburg, secretary and treasurer; J. P. Ashton of Albany and J. F. Somers of Scio were selected as directors.

Prof. R. C. Jones of the Oregon Agricultural College spoke on the value of Cow Testing and Bull Associations. L. J. Allen state calf club leader talked on Holstein Calf Club work. "Publicity Relative to Holsteins" was the subject of E. A. Rhoten of the Pacific Homestead. Horace Addis of the Oregon Farmer explained the Anti-Oleomargarine Bill. County agent A. C. Heyman told of Big Value in Purebred Sires. W. E. Myers, Holstein fieldman for the northwestern states said that contrasted with the conditions in the grain districts, the dairy industry appeared to a much greater advantage.

ADVERTISING NOT EVERYTHING

A dairy booster meeting promoted by the Cameron Holstein Club brought together one of the largest gatherings ever seen in the village of Cameron, Wisconsin. The Barron County movie and several other productions were shown on the screen. County Agent W. A. Duffy discussed recent developments in dairy progress and the Wisconsin Dairying Incorporated program of the Banker's Association. Mr. Duffy said that "if the plan of using the money collected in the dairy advertising fund, shall be used to promote the development of coöperative marketing of our dairy products, as well as advertising, I see no reason why we, as dairymen, cannot give this plan our whole-hearted support."

A very fine dinner was served at noon by the Black and White Auxiliary. Several hundred people enjoyed the dairy products of butter, cheese milk and ice cream which together with Holstein advertising matter graced the tables.

MAINE BREEDERS ELECT OFFICERS

The Maine Holstein Breeders and the Maine Dairy Breeders held their annual meetings, on March 30th during Farmers' Week at Orono.

The Holstein breeders listened to an address by Earl J. Cooper. They decided to have a field day a little later and will place the arrangements in the hands of a committee.

C. L. Blackman, field secretary of the New England States Holstein Association in a speech which was well applauded by the breeders present said that there was a place for all the four great dairy breeds and that Holstein men should endeavor to advertise the quality of their own breed and not knock the other breeds. He spoke of the health of Maine Holsteins and said that breeders in other states were learning this and also the fact that they were sold at reasonable prices.

The officers elected were: C. L. Longley, of Plymouth, president; Harold J. Shaw, of Sanford, secretary-treasurer; C. L. Pike, Lubec, L. E. McIntire, East Waterford, A. E. Hodges, Fairfield Center, Executive Committee.

HARDIN COUNTY TO HAVE CALF CLUB

The Hardin county Holstein Breeders' Association and the Community Club held a joint gathering at Iowa Falls, Iowa, March 22 and took further steps in making a purebred Holstein heifer calf club a sure thing in Hardin county.

Following luncheon Mayor Burt Gilchrist spoke on dairying in Hardin County and praised the calf club idea. Fred E. Ferguson of the State Dairy Association said that the most certain way to start dairying is through calf clubs. The Dairy Heifer Calf club is a three year proposition and the boy who goes through three years of club work has taken interest in the business and has a start for a dairy herd. He stressed the importance of dairying to keep up fertility of the soil. W. H. Dreier of Eldora, a young Holstein breeder told of the world's records held by Holstein cattle and the good points of the breed. A short talk was also given by Niels Nielson of Eldora, the tester for the Hardin county Cow Testing Association.

Ray Finster of Eldora was elected president of the Association. Charles Mark of Iowa Falls was reelected secretary and treasurer and Fred Bruenmeyer and W. H. Dreier were elected directors. A calf club committee was also appointed.

BUCKS COUNTY BREEDERS BOOSTING!

One hundred thirty attended the Bucks County booster dairy meeting at Perkasio, Penna., Saturday evening, March 24th. The meeting was held under the auspices of the Bucks County Holstein Association with the First National Bank of Perkasio coöperating. County agent P. H. Sprengle pledged every effort on the part of his office to extend dairy improvement in the county. Prof. J. W. Bartlett delivered a very instructive

illustrated lecture, "The Relation of Show Type to Production." The breeders present made many favorable comments on this feature.

W. W. Wetmore, secretary of the Holstein-Friesian Coöperative Association of New Jersey outlined the aims and purposes of his club. Allen N. Crissey district representative of the National Association spoke on the stability of the dairy industry and stressed some of the good points of the Holstein breed. Refreshments were served and musical selections rendered by the Perkasio quartet and the Doylestown Glee Club.

The recently organized Cow Testing Association has started operating and with renewed interest in Calf Clubs on the part of the breeders and the bankers of the county, we hope to see the list of boys and girls with calves increased considerably.

FOR PENNSYLVANIA BREEDERS ONLY

The Pennsylvania Federation of Holstein-Friesian Clubs has reached the decision to promote a state show herd to compete at the National Dairy Show, which will be held at Syracuse, early in October.

Pennsylvania ranks third as a Holstein state being exceeded only by New York and Wisconsin. Early in the history of the breed in the United States, Pennsylvania animals were looked upon as possessing the highest type of conformation and in the days when the famous Huidekoper herd was in its prime it had no superior. The majority of Pennsylvania herds are run on the breeder-dairyman plan, perhaps we should have said the dairyman-breeder plan as the owners value the animals according to their ability to produce under general farm conditions while in some other states more emphasis has been placed on the ability to make high records. The consequence is that when a good judge has an opportunity to look over some of the herds in the Keystone State he is surprised and delighted to find that so many of the cows possess high class individuality and show evidences of being large producers. It may be recalled that at the National Sale in Syracuse, 1921, the second prize cow came from a very small Pennsylvania herd and that she won her position in competition with members of large herds of many states. At the various shows connected with the Brentwood Sales, Pennsylvania animals have ranked high. Yet Pennsylvania animals are seldom seen at the great cattle shows and, as the Keystone state does not have a state fair, outsiders seldom learn of the real quality of the Pennsylvania herds.

The State Federation desires to let the breeders know that Pennsylvania animals rank with the best of any state and for this purpose is endeavoring to get breeders, whether members of the Federation or not, to exhibit at the National Dairy Show this fall. From the animals brought out a State Show herd will be selected which will compete with the herds from other states.

The animals must be from accredited herds or accompanied by a test temperature chart. Entry blanks can be obtained from the Federation secretary, W. Hugh Jones of South Montrose, Pa. and should be secured at once. The well known Pennsylvania breeder and judge, B. F. Jones, is to select the chosen herd and will arrange all details. If the cattle are forthcoming, this fact assures that the selected herd will be a formidable competitor for the valuable state herd prizes.

TO BE SHOWN AT SYRACUSE

The United States Department of Agriculture will have a number of exhibits at the National Dairy Show which will be held early in October at Syracuse, N. Y. The largest one will be 100 feet long, and will be the largest and most extensive single exhibit feature ever undertaken by the Department. It will portray the development of the dairy industry in this country and will combine newly developed features in the line of portable exhibits. Its construction is being supervised by Charles A. Corwin and Paul J. Fair, both of whom have done some of the finest work of this kind in the world for the Academy of Science in San Francisco and the Field Museum in Chicago. Mr. Corwin recently finished painting the cyclorama of the battle of Chateau Thierry for exhibition in Boston.

The central feature of the exhibit will be a model in relief of a dairy farm, showing three stages of development comparable to the progress of the dairy farming industry as a whole. The foreground of the exhibit will be done in miniature model form, showing the type of animals on the farm, buildings, trees, etc., and this merges into a background so painted that it is difficult for the eye to distinguish where the modeled material leaves off and the painting begins. This type of habitat exhibit has the property of giving much more depth and realism to the scene than would be otherwise possible.

Practically every bureau in the department has contributed something in the way of information and matter to be used in making this a great educational exhibit, for there is scarcely a branch of the department whose work does not have some bearing on or connection with the dairy industry. The first scene of this large feature will depict the average dairy farm as it was in the past before the advent of scientific agriculture and improved methods. While there are many dairy farms still in this stage—where scrub stock are kept, where unsanitary conditions are the rule, where antiquated machinery and equipment are still in use, and where haphazard methods of feeding are practiced—the next picture shows the improvement brought about by the adoption of some of the improved practices. In this stage, which is called the present, are seen the purebred dairy cattle, well-constructed barns and silos, power machinery, good roads and fences, and better feeding practices. The third and last scene marks a still more ideal stage in the future of

the industry which would be possible if all the present-day knowledge was put into practice. The whole presents an inspiring picture of the improvement of dairying through the use of improved practices, better machinery and equipment and also shows what may yet be expected in the near future, with the development of better marketing systems.

FARMERS BORROW HALF BILLION

A dispatch from Washington says that the War Finance Corporation up to March 1st, 1923, had made loans for agricultural and livestock purposes in the aggregate sum of \$453,917,574. The classification of these loans shows that livestock loan companies had received \$84,607,018, banking and financial institutions \$183,983,106 and coöperative marketing associations \$185,327,450.

Classification of the loans by products show the following:

Grain	\$36,790,189.31
Cotton	81,847,626.79
Sugar Beets	11,458,000.00
Sugar Cane	35,000.00
Rice	10,250,000.00
Canned Fruits	300,000.00
Dried Fruits	1,250,000.00
Peanuts	2,044,634.00
Tobacco	52,500,000.00
Hay	260,000.00
Seeds	50,000.00
Gen. Agric. Purposes	158,416,746.63
Livestock	98,715,378.16

Up to March 1st the War Finance Corporation had loaned to various exporters, coöperative marketing associations and financial institutions \$58,374,255 since July 1st, 1921, for the purpose of financing exports. Coöperative marketing associations received \$5,262,183 of this amount. Nearly \$6,000,000 of this amount was loaned for the purpose of financing exports of grain; \$3,246,000 for exporting tobacco; \$1,120,000 for exporting canned fruits; \$1,000,000 for exporting meat products; \$1,000,000 for exporting condensed milk and nearly \$41,000,000 for exporting cotton.

The total loans made by the War Finance Corporation from January 4th, 1921, to March 1st, 1923, which total embraces loans made for export purposes and for domestic purposes amounted to \$512,291,830.

COMING HOMESTEAD SALE

The Homestead Club will put on the first sale of Holsteins of the Homestead strain at Watertown, Wis., May 31st. The sale will be managed by Francis Darcey, who is the Club Secretary.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO

NATIONAL POLAND-CHINA JOURNAL, WINCHESTER, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. \$1.00 for 1 year; 3 years for \$2.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

Cow Testing Association Reports

PUREBREDS SHINE IN WISCONSIN

Purebred Holsteins made a good showing in the Wisconsin testing associations during the month of February. In the Thorp association a registered Holstein owned by John Barth was first with 1,739 lb. milk, 66 lb. fat while the Barth herd led with an average of 1,196 lb. milk, 42.8 lb. fat.

The Peterson Bros. purebred dairy consists of 19 cows averaged 40.1 lb. butterfat in the Taylor-Blair-Etrick association while a registered Holstein owned by A. P. Ofsdahl led with a production of 63.1 lb. fat as a four-year-old.

The Osterkamp Bros. herd of twelve registered Holsteins led the Almena association with an average production of 1,551 lb. milk, 51.7 lb. butterfat while a three-year-old member of this herd, Susie produced 65.1 lb. fat, 1,916 lb. milk, the highest record reported.

Twelve Holsteins owned by Cornelius Seblon led the Viroqua association with an average of 44.2 lb. butterfat, 1,206 lb. milk and members of this herd took first, second, third and fifth places with seven Seblon cows reported in the list of the first twelve. The leader made 64.6 lb. butterfat from 1,747 lb. milk while her stablemate made 63.5 lb. fat from 1,764 lb. milk.

The high cow in the Cedarburg-Grafton association was owned by Otto Kohlwey. She was a two-year-old and produced 1,677 lb. milk, 63.7 lb. butterfat. The seven Kohlwey milkers averaged 1,428.2 lb. milk, 48.4 lb. fat.

The first and second places in the Lakefield association are taken by cows owned by Blank Bros. The leader made 1,529 lb. milk, 73.3 lb. fat and her stablemate made 1,500 lb. milk, 58.5 lb. fat. Blank

Brothers' eleven pure bred averages 1,018 lb. milk, 38.8 lb. fat.

The Bender herd made a fine showing in the Watertown association. One member took first place with 106 lb. fat, 2,867 lb. milk and her stablemate took third place with 68 lb. fat, 2,268 lb. milk. Eight other cows in this herd exceeded 50 lb. Second place was taken by a grade Holstein with 74.5 lb. fat.

The high cow in the Dunn County association is one of John Farmer's purebred Holsteins with a record of 1,556 lb. milk, 59.1 lb. fat in the twenty-eight days.

Walter Holtz has a dairy of 21 registered and grade Holsteins which was high herd in the Oconto County association with an average of 1,243 lb. milk, 43.5 lb. fat, while in the Waseca association the individual leader was a purebred owned by Roy Hecht with 58.87 lb. fat from 1,338 lb. milk.

An eight-year-old owned by E. H. Braatz of Brandon led the Ladoga association with 1,392 lb. milk, 62.6 lb. fat while a seven year-old owned by J. F. Braatz & Son is third with 60.1 lb. milk from 1,538 lb. milk. In the Sabin association the J. W. Lawton purebred herd is first with a herd average of 1,227 lb. milk and 42.5 lb. fat and has the high cow with 2,058 lb. milk and 74.1 lb. fat.

In the Delafield association first place for herd was taken by the dairy of J. A. Hurtgen with an average of 1,198 lb. milk, 41 lb. butterfat. A Hurtgen cow was high with 58.3 lb. fat from 1,324 lb. milk and a stablemate was second with 1,688 lb. milk and 57.4 lb. fat.

In the Avoca association the leader, owned by F. W. Schwingle purebred 1,597 lb. milk, 54.3 lb. fat. Other purebreds ranked high.

The first month's work in the Vesper association showed good cows enrolled. Johanna, a purebred owned by Epa DeBoer produced 1813 lb. milk, 77.9 lb. fat. A year ago she was high cow of the Arpin association and her record of 671 lb. fat is the highest in the country. Mr. DeBoer's seven cows averaged 47.1 lb. fat and 1291.2 lb. milk with a test of 3.7%.

E. Jay Roxby Castine in February made 90.7 lb. fat in the Eau Claire association and during March, the second month of her lactation, she produced 98.58 lb. Her stablemate, E. Jay Aagie De Kol beat her, however, with a production of 100.58 lb. fat and became the first cow in Eau Claire county to make 100 lb. as Castine was the first 90 lb. cow. They are owned by Theodore Mathiew of Chippewa Falls. The Mathiew herd is first with an average of 44.11 lb. fat, 1144.07 lb. milk.

In Barnum County, first place was taken by Toma Belle 4th owned by R. L. Flathers. She producing 1,486 lb. milk, 53.4 lb. fat.

In the Greenleaf association, Cora, owned by Henry Benecke led for both milk and butter with 1,880 lb. milk, 65.8 lb. butterfat. A two-year-old owned by Arthur Davis gave 1,380 lb. milk, 45.5 lb. fat. The L. J. Larson herd of grades and purebreds averaged 1,200 lb. milk, 40.4 lb. fat for the fifteen cows.

The purebred Daisy owned by Cook and McDowell was high individual in the Eau Claire No. 1 Association with 60.5 lb. fat. The Geo. B. McLellan herd of purebreds averaged 960 lb. milk, 33.7 lb. fat.

The registered Holstein herd of Wm. Piltz led the Rudolph association with an average of 1,255 lb. milk, 45.4 lb. fat.

The champion butterfat producer in the Pulaski association was owned by J. Malczewski, with a production of 1,956 lb. milk, 74.3 lb. butterfat. Registered Holsteins were third and fourth.

NEW YORK STATE TESTING

Livingston County made a splendid showing in the final month of 1922, furnishing the five highest producers in the New York State testing associations. J. C. Cooley, of Groveland Station, owned the leader, a purebred Holstein named Topsy Neptune Edna. She was a four-year-old and produced 95.9 lb. fat, 1,956.8 lb. milk. She just beat out for first place Sam Barber's noted grade, Aaggie, this cow making 95.8 lb. fat, 1,996.4 lb. milk in the final month of her association year. She was followed by two of her stable mates, the three-year-old, Babe, making 93.5 lb. fat, 2,396.3 lb. milk and the five-year-old Daisy producing 91.4 lb. fat and 1,661.6 lb. milk. A grade Jersey is in fifth place with

91.4 lb. fat, 1,202.8 lb. milk made as a four-year-old.

The January list is headed by a purebred Holstein, Pioneer, owned by the Laurel Stock Farm, at Goshen. Although only two years old she produced 90.9 lb. fat, 1,856 lb. milk. Another purebred owned by W. B. Harbeck & Sons, of Black Creek, is in second position with 88.8 lb. fat, 2,777 lb. milk. Jessie, a grade Holstein, owned by J. C. Cooley, of Groveland Station, is third with 88.3 lb. fat, 1,931.3 lb. milk, and this cow is 11 years old. Ed. Bingham, of Spencers, has a purebred in fourth position with 86.5 lb. fat, 2,217 lb. milk, while fifth place is taken by a grade Holstein owned by P. E. Trask, of Hamilton, with 86.4 lb. fat, 1,289.4 lb. milk. The leaders for this month come from five different associations, while for the previous month they were all from Livingston County. Orange County furnishes the leader, Allegany, second; Livingston, third; Tioga, fourth, and Madison, fifth.

The incomplete reports for February are headed by a purebred Holstein owned by James Stewart and enrolled in the Monroe Association. She has to her credit 1,923.6 lb. milk, 11.6 lb. fat. The second cow is also a registered Holstein owned by F. R. Masten and enrolled in the Harlem Valley Association. She is credited with 95.8 lb. fat, 1,915 lb. milk. The highest milk producer listed is owned by J. B. Harbeck & Sons and has 2,343 lb. milk to her credit and 84.3 lb. fat.

WISCONSIN COW TESTING

Holsteins show prominently in the February report of Wisconsin cow testing association work. There are 123 associations reporting. The leader in 43 instances is a purebred Holstein and in 43 others a grade Holstein making 86 in all, or more than two-thirds. Seventeen leaders are grade Guernseys and four purebred Guernseys. Two are grade Jerseys and four purebred Jerseys. Milking Shorthorns, one purebred and

three grades head four associations. A grade Ayrshire heads one, a Brown Swiss heads one, while a couple are headed by native cows.

The state leader is a purebred Holstein from the Harvest Farms, Mayville. This cow is credited with 104.9 lb. fat. She is the only animal with more than 100 lb. fat. There are five others above 90 lb. and they are all of the Holstein breed.

Leo Kuhl & Son, of Hazel Green, has a purebred that is in second position with 98.9 lb. fat. The third cow is a grade Holstein owned by J. Brethouwer, 96.4 lb. fat. Fourth is a grade Holstein owned by Wm. Jaehnig, of the Farmington Association, with 94.9 lb. fat. Fifth is a registered cow owned by J. F. Mayer, of the Richfield Association, with 92.9 lb. fat, while the other cow is a purebred Holstein owned by Theo. Mathiew, of Chippewa Falls, with 90.7 lb. fat.

There are eight herds that average over 50 lb. of fat during the month and one above 60 lb. and they are Holstein herds in every instance. First place is taken by the 12-cow dairy of Leo Kuhl & Son with an average of 1,756 lb. milk, 64.4 lb. fat. This is a purebred herd. The 13-cow dairy of Wm. Jaehnig is second with an average of 59.1 lb. fat, 1,526 lb. milk.

KENTUCKY TESTING

Thirty-one Kentucky cows, 22 Jerseys and 9 Holsteins, owned by 14 dairymen in 9 different counties won a place for themselves on the February honor roll by producing more than three pounds of butter during the time they were on official test. During the month, 127 cows consisting of 105 Jerseys, 21 Holsteins, and 1 Guernsey were tested. The first place was taken by Lady A. Johanna Ormsby, owned by Hubert Conner of Burlington, with a production of 131.9 lb. milk, 4.63 lb. butterfat. The Kentucky Holstein Farms of Bardstown, had seven on the honor roll.

FOUR REAL GOOD ONES

During the third year of the Farmington, Wisconsin Testing Association which closed February 28, a total of 404 cows in 36 herds made records which averaged 8,505 lb. milk, 309.2 lb. fat. Last year the average was 8,501 lb. milk, 300.5 lb. fat. Four Holstein cows each produced over 600 lb. fat. The three highest are owned by Wm. Jaehnig, one making 686.8 lb. fat, another 686 lb. and the other 627.2 lb. the fourth cow, owned by W. H. Gruhle, produced 620.6 lb. fat. Nine cows made between 500 and 600 lb. fat and 38 made between 400 and 500 lb.

The average of 300 lb. fat or more was attained by twenty-four herds, the eleven Holsteins owned by Wm. Jaehnig averaging 14,248 lb. milk, 504.3 lb. fat. The eight cow dairy of Carl Aurig was second with an average of 10,512 lb. milk, 421.7 lb. fat. The fifteen registered Holsteins owned by W. Gruhle, was third with an average of 11,015 lb. milk, 385.7 lb. fat.

MARK THE DIFFERENCE

Five good grade Holstein cows have earned Truman Denny of Lonepine Montana, \$100 net in one month according to the barn milk sheet which has been summarized by the state dairy specialist. Mr. Denny's net return includes the returns from both butterfat and skim milk, after deducting the cost of feed, figuring butterfat at the price paid by the Plains Creamery and skim milk at 50 cents a hundred pounds.

There is a difference even in this small herd for two of the cows earn their owner \$54 while the remaining \$46 is produced by the other three. The highest producing cow gave 1,680 lb. milk, 67 lb. butterfat, the value of this production being \$40.67 while the feed cost was \$10.85 or a profit of \$31.82. The lowest producing cow gave less than half as much and made a net profit of \$13.87.

Young Stock For Sale

At prices that the
Everyday Breeder and Dairyman
can well afford to pay.

HARRY C. REYNOLDS

SCRANTON, PA.

Herd under the Accredited Plan

FOR FIVE YEARS IN SUCCESSION Hampshires have won grand championships over all breeds, all ages and all weights of hogs in the carload lots at the International Live Stock Show 1918, 1919, 1920, 1921, 1922.

FOR FIVE YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this show.

HAMPSHIRE ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains, and Because They Are Recognized Market Toppers.

For information about Hampshires or for names and addresses of breeders near you, address

HAMPSHIRE RECORD ASSOCIATION

E. C. STONE, Secretary

Dept. 35

409 Wisconsin Ave., Peoria, Ill.

TWO-YEAR-OLD IS LARGEST PRODUCER

The Hardin County Testing Association completed a year's work with the closing of February. During the year 494 cows have been tested but only 294 have completed tests of nine months or more. Of the other 200 milkers 34 were sold for beef, 16 for dairy purposes while the others were heifers which freshened during the year or cows purchased from outside the association. The average production for the 294 animals was 7,063 lb. milk, 276.2 lb. fat. The leading producer is a two-year-old purebred Holstein owned by Roy N. Finster of Eldora, Iowa. She produced 14,014 lb. milk, 532.4 lb. fat, a remarkable record considering that it was made under ordinary farm conditions. An eight-year-old grade Holstein owned by W. F. McCord of Iowa Falls is second with 14,395 lb. milk, 514 lb. fat.

UTAH SNOWBALL

The average milk production of the 377 cows tested in the Richmond Lewiston, Utah, Association was 773 lb. and the average butterfat production 27.6 lb. Forty cows exceeded 40 lb. butterfat during February and 82 cows were between 30 and 40 lb. The average cost was \$7.05 for feed for the month while the average feed cost per 100 lb. milk was 94 cents.

The registered Holstein cow Snowball, owned by A. C. Fisher led for the month with 1,788 lb. milk, 66.1 lb. butterfat. The twelve cow dairy of L. A. Hendrick led in the first division with an average of 1,008 lb. milk, 32.6 lb. butterfat. This herd consists of grade Holsteins as does the seven cow dairy of Cyrus Bullen with an average of 1,090 lb. milk, 32.6 lb. butterfat. The feed cost for the Fisher herd was \$6.76 and for the Bullen herd was \$6.81.

GRADE LEADS IN MISHICOT

A grade Holstein cow, owned by Oscar Witte, topped the Mishicot, Wis. Association for March, with 68.5 lb. butterfat. The herd of J. P. Meyer, was high with an average of 40.9 lb. fat. During the month 381 cows were tested of which 83 made 40 lb. fat. or more.

HOLSTEINS SHINE HERE

The East Snyder County, Pennsylvania Cow Testing Association completed the fifth month of its first year of operation and is going strong.

Of the ten leading cows for the month, five were grade and three purebred Holsteins and two were Guernseys, these being the first among the leading ten for the five months that were not Holsteins. The average for the leading ten cows is 1,375 lb. milk, 49.8 lb. butterfat, the average test being 3.62%.

The high herd for March was owned by George Gemberling of Selinsgrove, whose eleven cows produced 15,300 lb. milk. The high cow for the first five months is a grade cow Daisy, owned by D. E. Nagle, Selinsgrove, with over 8,300 lb. milk, and 300 lb. butterfat and is still going strong.

Of the 205 cows milked were seventeen producing over 40 lb. fat and four over 50 lb., 37 produced more than 1,000 lb. milk and 14 more than 1,200 lb. milk.

There is a marked increase in interest taken in the dairy industry among the members of the association. The majority of members are now feeding better balanced rations than they have been feeding before. WM. A. MARKLEY.

MACHINE MILKED TEN YEARS

During the 28 days of February, 306 animals in the Pioneer Association averaged 831 lb. milk, 31.2 lb. butterfat, reports the tester, Anton Christiansen. Thos. Hanses of Cedar Falls, Iowa, again had the high herd when his fifteen purebred Holsteins averaged 1,355 lb. milk, 44.37 lb. fat. Grade Holstein herds were second and third. The highest producer is a grade Holstein belonging to Entz Farm Company. She produced 1,400 lb. milk, 61.6 lb. fat. The thirteen year-old grade Holstein, Bertha, owned by Elmer Callies was second with 1,397 lb. milk, 61.5 lb. butterfat. This cow who was a leader in the association several years ago when in another herd, has been fed heavily and milked by machine the past ten years without any ill results.

There is only one member of the association who has not tested for tuberculosis or signed up for testing. During January the association led all others in Iowa in high average production and an even higher average figure was shown in February, considering the number of days in the month.

GOOD UTAH HOLSTEINS

The three best cows in the Utah County Association for February were Holsteins owned by John H. Moyle, of Salt Lake City, Utah. Thelma produced 1,909.6 lb. milk, 64.92 lb. fat; Duchess produced 2,010.4 lb. milk, 64.33 lb. fat; and Rose, produced 1,526 lb. milk, 64.09 lb. fat. Two cows belonging to Walter and Milton Holdaway, of Lake View, produced 64.05 lb. fat and 63 lb. fat respectively. The Holdaway herd consisting of 17 cows averaged 1,293.7 lb. milk, 46.3 lb. fat for the month.

NINE HOLSTEINS IN FIRST TEN

Two hundred and one cows in twenty-six herds were tested in the Sullivan County, Pa., Testing Association for the month of March. Eleven of these produced more than 50 lb. butterfat and 21 produced more than 1,200 lb. milk in the month, reports tester F. A. Boyle. The leader was a grade Holstein, Mike, owned by C. V. Driscoll, with a production of 1,634 lb. milk, 63.7 lb. fat. Mr. Driscoll had three cows in the leading ten. Mr. C. N. Shaffer owned the animals taking second and third places. They were grade Holsteins and produced 61.1 lb. butterfat from 1,609 lb. milk and 59.6 lb. butterfat from 1,454 lb. milk respectively. All but one of the leading ten cows were black and whites, either purebreds or grades, while the ten averaged 56.1 lb. fat from 1,480 lb. milk. Harrington & Co. and C. N. Shaffer each had a purebred on the honor list.

BUYING PUREBRED SIRES

The 383 cows on test in the Cerro Gordo County, Testing Association for the month ending March 15, averaged 28 lb. butterfat, 727 lb. milk. Seven cows exceeded 50 lb. fat. The leader was a high grade Holstein owned by J. A. Moser of Manley, Iowa, she producing 59.2 lb. fat. Two purebred Holstein sires were purchased during the month, one by Art Dobel, Manly, the other by C. F. Schneider, of Hanlantown.

FRAIN OWNS THE LEADERS

A purebred Holstein owned by Frank Frain of Winamac, Ind., led the Tri-County Association for the month of March, she producing 87.5 lb. fat. Mr. Frain's herd took first place, his eighteen head averaging 42 lb. for the month. There are 302 animals in 25 herds being tested by Revere Smith of Culver, whose advice on feeding is being greatly appreciated.

EHLERS THINKS THIRTEEN LUCKY

Sarcastic Mercedes Lassie, owned by E. G. Ehlers, of Twin Falls, Idaho, produced 93.9 lb. fat in the Pioneer Association during February. The average for the 220 cows tested was 704.4 lb. and 29.5 lb. fat. Thirteen is not an unlucky number for Mr. Ehlers for his dairy averaged 40.4 lb. fat and stood first on the list.

EDGAR COUNTY TAKING HOLD

Despite the fact that February is the shortest month in the year, it gave Edgar County its first 2,000 milk record. For Ralph Kerrick of Eldridge Illinois, has a Holstein which in the 28 days produced 2,008 lb. milk, 72.2 lb. butterfat. Ten cows in the association made over 50 lb. butterfat for the month an especially fine showing for a county just beginning to get a grasp on the dairy business.

FEEDING DURING THE EARLY PASTURE SEASON

With the pasture season approaching, the dairyman must give attention to the effect that pasturage has upon his feeding operations. When the cows are turned out to pasture, ordinarily the amount of grain fed is reduced. Many farmers feed no grain at all at this time.

This is probably not the best practice, as pasture grass is a strong stimulant to milk production and the cows are likely to run down in flesh, unless provided with some grain. Such an effect, while not apt to show up at first in the milk pail, will result in reduced milk production later on, when the pasture begins to dry up. Then it is very difficult to keep cows from falling off materially in milk yield, even with heavy grain feeding, unless they are in good condition of flesh. To avoid this, some grain should be fed during the early pasture season. For cows of average production, it should amount to at least one-third to one-half of the amount of grain that they were receiving when in the barn.

But, if grain is to be given, what should be the character of the grain mixture? Does it need to be as complicated and contain so much expensive high protein feed as the grain mixture usually given during the winter? The answer to these questions must be no.

The building of a grain mixture depends entirely upon the kind of roughage with which it is to be fed. Pasture grass is a high protein feed and furthermore the proteins which it contains are of the highest quality. It usually is rich in mineral matter and in addition contains something which stimulates the assimilation of mineral matter. It is a succulent, highly digestible feed and except for a lack of fat or energy-producing nutrients, is almost a perfect feed for milk production.

This deficiency can be made up by feeding a simple energy-providing grain mixture in the amounts suggested above. It is as follows:

200 lb. wheat bran.
100 lb. ground oats, or standard wheat middlings.
300 lb. hominy, cornmeal or ground barley.

This mixture contains no high protein feeds. Based on the prices quoted this month, its cost wholesale would be \$36 per ton, a saving of about \$7.50 per ton over the grain mixture below which is suitable for feeding with timothy hay and corn silage:

200 lb. wheat bran.
400 lb. ground oats.
200 lb. hominy, cornmeal or ground barley.
700 lb. gluten feed.
200 lb. cottonseed meal, 43 per cent.
300 lb. linseed oil meal.

In a ration made up of pasture grass and a grain mixture containing no high protein feeds, the protein content will always equal or exceed the amounts called for in feeding standards for cows

producing as high as 60 lb. of milk daily, as long as the pasturage is plentiful, green and succulent. However, as soon as the pastures begin to dry up and get short, the grain mixture must be changed in such a way as to include some high protein feeds. In addition, more grain must be given per cow.

Ordinarily, the pastures remain green and succulent until the last of June and occasionally even longer. When this time draws near the ration service will contain suggestions for feeding which will take into consideration this change in the condition of the pastures.—New York State News Letter.

SATISFIED CUSTOMERS MEAN REPEAT ORDERS

About four years ago Samuel Young, of Lansing, Michigan, bought from us a son of Sir Prilly Segis out of Ormsby Korndyke Armin, the then 32-pound daughter of Ormsby Korndyke Lad who since made three yearly records averaging a thousand pounds, her best year being 1,231.35 pounds of butter.

He bred this bull on his herd and after a while sold off his original cattle so that his herd to-day is made up entirely of the daughters of this bull. Mr. Young is very proud of these daughters and says they are not only great individuals but without any exception large producers.

He now has come to us again and has bought a young son sired by Ormsby Sensation out of Beaver Dam Ormsby Johanna, another young thirty-pound daughter of Ormsby Korndyke Lad with a yearly record at the age of three and one-half years of 1,110.23 pounds of butter and 25,516.51 pounds of milk, both being New York State Records when made. Her dam is one of the good daughters of Aaggie Cornucopia Johanna Lad.

This young bull is a splendid animal in every way, full of vigor, and style, and exceedingly well grown, with sires in his pedigree like Ormsby Sensation, Sir Pietertje Ormsby Mercedes 37th, Ormsby Korndyke Lad and the great century sire Aaggie Cornucopia Johanna Lad and with such dams as Wisconsin Forbes 5th, Spring Brook Bess Burke 2d, and Beaver Dam Ormsby Johanna, Mr. Young has a right to expect results in his breeding operations.

We are very proud that Mr. Young has come back to us for a sire the second time, for, a satisfied customer is the best recommendation.

We are greatly interested in the future development of Mr. Young's herd, which, being made up of animals of such excellent breeding has a right to make a splendid showing.

FREEMARTIN MAKES WORLD'S RECORD

Owners of all breeds of purebred cattle are likely to take an interest in Woodbine Rosa Prilly, number 743139, for this heifer is a freemartin that has not only freshened but has made a year record of 955.2 lb. butter from 27,160.5 lb. milk. This is the world's milk record for a junior two-year-old and this heifer was two years and four months old when she freshened. Many owners of purebred dairy cattle do not trouble to raise a freemartin heifer, but the Bridgeford Holstein Co., decided to take the chance with Woodbine Rosa Prilly, as her dam had a 30 lb. official seven day butter record and her sire was King Segis Alcartra Prilly the great show bull formerly owned by the Bridgeford Co. and sold by them to Col. Fred Pabst. The heifer, however, did get with calf but because she was a freemartin she was not given any special care and was in pasture right up to the time she freshened and did not have any previous grain ration. It was soon evident that she was a producer so she was entered in year test and made a world's record for milk production. During the year it is reported that she gained several hundred pounds in weight. She carried another calf approximately five months of the time she was on test and is due to drop her second calf in June.

A SPLENDID AVERAGE

The herd of 88 Holstein cows owned by the State hospital at Worcester, Mass., averaged 10.801 lb. milk during the past year. This is believed to be the best showing ever made by so large a Massachusetts herd.

LAST CALL FOR

Cumberland County Holstein Breeders' Sale, Carlisle, Pa., May 2d.

Meeting of the Salem-Cumberland-Gloucester Association, Salem, N. J., April 30th.

PICKING FOR THE JUNE SALE

The well-known Holstein breeder, B. F. Jones of South Montrose has been making a tour of the state inspecting the animals to be sent from Pennsylvania to the proposed sale at Cleveland in June. Mr. Jones is possibly the most noted judge of the Keystone State and sharply differentiates between natural conformation and flesh or high condition. Many of the animals that have been offered at some of the greatest sales of the country have been so fat that defects in conformation were covered and the unsuspecting purchaser has, after taking the animals to his own home and keeping them there for a time under usual farm conditions, been greatly disappointed to find out that his purchases were really animals of inferior type, the defects having been, at the time of the sale, covered by a layer of fat.

If the state consignors follow Mr. Jones' advice, and he has the authority to reject the offerings if they do not, the Pennsylvania offerings at the June sale will be worth while.

THE BELLE MEAD BULL ASSOCIATION

In the fall of 1917 a farmers institute was held in the village of Harlingen. One of the speakers at that meeting was Joel H. Winkjer who spoke on the advantages of cooperative bull associations. It seemed as though his seed was sown on barren soil for no immediate results followed. However, five years later, in 1922, the Belle Mead Bull Association was formed. At the time of organizing probably none of the members of the Association had Mr. Winkjer's talk in mind. Nevertheless it can be regarded as the maturing of the seed sown five years earlier.

The chief advantages that Mr. Winkjer mentioned were ability to own better sires and division of cost of keeping bulls. But the members of the Belle Mead Bull Association, Inc., have found several others. Not the least of these is a promotion of sociability among the members. Occasional meetings are held at which plans are made for the future of the bull and the development of his daughters. Sometimes the ladies surprise us at these meetings with lunches that make us forget bull rations and think of angel food.

The latest out-growth of these meetings is a plan to hold a Holstein-Friesian sale on May 17th, at J. V. D. Bergen's Maple Lane Farm, at Belle Mead. We have asked some of our fellow breeders to set in with us at this event and they have responded so nobly that the sale promises to be an epic in Somerset County Holstein History.

Among those who have accepted our invitation to put some good Holsteins in this sale are Bloomingdale Farms, Nevius Bros., Fred A. Quick, Thomas H. Mettler,

Benjamin Hageman, and J. Irving Stryker, and a few more yet to follow. The members of the Association who are, Judge Nelson Y. Dungan, J. V. D. Bergen, Willis E. Stryker, Henry Staats, Peter P. Van Nuys and Sidney I. DeHart, will consign some of their best animals of their herds.

Included in the sale will be at least five daughters of King Echo Pietje Model "the bull with the perfect pedigree," granddaughters of King Valdessa Pontiac the famous Bell Farm sire, King Pontiac Hengerveld Fayne, the hundred thousand dollar bull and Colantha Johanna Lad 8th, who is the greatest living sire of heavy milkers. There will be cows bred to King Model, whose daughters are all better than their dams. Also cows bred to King Master and King Echo Pietje Model. Several record cows and daughters of record cows, at least one 27 lb. cow and a few real good young bulls will be offered.

Our secretary has for the past two years spent a lot of time travelling about the country in club work. This time we have made a special effort to have a good number of calves suitable for club members in the sale, thus avoiding a lot of travel, and affording each boy or girl a large number to select from and a chance to make comparisons.

Mark May 17th, on your calendar as Holstein Holiday, and come to Belle Mead and get acquainted with us to our mutual benefit. King Echo Pietje Model will be there to greet you. At the close of the day return to your home with your possessions increased.

SIDNEY I. DEHART, Pres.
Belle Mead Bull Association, Inc.

CALIFORNIA BREEDERS GUARANTY SALE

The California Holstein cattle owners tried to surpass themselves in their offerings to their 1923 sale and the cattle consigned were of very high quality. The 34 animals brought \$22,325 an average of \$656. The 29 milkers averaged \$649 and the five bulls averaged \$700. The top price was \$2,500 for Anoakia Pontiac Beets 2d, consigned by the Santa Anita Rancho and struck off to W. J. Higdon and Sargent Bros. of Tulare. She has a year record of 27,372 lb. milk and 1,142.64 lb. butter. Sargent Bros. also purchased Anoakia Princess May for \$1,350. The third cow sold, Blanche Nudine Clothilde Walker, was purchased for \$1,100 by the Los Angeles Chamber of Commerce for presentation to the California Junior Republic at Chino. The Santa Anita Rancho consigned four cows which realized \$5,650.

The top price for a male was \$1,175 for Sir Aaggie Creamcup Mead consigned by W. J. Higdon and purchased by Burr Farm. Fred Hartsook took six animals for an average price of \$608. A. M. Dunn of Los Angeles bought a number of animals while the Kern County Union High School took one cow for \$525 and another for \$500. A majority of the animals went into the southern part of the state.

The following list shows the animals bringing \$500 or more together with the names and addresses of the purchasers:

Consigned by Santa Anita Rancho, Santa Anita	
Anoakia Pontiac Beets 2d, W. J. Higdon and Sargent Bros., Tulare	\$2,500
Blanche Nudine Clothilde Walker, California Junior Republic Chino	1,100

THE CUMBERLAND COUNTY BREEDERS SALE

The Cumberland County Holstein-Friesian Breeders' Association will hold their annual sale at Carlisle, Pa., Wednesday, May 2d. This is the sixth of a series and the consigners and managers aim to make this surpass all previous events. During the past few weeks three 30-lb. cows have been developed in Cumberland County and a number of state records have been made. Animals closely related to these new 30-lb. cows will be offered in the sale as well as others related to cows that have recently made state records in sub division B—the dairymen's division. Several of

(Concluded on page 296.)

MARKETING A HIGHCLASS PRODUCT

The Tillamook County Creamery Association reports that during 1922 the Tillamook dairymen received 59.9 cents per pound for their butterfat, the milk being made into cheese. During the year, the associated creameries made 92,774 boxes of cheese and received for this cheese the sum of \$1,706,186.49.

Tillamook County was handicapped by unfavorable climatic conditions during the spring and summer, yet the secretary, Carl Haberlach reports that Tillamook County cheese averaged nearly 6½ cents a pound above the Wisconsin average for the past year and also that California took 65 per cent of the Tillamook cheese manufactured. He gives credit for these results to the good cheese manufactured, the reputation the Tillamook product has established, a generous advertising campaign and an efficient corps of brokers. From reading the report, we believe that efficient marketing had a great deal to do with the returns for when prices were low, part of the product was put in storage and was marketed when prices showed an improvement.

PUREBREDS REPLACE SCRUBS

The first prize of \$1,000 in the Kansas Better Bull Contest was won by Franklin County, the cattle owners of that county replacing 161 scrub sires by purebreds. Rawlins County was second with 123 scrub bulls replaced and so won \$500. Clay County with 108 replacements won the third prize of \$300, and the fourth prize of \$200 went to Decatur County with 107 replacements. Agricultural commissioner, Geo. W. Catts working with the Kansas City Chamber of Commerce awarded the prizes.

The Better Bull Contest has been supervised by the following committee from the College of Agriculture: Harry Umberger, chairman, Karl Knaus, Dr. C. W. McCampbell, Roy Kiser, Professor J. B. Fitch and L. C. Williams.

COMES BACK FOR SECOND BULL

One of the grand old matrons in the Maple Grove Herd at Centerville, Penna. is Hillview Retta Veronica 109072. She has an official seven day butter record of 431 lb. milk, 15.09 lb. butter and has four daughters in the A. R. O. list. She is a persistent and regular breeder and has given her owners thirteen fine calves. Number 12, is a very nice young bull sired by Maple Grove Segis Glista King was purchased by Park E. Wood of Townville, Penna. This is the second bull Mr. Wood has selected from Maple Grove Stock Farm a sure sign that he is a satisfied customer.

Maple Grove Segis Glista King, sire of Mr. Wood's new herdsire, is a son of Model Daniel Glista who was bred in the Cornell University herd and was by Model King Segis Koningin from Glista Dinah a 25.70 lb. daughter of Glista Coreva a 34 lb. cow that two consecutive years exceeded 31 lb. butter in seven day official test, each time making right around 600 lb. milk. She is the second highest record cow in the University herd and is closely related to Glista Ernestine, the only cow that ever made a 30 lb. official seven day butter record seven different years.

WIRTH GETS GOOD BULL

Walter Wirth, of Batesville, Ind., recently purchased a very nice young bull from the Cray Farms, Warren, Penna. The sire was a son of Meadowsdale Helena De Kol Burke 3d a three-times 30-lb. cow, her highest record being 34.93 lb. butter made as a six-year-old. She is said to have weighed 1,945 lb. just before she freshened as an eight-year old and made her third 30-lb. seven-day butter record. The dam of Mr. Wirth's bull produced 25.11 lb. butter, 652.3 lb. milk in a week.

Since the bull was delivered, Cray Farms Christina, sister to the sire of the Wirth bull, has completed records of 30.40 lb. butter in seven days, averaging 91 lb. milk a day and 119 lb. butter in thirty days from 2,560 lb. milk, calving as a senior two-year-old. Just twelve months ago she made 28.21 lb. butter in a week as a senior two-year-old.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 295.)

the members of the Cumberland County Holstein Breeders Association are also members of the Cumberland County Cow Testing Association and their animals have made remarkable records, a splendid indication of the true value of the animals to the man who has to depend on his dairy and farm for a livelihood.

The sale will consist of fifty head of tuberculin tested Holsteins selected by a competent committee. Included in the number will be a daughter of King of the Pontiacs something that now-a-days is seldom seen at public sales. Catalogs may be secured from R. L. Shenk secretary of the Cumberland County Association. His address is Newville, Pa.

THE REESE DISPERSAL SALE

The T. L. J. Reese dispersal sale held at Montoursville, Penna., March 15 brought together a number of interested buyers as the herd was fully accredited and Mr. Reese advertised that he had been 20 years breeding purebred Holsteins and never had a reactor.

There were only 18 head in the herd and three of these were small calves. The total was \$3,055.00, an average of \$169.72. The calves brought \$50.00, \$67.50 and \$75.00 respectively. The top price was \$290 which M. D. Welshans of Jersey Shore paid for Agnes Korndyke Lyons, an untested daughter of Duke Pontiac Korndyke Segis Lyons. The next price was \$265.00, which Henry W. Eves of Millville paid for Maud Pontiac Pietertje Sethje, a very nice heifer coming three years old. The Herd bull, Blacres Adam Ambrosia went to J. Harry Rakestraw of Williamsport for \$230.00 which was a very low price for this good son of Cornucopia Ormsby Lad. The auctioneer was Harry Scott of Canaseraga, N. Y. The names and addresses of the purchasers with the names of the animals they purchased and the prices paid follow:

Blacres Adam Ambrosia, male, 2 yrs., J. Harry Rakestraw, Williamsport, Pa.	\$230.00
Walker Pontiac Lyons, 4 yrs., Geo. T. Swartz, Montoursville, Pa.	175.00
Agnes Korndyke Lyons, 5 yrs., N. D. Welshans, Jersey Shore, Pa.	290.00
Fanny De Kol Segis Lyons, 6 yrs., Bruce Opp, Opps, Penna.	120.00
Clorinda Clothilde Butter Girl, 7 yrs., Clyde G. Sallada, Montoursville, Pa.	227.50
Jennie Lind Emporia, 11 yrs., Geo. T. Swartz,	130.00
Lorena De Freule De Kol, 4 yrs., Geo. T. Swartz,	227.50
Elnora Hartog Eva, 4 yrs., Cyrus Casner, Hepburnville, Pa.	152.50
Maud Pontiac Pietertje Sethje, 2 yrs., Henry W. Eves, Millville, Pa.	265.00
Johanna of Maple Ranch 2d, 9 yrs., Geo. T. Swartz,	100.00
Daisy Hengerveld Sadie Vale, 3 yrs., J. B. Michael, Muncy, Pa.	200.00
Mechthilde Davis Pontiac McKinley, 7 yrs., H. D. Snyder, Hepburnville, Pa.	185.00
Cornucopia Mary Pontiac, 4 yrs., J. B. Michael,	160.00
K. H. Colantha Fayne, 5 yrs., O. P. Van Kirk, Orangeville, Pa.	205.00
Colantha Creamelle Princess De Kol, 4 yrs., C. G. Sallada,	200.00
Princess Glista, 3 mo., J. Harry Rakestraw,	75.00
Ormsby Pontiac Ambrosia, 3 mo., J. P. Michael,	62.50
Lady Korndyke Veeman, 4 mo., Geo. T. Swartz,	50.00

HONOLULU BUYING PURE-BREDS

A shipment of sixteen purebred Holstein cows purchased by W. H. Miller, the San Francisco agent of the Matson Navigation Company, from several Holstein breeders of Stanislaus County, went from San Francisco the first week in March, consigned to the Oahu Railway and Land Company at Honolulu. Mr. Miller announced that the company was erecting a large dairy barn and just as soon as it was completed they would be in the market for some more purebred Holsteins.

GOOD BULL HEADS GOOD HERD

King Johanna Pontiac Vale, the good bull that stands at the head of the herd owned by Gramps & Fredericks, Fort Plain, N. Y., is a son of a 30-lb. four-year-old. His dam Aetna Wayne Johanna made 30.54 lb. butter from 553.6 lb. milk. She was sired by a son of Colantha Johanna Lad 8th, whose daughters and granddaughters are making good both in test work and in the general dairy. The sire of this bull is full brother to Idleaze Pontiac Lass, who made 42.50 lb. butter in seven days when only four years and fourteen days old, producing 715.5 lb. milk. Of course, everyone knows she

is a daughter of King of the Pontiacs. The two nearest dams of King Johanna Pontiac Vale has seven day records that average 36.09 lb. butter.

While it is not the intention of the owners of this good herd to endeavor to make the highest possible seven day records as they believe that a cow is first of all a dairy animal and kept for all-the-year-round production and reproduction and so increase the breed yet there are a number of good record cows in this herd. Queen Segis Pontiac Bijou as a four-year-old produced 24 lb. butter in seven days. She milked 81.2 lb. milk her best day and averaged 3.848% fat. Mottled Twisk Bijou De Kol 2d made 21 lb. butter in a week averaging 3.54% fat. Her best day was 77 lb. milk. The two-year-old Fort Plain Queen Pontiac produced 19.5 lb. butter in a week and averaged 3.98% fat.

EASY OF ACHIEVEMENT

Josiah Johnson, a Mississippi darky, who is something of a professional invalid, recently made this announcement to his wife:

"Maria, de doctah done tole me dat ef I ain't careful I's gwine to be spendin' twenty-fo' houahs a day in bed."

"Huh! Dat would jest be addin' a couple of houahs to yo' regular occupation!"

CONCERNING EMERGENCY HAY CROPS

In the March Wisconsin news letter, Professor R. A. Moore, agronomist at the University of Wisconsin, gives some good advice to the farmers of his state, most of which is applicable to conditions in all the northern states where emergency hay crops may be needed on account of frost or heaving killing out the meadows. So we are passing a good thing along:

Now is the time for each and every farmer to watch his clover fields: If the clover seeding of last year should be killed no dairy farmer can afford to purchase much outside high priced protein feed, nor can he feed his stock on timothy and blue grass. If clover and alfalfa are killed by the freezing and thawing of the Spring it is very essential that the farmers get in a leguminous crop at the earliest possible moment. There are two crops in particular that we are recommending at this time, which we feel are very essential for all dairy farmers.

Where the clover and alfalfa has been a failure, plow up the land and put in soy beans. These are usually drilled in about June 1st, with the ordinary grain drill, stopped up at intervening holes, so that the beans are placed from 24 to 30 inches apart between the rows; drop the soy beans about two inches apart in the row. Where beans are planted in rows one bushel will plant two acres for seed purposes. Beans may be broadcasted if the soil is free from weeds, at the rate of one and one-half bushel per acre. In the northern counties the early black soy bean is profitable. In the central and southern counties plant the Manchu or Itosan variety. Soy beans should be cut for hay just as the plants are beginning to develop pods. They are cured quite similar to clover. All classes of live stock take readily to soy beans.

Another emergency crop should be peas and oats. Canada field peas and oats sown at the rate of about one and one-half bushel of each per acre is about right. These can be sown in the early Spring or a little later in the Spring if they are to go on ground where clover had been killed out. Usually the field peas are used, but the Horsford canning peas can be used if necessary. Peas and oats should be cut for hay just when the oats have nicely headed out. The peas will usually be in blossom at that time. Hay is made readily and is handled the same as other hay crops. All classes of livestock take very readily to a mixture of peas and oats.

TAG IS TIMESAVER

During the testing campaign in Steuben County, New York, the veterinarians and their helpers used the Ketchum Clincher Ear Tag exclusively as well as the Ketchum Branding Irons. There were 32 veterinarians engaged in this work and they used nearly 50,000 tags. It was estimated that considerable time which means money was saved by the use of the Ketchum tagging system owing to the ease and quickness of operation.

WEED-HURST

The herd of purebred Holsteins at Weed-Hurst Stock Farm, Otto, New York consists of seventy head and certainly the owners, Burdick & Son have every right to consider the Weed-Hurst herd as being absolutely free from tuberculosis as the herd has been tested no less than seven times in eleven years without finding a reactor.

Quite a number of the younger cows in the herd are daughters of King Silver Etta Dutchland, who is a son of the famous Dutchland Colantha Sir Inka. The work of the daughters of this bull are too well known to need repetition here. We need just say that he has two daughters that have each made over 1,000 lb. butter in a year, has fifteen above 30 lb. butter and is a son of Colantha Johanna Lad from the 30.88 lb. four-year-old Lady Princess Beets.

The dam of King Silver Etta Dutchland is Fancher Farm Silver Etta Segis Rose. As a junior four-year-old this cow made an official record of 21.84 lb. butter from 457.6 lb. milk. She is from a 20-lb. cow and was sired by King Aaggie Segis, whose daughters include the 46-lb. four-year-old Fancher Farm Maxie and who was by King Segis from Segis Aaggie De Kol Beets, whose 7 day record of 32.06 lb. butter was world's record in class at time of making.

The Burdicks have intensified the blood of Dutchland Colantha Sir Inka and the calves are sired by Eagle Boy King Korndyke, a grandson of the famous old "Dutch." Eagle Boy is from Queen Annie Korndyke Colantha, a 25-lb. cow that averaged well over 80 lb. milk a day during the week of her test and who has two good record A. R. O. daughters. Her dam is Yankee Annie Korndyke a 27.94 lb. cow whose dam has a 20 lb. record.

The sire of Eagle Boy King Korndyke is King Sadie Vale Supreme by King Korndyke Sadie Vale from K K S V Topsy 40.38 lb. butter in seven days as a three-year-old with an average of 81.2 lb. milk daily. Her dam is a 33 lb. four-year-old daughter of King Segis De Kol Korndyke. The seven day records of the seven dams appearing on a four generation chart of Eagle Boy King Korndyke average 31.23 lb. butter.

ONE RESULT OF LOWER PRICES

The value of plow lands in the United States has decreased 26 per cent in the last three years. The average value of all plow lands in the United States on March 1st in 1920 was \$90.01 an acre; on March 1st, 1923, \$66.53. The largest decreases occurred in the Mississippi Valley states where land reached a very high valuation. The smallest decrease occurred in the New England states, where the drop was only \$2 to \$4 an acre. The average price of plow lands was over \$100 an acre on March 1st, 1923, in only three states, Iowa, Illinois and California, the average in those states being \$153 in Iowa, \$126 in Illinois and \$113 in California.

NEW YORK GRADE MAKES 1,000 LB. FAT

The great Holstein grade cow, Aaggie, owned by Sam W. Barber, of Scottsburg, N. Y., has completed her year record, making 23,061.7 lb. milk, 1,014 lb. fat, with an average test of 4.3 per cent. During the year Aaggie consumed 13,285 lb. of ensilage, 1,508 lb. hay and 9,502 lb. of grain. The total cost of her feed was \$187.95 and she is reported as earning her owner \$345.09 profit. She was milked three times a day and certainly received good care and feed. In the 12th month of her lactation year, she is credited with a production of 95.8 lb. fat, 996.4 lb. milk. She was enrolled in the Livonia Association which operates in part of Livingston County and of which L. P. Zumstein is the tester. Mr. Barber has a herd of 25 cows, mostly grade Holsteins and during 1922 they averaged 11,314.3 lb. milk, 457.9 lb. fat.

Farm accounting or keeping books on farm operations is now being taught in the eighth grade in public schools of 21 Ohio counties. The scholars will be learning something that will be of use to them in after life and at the same time, gaining just as much in mental development as if they were figuring the age old transactions between James and John.

By Your Bull from an Accredited Herd

GOOD RECORD AT ELMRIDGE

Some excellent records were recently completed in the ElmrIDGE Herd of which J. Irving Stryker, of Millstone, New Jersey, is owner. Ridgedale Johanna Fayne, as a senior two-year-old, made 24.29 lb. butter and 601.3 lb. milk in seven days producing 91 lb. of milk and over 3.5 lb. of butter her best day. This heifer is of good size, is of strictly dairy type and she is a real show animal. Under average farm conditions her owner states that she is producing 75 lb. of milk a day.

Mr. Stryker's herd consists of only twelve registered females of milking age but they include some splendid individuals, while the recently completed record indicates that production and individuality are combined. The herdsire is Sir Model Alcartra Fayne, the bull Judge Moscrip placed second in the two-year-old class of his All-American selections. Sir Model is by the Bloomingdale herdsire, King Model, a son of King Segis Champion and Mabel Segis Korndyke the first 40 lb. heifer. His dam is from a 32-lb. cow sired by a son of King of the Pontiacs. Here we find individuality and fashionable bloodlines in combination.

BLESSED WITH TWINS

Kirkpatrick Bros. of Reedsburg, Wis., had the pleasure, on going into their barn the morning of Feb. 17, to find a nice pair of bull calves in the box stall of Myrtle Piebe Johanna 3d, who, less than a year ago, made a seven day official record of 30.73 lb. butter 620 lb. milk, two different days of the test milking 92 lb. She is less than seven years old now and has produced seven calves, three heifers and four bulls all living to-day. Her latest sons were sired by Johanna Kayewood Korndyke a son of Kayewood Joyce Korndyke 39.39 lb. butter in seven days.

"MAKING ANIMAL TAGGING EASY"

Ketchum Clincher EAR TAG
The new Ear Tag for Cattle, Sheep and Hogs, 3 sizes, simplest, best and cheapest. Requires but one movement to pierce ear and clinch itself. Made of bright steel, light but durable. STEVENS TANK & TOWER CO.

AUBURN, MAINE

IRIS DE KOL CANARY INCREASES RECORD

Iris De Kol Canary, No. 414027 has become a 30 lb. repeater by increasing her record of 32.16 lb. butter made as a four-year-old to 39.65 lb., reports her former owner Mark Hunt of Great Falls, Montana. Iris is a daughter of Canary De Kol Oak, a son of Canary Paul Fobes Oak Homestead. Her dam, Iris of Shrewsbury 3d is a 20-lb. daughter of Pontiac Zephyrus, a son of Hengerveld De Kol.

Iris De Kol Canary was owned for a time by Mr. Hunt and she dropped him

As she was born January 11, 1917, evidently she was tested as a six-year-old this time. She dropped her previous calf January 6, 1922. Two seven-day records averaging 35.905 lb. butter in less than fifteen months is certainly a great performance, or a brace of great performances, whichever way you like to say it.

When Mr. Hunt sold his farm and herd it was to Mr. Richard T. Ringling. About December 1st, the Ringling Ranch housed 68 purebred Holstein-Friesian cows, and about 520 high-grade Holsteins. There were at the time we heard, 20 bulls on the ranch among them being Canary

IRIS DE KOL CANARY

39.75 lb. butter in seven days as a six-year-old; 32.16 lb. butter in seven days, as a four-year-old. Owned by Fred Hartsook, Lankershim, California.

two good sons, then he sold her to David G. Maxwell, who took her to California and in his herd at Hollywood, she made her first official record as a senior four-year-old, of 621.6 lb. milk, 32.16 lb. butter. When Mr. Maxwell dispersed his great aggregation of Holsteins the last two days of August, 1922, Iris was struck off to that good California breeder Fred Hartsook of Lankershim for \$1,500. Mr. Hartsook purchased several of the best members of the Maxwell herd and it is in his great establishment that she has just made her record of 39.65 lb. butter.

LUTHERAN HOME HAS GOOD HERD

The Norwegian Lutheran congregations of Dane County, Wisconsin, were recently called upon to raise \$4,000.00 for the purpose of enlarging the dairy barn at the Skaalen Home for the Aged. The Home is situated near Stoughton and owns a small but big-producing herd of purebred Holsteins and a number of fine official records have been made including a 36-lb. seven-day butter record by Porcelain Thora Baker.

The superintendent of the home, the Rev. B. J. Larsen, wishes to make the institution largely self-supporting by means of the Holstein herd. At the

present time the dairy barns are crowded, there are no box stalls and some of the animals have to be housed in small out-buildings which adds to the cost of herd operations.

LOGIC

"Did it ever occur to you," said the minister, "that thousands and thousands of people on earth die every day."

"Yes, parson, it has," said the person addressed, "and what is more, it has set me thinking."

"Indeed! And what has been the result of your thinking?"

"I have come to the conclusion, sir, that living is a very dangerous thing."

KEEP THIS FARM IN MIND

The Carmil dairy and stock farm consists of 143 acres of rich, fertile soil and is situated about six miles from Santa Maria, Cal. The owner and manager is Carl McCullers. There are 85 acres of alfalfa which was sown about a year ago. This is irrigated from a well 104 ft. deep, the water being 30 ft. down. The irrigation pump will supply 1,600 gal. of water a minute. There is a nice herd of purebred Holstein cattle, a number of which have been prize winners at the state fair. The herdsires are Pietertje Segis Jannek and Maxwellton Pietertje Mercedes. The former is a son of King Segis Pontiac Jannek, formerly owned by James J. Jeffries. The five nearest dams of Maxwellton Pietertje Mercedes have year records that average more than 1,300 lb. of butter.

At the present time there are 25 cows in milk with 16 heifers that will freshen this coming summer. One of the cows is Elmwood Segis Sadie with a seven day record made as a four-year-old of 32 lb. butter. There are several daughters of Sir Ormsby Skylark in the herd and these, of course, are half sisters to the former world's champion, Duchess Ormsby Skylark, the first cow to make 1,500 lb. of butter in a year. Another is Cornucopia Paul Segis Fayne, champion at the Sacramento Fair last fall. It is planned to give most of the cows long time records, and nearly all the young animals are from cows that have produced 1,000 lb. or more of butter in a year.

REPORTING BY RADIO

One thing at a time is well, even in radio. Recently a reporter on the Floodwood Bugle tried to receive news messages from two country correspondents at the same time. One was broadcasting news of a wedding, the other of a public sale advertisement. Following is the receiver's finished copy:

"Beginning at nine o'clock amidst attractive decoration of spring flowers. Mr. Andrew A. Lemon and Miss Helen Eaton were disposed of at public auction on my farm, which was one of the most charming events one and one-half miles east of her father, who is located at a vantage point, near the Logan-Nelsonville pike.

The bride was gownned in a becoming tarpaulin, 10x16 ft. with large oval shaped mounds of good baled hay, and the following property to-wit: One Holstein bull, two years old, led the procession down the aisle scattered other articles too numerous to mention before background of farm impressive ring ceremony was said by six Poland China pigs, registered and tubercular tested, pastor of the First Baptist church of Floodwood. One set single buggy harness with a drop effect of trailing arbutus and her bridesmaid complete with tugs and bridle made it one of the most complete and charming events of its kind that will work single or double of the season. The groom was handsome in seven tons of clover and alfalfa mixed hay and diamond studded harrow with 42 teeth. His best man was

one Delaine Ewe, a former schoolmate at Ohio University.

Only intimate friends of 16 milk cows were present, including 14 registered Holsteins, the father and mother of the groom, six miles, and one good road scraper. Many beautiful and useful household articles such as sixteen quarts of tomato preserves, one brass kettle, beautiful cut glass tin cans, one church, one baby crib, one electric toaster and six bushels of eating potatoes were received by the charming auctioneer, A. M. Mooney. The decorations of also six cylinder uncle and two white calves will be served on the grounds by the members of the Ladies Aid of the Floodwood church. The wedding took place at high noon and will last until all goods are sold. Terms, Nine months time with approved security as is the custom at sales of this kind with interest at a six o'clock supper at the Ambrose Hotel, Logan.

After the nuptial knot had been tied with 200 feet of hay rope the happy couple left on one good John Deer manure spreader for an extended trip through 60 shocks of fodder to be hauled by the purchaser. After a honeymoon through the east they will be at home to their friends with one good baby buggy, 16 Rhode Island Reds and 30 bushels of corn in the crib.

All sums of \$5.00 cash but more time will be given the groom who is the son of one dapple gray gelding weight 1,400 lbs., age 7 years, well broke and works in any place. They have one cozy covered wagon with 3-inch tires, and dump bed fitted for housekeeping on East Mulberry street. The bride has had many beautiful parties given in her 60 bushels of onion sets and her many friends wish her much joy and 3 garden hose, same as new. The bride attended Ohio University and is a member of 7 stands of bees."

COLORADO SIRE LAW

On April 1st of this year, the purebred sire law went into effect in the state of Colorado. This law prohibits owners from permitting inferior stallions over the age of two years or inferior bulls over the age of one year to run at large. It says that, "any bull shall be considered an inferior bull that is not a purebred." The law, which was passed two years ago also says "Nor shall any owner or agent allow or permit any Jersey, Holstein, Guernsey or Ayrshire bull or bulls to run at large in this state under any pretense whatever."

POCKET BUTTER BOXES IN BERLIN

Pocket butter boxes are becoming popular with restaurant patrons in Berlin. Butter is no longer served by restaurants because of the high price, and it is becoming quite the thing for women to produce silver butter boxes from their hand bags. The men also are provided with butter boxes made in imitation of a small book. Fresh butter is available in the markets but most people are using oleomargarine. —Dairymen's League News.

Statement of the ownership, management, etc., required by the Act of Congress of August 24, 1912, of THE HOLSTEIN BREEDER AND DAIRYMAN, published weekly at Harrisburg, Pennsylvania, for April 1st, 1923.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the state and county aforesaid, personally appeared HOWARD C. REYNOLDS, who, having been duly sworn according to law, deposes and says that he is the business manager of THE HOLSTEIN BREEDER AND DAIRYMAN, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, (and if a daily paper, the circulation) etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse side of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are:

Publisher, THE BREEDER AND DAIRYMAN PUBLISHING CO., Harrisburg, Pa.

Editor, Not any.

Managing Editor, HOWARD C. REYNOLDS, Harrisburg, Pa.

Business Manager, HOWARD C. REYNOLDS, Harrisburg, Pa.

2. That the owners are: (Give names and addresses of individual owners; or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock).

OWNER: THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

STOCKHOLDERS OF THE BREEDER AND DAIRYMAN PUBLISHING COMPANY are:

E. E. SOUTHWORTH, Clarks Summit, Pa.

MARK T. MILNOR, Harrisburg, Pa.

EUGENE B. BENNETT, New Haven, Connecticut.

HOWARD C. REYNOLDS, Harrisburg, Pa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) There are no bonds, mortgages, or other securities outstanding against THE BREEDER AND DAIRYMAN PUBLISHING COMPANY.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

SWORN TO AND SUBSCRIBED BEFORE ME,

this 27th day of March, 1923.

HOWARD C. REYNOLDS,

Managing Editor.

[SEAL] MARLE P. WILBAR, NOTARY PUBLIC.

My commission expires January 20, 1927.

Representatives and Dealers WANTED

An excellent opportunity is offered one man in every town or county to take orders for U-Cop-Co Special Steam Bone Mineral Meal and Maromel on a very profitable basis.

These specially prepared products for dairy cows and pigs are used by breeders everywhere and by most agricultural men. They have been nationally advertised for years. Continued advertising will make them easy to sell. Your big opportunity to handle U-Cop-Co and Maromel on a very profitable basis is right now. Write today for detailed information, our plan of co-operating with you and descriptive literature.

Big Type Chester Whites Pigs, 10 weeks to 8 months, pairs and trio, no kin, sired by 1000-lb. boars. Boars a specialty.

OAKDALE FARM, CLYDE B. THOMAS, BOONSBORO, MD.

MADE GOOD WITH HOLSTEINS

Landing in Poplar Bluff, Missouri, some twelve years ago without any funds, Joe Prickett went to work on a farm and soon branched out for himself. To-day he owns the 100 acre farm on which he lives and he also owns a Holstein herd which Professor Harmon of the Missouri Agricultural Extension Service has called the best herd of dairy cows in Southeast Missouri. The average production of the herd is 7,528 lb. One cow has produced just over 11,000 lb. milk in a year and another came very close to the 11,000 lb. mark. Poplar Bluff is in the great valley between the St. Francis and Black rivers, a region consisting of 127,500 acres which is now drained by the Inter-River Drainage Project which cost two million dollars but has brought under cultivation some of the best agricultural land in the southeastern section of the state.

SUCCESS CROWNS FIRST ATTEMPT

One of the first men in Sauk County, Wis. to recognize the value of Holstein cattle was Fred C. Kruse of Loganville and his good opinion of them still holds good. One of the first A. R. O. tests he made, however, was on Queen Pontiac of Roseland about a year ago in which this animal, then a junior four-year-old, produced 30.27 lb. butter from 547.5 lb. milk. She was kept on year test which recently closed and she produced 20,040.3 lb. milk 1050.5 lb. butter in 365 days. Her performance is all the more gratifying to her owners as she was bred and developed at Roselands. Her sire, Canary Segis Inka Homestead was in service in the Kruse establishment for several years. There are breeders who have tested cows for years and have been unable to make a record of a thousand pounds. Well done, Mr. Kruse.

WASHINGTON DAIRY NOTES

A number of meetings are being held in various parts of the state in the interest of better dairy stock and a bull association is being organized in Clallam county. Nine dairymen, each with a large herd, have signified their intention to join. It is planned to have four bulls.

Chinook Piebe David, a young purebred Holstein bull has been purchased by a farmer in the Pasco district and a bull association is being considered. Twenty-seven dairymen owning 530 cows have signed up for the Grays Harbor testing association and boys and girls dairy clubs are being organized in Skagit county. A standard for the clubs has been set with 350 lb. of butterfat for two-year-old dams and 500 lb. butterfat for mature dams.

During the past three months 31 purebred dairy animals have been placed on farms in Thurston county. Sommers Brothers of Little Rock leased from George J. Galvin of Centralia the well known bull Chimacum King Korndyke Boon, a son of Chimacum Wayne Boon, sired by Chimacum King Korndyke Sadie Vale. Chimacum Wayne Boon produced 1134.07 lb. butter in a year.

In Yakima county six standard dairy clubs have been formed with 47 boys and girls enrolled. The Extension Service of the State College report that 70 boys and girls have already enrolled this year in dairy club work.

STATE CHAMPIONS BURNED

A J. Collins of Sabetha, Kansas, suffered a severe loss when his big Holstein barn burned about three o'clock in the morning on Sunday, March 11. While his splendid Holsteins were gotten out of the barn, two were so badly burned that they died soon afterwards and 19 had badly burned udders. The cows were heavily bedded with straw and this catching fire, while it had a tendency to drive the animals from the barn, inflicted some terrible injuries. There were 42 head in the stables.

Both of the injured cows were state champions and one had a 32-lb. seven day butter record. The origin of the fire is unknown. The loss financially, is covered by insurance.

At a recent meeting of the directors of the King County cow testing association, a plan was adopted for the sale of calves from cows in the association. The plan calls for two classes of bulls, five classes of cows and nine classes of calves. Calves will range in price from \$8.00 to \$25.00, depending upon the butterfat records of the dam and sire. Only calves belonging to this year's members of the testing association will be sold. In many respects this plan resembles the one adopted by the Clallam county cow testing association. Dairymen belonging to the latter association have been unable to supply the demand for their high grade calves from good butterfat producing cows.

BUY SHOW BULL IN COMPANY

Four progressive dairymen of Huntsville, Utah formed a company for the purpose of purchasing a high-class Holstein bull. They settled on a handsome young fellow in the herd of C. F. Potter of Ogden. His dam is Maple Grove Gladi Korndyke. The bull himself was a blue ribbon prize winner at the Ogden Livestock Show last January. He is a grandson of Weber Sir Pontiac Aaggie who was grand champion at the Ogden Show and who was the grand champion at Salt Lake City last year.

The four owners of the young show bull are James Surridge, Joseph Smith, Thomas A. Burton and Louis Wangsgard. They are to be congratulated upon their businesslike action. The best is none too good when planning for the future of a herd.

HER EXPERIENCE

At the East Side Sunday school in New York City the teacher was talking to her class about Solomon and the visit of the queen of Sheba.

"When the queen of Sheba came and laid jewels and fine raiment before Solomon, what do you suppose he said?" she inquired.

One small girl who had evidently had experience in such matters promptly replied:

"How much do yer want fer the lot?"

The wife of a certain great linguist, upon returning home unexpectedly, one day caught her husband in the act of embracing the maid.

"Why sir," exclaimed the wife, "I'm surprised!"

"Mrs. Blank," replied the great scholar in his most calm and dignified manner, "when will you ever learn to use the English language correctly? I am the one who is surprised. You are amazed." —Boston News Bureau.

Keystone Plum Johanna

1052.96 lb. butter in a year is the dam of the sire, and the granddam of the dam of my junior herdsire ORIGIN SIR NAPOL CORNUCOPIA. She produced 29.35 lb. butter in 7 days and during the year made 22,190.7 lb. of milk testing 3.8% fat. We are breeding for her type and producing capacity.

A. W. DOWNTON STARRUCA, PENNSYLVANIA

CONSERVATION AND LEGUMES

By W. C. COFFEY

Conservation must necessarily be a large feature in any constructive agricultural program for a state or nation. As a rule, the term suggests simply preservation, and it is undoubtedly true that no program has yet been put over which succeeds in preserving all of the producing power of our virgin soil, in countries of great expanse such as the United States. This being the case the definition of conservation should go farther than the mere idea of preservation. It should include a consideration of methods whereby the natural inheritance of the human race, such as the soil, may be improved.

The ambitious, efficient farmer desires to leave to his children a better inheritance than he received; that is, the feeling of turning over to his children acres that will produce more wheat, more corn, more hay, than these same acres would produce when they came into his hands. It is easy to predict what would become of our agriculture if we did not have a considerable percentage of farmers who possess the ambition and the efficiencies necessary to make the land more productive as the years go by. In any great industry, such as agriculture, there is sure to be a percentage who are not efficient; they cannot keep even with the game, they live by taking away more from something than they give back to it. In agriculture, they almost invariably take away more from the soil than they return to it.

In soil robbing or depletion, one of the elements, which is lost very rapidly, and which is vital to plant life, is nitrogen. It is only within comparatively recent times that a cheap method of restoring this element to the soil was discovered. The great agriculturist, Sir John Lawes, of the Rothamsted Experiment Station, England, once wrote to Prof. Manley Miles of the Michigan Agricultural College "that, within his

lifetime, England had well nigh exhausted the guano beds of the South Sea Islands." He also pointed out how these beds had been thousands of years in forming, and that there must be some natural process of nitrogen fixation by wholesale discovered soon or the civilized world would decline from lack of food. A short time after this letter was written, four years, I think, Helreigel made the wonderful discovery that the bacteria which attach themselves to the roots of leguminous plants are able to fix atmospheric nitrogen so that it becomes available to the plant, and thereby adds to the store of nitrogen in the soil. This discovery pointed the way to our salvation in soil fertility so far as the element of nitrogen is concerned.

While we are addressing ourselves chiefly to the bearing of the growing of leguminous plants on the fertility of the soil, we must not forget that it is almost impossible to conduct a prosperous animal husbandry, or dairy husbandry without making use of the products of these plants. Years ago, before anything was known about leguminous plants from a scientific standpoint, England had a large sheep husbandry which she conducted with great difficulty. Had it not been for the exceedingly high price for wool, and the protection which the English government gave the industry, it would have been impossible to maintain it. Huguenot refugees from France introduced to England the root and clover crops. Almost immediately there was a great step up in the prosperity of the sheep industry because these crops kept the sheep properly nourished through the winter months.

The more widespread use of leguminous plants means a better dairy and livestock industry, and if the manurial products from these plants are properly conserved and applied to the land, the maintenance and increase of the nitrogen content of our soils. If this is done, we shall be led to observe the other considerations necessary in keeping our soils in proper balance with respect to elements of fertility. Therefore, we shall have made a great step-up in conservation, the infallible sign of progress.

STATE CHAMPION IN HOSPITAL HERD

The farm owned by the State Hospital at Massillon, O., is an important feature in the maintenance of the hospital. The herd contains 161 Holsteins, one of which is Stark Fayne De Kol, 22,741.1 lb. milk and 993.41 lb. butter. She is the Ohio State champion of her class. There are nearly 500 hogs and during the last nine months 78,242 lb. of pork were dressed, considerable of which was sent to other institutions. Last year the farm produced more than 4,000 bu. of tomatoes, 2,400 bu. of potatoes, 297 lb. of cabbage and 2,000 bu. of beans.

At the present time the Massillon hospital has a population of more than 2,000 and the institution is appraised at \$1,600,000. The hospital grounds consist of 1,216 acres of some of the most fertile land in Stark County.

HOLSTEIN CATTLE FROM A PHYSICIAN'S STANDPOINT

By Dr. W. H. KETCHUM IN THE LOS ANGELES CULTIVATOR

When I was a boy back in Ohio where I was raised on a farm father had one cow, his best, that made ten pounds of butter in seven days and she was considered some cow.

As years rolled by I left the farm and entered medical college where the uses for milk became of great interest especially in the sick room, milk being the principal diet in many cases of illness. One day after being in practice several years I was called to see a baby who was literally starving to death. In spite of the fact that they had used milk from various sources nothing seemed to agree with the baby. After trying several artificial foods without success the baby was given up. The baby had no particular disease except the fact that all foods seemed poison to it. One day a good old lady suggested to me that "Holstein milk was what that child needed," explaining that her child had suffered the same way and was only able to take Holstein milk. Our teaching was to the effect that milk was milk and if fresh and clean then all was well, but the old lady stated that there was a difference in the types of milk and after persistent urging on her part we tried Holstein milk and to the surprise of every one in the house it stayed down, and the baby would cry for it and in a short time began to take on flesh and eventually got well. Then the thought came to me, why the difference?

Some children drink any brand of milk and thrive, while others will not. There are so many things in this world about which we know so little and this is one of them. After this interesting experience with Holstein milk I began boosting it for baby milk and finally purchased a herd of 18 cows and a bull.

TURNING BACK TO THEIR OLD LOVE

It is estimated that more than 1,000 cows are being shipped monthly into Salt River Valley, Arizona. This has always been a good dairying section but when high prices were being paid for cotton, ranchers in the Valley sold their dairies and made cotton fields of their pastures and meadows. When the slump came, prices they received for their cotton was way below the cost of production and as fast as they are able, they are turning to the good old dependable Holstein dairy cow.

HOLSTEINS BURNED

Eighteen head of purebred Holsteins, together with three horses and considerable farm equipment were burned March 29 on the farm of Fred L. Davis which is situated three miles from Chautauqua, N. Y. The cause is not known as the barn was not electrically wired and no one had been in the building with a lantern or light as far as it was known. The fire broke out at one o'clock in the morning. The loss is partially covered by insurance.

King Beauty Sylvia Lyons

Our young herdsire is by KING ECHO SYLVIA MODEL, whose seven nearest dams averaged 35.49 lb. butter in a week and whose first five tested daughters averaged 21.29 lb. butter in a week as junior two-year-olds. His dam is a 26-lb. three-year-old that averaged 71.5 lb. milk a day.

His individuality is equal to his breeding for he was awarded second prize at the 1922 New York State Fair in a class of sixteen bull calves.

He will be bred to daughters of WOODMONT ECHO SYLVIA CHAMPION the first prize three-year-old at the 1922 New York State Fair, whose sire is a son of Champion Echo Sylvia Pontiac and whose dam, Butter Boy Empress, made 30.27 lb. butter in a week, milked 100 lbs. a day and was first prize aged cow, first in the A.R.O. class and grand champion at the 1921 New York State Fair.

A GRANDSON OF 37th By KING TWEEDE SPRING FARM

A grandson of Sir Pietertje Ormsby Mercedes 37th,
a bull that is noted for his 1000-lb. daughters.

BERKS HENGERSVELD ORMSBY

born March 25, 1923, a nice little individual, being
seven-eighths white and well grown for his age.

HIS SIRE:—King Tweede Spring Farm who now has 17 A.R.O. Daughters, is by Spring Farm King, who is one of the best proven sons of King of The Pontiacs. The dam of King Tweede Spring Farm has an A.R.O. record of 30-lbs.

HIS DAM:—Magadora Ormsby, with an A.R.O. record of 22.01-lbs. and 509.4-lbs. of milk as a four year old, is by Sir Pietertje Ormsby Mercedes 37th, who has 43 A.R.O. Daughters and 18 A.R. Sons. The dam of Magadora Ormsby has an A.R.O. record of 20.26-lbs. of butter and 333.2 lbs. of milk as a three year old.

This bull traces to some of the greatest animals of the breed, including Spring Brook Bess Burke 2d, with 1290.94-lb. of butter and 24,918.1-lb. of milk in a year, and old Spring Brook Bess Burke with 34-lbs. of butter in seven days and Pietertje Maid Ormsby with 35-lbs. of butter in seven days. Also such sires as Sir Pietertje Ormsby Mercedes with 71 A.R.O. Daughters and 41 A.R. Sons,—this bull also has 63 semi-official record daughters;—and Sir Ormsby Hengerveld De Kol with 69 A.R.O. Daughters and 33 A.R. Sons.

DISPERSAL SALE

40 REGISTERED 40 HOLSTEIN-FRIESIANS

Saturday, May 19, at Laceyville, Pennsylvania

at the Farm—on Lacey Street, 1 mile from Laceyville,
on the main line of the Lehigh Valley Railroad.

Herd Under State and Federal Supervision

Passed Two Clean Tests

Sold subject to 60-day Retest

Herd sire—MODEL DARIUS KING SEGIS, will be sold with 6 of his daughters and 5 sons—he is a son of the noted Clara Clothilde Lyons who made 23.50 lb. of butter in 7 days as a two-year-old, and who held all the world's milk records from 30 days to 305 days as a two-year-old; she in turn is from a 30 lb. daughter of a 32 lb. cow, both of which gave over 677 lb. milk in a week. This bull is just two years old. His sire is from a 30 lb. cow with 647 lb. of milk.

FOURTEEN daughters of TITUSDALE ROSE DE KOL KING whose dam is an 18.75 lb. two-year-old daughter of a 26 lb. cow. His sire is from a 30 lb. cow.

FIVE daughters of KING JOHANNA KORNDYKE CORNUCOPIA whose sire is from the former four-year-old world's champion for year butter production.

BE SURE TO ATTEND THIS SALE. Write for catalog to owner—

FIVE CHOICE BULLS

For Sale at Farmer's Prices

No. 1, born January 3, 1922; 99% white. Dam made 16.69 lb. butter, 423.8 lb. milk in seven days at four years old.

No. 2, born January 16, 1922; 99% white. Dam made 18.68 lb. butter, 515.3 lb. milk in seven days at four years old.

No. 3, born December 18, 1922; 90% white. Dam made 22.84 lb. butter, 637 lb. milk in seven days.

No. 4, born March 31, 1923; 90% white. Dam same as No. 1.

No. 5, born April 14, 1923, 75% white. Dam (a daughter of dam No. 1) made 19.3 lb. butter 367.8 lb. milk in seven days at 25 months old, Virginia State record for a junior two-year-old.

All five bulls have the same sire whose dam, as a four-year-old, made 31.65 lb. butter, 633.1 lb. milk in seven days and is one of the best daughters of Old King Segis, one of the greatest sires of the breed, living or dead. The sire's sire is a son of Fred Field's \$35,000.00 Konigen bull.

YOUR CHOICE FOR \$100

(crated f.o.b. shipping point)

All records given are official. Herd under State and Federal supervision. Tuberculin tested 100% clean April 1922.

COVERED BY

The Holstein Breeder and Dairyman

comprises practically all the lands and countries in which the good old Black-and-White Cow is found. Affiliated with no political body or organization, we depend upon our own staff and news correspondents who are practical breeders, yet in the March 8 issue we carried news items or articles telling of Holstein and dairy activities in

Twenty-six States and Four Foreign Countries.

In the March 22nd issue, we had news from

Twenty-three States and Six Foreign Countries,

as well as from the District of Columbia.

In the April 8th issue, the District of Columbia was again represented as well as

Twenty-seven States and Six Foreign Countries.

Then, in the April 22nd issue, besides Hawaii, The District and

Thirty States,

we carried Holstein news from

The West Indies	Mexico	China
Central America	Guatemala	Great Britain
England	Honduras	Germany

And, relying upon the support of all really interested in the growth and development of the Holstein breed and the betterment of the Holstein industry,

We Intend to Do Still Better!

Alcartra Clothilde Pietje

The Story of a Cow Who Was Given a Chance and Made Good

THE first and only New Zealand cow to make 30,000 lb. milk in a year is Alcartra Clothilde Pietje. American breeders are greatly interested in the record as the cow is a descendant of animals imported into New Zealand from this country and traces to ancestors which rank with the best in the American registry. The charted pedigree shows that her sire is a grandson and her dam a granddaughter of the well-known sire, Prince Hengerveld Pietje, who has a long list of Canadian daughters with high records and who ended his life in an Illinois herd. This bull was by Pietje 22's Woodcrest Lad from Princess Hengerveld De Kol, 33.62 lb. butter in 7 days, the highest record daughter of Hengerveld De Kol.

A similar relationship exists between the parents of Alcartra Clothilde Pietje and Alcartra Polkadot Ormsby who has a seven-day butter record of 31.24 lb., has two 30-lb. daughters and is one of the daughters of the famous foundation cow Alcartra Polkadot, who has a 29-lb. record herself and has three daughters above the 30-lb. mark. Alcartra Clothilde Pietje is an inbred cow, her sire and dam having 75% the same blood and a glance at her pedigree will show that her ancestors include many animals which were considered among the best of past days and whose descendants may be found in the leading American herds to-day. Her grandsire, King Alcartra Pietje, was imported from this country as were the parents of her two granddams.

When Alcartra Clothilde Pietje started her test, she lacked ten days of being eight years old. The New Zealand regulations differ considerably from ours. In that far country a mature cow to compete in a test must have given birth to a calf fifteen months prior to the calf she drops at the beginning of the test then, after completing the test, she must again give birth to a calf fifteen months or less from the date of commencing her test, that is, three months after finishing her year record. By these strict regulations our New Zealand cousins aim to insure the cows will be bred regularly and that animals will not be kept dry for a long time before they freshen in order to fatten them up and thus make a record that does not truly indicate the capacity of the animal. The requirements of another calf three months after the close of the test year is similar to the Canadian regulation on this subject. As with us, the feeding of milk or milk products to a test cow is forbidden.

The year record of Alcartra Clothilde Pietje is 31,312.5 lb. milk and 1,145.24 lb. fat or, on the 80% basis, 1,431.55 lb. butter. Her highest day's milk was 112

lb. and her best month was 3,351 lb. milk with 126 lb. fat. She was milked three times a day, the New Zealand test regulations forbidding four times a day milking. Fourteen days after finishing her test Alcartra gave birth to two beautiful heifer calves so that, under these conditions, her great performance is all the more remarkable. Her owner says that the twin calves carry the highest record backing of any calves in the southern hemisphere, for three dams back of them have year records that average just over 1,000 lb. butterfat.

The New Zealand champion was never housed for a single night during her test and was out day and night in all kinds of weather. The winter climate of Mangatoki is cold and windy while the farm on which this cow was tested is situated under Mt. Egmont which is covered with snow the whole year round. Many of the New Zealand records have been made on grass alone or

ALCARTRA CLOTHILDE PIETJE
31,312.5 lb. milk, 1,431.55 lb. butter in a year. New Zealand Friesian Champion. Every one of her great-grandparents was born in America.

else with very little grain but Mr. Marx partly adopted American methods by feeding grain to this cow, the maximum amount being 30 lb. a day. At each milking she was given a box of pulped roots, mostly mangels. She had practically no hay as she appeared to dislike fodder in this form. The feed she responded to best was plenty of young grass and green oats.

Alcartra Clothilde Pietje, as her picture shows, is an animal of splendid type. She has been exhibited at some of the leading New Zealand shows and has never been beaten. Mr. Marx describes her as a small cow with a tremendous body. She is very finely boned with sharp shoulders, has a long fine neck, good head and strong wide muzzle, a square rump and is remarkably wide across the hips.

The New Zealand champion is owned by Vernon Marx of Mangatoki, and that this gentleman is a working dairyman is shown by the fact that with the help of one man, he milked and cared for seventy cows beside caring for Alcartra while on test and did all the farm work including the raising of green and fodder crops. Just how he managed to do all this we do not know but we certainly are in accord with his statement in which he says "I think that you will agree with me when I say that the conditions under which Alcartra put up her record were very much against a large record especially as she carried twin calves for more than eight and one-half months of the time she was on test."

Alcartra Clothilde Pietje was the first purebred cow owned by Mr. Marx. She was in a grade herd when he purchased her, was then five years old and had never had a mouthful of grain until she came into his possession. When he started her in test he had never had any experience whatever in feeding grain to a cow, preparing an animal or handling one while on test. That he is an apt scholar and handled a great cow is shown by the remarkable record made, credit for which must be evenly divided between the cow and the man who saw her inherent capacity and is responsible for her development. Hats off to Alcartra Clothilde Pietje and her owner, Mr. Marx.

PEDIGREE OF THE NEW ZEALAND CHAMPION:

Owner—Vernon Marx

Address—Mangatoki, N. Z.

Trying to Solve Breeders' Problems

THE University of California some time ago purchased a herd of cattle from the New Jersey Experiment Station and is now carrying on a breeding experiment in cooperation with the dairy division of the United States Department of Agriculture. The New Jersey station started an experiment with three Jersey bulls and eighteen purebred Jersey cows. The three Jersey bulls are Lucky Fern, Pogus Torono Experimenter, and Gravity's Exile of Lusscroft. The females are divided into three groups, and each group is mated with one of these bulls. The first generation of female progeny of each bull is bred back to their sires. The females resulting from this mating, that is, the second generation of inbred females will be mated again with their sire and the resulting progeny will carry 87.5 per cent of the blood of this bull. After the first generation of inbred animals have been mated back to the sire, they are then bred to each of the other bulls in the experiment and the same will be done with the second and third generation. It will thus be possible to make a direct comparison for the three generations of inbred heifers can be compared with the three generations of out-crossed heifers.

Complete records are being kept on every animal: first, for production; the amount of milk and percentage of fat is taken daily; second, for size and development; the animals are weighed and height measurements are taken monthly, starting at birth; these measurements are taken at the withers; third, for constitutional vigor and for this measurement of

heart girth is taken monthly; fourth, for reproduction. Complete breeding records are kept. This includes data on size, and vigor of calves, age at sexual maturity, sterility, susceptibility to abortion and sex ratios. The general conformation of all the animals is recorded by means of pictures taken periodically.

When selecting the animals to experiment, great care was taken to see that none of the animals showed any weakness whatever. No other selection will be made during the progress of the experiment.

This experiment is designed to find out the merits of the three general systems used by cattle breeders— inbreeding, line breeding and out-crossing. The experimental herd of cattle is being kept on the University Farm at Davis, California, under the supervision of Prof. W. M. Regan.

The New Jersey Experiment Station is conducting a similar experiment in which line breeding as a method of fixing and insuring the transmission of milk production is being compared with outcrossing. It is hoped that when these experiments are completed some valuable information will be available which may be used by breeders of purebred cattle in solving some of the many problems that have to be met.

"So you saw them married, did you?" "Yes." "Was it a quiet wedding?" "I should say so. Both the bride and groom were so scared they could hardly speak above a whisper."

Quality Means More Profit

By H. M. Jones, South Dakota Dairy Specialist

A PRODUCT of quality usually brings a good price. People want it and will often pay more for a product of good quality than to take a poor product at any price. Hence, the wide spread which exists between the best and the poorest butter and cheese found on the market.

The dairyman, who is striving to get the highest possible price for his cream or butter, is giving close attention to the care of his products and finds that it pays to do so. The difference between success and failure in many a small creamery can be traced to the difference in price between a 92 score butter and an 88 score butter. A recent report of the Minnesota creameries for one month serves to illustrate the spread which exists. The following are the data given for groups of creameries paying the highest, medium, and lowest prices:

Number of creameries	Price paid for butterfat	Price rec'd for butter	Pounds butterfat rec'd
7	.56	46.92	22,021
26	.50	45.85	10,448
5	.39	40.00	4,699

The amount of cream received by the last group of creameries was small because they could pay only 39 cents for butterfat. This low price was necessary because they were getting only 40 cents for their manufactured butter. Now, if the farmers patronizing those low paying creameries would cooperate in delivering first class cream, butter would bring more on the eastern market, the creamery could pay more for cream, the volume of business would probably increase as a result and there would be more profit all around.

Under many circumstances it is impractical to deliver any other than sour cream. The small dairymen and those living some distance from a cream station or creamery are justified in selling sour cream. On the other hand those producing a large volume of cream or living close to a market have a splendid opportunity to increase their revenue from cream without increasing their output simply by improving the quality of it.

Ice cream factories and many creameries pay a premium for sweet cream. Fortunate is the man who lives near enough to one of these establishments to make daily deliveries of cream. Some creameries establish grades and pay a premium for all who deliver the highest grade. There may be grades for sour cream as well as sweet.

This matter of quality is almost entirely in the hands of the farmers themselves. If all the patrons of a creamery will cooperate in bringing first class cream, it will pay them to do so. Conservatively speaking, butter made from the best sour cream brings five cents a pound more on the market than that made from ordinary cream. The patron gets the benefit of this increased value because there is no greater handling charge for the good butter. This difference of five cents a pound would amount to about \$100 a year for an average herd of ten cows.

Reasonably clean surroundings, good cooling facil-

ities and frequent delivery are all that are necessary to furnish the better product. These details can be met in one way or another. Sunning and scalding the utensils is the first step in producing good cream.

As a rule too little attention is given the milk and cream before and after separating. The separator must be washed twice a day if a good product is to result. Immediate cooling of the cream is necessary. Stirring is just as essential as cooling, stirring every ten minutes for an hour giving the best results. The mixing of warm and cool cream is a poor practice and results in a great deal of low grade cream.

In the matter of delivery, neighbors have cooperated with good success in hauling cream for each other. With three parties taking turns at making deliveries, it means only one trip a week for each one, yet the cream of each one reaches market every second day.

It is often said that there is no encouragement to produce superior cream because there is no difference in price. Where communities have taken hold of the matter in an united effort they have succeeded in improving the quality to such an extent that they receive an exceptionally good price for their butter in prints for local trade, or in tubs on the eastern market. Incidentally, their creamery always ranks near the top in the state scoring contests.

In the care and cooling of milk and cream on the farm is an opportunity to increase the receipts for butterfat by fully five cents a pound. The greatest benefits accrue when all of the patrons of a creamery unite in bringing good cream and thus increase the demand for every pound of butter put out by their creamery. The extra trouble and expense in producing cream of high quality is no item at all in comparison to the benefits derived. Prices, and therefore the profits, are governed by demand. Good quality creates the demand.

Feeding Advice from Washington

PROF. H. H. WING, the head of the Animal Husbandry Department of Cornell University, has repeatedly said that if one-third of the dairy cows in the United States were to be suddenly destroyed and the feed that they are now consuming be added to the rations now fed to the other two-thirds that, in all probability, the production of the reduced dairies would be even greater than the production of the whole dairies at the present time.

The feeding experts of the Federal Department of Agriculture evidently think along the same lines and they intend to supplement the "Better Sires—Better Stock" campaign with another campaign in which the slogan will be "Better Feeding of Livestock." The government experts have been receiving inquiries on livestock problems and a large proportion of these inquiries sought information on feeding.

To meet such demands, the Department offered an individual feeding service. One of the principal features of this service will be a "Feeding-Problem Sheet" which farmers may obtain from their county agents,

State agricultural colleges, or direct from the department at Washington. On the feeding-problem sheet the farmer outlines his problem briefly, and describes his stock and available feeds. The sheet is designed to enable the farmer to give sufficient information in brief form to make additional correspondence unnecessary. The farmer then refers the sheet to his county agent, who makes a recommendation. When the sheet reaches the department a livestock feeding specialist studies the problem and makes suitable reply.

It is very evident to anyone who travels along country roads that a good many animals can, with good advantage and profit to their owners handle more and better feed than they are receiving. This condition of affairs is even more emphasized in the winter for off-times cows and young animals come out from their barns in the spring so thin and run down that the best part of the pasture season is gone before they have regained flesh and are again in good condition.

A vest pocket-size handbook entitled "A Handbook for the Better Feeding of Livestock" is being prepared by department feeding specialists for free distribution to farmers who desire a handy-sized set of simple rules and references tables to be followed in feeding the different classes of farm animals. Requirements of animals, simple analyses of feeds, feeds to substitute for other feeds, and simple feeding instructions will enable farmers to understand the principals of better feeding, and fit their own practice to suit the conditions on their farms.

Pennsylvania 30-lb. Three-Year-Old

CRARY Farms Christina is a new Pennsylvania 30-lb. three-year-old, having just completed a record of 30.40 lb. butter, 637.9 lb. milk in seven days. She freshened on February 20th, at the age of 3 years and 10 months. Continued on test for 30 days, she

MEADOWSIDE HELENA DE KOL BURKE 3d
30.93 lb. butter in 7 days; three times over 30 lb. a day. Dam of the 30 lb. three-year-old Crary Farms Christina.

produced 119 lb. butter and 2,560 lb. milk so that she averaged 91 lb. a day during her seven day record and 85.3 lb. during the month.

This is not the first time that Crary Farms Christina has attracted the attention of the official supervisor. Just a year ago as a senior two-year-old she produced 28.21 lb. butter, 455.1 lb. milk in a week and 116.20

lb. butter, 2,155.7 lb. milk in 30 days, becoming a Pennsylvania state champion for both 7 and 30 day butter production.

Christina is owned by Horton, Crary and Company of Warren, Pa. She is a daughter of the Crary Farm herdsire, Spring Farm King 3d, who was by Spring Farm King from the 30-lb. three-year-old, Spring Farm Agatha Pontiac. Christina's dam is the well-known Meadowside Helena De Kol 3d, a cow that three different years has made over 30 lb. butter in 7 days. As a senior four-year-old she made 30.72 lb. butter, 623 lb. milk in seven days. As a six-year-old she is credited with 34.93 lb. butter and 545 lb. milk in a week. At the age of eight years, eight months and three days, she again freshened, this time producing

CRARY FARMS CHRISTINA
30.40 lb. butter, 637.9 lb. milk in seven days. 119 lb. butter, 2,560 lb. milk in 30 days as a senior three-year-old. As a senior two-year-old she produced 28.21 lb. butter in seven days, 116.20 lb. butter in 30 days. Daughter of a three-times 30 lb. cow. Owned by Horton, Crary & Company, Warren, Penna.

in seven days, 31.38 lb. butter, 520.2 lb. milk in a week and making a 30 day record of 119.02 lb. butter and 2,324 lb. milk in 30 days. She is a daughter of King Segis Hengerveld De Kol Burke and her dam is a granddaughter of De Kol Burke.

One of the herdsires at the Crary Farms is Crary Farm Pontiac Champion, a full brother to Crary Farm Christina, while another is Crary Farm Segis De Kol Burke, a half-brother to the new 30-lb. heifer, both being from the same cow.

Crary Farm Christina's record confirms the reputation for production that she built up by averaging four pounds of butter a day for seven days as a two-year-old. Her owners inform us that she was not in as good condition as she was a year ago, had she been, they feel certain she would have exceeded the creditable record she has just made. Still to make a 30-lb., seven day butter record as a three-year-old and to average 91 lb. of milk a day while doing so, is certainly nothing of which to be ashamed. And she is a worthy daughter of her mother, who was a four-year-old when she first crossed the 30-lb. mark.

Colored rookie—"I'd like to have a new pair o' shoes, suh!"

Sergeant—"Are your shoes worn out?"

Colored rookie—"Worn out! Man, the bottoms of mah shoes are so thin Ah can step on a dime and tell whether it's heads or tails."

The World Champion and Her Record

GOOD cows handled by good men make records under far different conditions. The leading article in this issue tells of the performances of Alcartra Clothilde Pietje, the New Zealand champion, who made her record on three times a day milking and was housed in the barn for milking and feeding only, during the year she was on test, running out day and night for the whole year.

In British Columbia under climatic conditions very similar to those existing in New Zealand, the Canadian cow Agassiz Segis May Echo made her tremendous year's record producing 1,681.25 lb. butter and giving

AGASSIZ SEGIS MAY ECHO
1,681.25 lb. butter, 30,886 lb. milk in a year. World's champion for year butter production. Owned by Dominion Experimental Farm, Agassiz, British Columbia.

30,886 lb. of milk. Echo was milked four times a day throughout the year. She was never on pasture but was kept in a box stall in the barn or during hot weather ran in a shady paddock. On the day of her best production she ate 165 lb. of pulped mangels and 31 lb. of grain besides a small quantity of corn silage and hay. When she tired of mangels she was changed to dried beet pulp then, when she tired of pulp her feeder would go back to mangels again. She was fond of alfalfa hay but appears to have a rather fickle appetite for her feeder. Mr. Harper varied her diet by using clover occasionally. She had a small quantity of corn silage and was not a very heavy eater of coarse fodder.

These two great cows, the World's champion and the New Zealand champion, carry very little blood in common. A study of their five generation pedigrees does not show a single common ancestor.

Echo is credited with producing 121½ lb. milk in a day while Alcartra's best day was 112 lb. Alcartra made 3,351 lb. milk and 126 lb. fat in a month while the Canadian cow made 3,251 lb. of milk in March, 1922, and her best thirty-day production was 112 lb. of fat. The New Zealand cow received 30 lb. of grain in a day, the Canadian cow 31 lb., both were fond of pulped mangels and neither seemed to care for hay as a bulky ration.

The New Zealand cow was cared for by her owner and as he had only one hired man he probably took the entire care of this cow as part of his own work. Echo was milked and fed during the year of her test by G. C.

Harper chief herdsman of the Dominion Experimental Farm, at Agassiz, B. C.

The New Zealand cow carried twin calves nearly nine months of her test year while the Canadian cow carried calf four months. After a comparative study of their records and the conditions under which they were made we may be pardoned for wondering which is really the greater cow, what Echo would have done if handled as the New Zealand cow was and just how large a record Alcartra would have made had she been milked four times a day and had the special and expert attention that was devoted to her Canadian rival.

By her splendid performance Agassiz Segis May Echo forestalled the great Australian Milking Shorthorn, Melba 15th of Darbalara whose record of 1,656 lb. butter from 29,423 lb. milk would have been the world's champion record if the Canadian cow had not finished her year's test first. Owners of Holstein-Friesians, or Friesians or call the purebred black and white cows what you will, owe Echo a vote of thanks for that one thing alone.

Building a New Breed of Cattle

THE efforts of the agricultural experiment stations of Alaska to develop a breed of cattle that would produce milk, and survive the climate makes interesting reading. Galloway cattle do well but the cows produce little milk. So an experiment was begun at the Kodiak station in crossing Galloways and Holsteins. A young crossbred cow at Kodiak, freshened October 3 and produced 778 lb. milk in the 45 days from Oct. 16 to Nov. 30 on a ration of native hay, silage, a little grain and pasture. The best cow as yet developed in the territory is a Milking Shorthorn which, as a six year old, freshened in September and in the 45 days during which the record is given, produced 1,101 lb. milk, on a very similar ration. Age considered, the work of the crossbred is just as creditable.

The new breed is being built on the foundation of a herd of Galloways which has been kept at Kodiak several years. A purebred Holstein-Friesian bull from producing ancestry was obtained from the States and a number of reciprocal crosses have been made. Unfortunately, the calves dropped have been mostly bulls and this has retarded development of the new breed but the experimentors are convinced that success awaits them.

A crossbred calf has short, slick hair, more of the Holstein type than it resembles the strong, fuzzy hair of the purebred Galloway. They are of rangy build and in this characteristic resemble the Holstein breed. Most of the calves are black with small white patches.

Alaska is one-fifth the size of the whole United States yet only has a population of approximately 57,000 nearly all of whom live along the coast. According to government report, there are about 1,100 cows in the territory or one cow to every 56 persons. About 85% of the dairy products consumed is shipped in, nearly all from the United States.

"Women undoubtedly require more sleep than men," said the doctor. "In spite of which our wives continue to sit up for us," replied the married man.

Reynolds Proposes \$93,000.00 Raid on Association Reserve Fund

DATED at Brattleboro, Vt., March 22, 1923, yet having all the ear-marks of Jimmy Reynolds, the repudiated politician from Ohio, known as "Chairman of the Executive Committee" of a Board of Directors pronounced by the Supreme Court of the State of New York as "Illegal," comes a long-drawn out appeal addressed to the members of The Holstein-Friesian Association of America asking them to sit perfectly still, be good boys and let the politicians, promoters, and propagandists walk off with a \$93,000.00 slice of the Association's Reserve Fund.

Did you get this wonderful document? Have you studied its contents?

Did you notice that this cunning political group, bent on the upbuilding of a political autocracy that defies the law and snaps its fingers at the plain breeders and members proposes to spend \$220,000.00 this year under the pretense of doing Extension work, but chiefly extending their own pocketbooks?

Did you notice that they estimated the income of the Association for the next year at \$475,000.00 and that they propose to spend \$93,000.00 more than they take in just to keep the political machinery well oiled, keep a lot of "pay-boys" in spending money and make sure that they keep a strong grip on the Association's affairs?

Did you notice the names of the "pay-boys?" Did you notice that that old-timer, W. B. Barney, whom the Cedar Rapids Gazette says was kicked out of office as Food and Dairy Commissioner of the state of Iowa is still feeding at the Association's trough to the tune of \$4,500.00 per year, and all expenses, while you milk cows and pay \$1.50 transfer fee to help you pay the bill?

Did you notice that Fred A. Koenig who so loved to put his feet on his Mahogany Desk, ring the bell for his servants, Puff at Big Black Cigars and roll out political bunk and propaganda at so much per agate line is still on the payroll at \$6,000.00 per year and all expenses, while you "fodder up" and get the milk over to the morning train?

Did you notice the list of titles that has been given to Koenig, Barney and others and in all these years that you have been associated in the breeding and development of Holstein cattle did you ever dream that the good old Association that you helped to make and the Reserve Fund that you helped to create would ever be turned over to such purposes as are indicated in this proclamation from Jimmy Reynolds? And lest we forget, let us go back to the year following the voting of \$12,000.00 to D. D. Aitken as President and just recall that in the following years under the promise of enormous prices for cattle and the coming of the millennium in the Holstein industry, this same bunch of "Illegal Directors" voted \$140,000.00 of our money for "extension purposes," "whirlwind campaigns," etc., while the prices of cattle and milk kept coming down and down and down.

And now look what the gentleman from Ohio tells

us. "The scope and plan of the Extension Service as now inaugurated is by far the most extensive and complete ever taken and bears no comparison with similar work undertaken in other organizations." If \$140,000.00 spent in 1920 did not make the raffle and resulted only in decreased prices for cattle and milk, how much more is it expected will result from the expenditure of \$220,000.00 now? We cannot help admiring the frankness of Mr. Reynolds. In order to do all this it may be necessary to entrench upon the Reserve Fund. In the next paragraph he goes on to show how the total income estimated for next year will be \$475,000.00, that it will take \$348,000.00 of this for administering the affairs of the Association and that in order to spend the \$220,000.00 which is proposed to spend, we must draw \$93,000.00 from the Reserve Fund. Please get this fact clear in your mind. If the Holstein-Friesian Association's income for the next year is to be \$475,000.00 and the cost of administering the affairs of the Association outside of the Extension and Publicity work will be about \$348,000.00, why in the name of common sense do we not add \$127,000.00 which will be left after paying the expense of running the Association to our Reserve Fund instead of spending \$93,000.00 of the Reserve Fund which has taken all of these years to create? Of course the answer is very plain. If we should run the Association economically and save \$127,000.00 this year to be added to the Reserve Fund, we could not make jobs for the "pay-boys" whose names appear in this wonderful document under various titles, nor could the political group who are exploiting the Association still further tighten their grip on the Association's affairs through the building up of a political machine.

Who is this Jimmy Reynolds who proposes this raid of \$93,000.00 on our Reserve Fund? He is one of the "pay-boys." He was elected a member of the Association in 1918, made a Director in 1919, elected Chairman of the Executive Committee immediately, and one of the first acts as an official of the Association was to violate its by-laws and vote a salary of \$12,000.00 a year to D. D. Aitken. Jimmy has already drawn from the Association's treasury the snug little sum of about \$12,000.00 and he is the same gentleman who was made member of the committee named at St. Paul in 1921 and given power to arrange for the "Purchase" or building of a National home with full power and authority to spend all of the Reserve Fund if necessary in order to become further entrenched in power. He is the same gentleman who as Chairman of the Committee on By-law Revision tried to sneak through a resolution at the Syracuse meeting in 1921 giving to this "Illegal Board of Directors" full power and authority to make, amend, or repeal our by-laws, and remember, if it had not been for the 9,000 proxy votes which the plain breeders and dairymen marshalled at the Syracuse Convention under the leadership of Judge Peasley, Brockway, Newman and others,

both of the above schemes would have been put through and the membership helpless to stop it.

It is very pertinent and proper at this time to ask first, who got the \$140,000.00 spent in 1920? Who is going to get the \$220,000.00 that they propose to spend in 1923? It is also proper to ask how long are the plain breeders and dairymen going to sit quiet and permit men who are holding office illegally and who are now entrenched in power through the performance of illegal acts to still further entrench themselves, exploit the Association, waste the Reserve Fund and make the Holstein-Friesian Association the laughing stock of breed organizations the world over.

THE HOLSTEIN BREEDER AND DAIRYMAN stands for the upbuilding of the Holstein-Friesian industry along honest, conservative lines and believes in the superiority of the Holstein cow and the ability of the plain breeder and dairyman to manage his own affairs free from all political manipulation and the exploitation of the many for the benefit of the few. It believes that the Association's Reserve Fund was created for a purpose and it was never intended to be used as "Political Pap" or to be spent in propaganda having no other object than the building up of a "Political Machine." We believe that this proposed raid upon the Association's Reserve Fund should be stopped. *We believe that if any part of it is to be spent it*

should be spent to clean out the gang who are throttling the Association and rendering it impotent for the good of the plain people. We believe the time has come for action and that the men of the Association who stand for right doing and for the conduct of the Association's affairs along the lines laid down in the Constitution and by-laws should rise up and drive out of power the illegal clique who for the last four years have been shaping the Association's affairs as to invite disaster and depreciation of the Holstein values and of general demoralization to the Holstein industry.

THE HOLSTEIN BREEDER AND DAIRYMAN is square out in the open and on the firing line fighting the interests of the small breeder and dairyman. No better proof of our oft-repeated position can be furnished than the proposed attempt of Jimmy Reynolds to try and fool all the people all the time. The time is ripe for leadership of the type that will command the confidence of the membership and place the Holstein-Friesian Association back on its feet as a big prosperous breed organization whose activities shall be devoted to the registration and transferring of purebred cattle, unhampered by any political clique and controlled by legal representatives, and into the hands of the men who sit down and place their heads against the side of the cow and do their own milking.

A Pair of Prize Winners

THE Central Poor District of Luzerne County owns a real good bunch of Holsteins which are kept at Retreat, Pa., and are generally known as the Retreat herd. A fine show herd from this institution was exhibited at a number of the leading fairs last

butter record of 25.97 lb. butter from 661.2 lb. milk, and 26.716.8 lb. milk, 1,114.88 lb. butter in a year, and she is a daughter of Butter Girl Johanna who produced 32.55 lb. butter, 588.4 lb. milk in a week as a junior four-year-old.

Both heifers, K P A P Prilly and Retreat Segis Prospect, have been constant winners on the 1922 show circuit and when they were beaten in their respective classes it generally was by another member of the Retreat herd, which shows something of the individ-

K P A P PRILLY

First prize senior yearling and junior champion at Susquehanna County Fair, Trenton Interstate Fair and Virginia State Fair last fall. Owned by Central Poor District of Luzerne County, Penna.

fall with splendid success. K P A P Prilly was first prize senior yearling and junior champion at the Susquehanna County Fair, Montrose, Pa., at the Interstate Fair, Trenton, New Jersey and the Virginia State Fair. She is a daughter of King Pontiac Alcartra Pietje. Retreat Segis Prospect is a daughter of Carnation Segis Prospect, the well known son of the world's champion milk producer, Segis Pietertje Prospect, 37,381.4 lb. milk in a year. Her dam is a daughter of Butter Girl Johanna 2d, who has a seven day

uality of the animals owned by that establishment. Under the care of Herdsman J. O. Vaughan, the Retreat show herd made a successful trip and captured many blue ribbons and championships. This is a Pennsylvania herd that breeders will do well to keep in mind.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

May 8, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Highest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

Amendments Suggested for Consideration at the Next Convention

A NUMBER of amendments have been submitted for consideration of the delegates to the next annual meeting or convention. One would automatically cancel the membership of any member who practiced fraud in the registration of cattle, another would automatically cancel the membership of any member who attempted to obtain an advanced register record by fraudulent means. The present By-laws allow the Board of Directors or Executive Committee, "to censure, suspend, or expel a member" after notice and a hearing at which he "shall have the right to be heard in person and by counsel and to produce witnesses, affidavits, documentary or other evidence." Probably the fact that Charlie Cole is still carried as a member of the Holstein-Friesian Association of America and that the present Board of Directors have never cancelled his membership is responsible for this proposition.

A third would do away with seven-day records on the ground that the seven-day test is no real indication of an animal's ability to produce year in and year out. Another suggestion is that the Association own and issue a paper. There are now three breed papers, but evidently something else is needed to get propaganda across. The Surplus and Reserve Funds certainly bother some folks.

We would suggest an amendment that any member or group of members proposing an amendment to the By-laws that has for its purpose getting control of the Association for the exploiting of its resources or the industry, that their membership be cancelled automatically

and they be denied Association privileges forever and imprisoned for life.

And would further amend the Association's By-laws to the effect that no politician or repudiated politician draw from the Association's treasury one penny for salary, services or traveling expenses, and that no one should serve as a director of the Association unless he has served at least a five-year apprenticeship as a dairyman and did his own milking and can otherwise qualify as a good, honest, upright citizen, and who swears that he is not a politician and will not enter that profession during his tenure of office.

Legislature of New York State Passes Bill Amending Membership Corporation Law

Prohibiting Holstein-Friesian Association Holding Meetings Outside the State

A SPECIAL dispatch just received as we are going to press says: "Governor Smith has just signed the bill introduced by Assemblyman Hickey, amending the Membership Corporation Law prohibiting all membership corporations other than those organized for benevolent, charitable and missionary purposes from holding annual meetings outside the state."

THE HOLSTEIN BREEDER AND DAIRYMAN has no knowledge of what the so-called "Hickey Bill" provides. We are unable at this time to offer any further comment on the matter or to give our readers any further information than that set forth in the above mentioned dispatch.

Clearly if the Legislature of the state of New York has again amended the Membership Corporation Law as above indicated, it still further complicates the legal mess in which the Holstein-Friesian Association now finds itself and, if the law takes effect immediately, as it probably does, it of course raises the question again of the legality of the meeting to be held in Cleveland in June of this year.

Before our next issue we will endeavor to secure a copy of this bill in its entirety and will advise our readers as to its probable effect upon the affairs of the Association and in what way it affects the membership generally.

An Oldtime Family Group

LOOK at the picture on the front cover of this issue look at all familiar to you? Do you recognize any of the animals?

The photograph was taken quite a number of years ago on Moyerdale Farm. It shows the grand old foundation cow Prilly and three of her daughters, Beauty Pietertje, Cleopatra Gelsche, and Eliza Pietertje. Prilly when past twelve years old made a seven day official record of 25.2 lb. butter. Her daughter, Beauty Pietertje has a 30.51 lb. seven-day butter record; Cleopatra Gelsche made 29.12 lb. butter in seven days and Eliza Pietertje produced 24.19 lb. butter during the week of her test. This group of great cows at the time the picture was taken formed part of a family that had never been equaled for butter production as a family

group. It was also noteworthy because old Prilly and all three of the daughters depicted were dams of cows that had 30 lb. seven-day butter records. In fact, Prilly has four daughters that are dams of 30 lb. cows as she was also the dam of Prilly Princess, who in turn has two daughters above the 30-lb. mark.

Standing at the head of Prilly is James Gillette, then the superintendent of Moyerdale and now at the Bell Farm; at the head of Eliza Pietertje with only part of his face showing is Harvey Gillette, Jim's only son; who himself was quite a cow man and record maker.

More Legal Entanglements, More Lawyers' Fees, More Trouble

JUST as we are going to press, word comes from Rochester that the Appellate Court has handed down a decision which reverses the decision of Justice Charles A. Pooley in the George case.

In our next issue we will tell our readers more of the findings of the court and just what position it leaves the Association in.

We have no hesitancy in assuring that regardless of the decision just handed down, that the Association will still be further milked for lawyers' fees and legal expenses, and probably in the end the members will wake up and wonder what they have to show for \$100,000.00 spent foolishly by the Board of Directors composed of millionaires, politicians and promoters.

Tommy—"Pop, what is a pessimist?" Tommy's Pop—"A pessimist, my son, is a fellow who expects to get the worst of it sooner than the rest of us."

Automobile and suitcase lost or stolen from 43d and Michigan; liberal reward for return of suitcase, no questions asked.—Classified Ad in the Chicago Tribune.

Advertising Holsteins as Seen by an Iowa Breeder

THE pet fad now seems to be advertising Holsteins. It is a good idea but how?

Last season a party was touring in the richest farming country of the U. S., whenever a farm was approached that looked especially livable, having the air of prosperity apparent in everything about the farmstead one member in the party would announce, "There are Holsteins in that man's pasture," and ninety-five per cent of the time he was correct. When a point was reached where the grazing fields were in view, black and white cattle were peacefully and prosperously enjoying themselves. The small number of times when he was not right, there were other dairy herds so the point is sustained—it is the dairy cow that brings prosperity. That is the kind of advertising that is really worth while.

These farms that especially attracted attention were always well kept. The buildings were in the best of condition, well appointed and clean. There were evidences of modern conveniences. In fact there was a general atmosphere that made one feel as if it would be no burden to live there.

Contrasted with these were the farms where the main purpose was planting, harvesting and selling the crop. Such places were, far too often, just protection from the elements with little or no evidence of any effort to provide those things that tie the farmer to his home once the crop is sold. Too frequently none of these comforts and near luxuries are possible with the returns available. It is a pleasure to live in a place like the former. It is drudgery to stay in the latter. Is it surprising, then, that many so-called economists are holding up their hands in horror at the trend toward town? The answer is the dairy cow. Farming must be made an organized business to keep the really desirable people in its ranks. There is a host that may be allowed to float to the city to the benefit of the farmer. Advertising will help make farming an organized business. Publicity is the life blood of any business and this wholesome, sane, far-reaching, advertising influence that radiates from the homes that proclaim prosperity is worth far more to the Holstein industry than miles of bill boards decorated with stiff, pedantic, unattractive cows shouting fecundity, vitality, and all the allied bovine virtues. If these proposed works of roadside art are noted at all, the passing throng will have a hazy idea as to whether they are proclaiming charms of Chesterfield cigarettes, lip sticks or face powder, the virtues of a corn cure, the shapeliness of a corset or a new kind of chewing gum or perhaps they give the bill board only a passing notice assuming that it is a last year's poster of Barnum & Bailey's; Forepaugh & Sells, or Ringling Brothers big circus, surely they would never give the matter a thought as advertising a legitimate product, the good old Holstein cow or Holstein milk. The one thing that may be said in favor of the signs is that they offer a splendid source of revenue to the bill board makers.

As for convincing publicity, the homelike, prosperous farmstead that has the air of being lived in joyfully, the real dairy farmer's home that makes the passing tourist say "You will find Holsteins in that man's

pasture," has the bill board beaten before the start. Make more homes by stimulating an appreciation of the breed among farmers and the work will be cumulative, going on in geometrical progression. The aim will be approached more surely. The "Vitality" bill board isn't going to make city people drink milk or farmers buy Holsteins.

Brockway Lends a Helping Hand

APRIL 16th, the ground was broken for the half-million dollar coliseum to be erected on the New York State fairgrounds at Syracuse. The appropriation bill has already been passed by the assembly and senate and signed by Governor Smith and it is planned to rush the work so that the building may be ready for the meetings of the National Dairy Show early in October.

Despite inclement weather, agricultural leaders of New York State and leading politicians and office holders of Syracuse were present to see the work started. These included the Mayor of Syracuse, the president of the city Chamber of Commerce, two state fair commissioners, leading business men of Syracuse and that well-known Holstein breeder, Albert L. Brockway who is always in the forefront of any movement for the betterment of agriculture. As the movie men were on hand to take photographs of the notables and the workmen, you may yet see Al's genial smile adorning the screen in your favorite movie house.

Wisconsin Dairy Product Traffic

W. P. JONES of Madison, who is an official of the Wisconsin Department of Markets in charge of Transportation, has been collecting statistics on the dairy industry of his state. He says that during the year 1921, it took 43,517 cars to move the output of the California Fruit Growers' Exchange and that everyone is aware that the Exchange handles a vast industry yet, outside of a few writers and dairy specialists, few realize the magnitude of Wisconsin's dairy industry. During 1921, if we allow 20,000 tons to a car, it took 43,021 cars to move the output of the Wisconsin dairies. During the year mentioned, the problem was handled by the railroads of the state without any assistance from the Interstate Commerce Commission while thousands of cars were directed to California roads by that body. Mr. Jones says that 95% of the total amount of dairy products manufactured in Wisconsin is shipped out of the state.

"Willie, where did you get that black eye?"

"Johnny Smith hit me."

"I hope you remember what your Sunday school teacher said about heaping coals on the head of your enemies."

"Well, ma, I didn't have any coal, so I just stuck his head in the ash barrel."

She—"Did you meet any stage robbers while you were out west?"

He—"Yes, I took a couple of chorus girls out for dinner."

The Junior Breeder and Dairyman

Carrie's Club Calf

Carrie had a little calf,
Its coat was black and white,
Its back was straight, its hips were wide,
Its eyes were big and bright.

Now Carrie fed her little pet
At least three times a day
On milk or grain with clover too
Or bright alfalfa hay.

She kept a currycomb and brush
And soap and water handy
And as the summer days flew by
The calf grew big and dandy.

She took it to the fair one day,
And big grew Carrie's eyes;
For Calvie was the best one there
So Calvie won first prize.

Among the Texas Juniors

Last year there were 25,253 junior club members in the State of Texas, an average of 176 per county. During the year 8,562 purebred animals were distributed to boys enrolled in the livestock clubs. Business men and organizations gave \$24,697 for prizes. Banks to the number of 403 loaned \$44,815 to juniors who were not financially able to begin their projects.

The boys are organized in clubs by the county agents and the work is carried on through local adult leaders. We had an average of a little over six clubs per agent with an average membership of 28 in all of our counties says Sterling Evans, the Texas State Club Leader. The clubs are organized at some community center, usually at the school. The county agent goes out, organizes the boys, and together they select some qualified person to act as their adult leader. He is the agent's assistant. He meets with the club, advises with the members and keeps up the interest in the organization. As it is not possible for the county agent to do this himself, the success or failure of our clubs depends in a large measure, upon this man. Therefore, it is very important to select a person who will actually be a leader and carry out the plans of the county agent.

Another important feature of our county program, is the county camp school. Last year, 112 counties held such camps. They are held at some central place of from two to three days, at which time all the club members are brought together in a camp. The boys then receive instruction in judging various classes of grain and livestock. They also receive a good program in recreation. The recreation is given in the form of games, with the idea of developing the game spirit so essential to a good community.

In Texas we do not try to stress the profit of club work too much in dollars and cents, and yet, our report shows a profit of \$275,269 on club projects for the year 1922. Far greater, however, to us is the production report, which shows that our corn club members produced an average of 32.6 bushels of corn per acre,

while the general average for Texas is 20.1 bushels per acre. At the same time, our cotton club members produced an average of 737 pounds of seed cotton, with a general average of the state of 401 pounds.

While our crop club members are making this remarkable record, our livestock club members are adding several thousand purebred animals to Texas herds each year. Certainly no one will fail to realize the opportunity afforded by club members towards furthering the cause of "better citizens" throughout the Nation.

Kansas High School has Modern Farm

Among the recent enrollments in the "Better Sires—Better Stock" campaign, conducted by the United States Department of Agriculture, was the Reno County High School at Nickerson, Kansas, which enrolled a registered bull and 12 purebred cows and promised to use purebred sires in all future breeding. An official emblem was promptly forwarded to the high school, and an inquiry made to learn in what manner the high school owned livestock, as this was the first high school in the country to take such a direct part in the better-sires movement.

A letter from County Agent V. S. Crippen of Reno County explained the situation. The high school has a well-equipped, 40-acre farm, given by the city of Nickerson. The county equipped the farm with a teacher's cottage, up-to-date farm buildings, and all modern conveniences; and supplied it with purebred Holsteins and standard-bred poultry for demonstration purposes. The experimental work on the farm is arranged by the Kansas State Agricultural College.

The high school has a complete manual training course, and the boys make many farm conveniences like wagon boxes, hay racks, self-feeders, breeding crates, and gates, for the farmers of the county. The county agent reports that the course is very practical, and that the school draws pupils from a large area.

New Government Up-to-Date

AN answer to the invitation of the American Government to visit the World's Dairy Congress was received by wireless from the Government of Czechoslovakia. The radiogram came from the Ministry of Foreign Affairs and announced that the Czechoslovakian Government would be represented at the Congress by one delegate from the Ministry of Agriculture and two from the Ministry of Public Health.

Recent acceptances have been received from Persia and Norway. Persia will be represented at the Congress by Abdullah Entezam, Secretary of the Persian Legation, Washington, D. C.; while Norway will send as her delegate Professor Haakon Isaachsen, of the Norway Agricultural Academy.

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

May 14—Berwick, Pa., Columbia County Hostein Breeders' Meeting.
May 16—Newton, N. J., Banquet of Sussex County Holstein-Friesian Ass'n.
June 23—Wauwatosa, Wis., Milwaukee County Field Day at Agricultural School.
August 10—Dairy Tour of Mercer County Association.
August 11—Amherst, Mass., Hampshire-Franklin Club, Annual Field Day.
September 24-30—Waterloo, Iowa, Dairy Cattle Congress.
October 2-6—Brockton, Mass., Brockton Fair and Dairy Show.
Oct. 2-5—Washington, D. C., World's Dairy Congress.
Oct. 6-13—Syracuse, N. Y., National Dairy Show.

NEW ASSOCIATION FIELDMAN

H. A. Mathiessen at one time agent for Ada County, Idaho and later in the employ of the United States Dairy Division as assistant dairy husbandman with headquarters at Salt Lake City, has been appointed fieldman for the Holstein-Friesian Association of America. His territory will be Southern Idaho, Utah and Arizona. He is expected to make his headquarters at Boise.

OFFICERS ELECTED AT MILWAUKEE

At the annual meeting of the Milwaukee County Holstein Breeders' association, the members went on record as favoring the state program for tuberculosis eradication, development of calf club work and the formation of a county sales and service organization. Arthur Rust of West Allis was elected president; E. E. Ewan, Wauwatosa, vice-president; T. H. Campion, Wauwatosa, secretary-treasurer; H. F. Froemming, Benjamin Dance and T. H. Campion, directors for three years.

NORTHWESTERN DAIRY DAY IN PROSPECT

How things grow! H. C. Seymour, Oregon state club leader, had 20 boys and girls lined up for a trip to Carnation Farms next summer and had selected June 26 as the date. At a meeting at Max Arp's at Eugene, at which 75 were present, W. E. Meyer proposed that all the Holstein breeders of the state go along. Now it is proposed to get Governor Hart to issue an invitation for everyone in Oregon, Idaho and Montana to attend, and have a regular gala dairy day.

GOOD SPEAKERS AT TAUNTON

There was a light attendance at the meeting of the Bristol County Holstein club held April 18 at the Public Library at Taunton, Massachusetts. In the absence of President Goff, secretary Warren L. Ives, took the chair. The principal speaker in the forenoon was L. M. Camburn, director of the state animal husbandry department and he spoke on Economic Phases of Dairying. The afternoon speaker was C. L. Blackman, field secretary of the New England Holstein-Friesian Association who talked on breeders problems.

NEVADA BREEDERS MEET

Prominent breeders and owners of Holstein cattle from all over the state met at H. J. Long's home at Fallon, April 7, the occasion being the annual meeting of the Holstein-Friesian Association of Nevada. The delegates and visitors were greatly pleased with the Longheath herd which is the best known herd in the state. A number of new members were enrolled and the following officers were elected: H. J. Long, president; Mr. Brooks of Reno, first vice president; Alfred Oats, second vice president; Professor Scott, secretary, and Mr. Stock of Fernley, treasurer.

CLUB ENDORSES COUNTY SELLING

The Dallas Holstein club met at the town hall, Dallas, Wisconsin, March 23d. L. W. Jewitt was elected club leader and William Owens secretary-treasurer.

The club indorsed the selling of cattle by the county association which charges a commission on all sales made. This plan has now been indorsed at meetings of all twelve of the Baron county clubs.

It is planned to have a community dairy show in June and also to have a film made showing Holstein activities in Barron County. An exhibit of both purebred and grade Holsteins owned by residences of Dallas will be staged at the Barron County Fair next fall.

LANE COUNTY TO THE FORE

The Lane County Holstein-Friesian Association, at Eugene, Ore., March 29th, decided to make a concerted effort to advertise Holsteins and are also planning a county campaign for better sires. E. W. Meyer the National Association field man for the Northwest district spoke on newspaper and billboard advertising.

It is planned to make county exhibits at the Lane County Fair, the Oregon State Fair and the Pacific International Livestock Exposition. T. J. Sweaney of Goshen was named as chairman of a committee on exhibits; Max Arp of Eugene, chairman of the committee on the better sire campaign; and O. L. Dunlap, head of the committees on advertising; C. B. Swango of Coburg will be head of calf club work.

CHEQUAMEGON CLUB STOCK DOUBLES

The Board of Directors of the Chequamegon Holstein-Friesian Association met at Ashland, Wisconsin, April 6, and reelected the entire Board of Officers for another term, they are: Ed. Carlson, president; Henry Roffers, vice-president; Roy Prince, treasurer; D. W. Emerson, secretary. These with Carl Rudquist, James W. Good, and Otto Olson, the remaining members of the board, form the executive committee.

A. O. Collentine of Madison, has been inspecting the cattle owned by the members and announced that they are in splendid condition. Three years ago the Chequamegon Association, at its organization, owned forty-one purebred Holsteins and these have increased to eighty-four. Mr. Collentine made the original selection.

FORM COUNTY BOOSTING ORGANIZATION

James Robinson was elected as director to represent Holstein interests at the union meeting of breeders of purebred stock at Tipton County, Indiana, March 31st, at which time the Tipton County Purebred Livestock Breeders' Association was formed. Representatives of dairy and beef breeds are on the board as well as representatives of the various breeds of hogs and sheep. Over 200 men and women attended the farmer's banquet at which the organization was formed.

The principal speakers were Prof. Shanklin and Prof. King of Purdue University. Prof. King is president of the Indiana Livestock Breeders' Association. Both speakers dwelt on the importance of organization and advertising of stock and the high quality of the products of the county.

OZAUKEE BREEDERS MEET

The annual meeting of the Ozaukee County Holstein Breeders' Association was held recently at Cedarburg, Wisconsin. The principal speakers were H. F. Schroeder, President of the Wisconsin Breeders Association, and County Agent M. H. Button, both of West Bend. Mr. Schroeder discussed the state association and Mr. Button talked on cow testing associations. It was decided to affiliate with the state association and to form a calf club. The members favored the area tubercular testing plan under State and Federal supervision. Officers were elected as follows: President, Oscar Sommer, Thiensville; vice-president, W. J. Bichler, Belgium, secretary, Walter Ahlers, Grafton; treasurer, Adolph Seifert, Thiensville; C. F. Dinneen and Theo. Schanen, members of the executive committee.

FORM CLUB IN LUZERNE COUNTY

A number of prominent dairymen of Luzerne County met at Wilkes-Barre, Pennsylvania, April 10th, and organized a Luzerne County Holstein-Friesian Association. Luncheon at the Hotel Durkee was followed by a business meeting held in the office of Luzerne County Farm Bureau.

Speeches were given by Allen N. Crissey, field agent for the National Association and O. G. Shafer, of State College Dairy Department.

Officers were chosen as follows: President, Frank A. Fisher, Hanover Township; Vice-President, George Shoemaker, Wyoming R. D.; Secretary-Treasurer, James D. Hutchinson; agent, Luzerne County Farm Bureau; Executive Council, Clair Murdock, Wyoming, R.D.; George H. Smith, Mountain Top, R. D.; Porter Michael, Wyoming, R. D.; D. P. Honeywell, Dallas.

GOOD SPEAKERS AT STILLWATER

It is estimated that, on April 17th, at Stillwater, Minnesota, there were three hundred in the audience that listened to Governor Preus, Dean Coffey of the Minnesota College of Agriculture, Robert Geiger and Chas. Collison of the Minneapolis Tribune, the occasion being the opening of the Washington County purebred sire campaign. "Washington County ranks 24th of the 87 Minnesota Counties in the number of purebred cattle" said Governor Preus. The county has 1,946 herds of cattle consisting of 1,654 purebreds and 22,589 grades or scrubs. The Governor reviewed the United States census figures on Minnesota as a dairy state. He said that these figures show Minnesota to have only 87,000 purebreds. The assessors returns for tax roll on May 1, 1922, reports 107,038 purebred cattle, 2,664,634 grade or scrubs. They also show 23,119 purebred bulls and 54,370 grade and scrub bulls in this state.

KANSAS BREEDERS ANNUAL MEETING

The members of the Holstein-Friesian Association of Kansas, met March 20th, at the Chamber of Commerce rooms at Topeka. They reelected C. A. Branch, of Marion, president, B. R. Gosney, of Mulvane, vice-president and H. W. Mott, of Herington, secretary-treasurer and sales manager. The directors elected were as follows: O. L. McCoy, Glen Elder; Frank McMurray, Darlow; Ernest Chestnut, Leavenworth, and Walter A. Smith, Topeka.

Ira Romig, Topeka; Charles P. High, Derby; and Mr. Chestnut and Mr. Gosney were chosen members of the sales committee.

About fifty attended the dinner. C. M. Long, director of field work, for the National Association, was the principal speaker. "Our association promotes the dairy industry primarily and the Holstein cattle secondarily," he declared.

Sales manager Mott announced that the attendance of the sale was the largest in two years and that the thirty-three cows, two calves and one bull brought a total of \$5,785. The top price was \$430, which O. L. Ward, Waco, Texas, paid for Pa Da Ra Copia, an eight-year-old, sold by Ira Romig of Topeka.

YORK COUNTY ORGANIZATION FORMED

Following several preliminary meetings the York County Holstein-Friesian Association was permanently organized at York, Pennsylvania, on April 20. A constitution and a set of by-laws were adopted and it is planned to stage a membership campaign. A junior club which is being sponsored by the farm bureau was favored and it is expected to organize about May 15. Membership will be open to every boy and girl in the county between the age of ten and eighteen. The heifers selected for the members will be between the ages of three and twelve months and there will be an exhibition and contest at the York Fair next October when all of the calves are to be shown and prizes will be awarded to their owners.

The officers of the county association are: President, H. E. Robertson, York R. D. 5; vice president, Fred Slyder, near Valleys; secretary, Sydney Davids, Seven Valleys, and treasurer, W. S. Grim, Red Lion, Pa.

JACKSON BREEDERS HAVE BUSY MEETING

The March meeting of the Jackson County Holstein Breeders' Association was held at Jackson, Michigan, March 23d. President Smith of the State Association, spoke on farming difficulties, questioned the extension of farm credits and said that many farmers had gone heavily into debt to obtain seed for last years potato crop and had not realized enough to pay for the seed and labor.

James Hayes, of the Michigan Agricultural Dairy Department, urged the breeders to bring to the attention of doctors, nurses, hospitals, and milkmen, the merits of Holstein breed and Holstein milk. He condemned sharpers who take advantage of the interest aroused in better sires to sell farmers inferior animals at inflated prices.

Robert Curtis, secretary of the Lenawee Holstein Breeders' Association, spoke on junior calf club work and said that the Lenawee breeders were greatly benefitted by pooling their interests.

The meeting indorsed the area plan of tuberculosis eradication, favored the reduction of state indemnities to the federal basis and urged an emergency appropriation of \$200,000 for indemnity to cover the balance of the present fiscal year and annual appropriations of at least \$400,000 for indemnities and \$120,000 for operating expenses for testing work during the next two years.

FOR FIVE YEARS IN SUCCESSION Hampshires have won grand championships over all breeds, all ages and all weights of hogs in the carload lots at the International Live Stock Show 1918, 1919, 1920, 1921, 1922.

FOR FIVE YEARS IN SUCCESSION Hampshires have shown the youngest, yet the heaviest spring pigs at this show.

HAMPSHIRE ARE THE PRACTICAL FARMER'S PRACTICAL HOG, because of—their meat type—their grazing qualities—their activity, health and vigor—their highly developed mother instinct and milking qualities—their early maturity and economical gains, and **Because They Are Recognized Market Toppers.**

For information about Hampshires or for names and addresses of breeders near you, address

HAMPSHIRE RECORD ASSOCIATION

Dept. 35

409 Wisconsin Ave., Peoria, Ill.

FARM BUREAU NOTES FROM BLAIR COUNTY

April 10, twenty-one prospective Holstein breeders living in the vicinity of Morrison Cove, Pennsylvania, began keeping the records of the Morrison Cove Holstein Calf Club. All of the calves are purebred and tuberculin tested or from tested herds. As many boys and girls are keeping the records of feed, grain and other essential factors in the development of what each hopes will be the winning calf at the Round-up to be held late in the summer. This is the fourth year that such a club has been in existence in Morrison Cove. For three years no club has been operating, but the Breeders' Association feels that the coöperation of the boys and girls is essential to the best interests of the breed, as well as to make the next generation of Holstein breeders better than those existing at present.

These twenty-one boys and girls automatically become junior members of the Cove Holstein Association. A club committee assures the donation of generous premiums which will include every member. The first prize will be the expenses of a trip to the National Dairy Show, which will be held at Syracuse, N. Y., in October.

CRAIG ADVISES STANDARDIZATION

The annual banquet and dance of the Sheboygan County Holstein Breeders Association was held at Plymouth, April 7th, and was very successful. More than 500 tickets were sold. Secretary C. F. Pratt of the Sheboygan Association of Commerce, was toastmaster, Carl Juve of Pinehurst Farms was chairman. The principal speaker was Dr. J. A. Healey of Madison, a representative of the state and federal departments of agriculture. He spoke on tuberculosis eradication through the area plan. He reported that last year \$350,000 was appropriated by the state legislature for the advancement of this work but that the appropriation was exhausted by the first of October. This year the state legislature is asked to appropriate \$1,000,000 which in his judgment would be a good investment.

J. A. Craig of Janesville, president of the Rock County Association, member of the executive board of the Wisconsin State Holstein Breeders Association, and president of the Sampson Tractor Company spoke on marketing farm products. He told his hearers to produce better livestock, better milk, better butter and gave pointers on improving and standardizing products before marketing.

F. G. Swoboda, manager of the Wisconsin Cheese Producers' Association, gave a short talk on improving dairy and livestock products and the connection between tubercular cattle and their products from a cheese dealers' standpoint.

PROFESSOR WING DISCUSSES THE INDUSTRY

The members of the Hampshire-Franklin Holstein-Friesian Breeders' club met April 20th at Northampton, Massachusetts, in the rooms of the Hampshire County Extension service. Secretary E. J. Montague read the minutes of the last meeting and then President Elder introduced the speaker of the day, Professor H. H. Wing, head of the department of animal husbandry of the New York State College of Agriculture, Cornell University. Professor Wing said that many breeders of purebred cattle apparently do not really know the basis upon which the industry rests. The reason for breeding purebred cattle is to get better cows into the hands of the dairymen. The cow producing 30,000 lb. of milk in a year is to be desired but she is not the one to which the industry should apply the whole of its energy. The 10,000 lb. cow is what the dairyman needs. There is a scarcity of this particular animal and the average dairyman is too often satisfied with a 4,500 lb. cow.

"We pose as breeders of dairy cattle," continued the professor, "when we breed a herd for four or five years and get probably fifty animals together and then sell out. This practice fails to get good and permanent results. Breeding is a life business."

The speaker said he thought he had been asked to address the meeting because the industry at the present time is passing through a depression. But the outlook for the Holstein breeder is the same as it has been in the past. The outlook for Holstein cattle—the most prominent breed of dairy cattle in the

United States—is steady and constant. There is no indication that the breed is not permanent.

Professor Wing gave some information regarding early importations and sketches the development of the breed. He said between 1878 and 1885 about 8,500 females were brought to this country and since that time there have been relatively few importations. There has been more than a million Holsteins recorded in the herd book. The breed seems admirably adapted to United States conditions which is the chief reason for this increase. The demand for fluid milk may be another, although in the speaker's judgment, a minor one. The Ayrshire, Jersey and Guernsey breed all have to have generous importations to keep the breed up to standard. According to figures which Professor Wing has compiled, if all the descendants of the 8,500 imported females had been all recorded there would now be recorded some 2,800,000 cows. About three-quarters of the possible number have disappeared. Selection has not been accurate and selection has not always been practiced.

Professor Wing then discussed advanced registration, approved the raising of the advanced registry requirements and said that he hoped that before another ten years had elapsed that the standard be again raised. He urged his hearers not to run to fads and said there must be a correct proportion between form and function and animals must both produce and reproduce.

GENETICS AND ANIMAL BREEDING

On April 27th and 28th, at Washington, D. C., there was a meeting held under the joint auspices of the National Research Council and the United States Department of Agriculture and the subjects under discussion were plans for the furtherance of investigations on inheritance in cattle. Those present decided that because of incomplete and inadequate records and a lack of standardization of methods, the present knowledge of genetics was not used to the best advantage by cattle breeders.

In order to make fuller use of the information already brought out and put it into more available form, the conference decided to appoint a number of special committees to study certain problems and report at a subsequent meeting. The committees will work on the following subjects:

1. Formulation of a genetic program in cattle breeding.
2. Standardization of methods in general record keeping and management practices.
3. Standardization of methods for correction for age and of taking measurements, photographs, and other kinds of data.

Those present at the conference were: Dr. F. R. Lillie, University of Chicago, Chairman of Division of Biology and Agriculture of the National Research Council, and owner of the well-known Holstein establishment, Buffalo Creek Farm, Arlington Heights, Ill.; from the Department of Agriculture—Dr. E. D. Ball, Director of Scientific Work; Dr. J. R. Mohler, Chief of the Bureau of Animal Industry; E. W. Sheets and Dr. Sewall Wright, Animal Husbandry Division; R. R. Graves and Dr. E. B. Meigs, Dairy Division; from State experiment stations—Dr. J. W. Gowen, Maine; Prof. W. W. Yapp, Illinois; Dr. C. H. Eckles, Minnesota; and Dr. L. J. Cole, Wisconsin, recently appointed chief of the Division of Animal Husbandry, Department of Agriculture, chairman.

SWAT THE FLY

A little fly flew in the door,
Then laid some eggs, and laid some more;
The eggs hatched out in a very few days,
And the little flies flew in different ways;
Then they laid eggs, and laid some more,
And the same things happened that happened before;
And the husky fly that started it all
Was alive and kicking till late in the fall.
She called a reunion of all her descendants,
And they wrote a declaration of independence,
To give you their names would be tedious and long,
For her descendants numbered five trillions strong.

Mrs. Yearwedd (distressed)—"Do you always believe everything you hear about your husband?" Mrs. Oldham—"Yes, and a great deal more."—*Boston Transcript*.

Letters to the Editor

BIDDEFORD, ME., April 29, 1923.

THE HOLSTEIN BREEDER AND DAIRYMAN,
HARRISBURG, PA.

Dear Sir:

Owing to poor health and poor help I was obliged to sell my farm and Holsteins. Since being deprived of my proxy right I take no interest in the Association or cattle, as I looked upon it the same as if the Cotton Mill corporations deprived me of my right of proxy or of voting at stockholders' meetings. You are right and I wish you success.

Very truly yours,
MAINE BREEDER.

Dear Mr. Reynolds:

Maybe I am dyspeptic—maybe bilious—anyway I am peevish.

Do you know that it is reported here in Iowa that the "putty cow" has cost the Holstein Association \$40,000 at the present time, and the committee has no idea of calling the job complete? Said committee enjoys the jaunts on association expense accounts too well. And the cow looks like an abortion. It is said even the president is sore on the subject.

Do you know that "a certain man," for whom the Hon. Supervisor of Extension Department used to work, answered an ad the other day just to get a line on their follow-up dope, out of curiosity.

Immediately said "certain man" was importuned and plead with by a Holstein paper published in the Empire State to become a regular subscriber. Sample copies and letters came in a shower, although this same "certain man" has been on their list ever since 1914. Is the extension department conducting a subscription campaign for the Empire State Holstein Publication? Draw your own conclusions.

Do you know that the dreamy, far-away look in the president's eyes is a perpetual indication of his hope that the Holstein will soon carry him up the White House steps and leave him there for four or eight years?

Do you know that the other breed associations are sitting back and chuckling at their increased business, thanks to "Vitality" publicity? The extension department is talking itself blue in the face about fecundity and so forth while the other fellows are selling more milk on the strength of the cream line.

Iowa, April 30, 1923.

DAIRYMEN'S LEAGUE MAY MILK PRICES

A cut rate competition in milk prices recently developed in the New York wholesale markets and the milk dealers buying from the Dairyman's League, recently at a conference with the League Executive Committee on the subject of May prices, declared they could not meet this competition unless the prices for May milk were reduced. The League has lowered the price for fluid milk to \$2.33 per hundred pounds. There will be a reduction of 1 cent per quart in the price to the consumer.

Class 1 \$2.33. This classification includes all milk sold in fluid form.

Class 2 \$2.05, with same differential applying to skim milk

as is in force at present with the exception that dealers will be charged 15 cents instead of 5 cents as formerly for skim milk which they do not profitably dispose of. This classification includes sweet cream and milk manufactured into ice cream and soft cheeses.

Class 3—which includes all milk manufactured into condensed or evaporated milk, powdered milk or hard cheeses, will be figured on the same basis as at present, namely 59 cents per 100 pounds above the average New York City outside quotations for 92 score butter.

Class 4—A—The prices for milk in this class, which includes milk made into butter, will be on the same basis as at present, namely the average official New York City quotations. The same charges will be made for skim milk as under Class 2.

Class 4—B—Milk made into cheese. Prices will be the same as at present, namely the average New York City quotations for cheese.

All these prices are for milk on the basis of 100 pounds of 1-10 milk testing 3% butterfat at the 200 mile zone.

It will be noted that in classes 2 and 4-A there is an increase from 5 cents to 15 cents in the charge for skim milk of which the dealer does not make profitable disposition.

CONTRASTING CUSTOMS IN DIFFERENT COUNTRIES

Cattle at the English "Royal" which is the great show under the supervision of the Royal Agricultural Society of England are arranged in the stalls according to the classes in which they are entered instead of the herds to which they belong. This arrangement is much more convenient for visitors than the system used at American shows and exhibitions for it enables visitors to compare the animals or prize winners readily at any time during the show. But oh! how such a plan would excite the ire of the American herdsman and his helpers. Fancy handling a state show herd and having it scattered in ten different rows in a big fair barn!

English sale customs are just as strange to our ideas. When cattle are being sold at auction the auctioneer sometimes uses a sand glass to determine how long to wait for new bids. If no bid is received during the time required for the sand to run, the offering or lot is struck off to the last bidder. This method has considerable in its favor for oftentimes there has been considerable dissatisfaction among consignors, some claiming that more time was given to offerings from favored parties. There is a considerable difference of opinion on the amount of time that should be given offerings for a sale conducted in a bright snappy manner generally results in higher returns than one dragged out. A few animals may be struck off for a little less but in the opinion of most habitués of the sale ring, the returns from the entire sale will be more.

THE OCCUPATIONS OF PENNSYLVANIA'S LAWMAKERS

There are fifty members of the Pennsylvania Senate and their occupations are classified as follows: Attorneys 18, bankers 4, manufacturers 4, contractors 3, insurance 2, lumber 2, retired from active business 2, managers 2, farmers 2, and oil business 2, with one each, physician, publisher, sales agent, merchant, senator, coal dealer, banking investments, alderman and theatrical manager.

The occupations of the 206 members of the lower House are: Attorneys 36, farmers 15, merchants 13, manufacturers 10, clerks 14, salesmen 8, real estate dealers 6, physicians 6, contractors 5, insurance agents 5, managers 7, housekeepers 4, publishers 4, lumbermen 4, undertakers 3, retired 3, secretaries 3, miners 3. Vocations and professions represented by two members each are coal dealer, druggist, banker, plumber, dentist, school principal, teacher and laborer.

There are eight women members of the House and four list themselves as housekeepers, one as a farmer, one as a manufacturer, one is an insurance agent and one is principal of a private school.

Uncle Toby was aghast at finding a strange darky with his arm around Mandy's waist. "Mandy, tell that fellow to take his ahm 'way from 'round yo' waist," he commanded. "Tell him yo'self," said Mandy; "he's a puffect stranger to me."—*Judge*.

Cow Testing Association Reports

ILLINOIS TESTING

The Illinois honor roll for March is headed by a purebred Holstein owned at Sinnissippi Farms No. 1, one of the units of President Lowden's great farm. This cow produced 2,091 lb. milk, 96.2 lb. fat in the month. The herd to which she belongs also led the state as well as the Ogle County Association for high average, the fourteen purebred Holsteins averaging 1,538 lb. milk, 52.6 lb. fat.

Purebred Holsteins made a splendid showing, comprising the first six on the list as well as the animal in tenth position. There is a tie for second position between two cows at the Buffalo Creek Farms each producing 88.3 lb. fat, one with 2,083 lb. milk and the other with 2,006 lb. Number 4 on the list belongs to the Frank T. Fowler herd at Lake Villa and she is credited with 2,502 lb. milk, 87.5 lb. fat while another Fowler cow stands next with 2,623 lb. milk, 86.5 lb. fat. A purebred from Rock River Farms at Byron is next with 1,683 lb. milk, 85.8 lb. fat and this farm also has the cow in tenth position with 81.1 lb. fat, 2,703 lb. milk, this being the highest amount of milk reported. Charles Reed of Ogle County has a grade Holstein with 84.5 lb. fat and Eugene Nagel of Madison County has another with 82 lb. fat from 2,647 lb. milk, so that nine out of the ten highest producing cows are black and white.

As mentioned above the Sinnissippi herd has the high average but A. D. Cornue of McHenry County has fourteen purebred Holsteins that averaged 1,272 lb. milk, 50.3 lb. fat. Chas. Reed & Sons have twelve grade Holsteins with an average of 1,406 lb. milk, 48.3 lb. fat and are in fourth position. The Ogle County report for February was not

received in time last month so must be commented on now. Sinnissippi Farm had the high herd and high producing cow, sixteen purebred Holsteins averaging 1,311 lb. milk, 49.2 lb. fat while one of their animals made 2,167 lb. milk, 91 lb. fat. The Rock River Farms and the C. Reed herd followed closely.

W. E. Acker, tester for the Lee County Association reports that at the Rocky Ford Dairy Farms, eight cows of which five were mature and three two-year-olds were selected for three times daily milking. The feeds were accurately weighed and the extra labor necessary was hired while all other conditions remained the same. There was an increase of \$50 over the previous month's gross income while the cost for the extra feed and labor was \$30 so that \$20 was left for net profit. Besides this increase in profit, the cows all gained in weight during the month.

A study of Illinois testing association records show that a good dairy cow consumes approximately 5,800 lb. silage, 1,900 lb. hay, 2,800 lb. grain during the year. In addition she is pastured five and a half months. In commenting on this, C. S. Rhode, Assistant Professor in Dairying advises careful planning of crops on dairy farms and the use of legume hay, also the use of farm grown grains such as corn, barley, oats with a small added amount of protein concentrates.

CANADIAN TESTING

The report of Canadian records accepted during the month of March is chiefly remarkable for the record of Lady Roberts Faforit 2d who is credited with a production of 24,954 lb. milk and 1125 lb. butter in a year as a mature cow. She

is owned by J. B. Hanmer of Norwich, Ont., and is a daughter of Lady Roberts Colantha, the world's champion senior three-year-old with a record of 26,433 lb. milk and 1,468.75 lb. butter. This is the world's record combination of dam and daughter.

This is the only record reported above a thousand pounds of butter, but there are a number of very creditable showings reported. In the 305 day division Arkano De Kol Faforit is credited with 20,053 lb. milk, 905 lb. butter in the mature class and Colony Beulah McKinley with 882.50 lb. butter, 22,081 lb. milk in the four-year-old class.

Five records of 30 lb. or more of butter in a week were accepted. Brookside Pearl Abbekerk has 32.70 lb. as a mature cow and Dutchland Alcartra Pieterje made 31.42 lb. butter from 486.4 lb. milk as a junior four-year-old. Both are owned by Arbogast Bros. of Sebringville, Ont.

PENNSYLVANIA TESTING

Eighteen associations report that 5,313 cows in 462 herds were tested during the month of March; 878 cows produced 40 lb. or more butterfat and 914 cows exceeded 1,000 lb. milk. The largest amount of milk was 2,381 lb. produced by a purebred Holstein, owned by E. Page Allinson of Town's End Farm, West Chester. Another purebred in the same herd led the state for butterfat, producing 103.6 lb. A grade Holstein owned by F. R. Babcock of Gibsonia and enrolled in the Butler County Association was second with 93.2 lb. fat. The West Chester and the Butler County Associations stage quite a contest. They tie with the number of cows producing more than 1,200 lb. milk, each having 64; the ten-cow average is

taken by West Chester Association with an average of 74 lb. fat, the Butler County Association's best ten cows averaging 71.3 lb. and standing in second position; while Butler County leads in the number of cows giving more than 50 lb. butterfat, there being 43 in this association.

Mr. M. J. Armes has summarized the cost of milk produced from thirty-five Pennsylvania cow testing associations records covering the years 1918 to 1922. He has grouped 8,630 cows according to their production and has found that for each increase of 1,000 lb. milk produced there was a decrease on the average of 46c in the cost of producing 100 lb. of milk. The group producing 3,000 lb. in the year made milk at the cost of \$2.76 more per 100 lb. than did the group producing 9,000 lb.

A similar comparison was made on the costs of producing butterfat, with 9,194 cows grouped according to production from 150 lb. annually to a group of 400 lb. and over. This shows that the cost of producing a pound of butterfat decreases 9½ cents a pound with each 50 lb. increase in fat production. Cows in the 200 lb. group produced fat for 9½ cents less per pound than in the group producing 150 lb. annually and so on up to those producing 400 lb. of fat and over where the cost was 57 cents less per pound than in the 150 lb. group.

These facts emphasize in a very striking manner the vital importance of having cows of a high milk and butterfat producing ability. As costs of production decrease, net returns or profits correspondingly increase. The producing or working ability of a cow is born in her and all dairymen should carefully study the productive inheritance of the sire at the head of the herd. Profits in the future will be dependent upon the breeding practice of the present.

A grade Holstein in the East Juniata Association returned \$202 above cost of feed last year and several others came very close to this figure. This association had 40 cows that produced 1,200 or more pounds of milk during March and was second on the list in this report.

HOLSTEINS LEAD IN VIRGINIA

White Face, a Holstein cow owned by Lee McChesney of Bristol, Va., led the Virginia cow testing association for the month of March. She produced 75.8 lb. butterfat, 1,865 lb. milk. Strelso, a Holstein owned by Martin Lynch produced 1,380 lb. milk, 51 lb. fat and was second. She has led the association for the past four successive months.

The McChesney herd was high with an average of 791 lb. milk and 30.8 lb. butterfat for thirty cows. There were 420 cows tested belonging to 15 herds and the average production was 440 lb. milk, 21.5 lb. fat, reports the tester, Harold Straw.

Bootlegging is what happens when an irresistible thirst meets an immovable law.
—New York Tribune.

GRADE CHAMPION OF THE SOUTH

The champion grade cow of the South is Sadie, a Holstein owned by Ben Middleton of Herndon, Va., who was the high cow last year in the Fairfax County Association No. 1. She is a six-year-old and her record is 18,490 lb. of milk and 729.6 lb. butterfat. Her average test was 3.95%. The record was made on two milkings a day. After completing her record she was dry three weeks and then dropped a fine, large heifer calf. Her milk was shipped to Washington, D. C., as fluid milk, bringing an average farm price of \$2.95 per cwt., making an income of \$545.21. Her roughage was corn silage and mixed clover hay. Her roughage including pasture was valued at \$41.30 and the grain at \$119.62, or a total feed bill of \$160.92, leaving an income over feed of \$384.29. There was a return of \$3.39 for every dollar invested in feed.

DAYETT COWS ARE PRODUCERS

J. Irvin Dayett of Coochs Bridge, Del., owned the first and second cows for production in the Delmarvia association for the month of March. The leader produced 1,621 lb. milk, 56.7 lb. fat and her stablemate is credited with 1,380 lb. milk, 55.2 lb. fat. Mr. Dayett had another of his purebred Holsteins in the list of the ten highest producers, she having 1,364 lb. milk and 47.7 lb. fat to her credit.

WILLIAM C. LEITSCH

The Wisconsin Holstein industry has suffered a severe loss by the death of William C. Leitsch of Columbus, who died April 18th at his home from pneumonia. Mr. Leitsch, a man of pleasing personality, was a progressive breeder and not a speculator. He was treasurer of the Wisconsin Holstein Breeders' Association and was formerly president of the National Canners' Association. He was a successful business man and was president of the Columbus Canning Company.

JESSIE MAIDA RUTH

Jessie Maida Ruth, owned by H. E. Robertson of York, Pa., is still going strong on her year test and is producing 100 lb. milk a day. On Saturday, April 7th, she produced 115.8 lb. which is the greatest single day's production in the thirty day ending April 10th, she produced 3,210 lb. milk.

Several other members of the Robertson dairy are also making large records.

A NICE SALE

A. L. Hunt of Frederickberg, Iowa, recently purchased 24 purebred Holsteins from Henry Heiter of South Byron, Wis. There were 22 bred heifers and two cows and the reported price was \$2,500.00. The tuberculin test on the Heiter herd failed to show a reactor.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

FULL INFORMATION FREE. WRITE TODAY FOR BOOKLETS TO

NATIONAL POLAND-CHINA JOURNAL, WINCHESTER, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. \$1.00 for 1 year; 3 years for \$2.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

WISCONSIN TESTING

Black and White cattle again carry off most of the honors in the Wisconsin Testing Association for the month of March for, in the 124 associations reporting, the leaders of 53 were registered Holsteins and 36 were grade Holsteins. There were three grade and four purebred Jersey leaders; 14 grade and 2 purebred Guernsey leaders; 2 of the leaders were registered Ayrshires; 2 grade Shorthorns; 2 were Natives; 1 a purebred Milking Shorthorn; and the breeding of one is not given.

The state leader is a registered Holstein in the herd of Leo Kuhl & Son of Hazel Green. She is credited with the production of 110.2 lb. fat. Second is a grade Holstein, owned by J. Brethouwer in the Cedar Grove-Oostburg Association. This cow made 101.4 lb. fat in the month. A purebred Holstein owned by Theo. Mathiew of the Eau Claire No. 3 Association is third with 100.6 lb. fat and the Mathiew herd of 13 purebreds heads that association with an average of 41.1 lb. fat, 1,144 lb. milk. The other cow to exceed 100 lb. fat is a purebred Holstein, owned by N. Lasselyoung of the Ellington Association with 100.1 lb. fat to her credit. Five other association leaders made between 90 and 100 lb. fat and all are purebred Holsteins.

The highest herd average is in the Hazel Green Association and is 67.8 lb. fat, 1929 lb. milk for the twelve purebred Holsteins in the herd of Leo Kuhl & Son. Eight grade Holsteins owned by Peter Yogerst averaged 62.9 lb. fat, 1,493 lb. milk in the Allentown-Kohsville Association and the purebred and grade herd of 21 milkers owned by Frank Gillis in the Dunn County No. 2 Association averaged 60.5 lb. fat, 1,534 lb. milk. Eight other associations are headed by herds averaging between 50 and 60 lb. fat and in six instances these herds consist of all purebred Holsteins; in one, grade Guernseys; and in the other instance of both purebred and grade Holsteins.

Nov. 15—Kansas State Association Sale, W. H. Mott, Mgr.

LITTLE MONEY HERE

The Hanson and Vik sale at Clarkfield, Minn., drew a big crowd but the general financial condition of the community prevented any large prices. Grade cows averaged \$100 a head, grade yearlings averaged \$71 and the purebred bull calves reached up to \$57. While these prices do not come up to the expectation of the breeders they were very fair considering conditions.

BOESEN HERD DISPERSED

The J. E. Boesen herd of grade and registered Holsteins was dispersed at public auction on the farm at Greencastle, Indiana, April 10. There were 28 registered Holstein cows and heifers which brought \$3,101.50. The sixteen cows averaged \$160, the top price being \$222.50. Only four animals remained in Putman county. The Indiana Tuberculosis Hospital was the principal buyer.

DR. PEASLEY'S DISPERSAL

Dr. A. A. Peasley's herd was dispersed April 12 on the farm at Columbus, Ohio. The auctioneer was C. E. Baylor, Wellington and the sales manager was the well known Ohio Holstein breeder and pedigree man, F. G. Johnson. There were only 36 animals in the herd, many of which were young. Prices were low for the quality of the stock. The total was \$3,435, an average of \$92.64. Many of those present secured real bargains.

SALE AT FOND DU LAC

Weather conditions influenced the Fond du Lac Breeders Sale held at the pavilion at Fond du Lac, April 5 and 6. The top price was \$405 which Louis Wagner of Fond du Lac paid for the five-year-old bull Sir Fobes Mutual Pontiac consigned by H. J. Wagner of Calvary. The principal buyers were Thos. Brady of Worthing, S. D., and the Northern Hospital at Winnebago, Wis. A large number of the animals were young which, of course, brought down the sale average. Kelly, Mack and Poulman were the auctioneers with F. H. Everson in the box. Sid Bird was sale manager.

BROWN COUNTY JUNIOR SALE

A sale of bull calves with a few females added was held April 5 at De Pere, Wis., under the auspices of the Brown County Holstein Breeders Association. Despite unfavorable weather conditions there was a good crowd present.

Twenty-three animals averaged just over \$67, totaling \$1,543. The highest price was \$158 for which James Ryan of Rockland, obtained a very fine young bull.

The auctioneer was Michael Kellner with Joseph Hoskens as sale manager. All the animals were purchased by residents of Brown County. The bulls averaged twice the amount they would have a year ago. There were fifteen bulls and fourteen heifers and the ages ranged from four weeks to one year.

OUTAGAMIE BREEDERS SALE

At the annual sale held by Outagamie County Holstein-Friesian Breeders' at Appleton, Wis., April 13th, forty-seven animals were sold for \$4,538. Many of these were quite young and the average of \$94.42 is lower than it would have been if it had included them with their dams as is the custom. The crowd was estimated at between three and four hundred and at least 30 purchased their first purebred Holstein females. Yearling heifers and old cows were not in demand but calves and animals in milk or soon due to freshen sold quite briskly. The auctioneer was J. E. Mack, of Ft. Atkinson, Wis.

The animals bringing \$150 or more with names and addresses of their purchasers are:

Parthena Piebe Hengerveld, Herbert and Frank Tubbs, Seymour	\$205
Ormsby Pontiac Parthena Lass, 2 yrs., Schwartzbauer Bros.	150
Sunnyside Storigo Wayne 3d, 6 yrs., H. Yandre, White Water	165
Consigned by Geo. H. Flamann, Appleton, Wis.	
Piebe Inka Parthena, 6 yrs., John Heenan	155
Consigned by Robert Tiedt, Black Creek, Wis.	
Male yearling, William Schultz, Ashland	150
Consigned by N. J. Losselyong, Appleton, Wis.	
Heifer, 2 yrs., John Knapstein, New London	175
Consigned by Harvey D. Knorr, Appleton, Wis.	
Korndyke De Kol Princess 2d, 7 yrs., Robert Burns	165
Consigned by Geo. R. Schaefer, Appleton, Wis.	
Colantha Rijneta Segis, R. J. Schaefer, Appleton	160

THE CUMBERLAND COUNTY BREEDERS' SALE

The Cumberland County Holstein-Friesian Breeders' sixth annual sale held at Carlisle, Pa., May 2 was pronounced to be the best of the series. For one thing, Hertzler's Garage, in which it was held, was large enough to accommodate both the cattle and the people and the large crowd were not inconvenienced in any way. Then the animals were generally of good individuality. There was a large proportion of young stock, but there was a much better demand for milkers than for younger animals while there were very few bull buyers present.

There were forty-three animals offered and these brought \$5,254.50, an average of \$122.20. There were six bulls and with one exception they were young calves and they averaged \$121.66. Twelve females under one year old averaged \$67.41 and the twenty-five females a year old or over averaged \$150.42.

The top price was \$320 which W. H. Miller, of Carlisle paid for the 19.84 lb. four-year-old, Colantha Ultra De Kol, consigned by W. H. Sheaffer, of Huntsdale. As can be seen from her picture in the April 22 issue of the BREEDER AND DAIRYMAN, she is a cow of good individuality. The animals over six months old were tuberculin tested and a number of them were from accredited herds. S. R. Miller was pedigree expert and sales manager. A. A. Raudabaugh, supervisor for the Cumberland County Testing Association was clerk of the sale and the auctioneer was Col. Geo. Deitch, assisted by G. N. Henry.

The general opinion among the consigners was that the sale was very satisfactory, although some of the purchasers obtained real bargains. Every one seemed optimistic as to the outlook for the Holstein industry. One thing we especially wish to commend was the action of a local ice cream factory in putting up cream in ten cent packages. There were three flavors in the bar and a generous amount was given for the dime while the product was of good quality. If the example of this local company is followed at Holstein events throughout the country we believe the venture would be very successful.

JAYNE HERD TO BE DISPERSED

The good herd of Holsteins owned by S. C. Jayne will be dispersed on the farm Saturday, May 19. This herd, which is under state and federal supervision has passed two clean tests, and will be sold subject to a 60 day retest. This is a real good herd and the animals are closely related. Fourteen are daughters of the bull, Titusdale Rose De Kol King, who was sired by a son of a 30 lb. cow and whose dam as a two-year-old heifer produced 18.75 lb. butter in seven days and was from a cow that made 26 lb. butter in a week.

There are five daughters of King Johanna Korndyke Cornucopia. Several daughters of this bull have made nice A. R. O. records. He is from a big producing cow and was sired by Korndyke Abbecker Netherland, a son of the century sire, Korndyke Abbecker, from Milanhurst America De Kol, who made a number of world's records and produced 1,231.35 lb. butter in a year as a junior four-year-old, world's record at time of making.

The herd sire, which will be sold, is Model Darius King Segis. His sire was from a cow that produced 30 lb. butter in seven days from 647 lb. milk. His dam is the noted Clara Clothilde Lyons, a former world's champion who, at one time, as a two-year-old, held all the world's records from 30 days to 305 days inclusive. As a two-year-old heifer she produced 23.50 lb. butter in seven days. Her dam is a 30-lb. cow whose own dam made over 32 lb. butter in a week and these two cows each averaged over 95 lb. milk a day during the week of their test.

(Continued on page 328.)

CRESTMONT ORMSBY ALCARTRA

The great junior-three-year-old Crestmont Ormsby Alcartra, owned by Harry C. Gates of Canton, Pa. will not, we are sorry to say, make a world's record in the ten months division, failing to qualify as she did not freshen within the required fourteen months. She was milked for 330 days and then dried off and in these eleven months she produced 1,030.4 lb. butter, 21,552 lb. milk, certainly a splendid showing. This great heifer as a junior two-year-old produced 15,883.1 lb. milk, 722.98 lb. butter in ten months, carrying calf 180 days of the time she was on test. She is full sister to Crestmont Duchess Ormsby, that as a junior three-year-old, produced 18,243.1 milk, 806.65 lb. butter in 305 days carrying calf 200 days of her test period. This splendid pair of full sisters were born less than a year apart. Their dam, Fairmont Duchess Ormsby, was a daughter of Pledge Spofford Calamity Paul. Their sire, King Pontiac Alcartra Wayne, is the splendid bull at the head of Crestmont herd. The Crestmont herd is small and in it King Pontiac Alcartra Wayne has not had the opportunity that he really deserves but his daughters are producers and fine individuals and we predict that much will yet be heard of this high-class sire and his offspring.

WISCONSIN UNIVERSITY JOINS HOMESTEAD CLUB

The University of Wisconsin is eligible to join the Homestead Club. Professor George Humphrey of the animal husbandry department purchased, early in April, Homestead cattle from the herds of S. E. Jones, S. T. Jones and S. B. Jones & Son, all of Watertown. One of the animals will join the University herd at Madison and the others will form a herd foundation at the farm belonging to the branch school of agriculture at Sturgeon Bay.

DOINGS AT BERKS FARM

Things are moving at Berks Farm and the first 34 lb. seven day butter record has been made by Belgian Heroine of Grayfields 368654. Freshening as a six-year-old, she produced 34.06 lb. butter, 717.1 lb. milk in seven days; in thirty days she is credited with 132.73 lb. butter from 2,800.5 lb. milk. Her best day's milk production was 107.4 lb. This 34-lb. seven day record was made only two months after she completed a 305 day record of 804.63 lb. butter, 16,438.6 lb. milk.

As a two-year-old, Belgian Heroine of Grayfields is credited with a 7 day record of 26.96 lb. butter, 503.8 lb. milk. She is a daughter of Heroine of Grayfields and was sired by Sir Fairview Pontiac Korndyke, one of the many good sons of old Pontiac Korndyke.

Congratulations are in order for Abner S. Deysher, the proprietor of Berks Farm and also to herdsman Clark Berry in whose care Belgian Heroine of Grayfields made her splendid records.

DELICIOUS DAIRYLEA DAINTRIES

Have you tried a Dairylea Dainty yet? Never heard of it, why, where have you been? That's the trade name under which the Dairymen's League are selling ice cream in the form of a Sundae. This is sold in a package which retails for ten cents and it consists of ice cream, Dairymen's League quality, with a covering of fruits and berries, packed in a sanitary cup. This new venture is meeting the approval of both dealers and consumers and we are sure you also will like the product. The alliterative name is easy to remember and the flavor lasts.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 327.)

There are six daughters and five sons of Model Darius King Segis, who is just two years old. He is a son of Model Darius Glista, whose offspring have won so many prizes at the leading fairs in the State of New Jersey and who was from a 30-lb. cow and was sired by a son of Annie De Kol Konigin, who twice made over 30 lb. butter in a week and whose dam, Annie De Kol Butter Girl is a three times 30 lb. cow. Both of these cows have won prizes in the show ring at New York State Fairs.

Northern Pennsylvania is noted for the quality of its Holstein herds. These herds have been selected and bred with a view for profitable yearly production. At the same time the owners have kept type and conformation in mind, the result is that Holsteins from this district can go to any part of the country and make good either in short time or long time test work or in the every-day work of the dairy. The health record of the Jayne herd should cause intending purchasers to journey to Laceyville, May 19 and be present when this good herd is sold at public auction.

Laceyville is on the main line of the Lehigh Valley Railroad and the Jayne Farm is just one mile from the village.

BARGAINS AT SHEBOYGAN

The Sheboygan County Holstein Breeders' Association's semi-annual sale was held April 11th at Plymouth, Wisconsin. There were many bargains offered the assembled buyers. The total was \$8,555 for 82 animals, an average of \$104.33. The top price was \$210 which Edward Guenther of Adell, Wis., paid for Tyro Hengerveld Segis Adonis, a son of a 30-lb. cow sired by Pabst Pontiac Adonis. Rushton & Shaver, also of Adell, paid \$200 for Sir Pietertje Colantha Jewel 12th, a fine young bull from the D. W. Huenink herd which is federally accredited.

The animals bringing \$150 or more with names and addresses of their purchasers are:

3	Lilly Johanna Parthena 2d, 6 yrs., B. J. Meyer, Plymouth, Wis.	\$180
4	Lady Blackbird Homestead De Kol, 7 yrs., B. J. Meyer, Plymouth, Wis.	160
9	Tyro Hengerveld Segis Adonis, 11 mos., male, Edward Guenther, Adell, Wis.	210
12	Piebe Johanna Sue, 6 yrs., Pinchurst Farms Co., Sheboygan Falls, Wis.	160
13	Spruce Lawn Blanche De Kol, 8 yrs., B. J. Meyer, Plymouth, Wis.	165
14	Male, 9 mos., Fred C. Gisser, Plymouth, Wis.	150
15	Kingwood Segis Fayne, 5 yrs., H. A. Meyer, Plymouth, Wis.	174
29	Jewel Maid Pontiac, 5 yrs., B. J. Meyer, Plymouth, Wis.	185
40	Female, Isaac De Munck, Plymouth, Wis.	150
43	Lucy Johanna Polkadot, 7 yrs., Herman Haut, Plymouth, Wis.	185
45	Bull substituted for No. 44, Fiedler Bros., Plymouth, Wis.	175

77	Ophelia Maid Johanna Pietertje, 6 yrs., G. J. Huenink, Cedar Grove, Wis.	195
84	Substitute female, Arno E. Pfang, Plymouth, Wis.	160

DISPERSAL AT HOMEVIEW FARMS

An event that should bring visitors and buyers from many parts of the southern states as well as from Pennsylvania and Ohio is the dispersal sale of the Homeview Farm herd which will be held on the farm at Wheeling, West Virginia, on May 30. The Farms are located on the Wheeling, West Liberty and Bethany Pike; are about two miles south of West Liberty and ten miles north of Wheeling. There are good auto roads and you will have a splendid day's outing that may be both pleasant and profitable if you spend Decoration Day at Homeview Farms. Those coming by train should come to Woodsdale station at Wheeling. Busses leave the station for Homeview farms every hour.

The Homeview Farm herd is well known to be a high class establishment. The herd, which is under state and federal supervision, was built on a foundation which included blood of the great sires, Colantha Johanna Lad, Sir Veeman Hengerveld, and Pontiac Aaggie Korndyke, bulls whose daughters and granddaughters have made tremendous records in both long time and official tests. The present herd consists of 63 head of which 22 are granddaughters of Colantha Johanna Lad and twelve are granddaughters of Sir Veeman Hengerveld. There are three daughters and three granddaughters of Pontiac Aaggie Korndyke and it is very seldom that daughters of this sire are offered to the breeders at their own price.

The three herdsires are all to be sold. Dutchland Colantha Champion, a son of Colantha Johanna Lad has three direct descendant dams that each have records above 30 lb. and four that average well over 30 lb. His dam is Dutchland Pietertje Changeling, with a seven day record of 30.98 lb. She is the daughter of Dutchland Changeling Colantha Lad with a record of 30.96 lb. butter from 617.2 lb. milk. Many will remember this daughter of Colantha Johanna Lad on account of her great year record made as a junior three-year-old of 21,239.8 lb. milk, 946.71 lb. butter. She is a daughter of Ready Change, 31.16 lb. butter, 720.4 lb. milk in a

week and Ready Change was by Pontiac Butter Boy from the great old 29-lb. producer and show cow, Changeling. There are daughters of Dutchland Colantha Champion in the sale as well as cows and heifers bred to him. Another of the Homeview herdsires is Sir Veeman Hengerveld Merle. This bull is a son of Sir Veeman Hengerveld from a two-year-old daughter of King Korndyke Sadie Vale that made a 21 lb. seven day butter record. This combination of blood lines is always in demand.

The third of the herdsires is King Ormsby Colantha Johanna Lad and he is by King of the Johanna Lads from a daughter of King of the Ormsbys. Holstein breeders know that the half sisters and three-quarter sisters of this sire are in hands where they are being developed and this insures that this combination of blood lines will be in the public eye for years to come.

The owners of Homeview Farms are Dr. J. R. Caldwell of Wheeling, West Virginia and James Caldwell of Short Creek, West Virginia. These gentlemen spared no time or expense in building their herd and this insures that the offerings will be of high quality for the herd was built on the right foundation. The only reason the herd is in the market is because the farm has been sold. Don't forget to send for a catalog. Remember the animals will be sold subject to a 60 day retest privilege.

THE 1923 SALE

The 1923 Sale, one of the great series of sales begun in 1913 under the management of E. M. Hastings, of Pulaski, New York, was held at the state fair grounds, Syracuse, N. Y. April 17 and 18 with Kelley and Lee as the auctioneers and Leo Blanding as pedigree expert. The sale showed an increased demand for cows and heifers fresh or soon due to freshen. The individuality of the offerings was an important price determining factor, and this seemed to carry weight and has in recent sales in New York state, even in the case of females not immediately profitable from the dairyman's standpoint. The offerings showed a wide range of quality, some of them were exceptionally good while some of the younger animals were poorly grown and this condition is reflected in the prices received.

There were 141 animals sold, of which 42 were under two years of age and 28 under one year. They brought \$19,590 an average of nearly \$140. The 110 animals over a year old averaged practically \$160 while 66 head averaged better than \$200. There were 40 actual buyers of which all were residents of New York with the exception of a representative of the Woodlawn Dairy Farm, Lincoln, Nebraska, and J. G. Kerrick of Towanda, Pa. Mr. Kerrick purchased a number of young stock while the Woodlawn Farm representative took the top price animal, Lyndale Pietje Pontiac Echo, for \$1,500. This seven-year-old sire has a long list of good record daughters, most of which are heavy milkers. He was from a 30-lb. cow and sired by Avondale Pontiac Echo. The top price for a female was \$350 which W. D. Lyons, Marcellus, bid for Donolda Vale, a twin daughter of King Korndyke Sadie Vale Wayne. As a three-year-old, this cow had made over 25,000 lb. milk, and nearly 1,100 lb. butter in a year. She was well worth the money.

Animals bringing \$200 or more with names and addresses of the purchasers are:

88	Lyndale Pietje Pontiac Echo, male, 7 yrs., Woodlawn Dairy Farms Lincoln, Nebraska.	\$1,500
92	Donolda Vale, (Twin), 5 yrs., W. D. Lyons, Marcellus, N. Y.	350
90	Wheatfield Pontiac Ormsby Wayne, 3 yrs., Strickland Farms, Carthage, N. Y.	200
97	Wheatfield Ormsby Tulip, 2 yrs., D. R. Sedgwick, Poughkeepsie, N. Y.	300
99	Wheatfield Ormsby May, 2 yrs., G. E. Halliday, Walkill, N. Y.	200
1	Lyons Pontiac Segis, 3 yrs., Strickland Farms, Carthage, N. Y.	305
2	Zerna Lyons Peter, 3 yrs., W. H. Crowell, Liverpool, N. Y.	300
3	Beauty Lyons Peter, 4 yrs., W. J. Abbott, Baldwinsville, N. Y.	255
7	Vida Plum Savoy De Kol, 6 yrs., C. B. Marshall, Morrisville, N. Y.	215
10	Substitute for No. 10, W. J. Abbott, Baldwinsville, N. Y.	200
11	Osego Hengerveld Beechwood, 3 yrs., Crego Bros., Baldwinsville, N. Y.	215
12	Verouka De Kol Mutual, 6 yrs., R. M. Stone & Son, Marcellus, N. Y.	245
14	De Kol Korndyke Ormsby Lass, 4 yrs., Crego Bros., Baldwinsville, N. Y.	200
17	Pansy Maude Pontiac Hengerveld, 6 yrs., D. Stedman, Syracuse, N. Y.	245
18	Alida Victoria Colantha, 8 yrs., Thayer Burgess, Utica, N. Y.	215
22	S. C. H. Nancy Korndyke De Kol, 5 yrs., Strickland Farms, Carthage, N. Y.	250
28	Maple Place White Lady, 4 yrs., John Dadey, Dewitt, N. Y.	265
32	Clover Heights Princess De Kol, 4 yrs., Thayer Burgess, Baldwinsville, N. Y.	215
34	Clover Heights King Pontiac Beryl, 1 yr., male, J. C. Weil, Lancaster, N. Y.	270
43	Rosanna Pontiac Mercedes, 5 yrs., Thayer Burgess, Baldwinsville, N. Y.	255
49	F. F. V. May Valdessa, 4 yrs., Edward P. Rose, West Winfield, N. Y.	220
58	Lyons Pontiac Hengerveld Aaggie, 2 yrs., G. E. Halliday, Walkill, N. Y.	240
64	Lady Grindetia Jewel, 6 yrs., Thayer Burgess, Baldwinsville, N. Y.	210

THE LLENROC REDUCTION SALE

The Llenroc Reduction Sale held April 10 on the farm of W. C. Houck & Sons at Chippawa, Ont. attracted Holstein enthusiasts from several states as well as from the Province of Ontario. Pennsylvania, Delaware, Vermont and New York state were represented among the buyers. The total was \$14,155 for forty-seven animals or an average of \$301.17.

The demonstration of the Jemima family was alone worth a long journey and it was an education to hear Judge R. E. Haeger discourse on the type, conformation and uniformity of the Jemima family as they passed before him. Four daughters of the old cow were shown with daughters of three of them and it was very evident

(Continued on page 330.)

THE COW TEST

I'm rather rushed and busy now while testing out my Holstein cow; it is a ten months' butter test, and I would have her do her best. I'm feeding her on choicest hay and special rations every day. I'm brushing out her waving hair with tender touch and dainty care. I'm treating her as well, I ween, as any king could treat a queen, "You poor old chump!" my neighbors say, "You're getting sillier each day! You treasure that old cow, by jink, as though she were the missing link. A man would think to watch you slave, she were a queen and you a knave! What! Are you feeding her on hay and ordinary beans to-day? Why not on pie, cream puffs, and cake, on sugar-plums and salmon steak? What is the bossie drinking now, just common water? Poor old cow! She should at least have ginger ale, or coca cola in her pail! Why, does she sleep on common straw just like her sisters and her ma? You should supply a feather bed and feather pillow for her head!" That's how my neighbors talk to me, but wait a while and you will see that when I finish up the test and my cow numbers with the best, these jesting folks from far and near will all come racing over here; they'll come in crowds, and flocks, and scads, they'll bring their brothers, sons and dads, and bid three prices and a half for Bossie's little spotted calf!

J. EDW. TUFFT.

SEES TWO SIDES

A certain farmer was always complaining. A friend met him one morn- and and remarked:

"Fine weather, James!"
"For them as ain't got to work."
"Your fields look in fine condition."
"To them as ain't got to dig 'em."
"Well, James. I'm glad your wife's better."
"Them as don't have to live with her may be."

THE BETTER SIRE—BETTER STOCK CAMPAIGN

During the first three months of the calendar year 1,177 persons signed a written agreement with the United States Department of Agriculture to use purebred sires exclusively henceforth. Vermont and West Virginia led in activities with Ohio, Virginia and Kentucky following in the order named.

The "Better Sires—Better Stock" campaign has now been running three and one-half years and its continued success shows the permanent position of the purebred sire and points to greater possibilities in the future. There are now 10,100 persons enrolled. During the recent three months period, Vermont which previously stood seventh in the list is now fifth while West Virginia advances from seventeenth to eight position. In this state legislation outlawing scrub sires became effective January 1st. From many states there comes increased demand for enrollment blanks and these are signs that there will be a continued-wide demand for purebred herdsires. The enrollment for the first three months of 1923 is greater than it has ever been in any of the thirteen previous quarters.

CLEANING MILKING MACHINES

Do you use a milking machine? The scarcity of good farm help has greatly increased their use. Many dairies producing milk that brings a relatively high price use them altogether, other dairies have discarded them claiming that they are hard to keep clean and that it is very difficult to keep the bacteria count down. The U. S. Department of Agriculture, in the recently issued Farmer's Bulletin 1315, gives some valuable instructions on cleaning and sterilizing milking machines and comparing methods of sterilization. If you have a mechanical milker or are thinking of getting one, it will pay you to send for the bulletin. It's free for the asking.

Origin Sir Napol Cornucopia

My Junior Herdsire, carries the blood of

KEYSTONE BEAUTY PLUM JOHANNA
1294.71 lb. butter in 365 days of strictly official test as a four-year-old, an unequalled record. This is the type, beauty and powers of production for which we breed.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Continued from page 329.)

from their appearance that the producing capacity of old Lemima is being transmitted with a remarkable degree of uniformity to her female descendants. After the show came the sale.

J. Russell Danks, representing Winterthur Farms paid the top price, \$1,800, for King Bess Burke Alice, a ten months son of the 1180 lb. year record cow, Llenroc Johanna Rue Alice. A. P. Bigelow of Vermont gave \$400 for King Bess Burke De Kol, a son of "Boast" from Magdaline Rag Apple De Kol, the good record daughter of Fairview Mata Rag Apple. The top price for females was \$1,525 which the Flock Brothers Co., Williamsport, Pa., paid for the seven-year-old cow, Woodcrest Johanna. This cow has a year record of over 25,000 lb. milk and more than 1,000 lb. butter and is a daughter of Woodcrest Sir Clyde from a 1,000 lb. cow. Flock Brothers Co. paid \$600 for Llenroc Johanna Rue Pontiac, whose dam produced 30.2 lb. butter from over 700 lb. milk in a week from three quarters. A. S. Deysher of Reading, Pa., took three good ones including Duchess Lucy Posch, a 25-lb. cow with a large year record.

The auctioneers were L. E. Franklin of Toronto with Baxter and Mead. Wood was in the box.

The animals bringing \$200 or more with names and addresses of their purchasers are:

1	Llenroc Bess Burke Pietertje, 1 yr.	Purchased by Noble & Hambley, Bronte, Ont.	\$325
2	Posch Lemima Lady, 3 yrs.	Purchased by Abner S. Deysher, Reading, Pa.	350
12	Duchess Lucy Posch, 6 yrs.		700
29	Llenroc Elmdale Pontiac Posch, 1 yr.	Purchased by Flock Brothers Co., Williamsport, Pa.	400
3	Llenroc Johanna Rue Pontiac, 5 yrs.		600
4	Woodcrest Johanna, 7 yrs.	Purchased by Clark Shipston, Niagara-on-the-Lake, Ont.	1525
5	Polly Abbecker Mercena, 5 yrs.	Purchased by Hamilton Health Ass'n, Hamilton, Ont.	450
8	Llenroc Echo Posch, 3 yrs.	Purchased by Winterthur Farms, Winterthur, Del.	250
9	King Bess Burke Alice, 10 mo., male.	Purchased by W. S. Schell & Sons, Woodstock, Ont.	1800
10	Llenroc Konigen, 1 yr.	Purchased by Erie County Farm, Millgrove, N. Y.	260
13	Llenroc Posch Betsy, 2 yrs.		265
20	Llenroc Lemima Ada, 2 yrs.	Purchased by J. R. Phillips, Ft. Erie, Ont.	225
15	Llenroc Lemima Hartog, 2 yrs.	Purchased by Dewey L. Bauder, Marilla, N. Y.	205
17	Margaret May De Kol, 3 yrs.	Purchased by Harlow M. Day, Ridgeway, Ont.	310
18	Llenroc O. K. L. Johanna, 1 yr.	Purchased by Sanford Dell, Chippewa, Ont.	300
23	Belle Aaggie Wayne, 8 yrs.		300
24	Victoria Wayne Aaggie, 2 yrs.		260
46	Llenroc Segis Mercena, 3 yrs.	Purchased by A. P. Bigelow, Middlesex, Vt.	240
35	King Bess Burke De Kol, male, 9 mo.	Purchased by Geo. B. Teal, Ridgeway, Ont.	400
38	Duchess De Kol Rousay, 3 yrs.	Purchased by J. H. Dyer, St. Catherine, Ont.	305
39	Jemima Snow Aaggie, 2 yrs.	Purchased by F. H. Leslie, Niagara Falls, N. Y.	235
47	Llenroc Magdaline De Kol, 2 yrs.	Purchased by J. W. Witmer, Petersburg, Ont.	200
49	Llenroc King Pietertje Inka, 9 mo., male.		300

GOOD MICHIGAN DISPERSAL

The Netherland Farm Dispersal Sale, held at Munger, Mich., April 24, brought together a good crowd and realized a very satisfactory average of \$266.35 for 48 head of all ages. The total was \$12,785. The 41 females averaged \$278.77 and the seven bulls averaged \$193.57. Practically all the animals had been bred by the owners Peter Bogart & Son and the good reputation of the herd was well known. All the animals remained in the state of Michigan. N. J. Meagher of Bay City, Mich., bought a number of good ones. He purchased the twelve-year-old cow Burtdale Belle Korndyke for \$350 and obtained three of her daughters including the 31 lb. cow, Burtdale Belle Korndyke 2d for \$700, the top price of the sale, the 26 lb. cow, Pearlina Segis, for \$485, as well as a 30 lb. daughter, Netherland Mattie for \$420, paying \$1,955 for the cow and her three daughters. He also took the herd bull, Netherland Dan Segis Lad for \$195, surely a bargain as this fellow was from a 31 lb. four-year-old that gave 600 lb. of 4% milk in a week. Fred Koebler of Auburn took Nellie Segis Hengerveld Belle, another daughter of the old cow for \$385, also Netherland May Segis, who made 25.99 lb butter in seven days as a two-year-old and was a daughter of the 30 lb. cow Netherland Mattie for \$500. No less than sixteen cows in this sale brought \$300 or more. The auctioneers were Col. Geo. W. Baxter, Elmira, N. Y., Col. Frank Cotton of Bay City, Mich. with R. Austin Backus in the box.

The animals bringing \$175 or more with names and addresses of their purchasers are:

		Purchased by N. J. Meagher, Bay City, Mich.	
1	Burtdale Belle Korndyke 2d, 9 yrs.		\$700
10	Netherland Rose Belle Korndyke, 3 yrs.		285
22	Netherland Mattie, 10 yrs.		420
26	Grace Bonnie, 12 yrs.		350
29	Burtdale Belle Korndyke, 12 yrs.		350
30	Pearline Segis, 8 yrs.		485
35	Netherland Josie Segis Girl, 2 yrs.		345

PROMOTING THE DAIRY INDUSTRY

The Corcoran Chamber of Commerce is fostering a movement for the promotion of the dairy industry. Prizes galore will be given to the best producers. Cash prizes amounting to \$170 are offered for high butterfat production in a year. Twenty-four merchandise prizes, donated by merchants of Corcoran, California, will be given to the monthly leaders. Then a valuable Holstein Bull, given by Frank Helm, will be awarded to the dairyman who shows the best average monthly production for any one cow during the year. The local papers will feature the competition and much good is expected to result.

ANTHRAX CONFERENCE

The International Advisory Committee recently met in London, England, and was attended by a representative of the U. S. Department of Agriculture. Delegates were present from Italy, Sweden, France, Germany, Belgium, South America, England, India and Australia.

About 20% of the deaths of human beings in this country from anthrax are of farmers who become infected as a result of skinning animals which had died on their farms. Better bury deeply such animals or better, burn the carcasses and not try to salvage the hides unless you know the cause of death.

HAS IT COME TO THIS?

"Let me show you how to sell the farmer's wife by mail. Rogers, 110 West Thirty-fourth Street."

We have believed for some time that the farmer was getting the worst of the present business deal but we did not think it was as bad as indicated by the above advertisement appearing in the *New York Times*. Mr. Rogers evidently thinks the farmer is so hard up he has to sell his wife.

King Beauty Sylvia Lyons

the handsome young show bull now heading SPRINGDALE HERD, is a son of King Echo Sylvia Model and the fine young producer, A. BEAUTY LYONS, with an official record of 26.13 lb. butter, 570.5 lb. milk as a junior three-year-old. After seeing her, we headed our herd with her son. She is a granddaughter of King Lyons, and a great-granddaughter of Buttercup Clothilde Pietertje and Beauty Pietertje Prince, so is very strong in the blood that produced Segis Pietertje Prospect, the World Champion Milker.

B. F. JONES & SON

B. F. JONES W. HUGH JONES

BREEDER SYNDICATE BUYS SHOW BULL

A syndicate of breeders consisting of J. H. Dillon, Joseph Hoskens, John Peeters, and Robert A. Ryan all of Rockland, Wis., have purchased Sir Calamo Wayne, who won a number of prizes last fall in the show circuit. This bull as a seven-year-old, was shown at the state fair at Milwaukee last fall. He was placed third and he was very favorably commented upon by Judge Moscrip. This bull has headed the Jefferson County Show herd and his daughters are remarkably fine individuals. One was made junior champion in the 1921 Wisconsin State Fair with a sister placed close to her. These are the two heifers that W. H. Mace then, of New York now of Iowa purchased, paying \$1,000 each for them.

Sir Calamo Wayne is a son of the famous Paul Calamo Korndyke, the most famous Holstein show bull of recent years. His dam Lucy De Kol Wayne was also a wonderful show cow and had large year milk and butter records. Sir Calamo Wayne has a nice list of tested daughters and his new owners are to be congratulated on their acquisition.

A CAPTURE

"Are they enforcing the Prohibition laws out your way?"

"Yes," replied Uncle Bill Bottletop. "They raided a moonshine still."

"Did they catch the men who operated it?"

"No. The operators haven't been around in the last twenty years. The still was bein' kept up as a romantic spot to show Summer visitors."—*Washington Star*.

IMPROVE THE PRODUCT

Standardization of dairy products is the next step and it will be a long one on the road to better pay for producers. In many parts of the western states, the milk is separated on the farms and the cream shipped long distances to centrally located creameries and there made into butter. Naturally the shipments received vary greatly in quality. In an effort to better the quality of the product of Washington County, Kansas, a demonstration team consisting of representatives of the state agricultural college and the Kansas Creameries recently visited each station operator and looked over the plants and offered suggestions for improvement. They also interviewed farmers and told of the difference in grades and the corresponding variation in price. There is a difference of three cents a pound between cream of the first and second grade. The authorities feel greatly encouraged at the prospect of betterment.

NEW FORAGE GRASS

At the University Experimental Farm at Davis, California, they are trying out a grass imported from South Africa several years ago. This grass has been named Harding Grass and is very drought resistant. In the experimental plots it has remained green late in the season in spite of no rain and without irrigation. One plot has stood a six year test without irrigation, coming up from the roots as a perennial. At Davis there is a field sown to Harding Grass and 75 head of purebred cattle were recently turned on the field. Aleck McDonald, herdsman, says that the cattle relish the grass and that it provides good summer and winter pasturage under California conditions.

THE HOLLINS COLLEGE HERD SIRES

One of the best herds of Holsteins in the Southern States is located at Hollins, Va., and is the property of the Hollins College. This herd is under the management of Jos. A. Turner, known to all southern Holstein cattlemen as Joe. Some very good records have been made at this establishment and they are all the more creditable as they are the every day work of the cows and not of a selected few that are pampered and handled so as to make extremely large records while the rest of the herd gets very little attention. Records are made at Hollins by practically every milker in the herd. We hope to tell more about them and show a few pictures of the animals in an early issue.

There are two very fine herd sires in use at this establishment. One is King Joh Pieter. This young sire, who was born March 29, 1918, has a remarkable pedigree. The seven day records of his twenty nearest dams average a little over 33 lb. butter while on a five generation pedigree chart will be found ten 30-lb. cows including several that have made world's records. There are some great sires in his pedigree, for, besides tracing to King of the Pontiacs, he also traces twice to Pontiac Korndyke; three times to King Segis; and five times to Hengerveld De Kol. His sire, King Joh, has a long list of good record daughters including a 40-lb. four-year-old. King Joh was from a 33-lb. daughter of Johanna McKinley Segis, the well-known son of King Segis and Johanna De Kol van Beers, the second cow to make 40-lb. butter in a week.

King Joh was sired by the century sire, King Segis Pontiac Alcartra, whose dam, K P Alcartra, made world's records in class for seven, thirty and three hundred and sixty-five days. King Segis Pontiac Alcartra is also a century sire and was by King Segis from Pontiac Clothilde De Kol 2d, the first 37 lb. cow whose records for 7, 30 and 365 days were world's

records over all ages and over all breeds at time of making.

King Joh Pieter is a son of Betta Walker Pieter, who made three records less than one year apart ranging from 20.08 lb. butter in seven days as a junior three-year-old to 23.18 lb. butter in seven days as a five-year-old. Her sire, King Pieter, has a number of good record daughters; was from the 33-lb. cow, Blanche Lyons De Kol and was sired by King Hengerveld, a son of Hengerveld De Kol and the 31-lb. cow, Abby Hartog Clothilde. Betta Walker Pieter is a daughter of Betta Walker Lyons, a 25.57 lb. daughter of King Lyons from Betta Lyons Walker, a 28.39 lb. three-year-old daughter of King Walker and Betta Lyons Netherland, a 34.71 lb. daughter of the 34.35 cow, Blanche Lyons Netherland. The five direct descendant dams of King Joh Pieter have seven-day records that average 29.24 lb. butter. He is a real good individual, nicely marked and sires beautiful calves that are making good.

The junior sire at Hollins is Colonel Pietertje Ormsby and this bull represents long distance breeding for his seven nearest dams have year records that average 963 lb. butter, while his twelve nearest dams average over 900 lb. butter in a year. His dam was tested when just thirty months old and she produced 673.12 lb. butter, 15,540.2 lb. milk in a year. Being by Sir Pietertje Ormsby Mercedes from a daughter of Sir Korndyke Hengerveld De Kol 36th, she has 75% of the same blood lines as a number of great producers including Queen Piebe Ormsby Mercedes who has two year records over 1,100 lb. butter; four year records above 900 lb. butter and six year records above 600 lb. butter.

The sire of Colonel Pietertje Ormsby is Sir Pietertje Skylark Ormsby, a son of Miss Pietertje Colantha Ormsby who was by Sir Pietertje Ormsby Mercedes from Miss Colantha Korndyke Ormsby, a 1,000 lb. four-year-old. Sir Pietertje Skylark Ormsby was sired by Sir Orms-

by Banostine Champion, a son of Duchess Skylark Ormsby, the former world's champion for year butter production and the first cow to produce 1,500 lb. butter in a year.

Colonel Pietertje Ormsby is quite light in color and is a very nice individual. His pedigree combines strains of breeding noted for remarkable and persistent production and he carries a large percentage of the famous Ormsby blood which is and has been greatly in demand for a number of years.

THE UNCANOONUC HERD

Six years ago a purebred Holstein herd was started at St. Anselm's College, Manchester, N. H., with one animal. It was added to and built up until there are now thirty head in all. The herd has passed a clean Federal test for tuberculosis.

At the head of this herd is Sir Pietertje Fluella Mechthilde, weighing 2,400 lb. as a seven-year-old. His dam has a record of 37 lb. butter in a week.

The brothers at the college look after the milking of the cows and the milk produced is consumed in the college. The prefix of Uncanoonuc is reserved for the college herd and the names of the younger animals commence with this word.

A soldier was being examined by a surgeon for a compound depressed fracture of the skull. The doctor placed his finger in the healed depression and while doing so, asked the man numerous questions. Finally he asked: "Are you married?" "No, sir," was the reply, "I was kicked there by a mule."—*Ladies' Home Journal*.

Freddy's mother took him out to the park the other day, and as they stood watching the birds in their enormous cage the little fellow observed a stork gazing at him.

"Oh, look, mother," he said. "The stork is trying to see if he remembers me still!"

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address The National Spotted Poland-China Record, Fred L. Obenchain, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

FEEDING FIELD PEAS

By A. L. HARVEY,
University Farm, Minn.

The use of the field pea or "Canada Field Pea" as feed for all classes of livestock has not been extensive by the farmers of the northern part of the United States. Lack of knowledge as to its merits, the high cost of seed and its relative cost as a protein concentrate, have been important factors in limiting the production of this crop.

Being a legume, the field pea is high in protein and low in fat. It contains 19 per cent digestible crude protein, 55.8 per cent digestible carbohydrates and .6 per cent digestible fat with a nutritive ratio of 1 to 3. As a concentrate it has practically the same feeding value as high grade gluten feed.

When cured as hay, field peas have a slightly higher feeding value than alfalfa, containing 1 to 2 per cent more digestible crude protein and fat. A combination of peas and oats yields a cured roughage or a soiling crop that is similar to clover hay in composition.

In the form of silage, field peas and oats together are slightly higher in dry matter and digestible fat and 150 per cent higher in digestible crude protein than corn.

Field peas are relished by horses. They make a good feed for horses at hard work and for growing colts where combined with oats. In the concentrated form, the field pea may be used to balance up rations low in protein. The peas should be ground and fed with at least an equal amount of carbonaceous grains. As a hay for horses, the field pea is apt to cause digestive disturbances because of its laxative character. However, peas are seldom grown alone for hay purposes as the vines lodge and make it almost impossible to harvest the crop with any degree of success. Therefore, peas are grown with oats or some other cereal, so that the latter may provide a support for the pea vines and increase the chances of securing a large yield of well cured roughage. A combination of peas and oats provides a hay less laxative and highly palatable.

Peas are a good food for dairy cattle. Especially are they beneficial for building up cows that are out of condition. When fed, peas usually form about one-third of the ration. The cured roughage is not fed to any large extent to dairy cattle, but as a soiling crop the peas and oats combination is excellent, because of the large yields (10-20 tons per acre), high nutritive value, palatability and its timeliness in supplementing spring pastures.

Peas are an excellent food for swine at all stages of development. Ground peas, in combination with middlings and oats, forming not over one-third of the ration, make a good ration for brood sows. As part of the grain ration for pigs, they promote growth and produce a firm finish. When grown in combination with oats, peas provide a pasture that ranks next to rape in value in the northern states. Its short grazing period (4

to 5 weeks) gives rape pasture a slight advantage. Two practices are followed, either turning the hogs in as the oats reach the dough stage and the pods are beginning to form on the peas, or allow the peas to become full-sized. A greater per cent of dry matter is obtained by following the latter method. Pigs will keep healthy and make good gains when this practice is followed.

Where corn does not grow successfully, peas and oats make a good silage crop. Due to the high percentage of protein, the silage is not as palatable as corn, hence stock do not relish it as well as corn silage. It is necessary to exercise great care in ensiling peas and oats because the hollow stems of the oats make packing difficult. Pea and oat silage is fed principally to cattle and sheep.

WHERE HOLSTEINS SHOULD THRIVE

The Owosso Sugar Company owns a tract of land near Owosso, Michigan consisting of 10,000 acres and this is said to be the biggest single tract of reclaimed land in the state. It is entirely reclaimed from a swamp which prior to 1903, when the Sugar Company purchased it, produced wild hay that was used for packing purposes.

Officials of the Sugar Company saw an opportunity to reclaim this land and purchased it. Dykes were built on all sides and drains made, then monster pumps were used to pump out the water and these have a capacity of 42,000 gal. of water a minute.

The primary purpose of the company in buying the land was to raise sugar beets but other crops are grown, in fact there is not more than 2,000 acres of beets. It is said to be the largest Belgian draft horse breeding establishment in the world and animals from this farm have won prizes at a number of leading shows including Detroit and Syracuse. At the present time there are nearly 200 Belgian horses on the farm.

The company owns 80 purebred Herefords and 305 grade Herefords, as well as 28 purebred Holsteins and 55 grade Holsteins. They have Duroc Jersey hogs and purebred Merino sheep. The farm is said to represent an investment of approximately \$3,000,000. The president of the company is under 30 years of age and is Harold F. Pitcairn of Philadelphia, said to be one of the youngest men in the country at the head of a large corporation.

WRONG NUMBER

The telephone in a well-known surgeon's office rang, and the doctor answered it. A voice inquired, "Who is this?"

The doctor readily recognized the voice of his seven-year-old son. Although an exceedingly busy man, he was always ready for a bit of fun; so he replied:

"The smartest man in the city."

"I beg your pardon, sir," answered the child, "but they have given me the wrong number."

BROWN COUNTY OWNS GOOD HOLSTEINS

Some sixteen years ago, Henry Wittig, superintendent of the Brown County Asylum, Green Bay, Wis., purchased from H. M. Everson, the cow De Kol Princess Jewel 2d, a daughter of Sir Tirania De Kol and she was the original foundation cow of the asylum herd. Then fourteen years ago, in 1909, Mr. Wittig purchased Drake Aagie Bell from R. E. Haeger the well known Holstein cattle judge and auctioneer. Descendants of these cows in the Asylum herd recently closed fine year tests. De Kol Canary Dot, a great granddaughter of De Kol Princess Jewel 2d made 945 lb. butter and 21,487 lb. milk in the year while Canary Drake Elba, now seven years old is a daughter of Drake Aagie Bell and she made 1,027 lb. butter, 23,770 lb. milk in a year. Both cows are sired by Pabst Canary Champion a son of King Pontiac Champion. Both of these cows have daughters that are producers and Cornucopia Canary Princess, a junior two-year-old daughter of De Kol Canary Dot finished a year test with 850 lb. butter, 17,450 lb. milk. Mr. Wittig recently refused an offer of \$6,000 for De Kol Canary and two of her daughters, so some idea can be gained of the opinion he has of them.

There are some good cows in the Asylum herd which consists of 80 head. Twenty-seven of the milkers have produced 24 lb., or more of butter in seven days official test and in this number are several junior two-year-olds. The highest record is that of De Kol Canary Pearl with 34.47 lb. butter from 681 lb. milk. The Asylum now has 12 cows on longtime test and the superintendent says that their records will average considerably over 900 lb. butter despite the fact that some of them are junior two-year-olds.

Some of the best members of the herd are daughters of Pabst Canary Champion. This bull has eleven daughters in the herd, nine of which have seven day records averaging above 27 lb., this includes one 34 lb. and one 30 lb. record while daughters in other herds have also made good records.

The two sires now in service on the Asylum farm are Sir Longfield Vale Pearl and Sir Ormsby Abbekerk Korndyke. The five nearest dams of Sir Longfield have year records averaging 982 lb. butter while Sir Ormsby is from a cow that made 1,227 lb. butter in a year from 27,444 lb. milk.

STEVENS TANK & TOWER CO.

AUBURN, MAINE

FOWLER BUILT ON FIRM FOUNDATION

The Fowler Holstein herd is owned by the Fowler Estate at Lake Villa, Ill., and consists of an aggregation of nice individuals selected for performance, production and type. This herd has an interesting history.

In 1901 when Frank T. Fowler brought some 60 high-grade Holsteins and a purebred bull he was ridiculed by nearly everyone in Lake Villa. He was fresh from the city but had read agricultural literature. He built five silos, sent to the State University for inoculated soil in order to raise alfalfa, disced his alfalfa and drilled cow peas and sunflowers in his corn. None of these things were done by his neighbors at that time and they laughed at him, but things have changed.

Mr. Fowler decided that purebreds were more profitable than grades and purchased a number of good cattle and then proceeded to put official and year records on them. His great herd sire Clover Mead King Spofford already has a number of good producing daughters one of which made 30.75 lb. butter in seven days, milking 103.4 lb. in one day. As a senior three-year-old she produced 27.67 lb. butter in seven days and as a senior two-year-old she produced 673.45 lb. butter and over 16,000 lb. milk in 10 months. Another senior three-year-old made 26.01 lb. butter in a week, averaging 71 lb. milk a day. Another heifer tested 60 days after freshening made 17.52 lb. butter in a week and two others have made over 20 lb. in seven days, while one is on a year test and promises to make a 1,000 lb. butter record.

The sire of Clover Mead King Spofford was Sir Johanna Gladi Korndyke whose dam was by Pontiac Korndyke and whose sire was by Colantha Johanna Lad from a 32 lb. four-year-old daughter of Hengerveld De Kol. This bull traces to many of the greatest producers

SCRANTON, PA.

Herd under the Accredited Plan

and best transmitting sires known. Five daughters of this bull on second freshening averaged 23.08 lb. butter in seven days at an average age of just about three years and their dams and granddams were never officially tested.

Sons and daughters of this bull have won honors in the show ring and in addition he won Grand Championship in the dairy classes and Grand Championship over all breeds at the 1922 Lake County Fair.

Mr. Fowler journeyed over a number of states in search of a herd sire and then found him in a small herd near Plymouth, Wisconsin. He attended a little sale and noticed that a number of the animals offered were very choice individuals and when he found out that they were sired by Clover Mead King Spofford he decided that this was the bull to head the Fowler herd.

There are some good cows in the Fowler herd. Rose Christine Mercedes produced 2,685 lb. milk, 96.6 lb. fat in January and was the highest producer in the 20 Illinois Cow Testing Associations. She has a record of 943 lb. butter in a year and is now going at a 1,000 lb. rate. The seven milkers enrolled in the Lake County Association averaged 1,364 lb. milk and 49 lb. fat which was exceeded only by one other herd in the state. One member of the herd is K. S. P. Andire. As a six-year-old, tested last year, this cow produced 30.38 lb. butter, 628.3 lb. milk in seven days and made a year record of 1070.11 lb. butter, 23,508.4 lb. milk. The previous year as a five-year-old she made 951.71 lb. butter, 21,542 lb. milk in 365 days. Another member of the herd is Leda Duchess Rue 3d, a 26 lb. cow with a year record of 952.29 lb. butter, 22,734.5 lb. milk. A third member is McCloud Bess De Kol with a seven-day record of 30.25 lb. butter and a record made in 339 days of 865.50 lb. butter, 20,854.5 lb. milk.

The Fowler herd is founded upon the three desirable characteristics of production, type and breeding. The females are given an opportunity to make official and semi-official records and are also enrolled in Cow Testing Association. Their high ranking month after month is a sure indication of quality and production.

CALIFORNIA DAIRY COUNCIL

The California Dairy Council should be representative of the great industry it stands for. Secretary Sam Greene is responsible for the statement "Of the members of the new board, nineteen are active dairymen, ten are breeders of registered dairy cattle representing the four principal breeds, thirteen are active officials of cooperative producing, manufacturing and distributing organizations. Seven members of the board are affiliated with the ice cream branch of the industry, three are bankers, two are equipment dealers and one is a lawyer, five are on the College of Agriculture staff, one is with the State Department of Agriculture and one with the State Board of Education. It is truly a council."

CAUSE FOR ALARM

Two ladies were married to musicians. The one, a bride of a year, was pushing a baby carriage in which were three fine babies—triplets, all girls. The other lady had been in the bonds of matrimony a couple of weeks.

"What beautiful children!" exclaimed the newly married one.

"Yes," replied the proud mother; "let me tell you the funniest coincidence. At our wedding supper the boys who played with my husband in the orchestra serenaded him and they played 'Three Little Maids' from 'The Mikado.' Isn't that queer?"

At this the other bride turned pale. "Mercy," she gasped. "At our wedding supper Tom's friends serenaded him also, and they rendered 'The Sextet,' from Lucia."

HIS IDENTITY CONCEALED

A certain young man had an amazingly large mouth, which he contorted into an all-pervading smile whenever he wished to make a good impression. His sweetheart persuaded him to "ask father," and the youth was determined to show himself to good advantage.

"Mr. Jenks," he began, stretching his principal feature to the utmost of geniality. "I have come to ask for the hand of your daughter. I—"

"Just a moment," interrupted the old gentleman, mildly; "would you mind closing your mouth for a moment till I see who you are?"—*Medical Record.*

CLAIMS TITLE OF LARGEST

The Coöperative Creamery at Barron, Wisconsin claims to be the largest coöperative creamery in the world. In 1902 the total amount of butter made was 70,416 lb. in 1912 the output reached 666,556 lb. and in 1914 the million mark was reached. During 1921 two million pounds of butter was manufactured and during 1922 more than two and a half millions.

MILK PRODUCTION COSTS ON WISCONSIN FARMS

The average cost of producing milk in Wisconsin in 1920 as computed from the records of 48 representative farmers was 25 per cent above the average selling price of the milk, a survey by the United States Department of Agriculture shows. Similar results have been observed whenever production costs have been studied on any great number of farms showing a wide variation in the rate of production of cows, in size of herds, in character and amount of feed available and fed, and in the general organization of the farms on which the milk is produced, the department points out. The survey was an effort to show the effect of these factors on costs through the experience of farmers who were largely dependent on the returns of their dairy enterprises for their livings.

Market milk, cheese, butterfat, and condenser milk producers are represented in the report. The size of herds ran from 3 to 287 cows some without, but most with, young stock in addition to the cows. The rate of production averaged 7,320 pounds per cow per year which is considerably above the state average rate, and varied from 2,830 pounds to 13,000 pounds. The farms ran in size from 17 acres to 240 acres. On some farms all the productive effort was concentrated on the production of milk, on others surplus dairy stock, hogs, poultry, and cash crops, in varying combinations contributed to the total income of the farm. According to the usual system in Wisconsin most of the farms produced the roughage and all but the high protein concentrates used by the stock.

Feed was the largest item in the cost of producing milk, amounting to about 53 per cent of the total computed cost. This percentage varies somewhat according to the prices used in the computations of all the factors, but due to the tendency for values of all the factors to move up or down together is regarded approximately a generally applicable proportion of the total cost. The quantities of feed consumed were compared with the theoretical quantities needed as computed by feeding standards experimentally established and found to check closely. The higher producing herds consumed more feed, especially more grain, but the rate per hundred pounds of milk produced was very little higher and largely offset by decreases in the other classes of feed.

The quantities of grain, hay, silage and fodder supplied per hundred pounds of milk produced were materially less than have been reported in similar studies of unit requirements made elsewhere. This is partly due to a higher rate of production, partly to the fact that computations were based on the producing herd only and partly to the use of pastures. The contribution of pasture is computed in terms of the proportion of the total feed supply, averaging about 25 per cent, instead the customary figure "number of days pasture." In one group, 40 per cent

of the feed used by the cows in producing milk was attributed to pasture, which in another group pasture contributed less than 20 per cent, the "number of days on pasture" not being very greatly different.

The labor cost of producing milk on these farms was 2.34 hours, a figure not far from that reported in other studies. The higher producing herds were found to be distinctly more economical in the use of labor than the lower producing herds. Labor was figured at 40 cents an hour and on this basis found 28 per cent of the total computed cost.

Although there was serious depreciation in price of cows in 1920, the herds under observation were practically maintained in numbers and quality, and depreciation was figured on the physical basis of replacement rather than on both replacements and price. A total of 775 cows was needed to make up the total of 630.25 cows as an average for 12 months. Thirteen died and 112 were sold for various reasons.

Other costs—charges for buildings, use of equipment and miscellaneous items occurring with wide variation in amount and character but to be met some time—amounted to about 8 per cent of the total computed cost.

Attention is called to the confusion of ideas involved in quotations of prices of milk. Prices are usually quoted in terms of some standard grade. The price a farmer gets at any time may be quite different from the quoted price. This is true also of the average price for the year, as the amount sold at the several monthly prices is rarely uniform. The difference may easily amount to several hundred dollars in a farmers' computations unless he uses his own actual average price, the department points out.

If feed is figured at market prices at the farm and costs other than labor are considered as fixed in the computation, the balance left for labor was not enough on the average to pay 40 cents an hour. Similarly if wages are set at 40 cents an hour, market prices for feed were not realized, though a few farmers were able to realize both market prices and 40 cents an hour for labor in milk production in 1920. Many dairymen had to draw on supplementary sources of income to make up for deficits in their main line.

A complete report of the investigation is contained in Bulletin No. 1144, entitled "Cost of Milk Production on Forty-Eight Wisconsin Farms," copy of which may be obtained free upon request to the United States Department of Agriculture, Washington, D. C.

TAKING NO CHANCES

"Certainly," said the minister, "I'll come and see your sick daughter if she is so very ill, but I don't think you belong to my parish. What church do you attend?"

"No, we don't go to your church, we're Methodists."

"Then why don't you send for your own pastor?" asked the puzzled minister.

"Oh, we couldn't risk him," explained the caller, "it's scarlet fever."

A TRIED STORY FAILS

An aged dorky in Alabama was before a magistrate because he had failed to take out a license for a pet terrier. His oft-repeated reply to the questions of the court was:

"Why, he ain't nothin' but a puppy!"

"Yes, yes, so you say," commented the judge. "But how old is he really?"

"I can't tell exactly," was the reply, "I was never good at dates, yo' honah, but he ain't nothin' but a puppy."

Evidence proved, however, that the dog was long past puppyhood, and the bench inflicted the usual fine.

Talking it over, the old dorky said to a friend: "Doggone me ef I can understand it! Last yeah and the yeah befo' dat, I tole de same tale 'bout the same dog, an' it was allus good enough befo'! Who's been meddlin' with the law since last yeah?"

NO MORE FREE FARMS

The era of free first-class land in the United States has passed, according to the United States Department of Agriculture. Nearly half the area of continental United States is not in farms. Of this area 40,000,000 acres are absolute desert or too rugged to cultivate, 270,000,000 acres are occupied by forests and cut over land, and 60,000,000 acres are in the semiarid west suitable only for grazing.

**Representatives
and Dealers
WANTED**

An excellent opportunity is offered one man in every town or county to take orders for U-Cop-Co Special Steam Bone Mineral Meal and Maromel on a very profitable basis.

These specially prepared products for dairy cows and hogs are used by breeders everywhere and by most agricultural experiment stations. They have been nationally advertised for years. Continued advertising will make them easy to sell. Your big opportunity to handle U-Cop-Co and Maromel on a very profitable basis is right now. Write today for detailed information, our plan of co-operating with you and descriptive literature.

Big Type Chester Whites Pigs, 10 weeks to 8 months, pairs and trio, no kin, sired by 1000-lb. boars. Boars a specialty.

OAKDALE FARM, CLYDE B. THOMAS, BOONSBORO, MD.

HOLSTEIN HEIFER and bull calves. Purebred, registered and high grade. Splendid individuals and breedings. Delivered to you, \$25 and up. Your inquiry will be given our best attention. **BROWN CROFT FARMS, MCGRAW, N. Y.**

WHAT HE NEEDED

A Kansas farmer received a note from a young man who had been "going with" his daughter. It read:

"Dear Sur: Wood like your dauter's love in marriage. She and me are in luv. I think I neede a wife. Youres trooly."

The former replied: "Friend: You don't need a wife. You need a spelling book. Get one and study it a year. Then write me again."

THE STORY OF A MAINE HERD

One of the good Holstein farms in Oxford County, Maine, is owned by the Robinson family, who are stockholders and operators of the Robinson Manufacturing Company, which was established in 1862 to manufacture woolen cloth. In due time one of the younger members of the family, Joseph 2d, became interested in farm stock and for a time the training of young steers or bulls was his pastime. He fussed with poultry and some of his exhibits at local exhibitions won a goodly share of the prizes. Then the lad purchased a cow for which he gave \$23; incidentally it may be mentioned, that the last cow he purchased cost an even \$1,000, evidently his ideas changed as he grew older.

In 1912, Joseph 2d purchased his first registered stock at a sale in Syracuse, New York, where he bought six cows and a bull, sired by Pontiac Korndyke. At the present time there are on the farm, seventy head of registered Holsteins most of which, with the exception of the bull, Pequitside Korndyke and his twenty-four daughters, are descended from the original purchase.

Pequitside Korndyke and his two score daughters were purchased last October from Joseph Draper, Canton, Mass. This bull has been a prize-winner at the Brockton Dairy Show three years in succession. His daughters are doing well, nine of them have freshened so far and everyone has milked 60 lb. or more a day, while one produced 20.99 lb. butter in seven days and produced 75 lb. milk a day. The Robinsons are joint owners with H. B. Ayres of Pittsburgh, Pa., of the bull Sir Pietertje Ormsby Lilith, who was also a prize-winner at a number of fairs.

Last March, H. S. Bole a 1917 graduate of agriculture from Cornell University was employed as farm manager. Since then the name of Clover Lane Stock Farm has been given to the establishment and the prefix Clover Lane has been reserved for exclusive use of this herd. One good record made since Mr. Bole came to the farm is that of S. V. H. Nellie Veeman, who produced 30.45 lb. butter, 647.3 lb. milk in seven days.

When the foundation purebred herd was purchased in December, 1912, young Joseph suggested that a modern barn would be in keeping with the improved stock. His father demurred saying that the old barn had been good enough for two generations and was still in good condition but finally told the boy to go ahead and build a barn and not trouble him. Although, he was then scarcely of age, Joseph 2d, put up the present barn which is modern in every respect and the next year erected a modern hog house. The raising of purebred hogs was an important project for a time but has been gradually dropped as the purebred herd has developed. Twelve head were exhibited under care of Mr. Bole at the state and county fairs, three first and five second prizes were carried off at the state fair and four first and four second at the county fair.

The Clover Lane Farm consists of between 80 and 90 acres of tillable land and

200 acres of pasture. About 160 ton of hay are cut annually.

Mr. Joseph Robinson 2d, is now president of the Robinson Manufacturing Company and superintendent of the mill. He is quoted as saying: "This farm business is a side issue. It is our hobby, we have never run the farm as a source of income for the family. We enjoy the farm, and the stock is being constantly improved for breeding and show purposes. We take pride in bringing each cow up to a high test." Had Mr. Robinson no other business it is evident he would have made a success as a purebred livestock breeder.

WATER FOR DAIRY COWS.

By H. M. JONES,

South Dakota Dairy Specialist.

The dairy cow needs a larger amount of water than does any other farm animal. The reasons for this are obvious. The cow is producing milk which consists of about 87 per cent water. She also needs water to carry on the digestion of the large amount of feed which she eats. The cow on dry feed uses more water than one on green feed. If the amount of water is insufficient, the milk production is bound to decrease.

An ordinary cow producing an average flow of milk requires about 75 pounds or nine gallons of water per day. An exceptionally large cow, or one producing an exceptionally large amount of milk, requires more, while a small cow may get along with considerably less. In addition to the above amount, a cow gets about 3 gallons or 25 pounds in her feed and as a by-product of the digestive process.

The subject of water for dairy cows is often given too little thought. Too many cows are expected to obtain their drinking water through a hole in the ice, from a distant creek or from a stagnant pool. In such cases the cow is likely to drink less water than will satisfy her needs. Water is one of the most plentiful of all

materials and yet is often the limiting factor in milk production.

The more frequently a cow has access to water, the nearer she comes to fulfilling her needs for water. At the South Dakota Experiment Station, cows watered twice or three times a day drank almost 40 percent more water than those watered only once a day and produced about 20 per cent more milk as a result.

Cold water is not conducive to high milk yields. When a cow is forced to drink ice water out of doors with the thermometer at 30 degrees below zero, she will not drink as much as she could use to advantage. Furthermore, she must use the heat of her body, and therefore some of her feed to raise the temperature of the water to her body temperature. It is far more economical to burn wood, coal or cobs in a tank heater to warm the water than it is to burn high price feeds inside of the dairy cow. Heating water inside of the cow uses feed that ought rightfully to go to milk production.

Inside watering arrangements are paying investments. The ideal way is to have a watering bucket at each stall, but a tank in one end of the barn where cows may be turned loose, one or two at a time, is far better than turning them out on a cold windy day. Such an arrangement would not cost a great deal and would more than pay for itself in one season.

Fresh running streams are all right as a source of drinking water for cows during the summer, but stagnant pools are to be avoided. The cows do not like such water, will probably not drink enough to satisfy their requirements, and when they wade through such places, germs and filth may stick to their flanks and udders only to fall off and taint the milk at milking time. A spring, a running stream or fresh well water are by far the most satisfactory supplies of water for the summer months.

There is a popular belief that cold water and cold barns raise the per cent of butterfat in the milk. Experiments show that there is no foundation for such a belief. On the contrary, they show that there results a reduction in the milk flow which invariably lowers the amount of butterfat. Four cows at the South Dakota Experiment Station were given water of varying temperatures with the following average results:

Temperature of Barn and Water (degrees)	Lb. of Milk	Per cent of Butterfat	Lb. of Butterfat
104	10.20	5.04	.513
94	11.05	4.81	.532
85	11.00	4.13	.448
69	11.20	4.40	.459
53	9.90	4.07	.403

It will be seen that barns and water above 70 degrees Fahrenheit result in the highest production of butterfat and that temperatures below 60 degrees Fahrenheit cause a noticeable decrease. The difference is .13 lb. butterfat in one day. For ten cows it would be 1.30 lb. per day and 39 lb. per month, worth in winter about \$19.50 or about \$58.50 for the three coldest winter months. The expense of making the barn warm and

installing some simple watering device should not amount to anywhere near that much and could be used year after year.

The water supply is one of the most important and yet often one of the most neglected of all details connected with dairying. A warm, inside supply of water for winter, and fresh water during the summer are essential for a normal amount of milk production. The cash outlay to provide a suitable water supply is not great. The resultant higher milk yield more than compensates for the expense and labor involved.

NEWS FROM THE HARTSHORN HERD

The young calves dropped during the past winter on the farm of the A. A. Hartshorn Holstein Company, Hamilton, N. Y., are very promising. The majority of them are sired by Prince Pontiac Lyons Vadora from daughters of King Echo Sylvia Model. Prince Pontiac Lyons Vadora is a son of Betty Lyons, a 31 lb. cow, whose dam, Betty Lyons Netherland, made 3470 lb. butter in a week and was a daughter of the great foundation cow, Blanche Lyons Netherland, 3436 lb. This well-known producer was the first 34-lb. cow to have a 34-lb. daughter and she and her daughter were, in their day, noted for constitution and conformation as well as production.

In the Hartshorn herd there are 28 daughters of King Echo Sylvia Model, the son of Champion Echo Sylvia Pontiac and Belle Model Pietje 2d. This cow as a five-year-old, made 2816 lb. butter in a week while the year previous she exceeded 27 lb. and she is by King Pontiac Artis Canada from Belle Model Pietje, a 36 lb. cow with three 7-day records above 33 lb. and she in turn is from Belle Model Johanna 2d, who twice has made over 37 lb. butter in a week and three times over 32 lb. The seven nearest dams of King Echo Sylvia Model have records that average 35.49 lb. butter for seven days and 141.81 lb. butter for thirty days. Daughters of this bull are making very fine records.

The Hartshorn Company have daughters of King Record, a bull whose 21 nearest dams average over 30 lb. while his fifteen nearest dams, that is, all those that appear on a five generation pedigree, have seven day butter records that average 31.47 lb.

Then there are seven daughters of Colantha Pietertje Lyons who was by King Lyons from Clothilde Colantha Pietertje, a daughter of the famous 32-lb. cow, Buttercup Clothilde Pietertje. Daughters of Colantha Pietertje Lyons are doing splendidly and some very fine records are expected from this family.

The Hartshorn herd has produced a long list of splendid cows—animals that have not only made fine records themselves but whose daughters and granddaughters have inherited this producing capacity which is evidenced by splendid milk and butter records made by successive generations; but perhaps the best bred animal produced in the Hartshorn herd is still a member of that establishment. We refer to Ruby Walker

Lyons Pietertje, whose dam, Ruby Walker Pietertje 3d is the only 30-lb. cow that is backed by three generations of 30-lb. cows on both the sire's and the dam's sides of her pedigree. Ruby Walker Lyons Pietertje is a daughter of Judge Lyons, a bull whose seven nearest dams have records that average over 32 lb. butter for seven days and over 99 lb. milk in a day. Ruby Walker Lyons Pietertje has already produced a two year old heifer that has made a seven day butter record of 25 lb. so that there is a reasonable prospect of both her and her daughter making 30 lb. seven day butter records which would make a six generation thirty-pound combination.

The Hartshorn herd is under state and federal supervision and has passed one clean test. The senior member of the firm is the well-known veteran Holstein breeder, A. A. Hartshorn, formerly president of the Holstein-Friesian Association of America. I. U. Scott, the manager, is Mr. Hartshorn's son-in-law, and the company is very much of a family affair. Mr. Hartshorn is a keen student of blood lines and is one of the best authorities on Holstein pedigrees. Mention a big record cow and he is pretty sure to come back with part of her pedigree running to great cows that were formerly members of the Hartshorn herd. Segis Pietertje Prospect, the holder of the world's record for milk production in yearly work, traces to sires and dams of Hartshorn breeding and so does the American champion for year butter production, May Walker Ollie Homestead. These great cows trace a number of times to many of the animals that first made the name of Hartshorn famous as a breeder and developer of purebred Holsteins.

A dollar and a penny met. The penny had a bright, clean face, but the dollar was dirty but proud.

"You think you are gold but you are only cheap brass," said the dollar.

The penny replied, "I am what I am and claim to be no more."

The dollar swelled up with pride and said, "I am patriotic, I am trustworthy, I have the emblem of liberty on my bosom, and the United States Government has placed these words on me, 'In God We Trust.'"

After a little thought the penny answered, "I grant you all that, but I go to church oftener than you do."

Dr. J. A. Freudenberg, of Markesan, reports the loss of his senior herdsire, Sir Ollie Mooie Ormsby, one of the most valuable sires of the Holstein breed in Wisconsin. The animal died as the result of an injury sustained during the process of dehorning.—*News Item.*

If you secure your bull from a naturally hornless strain you never will have your paper carrying a similar item about your animals nor need you suffer such loss and inconvenience. And polled Holsteins produce just as well, probably better, for the energy necessary for horn-growing is turned towards the processes of growth and milk production. Let me tell you more about the merits of Polled Holsteins and the World's Records they have made.

HOMEVIEW FARMS COMPLETE DISPERSAL SALE

Having sold our farm, will dispose of our entire herd of Registered Holstein-Friesian Cattle at public auction. Neither time nor expense has been spared in bringing together this herd, which was founded upon the blood of Colantha Johanna Lad, Sir Veeman Hengerveld and Pontiac Aaggie Korn-dyke, and is strictly a breeder's establishment. We offer you

63 PUREBRED HOLSTEINS 63

22 Granddaughters of Colantha Johanna Lad, 12 Granddaughters of Sir Veeman Hengerveld, 3 daughters of Pontiac Aaggie Korndyke, 3 Granddaughters of Pontiac Aaggie Korndyke, 30 cows in milk and bred.

HOMEVIEW FARMS, Wheeling, West Virginia, MAY 30th
Sale held under cover, commencing 11 a.m.

HOMEVIEW FARMS are located on the Wheeling, West Liberty and Bethany Pike, two mile south of West Liberty and ten miles north of Wheeling. Busses will leave Woodsdale station, Wheeling, every hour.

HERD SIRES TO BE SOLD:

Dutchland Colantha Champion, 217631, a son of Colantha Johanna Lad, backed by three direct generations of 30-lb. cows. His three nearest dams average 32.39 lb. butter; his seven nearest dams average 28.23 lb.

Sir Veeman Hengerveld Merle, 305979, a son of Sir Veeman Hengerveld from a 21.30-lb. two-year-old daughter of King Korndyke Sadie Vale, the only sire with a 40-lb. dam, a 40-lb. daughter and a 40-lb. sister.

King Ormsby Colantha Johanna Lad, a son of King of the Johanna Lads from a daughter of King of the Ormsbys.

The cows in the sale will be bred to DUTCHLAND COLANTHA CHAMPION and KING ORMSBY COLANTHA JOHANNA LAD.

Sealed bids will be received by mail. Lunch will be served.

Held under State and Federal Supervision. All animals sold subject to 60-day retest. Terms: Six months with bankable note.

Auctioneer and Sales Manager: Col. T. H. McColloch, Wheeling, W. Va., assisted by Col. C. M. Hess, Akron, Ohio. S. T. Wood, Liverpool, N. Y., in the box.

Vol. II

HARRISBURG, PA., MAY 22, 1923

No. 10

Published Semi-Monthly. Price, 75c. Per Year

Published in the Interest of Breeders and Dairymen Everywhere

Entered as second-class matter April 8, 1922, at the post office at Harrisburg, Pennsylvania, under the act of March 3, 1879.

Where Can You Beat This Value for a Herdsire?

A Grandson of a 33-lb. cow that has twice crossed the 30-lb. mark.

A son of the first prize senior yearling bull at the New York State Fair in 1922. First at four other shows.

BERKS SIR HENGERVERELD ORMSBY, born February 7, 1923. This bull is very nicely marked and carries a wonderful straight top line for a young calf.

The sire of this bull, Chief Pontiac Segis Ormsby, is by Sir Ormsby Hengerveld Korndyke (15 A.R.O. Daughters), who is by Sir Korndyke Hengerveld De Kol (60 A.R.O. Daughters and 51 A.R. Sons) and Pietertje Maid Ormsby (Butter 7 days 35.56-lbs.). The dam of Chief Pontiac Segis Ormsby is Silver Bow Pontiac Segis 3d., with a year record of over 760-lbs. of butter and almost 20,000-lbs. of milk as a two year old; she being a daughter of Piebe Laura Ollie Homestead King (41 A.R.O. Daughters and 13 A.R. Sons) and Silver Bow Pontiac Segis, with a year record of 1,212.98-lbs. of butter and 30,009.4-lbs. of milk.

The dam of this bull, Gwyneth Of Grayfields, is a 26-lb. daughter of Sir Fairview Pontiac Korndyke (28 A.R.O. Daughters), who is by Pontiac Korndyke (151 A.R.O. Daughters and 137 A.R. Sons) and Fairview Jessie Korndyke, with a record of over 30-lbs. of butter in seven days. The dam of Gwyneth Of Grayfields is Gundrieda Phillips De Kol, with a record of 33-lbs. of butter in seven days as a six year old and a record of 30-lbs. of butter in seven days as a four year old.

This bull is priced for quick sale at the reasonable sum of \$200.

A few other good bulls for sale at reasonable prices.

The Holstein Breeder and Dairyman

comprises practically all the lands and countries in which the good old Black-and-White Cow is found. Affiliated with no political body or organization, we depend upon our own staff and news correspondents who are practical breeders, yet in the March 8 issue we carried news items or articles telling of Holstein and dairy activities in

Twenty-six States and Four Foreign Countries.

In the March 22nd issue, we had news from

Twenty-three States and Six Foreign Countries,

as well as from the District of Columbia.

In the April 8th issue, the District of Columbia was again represented as well as

Twenty-seven States and Six Foreign Countries.

Then, in the April 22nd issue, besides Hawaii, The District and

Thirty States,

we carried Holstein news from

The West Indies	Mexico	China
Central America	Guatemala	Great Britain
England	Honduras	Germany

And, relying upon the support of all really interested in the growth and development of the Holstein breed and the betterment of the Holstein industry,

We Intend to Do Still Better!

HARRISBURG, PA., MAY 22, 1923

No. 10

Paid Propagandists Take Notice Association's Irregularities Pointed out by the Court's Decision

COMPARATIVE ANALYSIS

What Judge Sears said in 1921

"From the time of the first meeting after the incorporation of the Association to the meeting in June, 1919, the affairs of the corporation were conducted by nine persons elected at annual meetings. If it is necessary that the directorate should be constituted in all respects in accordance with Law, the plaintiff must be granted relief against some of the defendants in this case at least, for no proceeding to increase the number of directors beyond six, is in all respects regular.

"There was no proceeding under Section 14 of the Membership Corporations Law to increase the number of directors from six to nine; likewise the increase of the Board at the Philadelphia meeting did not become legally effective until the filing of the certificates in the proper offices required by law.

"Even the certificate of increase filed after the Philadelphia meeting is insufficient for the reason that it is not signed by a majority of the directors but bears the signature of eight elected at the Philadelphia meeting and of only three of the preceding directors, which three are members of a board of nine of a corporation which was only entitled to six.

"There is also a serious question as to the right of this corporation to hold its meetings outside the State of New York. In Ormsby vs. Vermont Copper Mining Company, 56 N. Y. 623, it is stated to have been held that according to the settled law of corporations, neither stockholders or directors can do a corporate act outside of the jurisdiction creating the corporation which shall be of course to bind those who do not participate in it."

What Judge Sears said in 1923

"The Holstein-Friesian Association of America is a membership corporation. The original certificate of incorporation provided that the number of directors should be six. This number was increased by a resolution adopted in Chicago in 1914, but no certificate as required by Section 14 of the Membership Corporation Law, was ever filed. In 1919 at a meeting in Philadelphia the By-Laws were amended to increase the number of directors from six to sixteen. Following this meeting a certificate was filed but this certificate was ineffective because a majority of the directors who were such at the time the resolution was adopted, did not sign the same.

"It is claimed by the respondent that the Association cannot hold its meetings outside the state of New York. This claim is based upon the principle laid down in Ormsby vs. Vermont Copper Mining Company, 56 N. Y. 623. Although it is stated in report of that case that it is the settled law of corporations that neither stockholders or directors can do a corporate act out of the jurisdiction creating the corporation, we must interpret this language in the light of the facts there before the court.

"There may be a question as to the regularity of the elections at Syracuse in 1921, at St. Paul in 1920, or in Philadelphia in 1919, which were held before the legal certificate as to the increase in the number of directors adopted at the Philadelphia meeting was filed in the proper offices."

Wherever in the above quotations from the opinions of Justice Sears italics appear, they are used by THE BREEDER AND DAIRYMAN to emphasize the similarity of the opinions, and the clearness with which certain points have been established.

We cannot help but again reiterate in this issue, what we have previously said that during all this time the men who milk the cows are paying fat fees to the lawyers and ex-politicians, to protect an illegally elected board of directors against damage actions for illegal acts.

A Good Herd Built Under Difficulties

AWAY back in 1907 C. H. Titus of Tunkhannock, Pa., purchased two heifer calves from his uncle W. E. Taylor of Lynn, Pa. They both were daughters of cows without records but were sired by De Kol Pietertje Prince of Cold Brook, a bull who has a number of daughters with good records. The majority of the daughters of this bull were owned by men who did not do any official work.

The heifers Mr. Titus purchased were Belle Vernon De Kol 2d No. 100298 and Rose De Kol Pietertje 101043. These animals were developed and tested by Mr. Titus. Belle made a seven day record of 23.18 lb. butter, 515.2 lb. milk when nearly eight years old; also a thirty day record of 2,192.3 lb. milk, 91.54 lb. butter. Rose, when nearly eight years old produced 509.5 lb. milk, 26.97 lb. butter in seven days. When nine years, nine months old she was tested for 303 days in which she produced 12,899.9 lb. milk, 590.52 lb. butter. Testing these were about the first experience Mr. Titus had of A. R. O. work. So well did these two cows develop that the next addition to the Titus

TITUSDALE BEAUTY VEEMAN

26.94 lb. butter, 515.8 lb. milk in a week as a three-year-old; 680 lb. butter, 14,000 lb. milk in cow testing association work. Bred by C. H. Titus, Tunkhannock, now owned by L. L. Allis of Rummerfield, Pa.

herd consisted of three more daughters of the same sire, also purchased from Mr. Taylor, De Kol Pietertje Roxy, Mechthilde Von Harlingen De Kol 2d and Inka Von Harlingen De Kol 2d. Mechthilde was given a test as a five-year-old in which she made 411 lb. milk, 22.11 lb. butter in a week and De Kol Pietertje Roxy as a six-year-old made 469 lb. milk, 20.77 lb. butter in seven days. Then in 1910 three head were purchased from C. W. Newman of Wyalusing, Pa. One of these was Riskie Johanna Girl and she dropped seven daughters for her owner, one of which was Titusdale Riskie Girl No. 190254, who tested as a junior two-year-old, produced 385.8 lb. milk, 23.08 lb. butter in a week which was the Pennsylvania state record for a long time. Her sire, The Milk and Butter King 3d, was the first real good sire in the Titus herd. Another daughter of this bull, Titusdale Rose De Kol No. 190250, calving at 25 months old, produced 462.1 lb. milk, 18.75 lb. butter and for thirty days she averaged 65 lb. milk in a day. This bull has seven A. R. O.

daughters, six of which have Titusdale as a name prefix and five of these six made over 20 lb. butter in a week while only two had attained maturity when they were given official records.

Three more were added to the herd in 1913 by a purchase at the Bradford County Consignment Sale held at Towanda. One was a daughter of the well known sire De Kol Burke and she was named Elizabeth De Kol Burke. Tested when nearly ten years old she produced 440.6 lb. milk, 23.04 lb. butter in a week. Another one in this purchase was Fairmont Calamity Pauline, a daughter of Pledge Spofford Calamity Paul and she made 441 lb. milk, 20.98 lb. butter in seven days. The third animal of this purchase was Queen Stael Kolkluft, who as a junior four-year-old, made 401.5 lb. milk, 21.39 lb. butter in seven days. Mr. Titus says that she was the best *little* milk machine he ever fed. Mr. Titus later obtained her sire Lipkje Clothilde Imperial 2d and raised a number of daughters by him. Then in 1912, the bull calf King Korndyke Hengerveld Veeman No. 91860 was purchased. This bull was sired by Sir Korndyke Pontiac Artis and his dam was Victoria De Kol Hengerveld Veeman, a daughter of Sir Veeman Hengerveld that made, as a senior four-year-old 601.7 lb. milk, 30.61 lb. butter in seven days. This bull sired a number of good daughters in the Titus herd but before they were old enough to show what they could do Mr. Titus had a stroke of paralysis so most of the daughters of this sire were developed in other herds. During the past year several have sold for prices up to as high as \$400.

Soon after the purchase of King Korndyke Hengerveld Veeman Mr. Titus went into partnership with C. A. Stark of Springville, Pa., and a share in the bull, Lilith Pauline De Kol's Son, was obtained. He was then an old bull and all his daughters dropped in the Titus herd were sold before they were milking, in 1916 when Mr. Titus was taken sick. Lilith Pauline De Kol's Son was from the former world's champion Lilith Pauline De Kol, the first cow under full age to make a 28-lb. seven day butter record while at the time this was made her record was supreme over all ages and breeds.

When the herd was dispersed, Mr. Titus retained only Fairmont Calamity Pauline and he still has two daughters of this cow; one a yearling sired by an Ormsby bull and the other, now milking age, sired by Napol Sir Keystone Beauty, a son of the former world's champion senior four-year-old for year butter production, Keystone Beauty Plum Johanna whose record of 1,294.71 lb. butter in a year was made in strictly official test. This performance has never been equalled in strictly official test by any other heifer.

Titusdale Riskie Girl, the 23 lb. two-year-old state champion was sold in 1915 at the Dr. Hand dispersal and she topped the sale for females bringing \$1100, her purchaser being C. W. Bray of Bridgeport, Pa.

The records quoted were made by animals given the care that might be expected from a busy dairyman with the rest of his dairy and all of his farm work to

look after and Holstein enthusiasts in Bradford and Susquehanna Counties thought very highly of them and of the animals themselves at the time of making.

Mr. Titus is evidently a capital judge of stock. While the herd was bred and developed primarily for production yet individuality was not lost sight of and the herd was shown with good success at the Wyoming County Fair several years with good success. One year they carried off \$100 in prize money. Titusdale Johanna Kolkluft, a daughter of The Milk and Butter King 3d was sold to Dr. J. F. Maycock of Wilkes-Barre and she has a long list of show ring victories to her credit.

Mr. Titus had the reputation of being a great worker and a good farmer before he was incapacitated by paralysis when only 35 years old. Since that time a few animals have been added to keep company with Fairmont Calamity Pauline and the herd now numbers 19 females, three of which are granddaughters of Sir Veeman Hengerveld, three are daughters of Napol Sir Keystone Beauty, two are daughters of King Lyons Sylvia and two are sired by Dutchland Creamelle Sir Concordia. Then there are two daughters of The Potentate, who was sired by a 33-lb. son of Pontiac Kordyke and whose dam Leafy Veeman De Kol, produced 40.1 lb. butter in a week and was a daughter of Leafy Dawn De Kol, 43.19 lb. butter,

655.1 lb. milk in seven days. At the head of the present herd is a two-year-old son of King Ormsby Ideal.

A number of the animals bred in the Titus herd went into other hands and made good. One of these was Titusdale Beauty Veeman, a daughter of King Korndyke Hengerveld Veeman from Beauty of Fairland who was sired by Lipkje Clothilde Imperial 2d from Riskie Johanna Girl already mentioned as a 19.56 lb. cow and the dam of the former state record junior two-year-old, Titusdale Riskie Girl 23.08 lb. Titusdale Beauty Veeman in the Newman herd produced 26.94 lb. butter, 515.8 lb. milk in seven days. As a three-year-old this cow made 21.47 lb. butter from 524.4 lb. milk in a week and she has a cow testing association record of 680 lb. butter from 14,000 lb. milk. She was sold in the Merryall Farm Dispersal last March for \$340, being purchased by L. L. Allis of Rummerfield, Pa.

Despite his ill health Mr. Titus has kept before him the idea of herd improvement and herd health. Every animal in his herd has twice passed a clean tuberculin test and some of them have been tested three times and passed clean. The first two tests were made by veterinarians approved by the State Veterinary Department of Pennsylvania while the last test was made under the Accredited herd system.

World's Record Made at Berks Farm

ECO-SYLV Mechthilde, who made a Pennsylvania State record for a yearling heifer about a year ago freshened again, March 11, 1923, dropping a very nice bull calf sired by King Tweede Spring Farm, the Deysher herdsire. Put in official test she made 29.68 lb. butter in seven days from 740.4 lb. milk. She produced 112.2 lb. milk in a day and in thirty days made a record of 116.93 lb. butter from 3,092.3 lb. milk. As she was born April 30, 1920, it will be seen that she completed this great showing as a senior two-year-old. She is still milking 100 lb. a day and is making a great 60 day record. Her present records stand first in Pennsylvania in the senior two-year-old class for both milk and butter and are world's records for milk for both seven and thirty days.

Eco-Sylv Mechthilde is a daughter of Champion Echo Sylvia Pontiac and Mechthilde Korndyke Walker, who as a three-year-old produced 30.33 lb. butter, 724.5 lb. milk in seven days. As a yearling heifer, the new champion produced 80 lb. milk in a day, 531.2 lb. milk in seven days and 2,224 lb. milk in 30 days.

By her splendid performance Eco-Sylv Mechthilde displaces for the seven day championship in the senior two-year-old class, Johanna Boelyn Gem Segis, the Washington heifer that recently produced 726.4 lb. milk in seven days. She displaces for the thirty day championship, De Kol Paul Cornucopia, 2,836.5 lb. milk, a record which has stood supreme in the class and division for a long time. The production of 100 lb. milk a day for 30 consecutive days is certainly

wonderful for a mere two-year-old heifer and it will be seen that Eco-Sylv Mechthilde averaged 103 lb.

Another nice record recently completed at Berks Farm was on Eco-Sylv Clothilde Pontiac, a sister of Eco-Sylv Mechthilde and another daughter of Champion Echo Sylvia Pontiac. As a two-year-old this

ECO-SYLV MECHTHILDE

29.68 lb. butter, 140.4 lb. milk in seven days; 116.93 lb. butter, 3,092.3 lb. milk in thirty days as a senior two-year-old. World's records for milk for both seven and thirty days and Pennsylvania state records for both milk and butter.

heifer produced in seven days 22.65 lb. butter, 479.4 lb. milk.

Queen Echo Model Walker another member of the Deysher herd tested as a junior four-year-old, made 30.12 lb. butter from 667.6 lb. milk in a week; in thirty

days she produced 121.30 lb. butter from 2,626.2 lb. milk. This heifer produced 109 lb. milk her best day and her dam has also a 30 lb. seven day butter record.

Abner S. Deysher, the owner of Berks Farm, despite his retiring disposition, is well known to eastern breeders. At a number of the leading sales in the east, Mr. Deysher has purchased the highest selling animal. At the last Brentwood sale it will be remembered that he paid \$4,300 for Dairy Maid Prilly, then a heifer calf, a daughter of Adirondac Wietske Dairy Maid, who in two years produced 66,301.7 lb. milk, 2,715.3 lb. butter. At the same sale, Mr. Deysher purchased Carnation Matador Pontiac, the Brentwood show grand champion and from time to time animals that have won high honors in the show ring have been added to this good Pennsylvania aggregation of Holstein beauties.

The Deysher herd is under state and federal supervision. The milk from this herd is sold in the nearby city of Reading and is in great demand. The herd manager, Clark F. Berry, has been connected with leading Holstein herds for a number of years and had charge of the new champion during her record breaking exploit.

She's a Daughter of a Holstein Bull

EACH year the Livingston County Trust Company donates two beautiful silver cups to be awarded to the owners of the cows making the highest production of milk and of butterfat in the Dairy Improvement Associations of Livingston County, New York. The cups for 1922 were awarded to J. M. Huff of Hemlock and Samuel Barber of Scottsburg, the former winning the butterfat production cup and the latter the cup for milk production, Mr. Huff's grade

Aaggie, grade Holstein owned by Samuel Barber, Scottsburg, New York. 25,295 lb. milk, 1,129.4 lb. butterfat in 365 days in the Livonia Dairy Improvement Association.

Holstein Pocahontas produced 22,263 lb. milk, 800.8 lb. fat and Mr. Scott's grade Holstein Aaggie giving 23,061.7 lb. milk and 1,014.1 lb. fat. Both these great cows are daughters of a purebred bull.

For the twelve months of her lactation period, which did not coincide with the calendar year since she freshened in February, Mr. Barber's cow gave 25,295 lb. of milk containing 1,129.4 lb. fat thereby breaking the record for grade cows by a wide margin. During this period she ate, 1,508 lb. hay, 13,285 lb. ensilage, 9,502 lb. grain and was on pasture 183 days, her total feed costing \$231.32. Her milk brought \$590.65 and

her twin bull calves, \$15, making a profit of \$359.39 above the cost of feed.

Mr. Tailby, supervisor of cow testing of the State of New York, spent three days with Mr. Zumstein, tester in charge, during the period of these records and after going over the records in detail reported that he was perfectly satisfied with the accuracy of the work. Mr. Barber's record was especially noteworthy since this was his first year in Dairy Improvement Association work.

New Legume Discovered in Iowa

A NEW annual legume has been discovered by the Farm Crop Department of Iowa State College and is thought to offer considerable promise as an annual nitrogen gathering crop. A number of statewide tests under practical farm conditions are being made to determine its adaptability. The new legume has been named Dalea. It was first found making a volunteer growth in winter wheat stubble on a farm in Harrison County, by C. R. Fritzsche the county agent. The farm owner, W. A. Wood, stated that he had first noticed the plant about fifteen years ago and that as his wheat acreage had increased the plant had also rapidly increased.

H. A. Hughes, Professor of Farm Crops at Iowa State College visited the Wood farm in September, 1922, and found the plant growing thickly in winter wheat stubble. The crop grew to be nearly three feet in height and was in full head by the middle of September. Practically all the growth was made after the winter wheat was harvested for at that time the plants were not tall enough to interfere with the binding.

It is thought that Dalea will not make a valuable pasture crop as it has a disagreeable taste but it is valuable for green manuring. It is estimated that it will produce about fourteen tons of green manure per acre.

The common practice on the farm on which it was discovered was to plow wheat stubble early but in spite of this fact Dalea produced a thick growth the following summer which would seem to indicate that part of the seed will retain its vitality for at least two years, and that part of it does not germinate the first spring.

It was not until last fall that any part of this crop was harvested for seed. Mr. Wood secured 8½ bushels of seed per acre after harvesting the crop with a grain binder but he believed that enough seed went through the thresher so that the seed produced was about 12 bushels per acre. The new crop is not likely to become a pest where it is not wanted for although it grew freely where corn was planted following a stand of winter wheat, the young plants were easily killed by the first cultivation.

"Brothah Binkley, would yo-all be so kind as to lend me yo' razzler?"

"Suttinly, Brothah Bimbo, so an yo' brings it back. Fo' what osculation does yo' requiah its temporal possession?"

"Ah's jes' goin' to attend a li'l social function. De members of de Rise an' Shine Lit'ry Sassiety, of which ah is president and chairman, is gwine have a frienly argumentification on de fundamentals of worl' peace."

The Permanence of Dairying

By H. M. JONES, *South Dakota Dairy Specialist.*

A LARGE portion of the middle west has been over-run by a wave of wheat or corn growing. With the opening to settlement of the fertile prairies of the Dakotas came the exploitation of the new bread basket of the world. That process of exploitation has meant depletion in many cases.

Wheat production per acre has gradually declined from year to year and yet, at the present time, there are thousands of farmers who sow wheat after wheat seemingly in the vain hope that the original fertility of the prairies may be restored. Restoration can now be made only by the liberal application of manure and the growing of legumes. On many farms it is too late to talk of conservation of fertility. The fertility is spent. From now on it must be a process of soil building, putting back on the land each year not the equivalent of what has been removed but decidedly more.

A strictly grain farm is usually characterized by a shabby, unpainted house, a small dilapidated barn and a few or no trees. The livestock farm, on the other hand, usually exhibits a certain air of prosperity and permanence. This is particularly noticeable on the older farms of the east. The reason for such a condition is almost self-evident. The livestock farmer who converts his farm-grown feeds into livestock and livestock products and returns the residue to the land is removing very little fertility from his farm. After 20 or 30 years, his farm will be in practically the same high state of fertility that it was at first.

The dairy farm has been termed "the farm that won't wear out." This may not be true literally, but dairy farming probably comes nearer to maintaining the soil in a high state of fertility than does any other type of farming.

There is brave apprehension on the part of some people that dairying will not always return the profits which it now does. This may prove to be the case at some very distant date, but present indications leave no room for fears. It appears that any over-production of dairy products must be very far in the future. Of course, there will always be seasonal fluctuations causing at times a glut of the market. This does not mean that there is over-production, but simply that producers have not prepared themselves to meet such a condition. Regulating the production so that it meets the seasonal market demands would eliminate the temporary extraordinary high production which usually occurs in May, June, and July.

There appears to be no probability of dairying being overdone within the next few years at least. In the first place a great many people look upon dairying as a business which ties one down too closely and they avoid it for this reason. Then too, statistics show that for the past 30 years the number of dairy cows has not kept pace with the increase in population. There are fewer cows per 1,000 people now than there were in 1890, the census for 1890 showing about 260 cows per thousand people and that of 1920 showing only about 220.

Furthermore, the per capita consumption of dairy products in the United States has possibilities for a

great increase. American people have not been such heavy consumers of dairy products as have the people of Europe. Educational milk campaigns have done a great deal to increase the consumption of dairy products, especially milk, but there is still room for a great increase before our average consumption will equal that of Europe.

Country	Gallons milk per capita per year	Pounds butter per capita	Pounds cheese per capita
Switzerland	67.4	12.1	26.4
Denmark	68.5	19.0	12.3
Netherlands	39.5	16.8	13.3
United States	43.0	15.5	4.2

The foregoing data shows that in a general way the situation in the United States is not one of over-production but rather one of under-consumption. The above figures are not all for the same year, but they are from the latest reports secured from the various countries in each case.

It requires a considerable length of time to establish a dairy herd. A great many farm enterprises run the risk of over-production within a single year, but this is not true of dairying. The building up of a dairy herd is a matter of years, not months.

The keeping of dairy cows maintains the soil in a high state of fertility and to some extent replenishes a run-down soil. Dairy products give greater returns to the farmer than any other product which takes the same amount of fertility from the soil. Dairy farms and dairy sections of the country exhibit an air of permanence, solidarity and prosperity not found elsewhere, and in view of the statistics on production and consumption, this condition has every indication of remaining so indefinitely.

Bob Jones on the Dairy Industry

SPEAKING before the San Francisco Ad Club recently, Robert E. Jones, representing the California Dairy Council, pointed out that the money return from the dairy industry of the state equals the cash returns from the following crops: wheat, potatoes, rice, vegetables, oranges, cherries, plums, figs and almonds. Just think over this for a moment and then ask a few of your friends what are the chief agricultural products of California. The total money return from California dairying during the year 1922 was, in round figures, one hundred million dollars.

Mr. Jones pleaded for a more sympathetic attitude on the part of the consumer toward the dairy industry, pointing out that no one would expect any of the great oil companies to deliver a quart of gasoline each day to the kitchen door, yet such a service is required of the dairy industry.

The fair co-ed was fair indeed, but to her lessons gave no heed. On the campus a group of female seniors had her under discussion. It was more in sorrow than in anger. "That girl is silly," declared one. "So silly she'll never graduate," asserted another. "Never mind," remarked a third, "she won't need to." There was a big flutter over this. "Why not?" chimed the chorus. "One of the professors is going to marry her."

Court Decision a Grave Disappointment to Membership

WHEN the *Holstein Friesian World* in its issue of May 12, 1923, with characteristic duplicity and illconcealed venom, attempts to deceive the membership as to the real effect of the court decision in the George Case, it only emphasizes its well known subservience to the political clique now in control of Association affairs, who disfranchised the small breeders in 1921 and are now reaching out to get hold of the \$300,000.00 reserve fund.

The decision of Justice Sears is printed in full in this issue. It speaks for itself. There is nothing decided of any importance to the membership or that could be construed as an "association victory" except the fact—as the "Breeder and Dairyman" has always contended—that the meeting held at Philadelphia in 1919 was an "illegal" meeting and the Board of sixteen directors elected at that meeting was an "illegal" Board of Directors.

Justice Sears made these points very clear in a decision or opinion written by him two years ago, and he makes it just as clear in the opinion which he has written in the George case handed down under date of May 2, 1923.

In plain words, the learned Judge says:

"There may be a question as to the regularity of the elections at Syracuse in 1921, St. Paul in 1920, and Philadelphia in 1919, which were held before the legal certificate showing an increase of directors was filed."

It does not require anything but plain common sense to show that the "irregularity" which Judge Sears refers to in this last opinion is the same "irregularity" pointed out in his decision of two years ago, when he said:

"From the time of the first meeting after the incorporation of the Association, to the meeting in June, 1919, the affairs of the corporation were conducted by nine persons elected at annual meetings. If it is necessary that the directorate should be constituted in all respects in accordance with law, the plaintiff must be granted relief against some of the defendants in this case at least, for no proceeding to increase the number of directors beyond six is in all respects regular."

There was no proceeding under Section 14, of the Membership Corporations Law to increase the number of directors from six to nine; likewise the increase of the Board at the Philadelphia meeting did not become legally effective until the filing of the certificates in the proper offices required by law.

Even the certificate of increase filed after the Philadelphia meeting, is insufficient for the reason that it is not signed by a majority of the directors, but bears the signature of eight elected at the Philadelphia meeting, and of only three of the preceding directors, which

three are members of a board of nine of a corporation which was only entitled to six."

The Philadelphia meeting was held June 4, 1919. No attempt was made to file the certificate required by law until after July 7th of the same year; and as Justice Sears very clearly points out even that "certificate of increase" was "insufficient," showing clearly that the Philadelphia election was illegal and the Board of Directors there elected an illegal board.

Passing from the question of illegality of the board of directors for the reasons which Justice Sears has shown to have existed, we want to take up briefly the other question; to wit, the right of the Association to hold meetings outside the State of New York.

Upon this point, Justice Sears in his opinion of two years ago, says:

"There is also a serious question as to the right of this corporation to hold its meetings outside the state of New York. In *Ormsby vs. Vermont Copper Mining Company*, 56 N. Y. 623, it is stated to have been held that according to the settled law of corporations neither stockholders or directors can do a corporate act outside of the jurisdiction creating the corporation which shall be of course to bind those who do not participate in it."

In the present decision the learned Justice Sears says the same thing and evidently admits that this is the Law as laid down by the Court of Appeals, in the state of New York, and its highest judicial tribunal; but, he seems to think, maybe, that the Court of Appeals will change its mind and reverse their former decision by reason of what he terms "different conditions."

On this point we want to call the attention of our readers to quite a pertinent fact. Justice Sears handed down his decision in the George case, May 2, 1923, and on May 4, 1923, Governor Smith affixed his signature to an amendment to the membership corporations law, which in effect forbids corporations such as the Holstein Friesian Association from holding its meetings outside the state, and repeals the amendment to the membership corporations law passed with the aid of Senator Lusk and Ex-Governor Miller, which the *Holstein World* says, was placed on the statute books "as a precautionary measure."

While we do not assume to know or to predict what the Court of Appeals who have already decided this question, will do, when it is again presented to them for their consideration, we fail to see any good reason advanced why the highest court in the State would be seriously inclined to reverse its former decision particularly when the law making power of the state forbids the doing of corporate acts outside the corporate domicile.

So that after all is said and done we are no nearer a solution of the much mooted questions which have been raised as to the legal conduct of Association affairs,

Appellate Court Decision in George Case

IN THE MATTER OF THE APPLICATION OF EDWARD P. GEORGE, pursuant to Section 32, General Corporation Law, to review and set aside the election of directors of the Holstein-Friesian Association of America.

Argued March 19, 1923—Decided May 2, 1923.

PRESENT: HON. IRVING G. HUBBS, *Presiding Justice*, HON. WILLIAM W. CLARK, HON. ROWLAND L. DAVIS, HON. CHARLES B. SEARS, HON. LEONARD C. CROUCH, *Associate Justices*.

APPEAL from an order of the Erie Special Term entered in the Clerk's office on the 15th day of February, 1923, directing a new election of six directors of the Holstein-Friesian Association of America.

HON. NATHAN L. MILLER, of New York City, for the Holstein-Friesian Association of America, et al., *Appellants*.

HON. FRANK C. LAUGHLIN, of New York City, for the Petitioner, *Respondent*.

OPINION

SEARS, J.:

The Holstein-Friesian Association of America is a membership corporation. It was originally incorporated under a special act, Chapter 333 of the Laws of 1815 and was thereafter reincorporated under the Membership Corporations Law in 1913.

The respondent has brought this proceeding under Section 32 of the General Corporation Law complaining of an election of directors. The original certificate of incorporation provided that the number of directors should be six. This number was increased by a resolution adopted at a meeting in Chicago in 1914, but no certificate as required by Section 14 of the Membership Corporation Law was ever filed, but in 1919 at a meeting in Philadelphia, the by-laws were amended to increase the number of directors to sixteen. Following this meeting and during the same month, a certificate was filed in the offices mentioned in Section 14 of the Membership Corporation Law, but this certificate was ineffective because a majority of the directors who were such at the time the resolution was adopted did not sign the same. An amendment of Section 14 of the Membership Corporations Law became effective May 5, 1921, providing that such a certificate should be filed by the president and secretary of the meeting. Thereafter the president and secretary of the Association who were also president and secretary of the Philadelphia meeting, filed such a certificate.

The contention of the respondent rests on the correctness of two fundamental propositions. The first is that meetings of this corporation cannot be held outside of the State of New York without specific statutory authorization. This claim is based upon the principle laid down in *Ormsby v. Vermont Copper Mining Company*, 56 N. Y. 623. Although it is stated in the report of that case that "it is the settled law of corporations that neither stockholders nor directors can do a corporate act, out of the jurisdiction creating the corporation, which shall have any force to bind those who do not participate in it" we must interpret this language in the light of the facts there before the court. That was a stock corporation organized for profit; presumably local in its membership. We know of no facts which there made it expedient to hold the meetings outside of the state of its incorporation.

Here we have an association not organized for profit, having a vast and scattered membership; its business to be done throughout the United States as stated in its certificate of incorporation; its officers residing in different states. The reason for the rule of the *Ormsby* case would seem to fail, and we are of the opinion that the principle of that case should be confined to stock corporations, and so it has been held in other states where the question has arisen.

Derry Council v. State Council Junior Order United American Mechanics, 197 Pa. 413; *Sovereign Camp Woodmen of the World v. Fraley*, 94 Tex. 200; *Woodmen of the World v. Woods*, 34 Col. 1; *People v. Grant*, 283 Ill. App. 391.

(Concluded on page 361.)

and it is quite probable that we will have to be content until these questions are passed upon by the court of last resort.

It seems that Edward P. George is denied relief by the Appellate Court because he gave his proxy to Judge Peasley who voted it at the Syracuse convention to drive D. D. Aitken into oblivion and to rebuke the extravagant methods of this same political coterie who has functioned so recklessly particularly regarding the financial affairs of the Association in the past three years.

Any fair minded man would refuse to take refuge behind such a trivial circumstance and would have long since demanded that full expression be given to the opinion of Justice Pooley and the Association started on the right road.

If what Justice Sears says is the Law—that there was irregularity in the Syracuse, St. Paul and Philadelphia elections, the membership want those "irregularities" corrected and the Holstein-Friesian Association put in a position where its affairs can be legally conducted.

Above everything else they want their right to vote in person or by proxy restored, so they can by their votes put plain, honest farmers, and breeders, in charge of the Association to protect its \$300,000.00 reserve fund from the rapacity of political greed, and let the Holstein cow demonstrate her real greatness as "Queen of the Dairy World," without aid of "putty cows," ex-office holders, lawyers, politicians or grafters.

No paid puppet of political intrigue can long deceive the plain people and when the reckoning comes woe be unto those who have defended political autocracy and greed as they stand revealed in their true light.

THE BREEDER AND DAIRYMAN believes that justice is still on her Throne and that the decision of the higher courts in the George case will bring to the plain breeders and members who milk cows for a living, a restoration of the rights taken from them by political methods questionable in the extreme.

No amount of venomous "bunk" or cunning camouflage put out by a certain subservient and subsidized breed journal can keep from the membership of the Holstein-Friesian Association the fact that **hundreds of thousands of dollars have been taken from the Association treasury and spent recklessly and with a wanton extravagance to support so-called extension service lawyers, ex-politicians and sale promoters**. Nor can it hide from the membership the fact that the plain farmers and real dairymen have been robbed of their right to vote in person or by proxy as provided by the constitution.

It will be useless to attempt to frighten, bulldoze or fool the thousands of men who are members of the Holstein-Friesian Association and who are engaged in breeding and dairying as a business, with the ghosts and scarecrows of 1919 which were long since buried and which long ago lost their effectiveness.

THE BREEDER AND DAIRYMAN stands for Justice for one and all. It stands for the protection of the right of the men who milk their cows. It stands for honest methods and insists on the rights of the membership to rule. Never until these rights are respected can the industry hope to thrive or the Association prosper.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

HOWARD C. REYNOLDS, *Managing Editor*
G. H. TRUCKELL, *Associate Editor*

Published semi-monthly by the Breeder and Dairyman Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 15th or 27th of each month preceding date of issue.

May 22, 1923

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

We stand for progressive yet conservative administration of the National Association. We stand for Honest Records, Honest Advertising, and Honest Sales. We will at all times endeavor to promote any interests that have for their purpose the advancement of the Holstein cow, the Holstein-Friesian Association of America, and the breed and breeders generally.

For the Common Dairy Cow

THE advanced registry associations of the different dairy breeds have helped amazingly in constructive dairy breeding. We hope that they will continue to grow in influence. But we also wish to suggest, and that is the purpose of this editorial, that from the standpoint of the average corn belt farmer a new type of advanced registry might well be worth while. We want to see an advanced registry in which only the cows that have made the records under twice a day milking would be eligible. Furthermore, we would like to see it specified that the cow making a record would not be fed any fancy, expensive feeds, but only such home-grown and familiar feeds as silage, clover hay, alfalfa hay, mixed hay, corn, oats, bran, cottonseed meal, oil meal and gluten feed. We would be much more interested in a cow which would give 600 pounds of butterfat, milked twice a day, on a ration like this, than a cow which will give 1,300 pounds of butterfat, milked five or six times a day, with a wide variety of feed.

The above is taken from *Wallace's Farmer*. The opinion it expresses is one that is rapidly crystallizing among many well wishers of the dairy industry. The number of milkings may be exaggerated but it is hard to convince the everyday dairyman that records made by animals that are given every attention and fed rations that are not obtainable in many dairy districts, and of which the cost is so high that there is no profit earned, has any beneficial effect upon dairying or upon the profitability of his own herd. The slow but gradual trend of sentiment in favor of the Dairymen's Division tests or of cow testing association records, simply reflects the opinion of men who head their grade herds

with purebred bulls or think of purchasing purebred females because of the possibility of greater dairy profit. The day of tremendous prices based upon forced records seems drawing to a close and this will be regretted only by those who made a business of picking up good cows, at low prices, putting them through a strenuous test and then selling them and their progeny for long prices because of large records thus made, regardless of the fact that their usefulness as dairy animals was often impaired because of the strain they had undergone. The Advanced Registry was based upon a right idea but it has been abused in all the dairy breeds by those who have posed as its greatest friends.

The Song of the Pay Boys

WE are informed that the "Pay Boys" of the Holstein-Friesian Association of America have a rallying song which each one has to learn before he can receive his periodical pay check and that this song is sung at the close of each meeting at Chicago after the proper spirit and enthusiasm has been aroused. Our informant does not say who wrote this charming rhyme, whether the author is Director Koenig or Executive Committee Chairman Reynolds or whether the effusion is a product of their joint authorship, but, their sentiments are expressed exactly.

It was after repeated singing of this beautiful song that Director Fred and Chairman Jimmy conceived the brilliant thought that the present income of the Association on the \$1.50 transfer fee was not enough to supply funds enough for all their friends they wished to place on the Association payroll and so \$93,000 could be taken from the accumulated funds, a majority portion of which was saved when only 25c was the charge for transferring animals. Just read this over once or twice and you will get the "Extension Spirit."

"Tax the breeders, tax with care, to help the multi-millionaire. Tax the farmer, tax his fowl, tax the dog and tax his howl. Tax his hen and tax her egg and let the bloomin' mudsill beg. Tax his pig and tax his squeal, tax his boots run down at heel; tax his horses, tax his lands, tax the blisters on his hands. Tax his plow and tax his clothes, tax the rag that wipes his nose. Tax his house and tax his bed, tax the bald spot on his head. Tax the ox and tax the ass, tax 'Henry,' tax the gas; tax the road that he must pass and make him travel on the grass. Tax his cow and tax the calf, tax him if he dares to laugh. He is but a common man, so tax the cuss just all you can."

Maybe the Consumer's Capacity is Limited

RECENT beef and hog papers contain articles announcing the appointment of R. C. Pollock as managing director of the National Livestock and Meat Board with offices in Chicago. Mr. Pollock will head the campaign which has for its purpose the increasing of meat consumption.

Holstein breeders will remember Mr. Pollock as the foremost apostle of the "whirlwind campaign," a movement which ended disastrously for all who engineered it. Mr. Pollock's chief rallying cry to induce Holstein

owners to join the state associations and pay dues to furnish funds from which to pay a state secretary was "Have a man to sell your bulls." The results achieved were so small in proportion to the cost that, as a consequence, the state organizations lost a large proportion of their membership and had to campaign energetically for money and members until the Kansas City meeting; since that meeting the rebate from the transfer fee has furnished money without the necessity of strenuous periodical membership campaigns.

The eat-more-meat campaign as well as the announcement that the cereal growers are organizing a similar campaign brings up another thought. If the producers of dairy products finance an advertising campaign and spend, say a million dollars; the meat producers advertise and spend a million; the cereal growers spend a million in advertising; and the fruit men and producers of vegetables follow a similar course—what will the consumer do?—"eat more?" Will the cost of these various campaigns be borne by the consumer or the producer? Who will get the benefit—the producer, the consumer, or the advertising mediums' writers and campaign managers?

Time Will Tell

AS we go to press, we are unable to inform our readers definitely as to where the 38th Annual Convention of the Holstein-Friesian Association of America will be held.

In previous years the announcement of the Annual Meeting has been sent out by the Secretary thirty days in advance. Up to the time of this writing, we have not received an announcement of the Cleveland meeting.

With the Hickey bill becoming a law on May 4, making it illegal for the Association to hold meetings and transact business outside of the State of New York, it is possible that the place of holding the meeting is still under advisement.

Any change with reference to the place of holding the Annual Meeting will be a disappointment to many members of the Association who had anticipated having the pleasure of attending the meeting and enjoying the hospitality of the Ohio breeders at Cleveland on June 6. However, notwithstanding this fact we feel that the majority of the members had rather see the Association conducted honestly and in compliance with the law and be deprived of the anticipated pleasure of attending the meetings in Cleveland than have the Association knowingly and wilfully violate the law.

Koenig and the Facts

OUR \$5,000.00 a year Extension Director, Fred A. Koenig, has been handing out a little more misinformation. This time it is in the form of an article appearing in *The Field Illustrated*, a high class monthly periodical with which many of our readers are doubtless familiar. The editors requested authoritative articles on the various breeds and the May issue carries such articles on the Guernsey, Holstein, Jersey, Ayrshire and Brown Swiss breeds.

Under the head of "The Holstein for Milk" Mr. Koenig says that "The total number of imported Hol-

steins is only 1,864." Now, if he had asked Mr. Houghton, the Secretary of the Holstein-Friesian Association of America or Mr. W. A. Clemons, Secretary of the Holstein-Friesian Association of Canada, either of these gentlemen could have given him the truth or even he could have looked through the earlier numbers of the Holstein Herd Book and the Dutch Friesian Herd Book and found out something for himself. Both Mr. Houghton and Mr. Clemons have stated that the number of purebred Holstein-Friesian animals imported into the United States and Canada from overseas is between eight and nine thousand. The statement quoted above is in the first paragraph of the article.

Then, Director Koenig again betrays his lack of knowledge in the second paragraph in which he says "The 528,000 Holsteins represent 60 per cent of the purebred dairy cattle. If there were figures on grades, a large majority with Holstein blood would undoubtedly be shown." Bless his heart, the same little book from which he obtained the purebred figures he gave, also states that there are 11,069,000 animals of Holstein blood in this United States of ours, a trifle over 16% of the cattle of the country. Animals carrying Jersey blood follow with a total of 9,554,000 or 14%.

Then, after minor inaccuracies, he states that Malcolm H. Gardner has supervised Advanced Registry work for the Association for twenty-two years when the facts are that Mr. Gardner was elected to his office June 8, 1905 not quite eighteen years ago.

Then he runs foul of the American Jersey Cattle Club and the devotees of the Jersey breed by saying "Holsteins hold all world records for all ages over all breeds of cattle" entirely overlooking the fact that the world's record for butterfat produced by a four-year-old in yearly test is held by the Jersey, Darling's Jolly Lassie with 1,141.28 lb. fat equivalent to 1,426.60 lb. butter on the 80% basis.

Now if Mr. Koenig does not have truthful information and reliable data on hand, we cheerfully offer him the use of the reference files of the HOLSTEIN BREEDER AND DAIRYMAN. But we really believe, and we think all our readers will agree with us, that the head of "The Extension Service, a third office of the Association" to again quote the article he wrote, drawing a salary of \$5,000.00 a year, which comes from the pockets of the plain breeder and dairyman, should at least, spend some time in learning facts before he, in his official capacity, writes articles for the public press.

New York Provides for Indemnities

OWNERS of cattle that react to the tuberculin test in New York State will now get the indemnities they are entitled to. Bills to that effect have passed both Houses and have been signed by Governor Smith, as well as another bill which provides for pay for reacting cattle slaughtered during the balance of this year and the first half of 1924. The total sum is five million dollars, part of which will be required to pay for stock slaughtered in 1922. Because payment of indemnity was postponed, tuberculosis eradication work in the Empire State has been badly hampered during the past year.

Digest of the Secretary's Report

THE reports of the various departments and committees of the Holstein-Friesian Association of America are now published, for the fiscal year ended on December 31st. The Secretary's report says that pedigree registrations reached 113,772 of which 30,631 were males, 83,141 females. During 1922, 113,772 animals were registered. These figures have been exceeded in two previous years; in the year ending April 30, 1920, in which there were 114,503 registrations and the year ending the same day 1921 when the figures were 127,850.

The Secretary's report shows a very interesting classification of certificates issued either to members or non members and also the number of double fees charged on account of delay in either registering or transferring. During the year there were 207,065 certificates issued, of which 1,463 were duplicates and the certificates brought in \$332,181.75. A comparison of transfer certificates issued during the past eight years is also given and the figures bear out the statements made by the BREEDER AND DAIRYMAN concerning the recent decrease in the association's business. During the fiscal year ending April 30, 1921, there were 128,615 transfer certificates issued. Then the end of the fiscal year was made coincident with the end of the calendar year, so that the next report was for eight months and this took in the slackest quarter of the year. The figures now reported are for twelve months and it will be seen that only 91,830 transfers were issued last year against 128,615 for the twelve months ending April 30, 1921.

The apportionment of the 50c from each transfer originating in the various districts and states is very interesting. Thirty districts did not claim their portion and the table gives the amounts sent to the state associations in the other districts. Wisconsin gets the largest amount, \$3,443.50, the Holstein-Friesian Association of New York gets \$3,096.

A number of volumes of the herd book can still be obtained from the Secretary's office and the price of each volume is \$2 which is far below the cost of compilation, publication and delivery. Forty-eight volumes of the Holstein-Friesian Herd book have been issued and number 49 is now all in type.

During the year, 1,726 names were added to the roll; but the expirations of twenty-three limited memberships and the death of 131 members reduced the net gain and at the close of 1922 the total membership was 22,014. The table showing the distribution of membership in sections and by states is well worth study. Wisconsin gained 314 members, New York 222, Pennsylvania 166; New York now has 4,441 names on the roll, Wisconsin is second with 3,599 and Pennsylvania third with 1,862. Lists of limited memberships terminated and of the deceased are given.

The expenditures in the Secretary's office were 88.45% of the budget estimates and a table is given showing how the money was spent. The cost of the Secretary's office including prize money awarded was \$251,252.11, the income was \$338,246.58, of which \$28,675 was from membership fees. The sum of \$4,350.62 was confiscated from fees on applications for registration and transfer because the applications were

incomplete or incorrect and the persons filing them had apparently done nothing toward getting the mistakes corrected. During the year 238 persons were suspended for failing to answer letters from the Secretary or the Superintendent of Advanced Registry; failure to furnish certificates of registry or transfer for animals sold; apparent irregularity or deception in matters pertaining to registration and transfer; fraudulent practices in testing; or delinquency in payment for Advanced Registry testing. Thirty members were suspended by the secretary and 208 reported delinquent by Superintendent Gardner. We understand that one of the delinquents holds the position of director in the National Association.

The Secretary's report will repay close study because from it a better idea can be gained of the present condition of the industry than from any of the other reports. Every member of the Association in good standing has the right to have copies of these reports and requests for the same should be sent to the Secretary's office at Brattleboro, Vt. A member of the Holstein-Friesian Association stands in much the same relation to this Association as does a member of any corporation and the more the members study the reports of the various officers, departments and committees the better grasp the members will have of the true condition of affairs.

Report of the Treasurer

THE Treasurer's report shows that \$81,075.17 was on hand January 1, 1922, and that the cash receipts during the year from all sources were \$445,458.96 making a total of \$526,534.13.

The cash disbursements by the Secretary's office was, by Treasurer's vouchers, \$275,772.40, this includes the amounts used for calf clubs and extension; by the Advanced Registry office, \$106,157.34; by the Treasurer's office, \$60,716.77, a total of \$442,646.51. The Treasurer reports that the total cash balance was \$83,887.62 on December 31, 1922.

Jimmy Reynolds takes another \$2,000; Director Noyes, Chairman of the Finance Committee, gets \$1,000; the sum of \$3,951.55 was used for the Kansas City meeting of which, \$1,279.15 was charged to Annual Meeting expenses and \$2,672.40 to the Heart of America Dairy Show; legal expenses takes \$19,255.10; and \$1,639.27 is charged to the Cabana case. The committee on School of Judges, that is, the type committee has used the nice little sum of \$7,305.12.

Extension Department Report

THE report of the Extension Service is compiled by the director, Fred A. Koenig and is quite a contrast to the one emanating from the Secretary's office as Mr. Koenig does not give exact figures confining himself largely to round numbers. He says in over 200 shows, calf club ribbons furnished by the association were used, that the Calf Club News goes to over 4,000 boys and girls owning Holstein calves; that approximately 300 boys and girls are allowed membership in the Holstein-Friesian Calf Club Association of America until they are nineteen years old. Then he

says approximately 2,000 production records were given publicity from his office.

In March, 1922, Earl J. Cooper was engaged to develop calf club work; then following the Kansas City Convention, Mr. Koenig was made director of Extension and W. B. Barney was engaged to look after questions on dairy products including dairy legislation. Other men have been added during 1923. The exhibits at three great livestock and dairy shows are mentioned as well as the painting and models produced under the direction of the committee on type. The rest of the report deals largely with work started in 1923 or planned to start in 1923.

No figures for expenditures are given. For some reason the amount spent by the Extension Service and also for the Extension Service Calf Club is placed in the figures for the Secretary's office. The Extension Service has used \$38,726.22 and the Calf Club department, \$9,187.23.

The latest Koenig report agrees with his former report in that it tells very little of anything accomplished but is full of intimations that much will be done in the future.

Reports of Auditor and Type Committee

THE average member in comparing the various reports is apt to be puzzled by apparent discrepancies. The expenses of the Association as figured by the Treasurer and the Auditor differ in a number of instances. The Auditor gives \$394,431.89 as the total expenses for the year; while the total cash disbursements as reported by the Treasurer is \$442,646.51. The Treasurer's total cash receipts are \$445,458.96 while the income as given by the auditor is \$390,778.50.

The Treasurer's report shows a gain in resources during the year of \$2,812.45 while the Auditor's report shows an excess of expenses of over income of \$3,653.31. In either case it is very plain that the Holstein-Friesian Association of America just about broke even during 1922. The amount of the transfer fee really had very little to do with the balance at the end of the year for, right away after the transfer charge was raised at Kansas City, some salaries were raised, a number of new employees were engaged at Chicago and expenses were greatly increased.

The report of W. S. Moscrip, chairman of the Committee on Type tells what was done since March 20, 1922 and also says that there is one more meeting of the committee necessary to complete the work or revising the Scale of Points and that a booklet will be gotten out showing the results of the work.

Finance Committee's Report

THE report of the finance committee should be before the reader when studying the treasurer's and auditor's reports. The financial committee makes a statement which agrees with the fact that the BREEDER AND DAIRYMAN has tried to call to the attention of the members and which is in direct contrast of the statements made by some speakers and writers

who ought to be better informed. The committee says: "The final comparison of 1922 and 1921 showed that we received 1.81 per cent less applications for registry, 7.25 per cent less applications for transfer, or taking the two together 4.33 per cent less applications for registry and transfer and 13.13 per cent less applications for membership."

According to the finance committee the total net worth of the Association is \$459,749.54, an apparent gain during the calendar year of 1922 of about \$43,000. The committee explains that this is only apparent as on the last day of 1921 the liabilities—money appropriated and not yet spent—were \$63,846.56 against \$6,368.23 on the last day of 1922. The finance committee which consists of Directors Noyes, Fox and Barney say that during the period from April 30, 1921, to December 31, 1922, the net worth of the Association was decreased about 40,000; yet they go on and say they have charged off \$32,000 for depreciation and have not yet given credit for increase in value of bond investments which at the present time would bring in the market \$13,000 more than their present book valuation.

The estimated income for 1923 is \$475,230. The cost of carrying on the association outside of extension and advertising is estimated at \$347,950 but no details are given. They estimate there will be \$127,280 available for extension and publicity work without invading the Association's resources.

The Guernsey National Sale

THE editor confesses to indulging in a little dissipation in the form of attending the National Guernsey Sale at Devon, Pa., May 17. We should estimate there were between six and seven hundred persons present. The cattle came from many states and were choice individuals and the catalog showed that many of them had won high honors at leading shows and fairs. As is usual at most of these great events, there were varying opinions as to how the cattle was selling and the editor confesses that he does not know enough about the Guernsey breed to give a definite opinion. The top price for a male was \$10,000 and for a female, \$9,000. Auctioneer Bain announced that the eighty-five head sold averaged \$1,211 which most of us would call a real good average even for a sale of such high calibre.

There were a number of Holstein and Ayrshire breeders among the spectators and it was the consensus of opinion that Holstein sale managers could, with advantage to themselves and their clients, copy some of the Guernsey practices while we believe our Guernsey brothers could also learn something at our best sales. For one thing, there was no built-up platform. The animals were sold in a ring pitched on the ground, and it was practically impossible to see very much of the animal in the ring unless the onlooker sat close to the ring side.

Despite the large number of animals offered the sale was over early. There were no long winded speeches. Auctioneer Bain kept the animals moving steadily through the ring. Sale manager Herrick's remarks were short and to the point, the audience was

keenly interested and there was very little loud visiting under the big tent. The animals were splendidly fitted and their performances in both tests and in the ring showed that Guernsey owners had brought together a splendid aggregation of their favorite breed.

One of the features of interest was the grand old cow, Lillie Paul, born January 10, 1904. In her twentieth year she had just closed a year record of 13,864.4 lb. milk, 540.63 lb. fat—Guernsey records are reported in terms of fat. This great cow has given birth to nineteen daughters and one son. Evidently she is the kind of stock producer that most of us would like to have in our herds. Her owner is Fred Huggler, Harriton Farms, Bryn Mawr, Pa.

Much Yet to Learn About Feeds and Feeding

A GREAT advance in the science of cattle feeding has been made in the past few years. It is known that an adequate diet must contain certain mineral ingredients and also certain organic compounds whose exact chemical nature is still unknown but which have been called vitamins. It is possible to compound a ration from ordinary feed-stuffs which will contain sufficient protein and energy

producing substances and yet be deficient in either minerals or vitamins or both.

There is every reason for believing that feeding for any given result including high milk yields can be very much simplified and made more economical by a systematic study of the vitamin and mineral content of feeds.

It is also possible that the mineral and vitamin content of dairy feeds may be found to have an important bearing on the breeding vigor, or reproductive ability, of dairy cattle.

The United States Department of Agriculture is studying these questions. Results of considerable practical importance have already been obtained some of which indicate that high producing dairy cows suffer from shortage of lime unless they are fed much larger amounts of legume hay than is customary in many parts of the country. It has also been shown that there are differences in the values of protein in feeding dairy cows and also that there is a vitamin in fresh, green feed that probably promotes the assimilation of lime by animals milking.

"Pa," said Clarence, "what do they mean by making light of your burdens?" "Burning the mortgage, I guess," replied his dad.

Experts Making a World's Record

MARYLAND BREEDERS SPRING MEETING

The Holstein-Friesian Association of Maryland held its spring meeting, May 12 at the Hotel Emerson, Baltimore. Probably owing to the beautiful weather and the fact that the \$53,000 Preakness running race was on that day there was a small attendance. President Nelson James called the meeting to order and introduced a representative of the Baltimore Health Board who told about the city's bacteria restrictions upon milk and the requirements as to solids and fat content. The Doctor said there was no intention on the part of the City Health Board to discriminate against Holstein milk but that it seemed when milk shipped into the city tested low and the shipper was asked to explain he invariably would say that he was keeping Holsteins when probably he simply had a few black and white cows in his herd and no purebred Holsteins at all.

President James introduced Mr. E. B. Bennett, who for four years was President of the Pennsylvania Holstein-Friesian Association. Mr. Bennett told of what he had seen of the Holstein-Friesian industry in Holland and England during the summer of 1922, particularly the work of registration at the office of the Secretary of the Dutch Friesian Cattle Association. Cattle were bred in Holland for type and no cow was registered until she came in milk. Before registration each animal was examined by able judges who used a scale of points in their judging.

Then Mr. Bennett commented upon the recent circular sent out from the office of the Secretary of the Holstein-Friesian Association of America and its intimation that \$93,000 was to be taken from the treasury and used in some kind of extension work in addition to an estimated sum of \$127,000 which was left after the original running expenses of the association were defrayed.

At the afternoon session there was a general discussion. It was brought out that the members thought something should be done to develop the Holstein-Friesian industry in Maryland. Mr. Bennett introduced a resolution to the effect that the members of the Holstein-Friesian Breeders Association of Maryland were in favor of extension work but were not in favor of extension work as outlined in the recent circular issued from the Secretary's office; that the Maryland Association stood for speedy reduction of transfer fees, a strict policy of economy in the national association, a return to a board of six directors, and a restoration of the right of every member of the Holstein-Friesian Association of America to vote either in person or by proxy.

Mr. Bennett explained that he was in favor of true extension work. He believed that field men who would work in the states where there were few Holstein cattle would do more for the breed than field men could if they worked where there were a large number of Holstein breeders and large herds of purebred Holstein cattle. He questioned the legality of the delegate system and of the coming Cleveland convention.

Mr. H. M. Rowe seconded the resolution and spoke at length upon the Holstein industry and the conduct of the breeders. He said that if the cattle owners gave their animals good care and feed, ascertained what it cost to keep the animals, weighed and tested the milk and swore to truthful reports of the work that they would have no trouble in selling their surplus animals, irrespective of the policies or actions of the National Association or its so called Extension Department. Dr. Rowe touched upon the herd owned by the Maryland State College at College Park and said there were no Holsteins in the herd and he called upon the professor present to answer his remarks. The Professor said that the herd consisted of purebred Ayrshires and Guernseys, that the young cows have made records ranging from 10,000 to 13,000 lb. milk a year and he urged the Maryland Association and its members to do what they could to have the legislature appropriate enough to start a well bred herd of Holsteins at the college.

Mack Dennis said that he was in favor of the increased transfer fee part to be used for advertising the Holstein breed. He said that there should be a man in the states of Maryland, the Virginias and the Carolinas to tell farmers and dairymen the good points and profitability of the Holstein breed.

Several other members spoke on the resolution. Some urged

that there was a question of the legality of the Cleveland convention, there was no use instructing the delegates, John M. Dennis, and Wm. P. Morsell. Others thought that as both gentlemen understood Maryland conditions, they should be left free to use their own judgment. Dr. Rowe suggested that the resolution be construed merely as an expression of opinion and not as instruction to the delegates and suggested that this be incorporated in the proposed resolution but Mr. Bennett objected. Thereupon the president put the resolution which was defeated.

A resolution was passed that the president appoint a committee to induce the proper officials to place a Holstein herd at College Park, for the purposes of furnishing instruction to students and serving as a breed advertisement. President James appointed Granville Hibberd of Brooklandwood Farms, Chas. Wertheimer of Frederick, and Mr. Carroll.

President James read a communication that the Holstein-Friesian Association of America would give \$25 to be awarded as calf club prizes at the state fair providing that the state association would match the appropriation. Dr. Rowe criticized the way the letter was worded especially the use of the word "match." He said that he would, through the state association, personally donate the \$25, whether the National Association gave anything or not.

The question of holding a state sale in October was then brought up and a variety of opinions were expressed. Some were against a state sale some were of the belief that a sale should be held in the spring and some in the fall. Mr. Wertheimer spoke against having any sale unless the breeders would consign their best cattle selected by a committee. Granville Hibberd moved that the secretary be instructed to send out inquiry cards to all breeders of Maryland asking if they would consign one or more good animals to a sale in October, such animals to be subjected to inspection by a committee. This resolution was seconded and passed unanimously. The breeders were invited to attend Farmer's Day at College Park, Maryland, May 26, when the cornerstone of the new dairy building would be laid. Thereupon the meeting adjourned. The president of the association is Nelson James of Rising Sun, vice president Mack Dennis, secretary-treasurer W. R. Whittingham of Corbett.

Letters to the Editor

Editor

HOLSTEIN BREEDER AND DAIRYMAN:

At one time I was what might be termed "a Holstein enthusiast" but it is enough to make one feel sick to see the way the Association is being run. Too many millionaires will spoil anything, they make poor companions for farmers.

PENNSYLVANIA BREEDER.

THE PROUD VICTOR

An Irishwoman had a quarrel with her husband and the old village priest heard of it. Always anxious to restore peace wherever possible, the priest called at the woman's house. He found her alone.

The priest shook his head sadly as he looked at her. "Dear, dear," he said, "this is dreadful. Here are you, Mrs. Flannigan, the mother of a family, with your eye blackened, your lip torn, your cheek bruised and your nose broken. Dreadful, dreadful!"

"Ah, sure, yere rivrinced," answered the woman somewhat sadly. Then she added; "But wait till ye see Flannigan!"

NO GOOD

From a letter received by a corn syrup company:

"I want to tell you that I have eaten ten cans of your corn syrup, and it has not helped my corns one bit."

"Does your husband enjoy sound sleep?" "Really, I don't know. Sometimes from the sound he makes I think it must be agonizing to the poor fellow."

CLUB ACTIVITIES

CALENDAR OF HOLSTEIN DOINGS

June 5-15—Second Annual Livestock and Farm Tour of State of Washington.
 June 16—West Bend, Wis., Dairymen's Field Day at Cedar Lawn Farm.
 June 19—Corvallis, Ore., Oregon Holstein Breeders Annual Picnic.
 June 23—Wauwatosa, Wis., Milwaukee County Field Day at Agricultural School.
 June 27—Brookings, S. D., Midsummer meeting of S. D. Holstein-Friesian Association.
 August 10—Dairy Tour of Mercer County Association.
 August 11—Amherst, Mass., Hampshire-Franklin Club, Annual Field Day.
 September 24-30—Waterloo, Iowa, Dairy Cattle Congress.
 October 2-6—Brockton, Mass., Brockton Fair and Dairy Show.
 Oct. 2-5—Washington, D. C., World's Dairy Congress.
 Oct. 6-13—Syracuse, N. Y., National Dairy Show.

WILL BE AT NATIONAL DAIRY SHOW

The newly formed Holstein-Friesian Dairymen's Association of Luzerne County, Pa., plans to exhibit at the National Dairy Show. One of the members, Dr. E. Hogg, on his farm at Lehman, owns the well-known sire Radium, a New York state fair grand champion and has also a number of other show animals in his herd. The Doctor has offered the use of these to the committee if they see fit to take them.

SELLING RATES CHANGED

There was a good attendance April 24th at the Holstein Club meeting of the Stratford Association, held at Stratford, Wis. County Agent W. J. Rogan discussed the neighborhood breeding club plan of the organization.

The five per cent charge for selling cattle of members was explained and a motion was approved to charge non-members of the association for whom sales were made six per cent.

A number of new members were enrolled by the acting president Harry Keller and Secretary Wm. Klemme.

WASHINGTON STATE TOUR

The Second Annual Livestock and Farm Tour of the state of Washington will be held from June 5 to June 15. This tour will include practically the entire dairy section of the state and stops will be made at 44 farms. The trip will be taken by auto and will extend for nearly 1000 miles.

Among the stops will be included 33 dairy herds divided into the breeds as follows: Holsteins 14 herds; Jerseys 9 herds; Guernseys 8 herds and Ayrshires two herds. There also will be included the foundation herd of Holsteins at the Western State Hospital which Governor Hart is building up to supply the state institutions with Holsteins.

The trip is under the auspices of the Extension Service of the State College and the livestock and dairymen of the state.
 LINCOLN R. LOUNSBURY.

WILL TOUR COUNTY

The Board of Directors of the Green Lake County Holstein Breeders Association held a meeting at Green Lake, Wis., April 26th. It was decided to arrange a farmers' tour through the county and visit some of the good purebred and grade Holstein herds. This trip will take the place of the regular summer picnic of the organization which has been held annually for the past ten years.

According to present plans the tour will be held early in June. It is planned to interest not only Holstein breeders but dairymen in general as well as business men throughout the county. Invitations will be extended to the Chamber of Commerce and to other business men's organizations to participate in this trip for the purpose of viewing the progress which is being made in livestock breeding.

SMALL BUT ENERGETIC

There are only eight members in the Polk County Holstein Breeders Association but what they lack in numbers they make up in enthusiasm. Six of the eight members met at

the Court House, Balsam Lake, Wis., April 23 and decided to offer another silver loving cup to be awarded to the class of high school boys making the best showing in a county stock judging contest. The last cup was won by the Milltown high school two years in succession and is now their permanent possession.

The committee appropriated \$65 for prizes for the boys' and girls' calf clubs. There are to be two clubs, senior and junior. Five prizes will be awarded in each division. The senior club will have calves born between August 1, 1922 and February 1, 1923 and the junior club will have calves born between February 1, 1923 and August 1, 1923.

The president of the association is Ernest Nelson and R. C. De Golier is secretary.

PROFITEERING IN THE BLUE EARTH COUNTY PUREBRED SIRE CAMPAIGN

The following article appeared during April in two Minnesota papers, the *Lake Crystal Tribune* and the *Good Thunder Herald*. Breeder and Dairyman readers who may have forgotten some of the details of the Blue Earth County Purebred Sire Campaign may refresh their memory by looking over the article entitled "Selling the Bulls in Blue Earth County" which appeared on pages 213 and 214 of the March 22d issue of this journal. The information from which this article was written was sent to our office by Robt. Geiger, Secretary of the Minnesota Holstein-Friesian Breeders Association. Substantially the same article as carried by us appeared in the other breed journals and in a number of agricultural papers. We published the story as we believe in the purebred sire movement and because we thought the Minnesota State Association was, for once, on the right track. Evidently, we were mistaken but will refer to that matter editorially and are simply quoting these two Minnesota papers, which both advocated the movement until they found how the sellers were being used.

The *Good Thunder Herald*, in its issue of April 19th copied the article from the *Lake Crystal Tribune* and presented it with the following introductory paragraph. "The following from the *Lake Crystal Union* contains a great deal of truth and expresses the general sentiment of this vicinity as far as we can tell by interviewing those who purchased purebred sires. Some of our breeders are still waiting for their pedigrees. The *Herald* is one of those who got it in the neck, as usual."

The original article which appeared in the *Lake Crystal Tribune* issue dated April 12th is as follows:

Considerable dissatisfaction is arising over the methods pursued by the promoters of the recent purebred sale campaign in Blue Earth County, which was handled through the Minnesota Holstein-Friesian Breeders Association, sponsored by the *Minneapolis Tribune*, and approved—at least in the beginning by the county farm bureau.

The campaign was supposed to be a no-profit affair, that is the no-profit feature applied to the country weekly newspapers who were roped in for free advertising space, and the bankers were also induced in the furtherance of more purebred sires to cut the profit margin off the notes and furnish the money to buyers at only 6 per cent. The other parties interested in the no-profit campaign got theirs out of a charge of \$35 added to the regular price asked by the seller of each animal sold, which the buyers paid.

The buyers did not know in the beginning that this \$35 charge was to be added to the regular price, but they know now that they paid for the campaign, and don't like it; the sellers feel about the same. It was explained to the sellers by the promoters that the \$35 extra on each animal was to cover the expense of testing, inspection, delivery, 10 per cent. to the Holstein association, and some other expenses which presumably went to fellows who stated "they were not out for their health."

The owner of an animal was to add the \$35 to his regular price, and must not offer it for less to anyone. The buyer immediately gave his note for the amount after being notified that

the association had for sale the kind of a sire he wanted, which note drew interest from that time, often before he got the animal. The promoters cashed the note at the bank for its full face value,—and some of the sellers—now nearly two months after the campaign—are still waiting for their money from the association.

Not satisfied with getting the \$35, the association is now asking of some sellers a further fee for testing, which the seller understood was to be paid out of the \$35 paid by the buyer. In some cases, where the herd had been federal tested, there should have been no expense whatever for testing. One seller was told to bring his animal to town or the sale would be called off—and the \$35 was to have covered delivery by the association at no expense to the seller. As for the inspection service which the buyers paid for, the fact that a number of prospective buyers refused to accept the animals which they bought without first seeing, indicates that the inspection service was far from satisfactory.

At the flat charge of \$35 per animal sold, the no-profit campaign for the benefit of the farmers who wanted to buy purebreds from their neighbors, cost the buyers \$3,710 for the 106 animals sold in Blue Earth County, with additional fees still being deducted from sellers.

The county farm bureau backed the movement in the beginning, but is endeavoring at this time to have corrected some of the mistakes made. The bureau should pursue this matter until rebates to buyers have been made up to the point of actual and reasonable cost of selling, compelling the Holstein association and their co-workers to keep the promise made of a no-profit campaign so far as they are concerned—the same as they asked of the bankers and newspapers—and then finally to split the real cost of selling between the buyer and seller.

A \$35 cost to the buyer of selling an animal worth only \$50, a total of \$85, is unreasonable and discreditable. The bottom is going to be knocked out of that kind of blue-sky selling just the same as the high fictitious prices on purebred hogs were punctured which are now down to where they will do the most good. Further than that, we would rather see several car loads of purebred stock shipped into Blue Earth County from Wisconsin and Michigan, and then let the neighbors do their own buying and selling of any surplus stock in the county, which they can do at much less cost than \$35 per head. We are informed the association admits they have made mistakes; then straighten the back trail and keep going straight. The era of sky-high prices paid to promoters and their farmer-cappers for purebred stallions have long since passed; the purebred hog promoters of fictitious prices had their day; the breeders and associations of purebred cattle sires had best heed the signs of the past."

Daughter—"But, papa, don't you think Bertie is old enough to know his own mind?" Father—"He ought to get acquainted with what little he has in no time at all."—*Spare Moments*.

CALIFORNIA PIETERTJE BLOOM MEAD

I am pleased to announce that the Holstein-Friesian cow California Pietertje Bloom Mead, No. 450151 has just closed a long-time test and is credited with 28,236.1 lb. milk containing 1,004.62 lb. fat in 365 days, thus showing an average of 3.56 per cent fat in the milk. She freshened at the age of 4 years, 1 month, 4 days. Her sire is King Mead of Riverside, No. 50290; her dam is Pietertje Bloom, No. 66816. She was bred and is now owned by the University of California, Davis, Cal. At the age of 2 years, 8 months, 22 days, during a semi-official test, she is credited with 19,985.5 lb. milk containing 722.27 lb. fat in 365 days; she having no official record of seven days or longer during that lactation period. For the lactation period just closed, her best seven days' official production is 623 lb. milk containing 25.45 lb. fat. She had fifteen official test periods during the year, of which two were retests. Twelve different supervisors were employed in the conduct of the test. Her 365-day production of 1,004.62 lb. fat, equivalent to 1,255.77 lb. butter on the 80 per cent basis, gives her 62nd place among the cows producing above 1,000 lb. fat, she being the 67th Holstein-Friesian cow to gain the honor of producing 1,000 lb. fat in 365 days.

MALCOLM H. GARDNER, Supt. of A. R.

April 30, 1923.

BALTIMORE DAIRY COUNCIL

The Baltimore Council had an active year during 1922 and the report is interesting reading. The receipts and contributions were \$11,690.85 and the expenditures \$11,318.19.

Baltimore has an enviable record in that practically every public school is having milk served to its children to be paid by those who can afford it and given free to those undernourished who cannot pay. The milk is served in half-pint bottles with straws furnished by the Council. For the school term, September, 1921 to December 31, 1922, 1,983,127 half-pints were paid for by school children, and 497,886 bottles were given free. This amount of free milk was far in excess of the estimate at the beginning of the year and was evidently due to various causes among which are unemployment, lack of interest on the part of some school principals and teachers, high price agitation, and the failure of the novelty of the straw and half-pint bottle to continue to attract.

The free milk given to the undernourished school children during the school year represented an amount equal to \$17,426.01. This expense was assumed entirely by the milk dealers of Baltimore who have been exceedingly generous in furthering the Dairy Council's Health program in the schools.

Undernourished school children, whose parents are employed in factories and thus are not home at the noon hour were selected and given a hot lunch each day except Saturday and Sunday at the Diet Kitchen. The children were weighed

SPOTTED COWS and SPOTTED SOWS

The best combination on earth from both points of view—beautiful to look on—profitable to the uttermost.

Every feature of the spotted cow may be learned from THE HOLSTEIN BREEDER AND DAIRYMAN. Likewise, every feature of the old fashioned Spotted Poland China sow may be learned from the *Spotted Poland China Journal*, 600 Wulsin Building, Indianapolis, Indiana, Fred L. Obenchain, Managing Director. One year, \$1.00; three years, \$2.00. The same address brings you all the information in regard to recording the old-fashioned Spotted Poland China Breed in the National Spotted Poland China Register formed during the fall of 1913; incorporated under the laws of Indiana early in 1914.

The assets of the Association to-day are around forty-five thousand dollars. They do not owe one single dollar. They have a publicity department for the benefit of their breeders free to all members. They give a twenty-four hour service

of recording pedigrees. They appropriate all of their profit for prices in county, district, state and national shows, so far as we have been able to ascertain, this is the only swine record in the United States that has done a greater business in 1921 than they did in the year 1920. In 1922 their gain over 1920 was 53%. Their membership fee is \$5.00. Write for full particulars. Address THE National Spotted Poland-China Record, FRED L. OBENCHAIN, Secy.-Treas., 600 Wulsin Bldg., Indianapolis, Indiana.

periodically and given instruction in proper food and health habits. As soon as the children arrived at normal weight they were dismissed and other undernourished ones took their places.

Exhibits and Demonstrations have been made during the year and is estimated that more than 60,000 people saw the display. Talks have been made before schools, churches, mother's clubs and similar organizations, on subjects relating to nutrition and the importance of milk in the diet. Several short health plays have been given in the schools, the Dairy Council furnishing the costumes. Nutrition picture films have been shown at twenty-three different places and seen by approximately 10,000 people. We regret to add that owing to lack of funds the work is being curtailed during the present calendar year.

STUDYING NEW YORK STATE DIET

A nutritional study on the use of milk and milk products is being conducted in New York State by supervisors of education, social workers and representatives of several organizations including the Bureau of Nutrition, Dairymen's League, Cornell University, the State Department of Education and the State Federation of Home Bureaus.

A nutritional study among 15,000 school children of New York City has been in progress for several months and it is now planned to learn up-State food habits, especially in relation to milk.

There are two questionnaires, one for the children and one for older members of the family. When filled out and returned the information is tabulated and it is expected that much valuable information will be gained. It is hoped to complete the work by June 5. Miss Laura A. Cauble, the League Director of Nutrition, is in charge and the Dairymen League will publish the findings.

MANY ORGANIZATIONS REPRESENTED

At a meeting, May 2d, at Rochester, N. Y., joined in by the Chamber of Commerce, the Dairymen's League, Tri-County Holstein Association, the State Brown Swiss Breeders' Association, Tuberculosis and Public Health Association, Monroe County Farm Bureau, and representatives of the Board of Supervisors and the City Health Bureau, a plan was formulated for the eradication of tuberculosis in the dairy herds of Monroe County. The principal speakers were Dr. E. H. Howard of the Public Health committee of the Chamber of Commerce; E. D. Merrill, manager of the Monroe County Farm Bureau; Dr. E. T. Faulder, representing state and federal Bureau of Animal Industry; and Dr. G. W. Goler, health officer. Representatives of the eight organizations present voted unanimously to endorse the plan and to pledge their support and coöperation in carrying it out.

THE CLEVELAND CONVENTION DELEGATES

The official list of delegates elected to the Cleveland convention was sent out from Secretary F. L. Houghton's office under date of May 3d. The members have shown less interest in the selection of delegates than they did last year for despite the growth in membership, this year, only 26 districts elected 122 representatives while last year 35 districts elected 136 representatives. Three of the districts, California, Nebraska and Oregon did not elect the full number to which they were entitled. California elected one when they were entitled to three representatives, and Nebraska and Oregon each elected one when they were entitled under the rules to two. The members in twenty-seven districts made no nomination whatever and so these twenty-seven districts which, under the rules are entitled to thirty-one delegates, are unrepresented.

APPELLATE COURT DECISION IN GEORGE CASE

(Concluded from page 351.)

And the same view has been expressed by textbook writers. *Taylor on Private Corporations, Part V. p. 281; Morawitz on Private Corporations, Sec. 488; 19 Ruling Case Law, p. 1303; 27 Yale Law Journal, 1078-9.*

The interests of the members of this corporation, as well as the purpose for which it is incorporated, make desirable, if they do not require, meetings at different places throughout the country convenient for the large membership, and we therefore deem the objection not well founded.

Moreover we may well take notice of the great number of incorporated professional, fraternal and social bodies of national scope and importance which have come into existence almost without exception since the *Ormsby* case was decided in 1874. The successful conduct of these bodies necessitates meetings in different states. We are to-day confronted with a situation which did not exist in 1874 and could scarcely have been foreseen. The existing conditions thus impels us toward the same conclusion.

The other proposition of the respondent is that the amendment of the by-laws increasing the number of directors adopted at the Philadelphia meeting of 1919 is invalid because of the failure to file the certificate in accordance with the provisions of the statute as it then existed, and that this defect has not been corrected by the filing of the certificate in 1921 in the form authorized by the amendment of the law effective May 5, 1921. The amendment of Section 14, by Chapter 575 of the Laws of 1921, does not validate previous action but permits certificates thereafter filed to be signed by the president and secretary of the meeting instead of a majority of the directors. It is not confined to meetings thereafter held but only to certificates thereafter filed. The resolution adopted at the Philadelphia meeting therefore became effective when this certificate was filed. This was in September, 1921, before the Kansas City meeting, and the election held in Kansas City in 1921 was not invalid for the reasons stated.

There may be a question as to the regularity of the elections at Syracuse in 1921, at St. Paul, in 1920, or in Philadelphia in 1919 (*Lewis v. Matthews, 161 App. Div., 107*) which were held before the legal certificate as to the increase in the number of directors adopted at the Philadelphia meeting was filed in the proper offices, but in view of the fact that the petitioner was represented by proxy at the Syracuse meeting and made no objection, and in view of the length of time which has elapsed, we are of the opinion that petitioner cannot now be heard to question these elections.

The order should be reversed with ten dollars costs, and the motion denied with ten dollars costs.

Order reversed with Ten dollars costs and disbursements and motion denied with Ten Dollars costs. All concur.

Dairymen's League Payment for April Milk

The Dairymen's League Coöperative Association, Inc., announces a gross pool price for April milk of \$2.15. Deduction for miscellaneous expenses amount to \$.07½ which makes the net pool price for April of \$2.07½. This price is for 100 pounds of milk testing 3% butter fat at the 200 and 210 mile zone. The price which individual poolers will receive will vary according to the butter fat and freight differentials applying in each case.

The report on the Association sales of milk and milk products for the month of March shows a total increase of more than \$1,000,000 over the sales for February and about \$1,500,000 increase over the sales for March, 1922. The Association is now handling more milk through the League owned plants especially in the higher classifications—fluid milk, ice cream and canned milk—and is now making very little butter and cheese which do not bring as high returns.

Percy—"If you marry me I will love you so I would gladly die for you."

Cow Testing Association Reports

GOOD WORK DURING FIRST YEAR

The Shirley-Denmark Cow Testing Association started its years' work December 1, 1921, with Manning Nelson as tester. Its first annual report has just been received at our office. The book is well gotten up and contains much valuable information.

There were 351 cows finished the years' work. They averaged 7,321 lb. milk, 277 lb. fat. The tester has divided these into three classes; there are 88 scrubs with an average of 243.8 lb. fat; 232 grades averaged 279.6 lb. fat while the 31 purebred females averaged 356.4 lb. fat.

The high cow is a four-year-old registered Holstein, Cornucopia De Kol Lotta, owned by Lawrence J. Larson of Denmark, Wis. Lotta gave 15,794 lb. milk testing 3.45% and yielding 544.9 lb. butterfat. Her production was valued at \$243. She returned \$2.37 for each dollar expended for feed and earned her owner a profit above feed cost of \$132.16. She was on pasture 183 days, was milked three times daily for six months and gave 86 lb. milk her best day.

Blacky, a nine-year-old grade Holstein, owned by Louis Schaeetz, on twice a day milking produced 12,825 lb. milk, 503.4 lb. fat and is said to have earned her owner a profit of \$145.84. She is the Association champion for twice a day milking.

Mr. Larson, about a month before the association was organized bought a black and white two-year-old, Molly, for \$40. Tester Nelson says she is not a grade, evidently giving this term its technical meaning instead of its general application as Molly is a well marked black and white heifer. During the year she produced 11,509 lb. milk, testing 3.68% and gave 424.4 lb. fat. Her feed cost was \$80.96 and the returns above this were \$107.67.

The high herd consisted of nine Holstein cows, 7 registered and 2 grades, owned by Henry Benecke of Denmark. These nine animals averaged 12,178 lb. milk, 445 lb. fat. The average feed cost was \$77.59 and the average net profit was \$116.60. Eight of the animals in this herd qualified for the Record of Production by averaging one pound fat every day in the year. This herd was the highest in the state for the month of June and July and held the high herd honors in the association for seven months.

The fourteen cow dairy of L. J. Larson stands second with an average of 10,023 lb. milk, 355.4 lb. fat. Tester Nelson's brief remarks under the head of "Some Facts" are interesting reading. He says that during the year six non-efficient purebred sires were sold to the butcher as well as two scrub bulls and that ten purebred sires were purchased. One member used a sire whose daughters, tested as three and four-year-olds, showed

a decrease of 130 lb. fat below their dams production; cow testing association work uncovered this fact. Twenty-two of the members have silos and 21 have drinking cups in the barn while 16 use milking machines and 5 have had light and power plants installed during the year making a total of 11 in the association.

SHOWING AND TESTING ASSOCIATIONS

The following letter shows the influence of cow testing associations and also points out that the value of exhibiting at shows and fairs is not measured or limited to the number of inquiries for stock received during exhibition days. The letter was sent to County Agent Milton H. Button of Washington County, Wisconsin.

Dear Mr. Button:

I was just wondering if you were the fellow in charge of the high grade Holsteins at the National Dairy Show last fall. I purchased one cow from your county and I am so well pleased with her that I would like to get a carload from down there if I could buy them right. The cow I got is Blossom out of Fred Pamperin's herd and if there are more cows like her I would be willing to pay more for cows of her type than others of smaller production. I would want cows that have been tried out in your testing associations, so that we would have something to build our future on. To buy a cow without a record back of her is like trading a knife unseen.

Will you kindly write me fully as to what the prospects would be to get a carload of good cows like the one I mention above that I now have on my farm?

I am expecting to leave for Wisconsin some time the first part of June, or if I could pick up a carload in a couple of days I might get down there the middle of May or the last part of May.

I shall appreciate an early reply, I am

Yours truly,

P. E. JOHNSON.

LEADERS ALL PUREBREDS

Purebred Holsteins carried away the honors in the Cumberland County, Pa. Association for the month of April. The leading producer for milk was owned by A. P. Loudon of Carlisle, and she produced 2,343 lb. The leading butterfat producer was a member of the herd of Ivo V. Otto of Boiling Springs and she was credited with 67.8 lb. Mr. Otto's herd averaged 1,514 lb. milk and 49 lb. butterfat while the herd of W. H. Wertz of Shiremanstown was second with an average of 1,244.3 lb. milk and 40 lb. fat.

During the month 39 herds were tested and they were composed of 285 cows in milk and 29 dry. Seventeen animals exceeded 60 lb. of fat, which is the best showing ever made in the association, reports tester A. A. Raudabaugh.

TESTING IN LAWRENCE COUNTY

A registered Holstein, Ida Belle, owned by E. B. Vensel, led the Westfield Testing Association during the month of March, reports the tester, Gordon Rice. This cow, a seven-year-old produced 1,704 lb. milk, 80.1 lb. butterfat. A registered Holstein, Jewel, owned by Herb A. Freed is second with 1,807 lb. milk, 68.7 lb. fat. Herb Freed has three purebred Holsteins above 45 lb. fat; H. Frank Freed has two and Geo. Augustine has three. There were 273 cows tested in 26 herds. Forty-eight cows produced over 40 lb. fat and 19 over 1,200 lb. milk.

The Westfield Association operates in part of Lawrence County, Pa., as does the Volant Association of which Paul J. Stonebraker is tester. During March, 23 herds containing 250 cows were tested of which fourteen produced 50 lb. fat and twenty-two over 1,200 lb. milk. The first and second for both milk and fat production were purebred Holsteins owned by D. B. and E. R. Reynolds, an eight-year-old making 2,152 lb. milk, 73.7 lb. fat and her stablemate producing 69 lb. fat from 1,917 lb. milk. The Reynolds herd had eight cows tested of which seven exceeded 40 lb. fat and the other, a two-year-old, produced 32.6 lb.

NEW YORK STATE TESTING

During February, a purebred Holstein named Stewartford Pontiac Sadie Vale owned by James Steward, Pittsford, led all the cows enrolled in the Dairy Improvement Associations of New York State by producing 111.6 lb. fat from 1,923.6 lb. milk. She is only a four-year-old. A grade Holstein Alice, owned by R. W. Reed, of Hemlock was second with 100.2 lb. fat, 2,575.2 lb. milk. Princess, a purebred Holstein, owned by F. R. Martin of Copake Falls, was third with 95.8 lb. fat, 1,915 lb. milk. Another purebred in the herd of J. S. Cooley, Groveland, was fourth with 90 lb. fat, 1,599.8 lb. milk and this record is all the more remarkable as the animal was only a two-year-old heifer. A purebred owned by J. B. Harbeck & Sons of Black Creek is fifth with 84.3 lb. fat, from 2,343 lb. milk.

All the reports for March were not in when the supervisor's news letter was published April 25th. A member of the Stewart herd leads the animals reported with a production of 2,083.2 lb. milk, 103 lb. fat. Mr. Reed's grade Holstein is second with 102 lb. fat from 2,575 lb. milk while a purebred, owned by P. W. Chamberlain of the Western Allegheny Association is third with 2,123 lb. milk, 100.1 lb. fat. The Harbeck purebred Holstein herd, reports Agent B. E. Mullaney averaged 1,687 lb. milk, 53.7 lb. fat despite the fact that the herd includes five two-year-olds and four three-year-olds. In this association one cow owned by E. H. Witter was the association leader for

milk with 2,387 lb. milk and the purebred mentioned as belonging to P. W. Chamberlain of Canadea is the leader for fat with 100.1 lb.

In the East Aurora Association twelve grade cows owned by Merritt Kelsey, Porterville, averaged during the year 9,142 lb. milk, 344 lb. fat, their average test being 3.76% and the value of their product above feed cost was \$135 per cow.

MAKING A NICE START

The high herd for milk production in the Franklin County, Pa., Association for the month of April consisted of ten Holstein cows owned by W. J. Young and their average production was 1,217 lb. and their average test was 3.6%.

De Kol Queen Mooie owned by C. E. Stouffer of Shippensburg although only a three-year-old led for production with 2,040 lb. milk 69.4 lb. fat to her credit despite the fact that she freshened April 6. Kings Highway Aaggie Netherland owned by W. J. Young was second with 1,935 lb. milk, 62 lb. fat. Grade Holsteins were third and fourth, a purebred owned by H. H. Stoner & Bro. was fifth, another Stouffer cow Belle Princess De Kol 3d was sixth, while Kings Highway De Kol Princess, of the Young herd was eighth. The leading ten cows each produced over 51 lb. fat during the month. The animals occupying ninth and tenth positions were grade Guernseys.

Twenty-six cows produced 40 lb. fat or more and 13 exceeded 50 lb. while 23 cows produced over 1,200 lb. milk. The tester of this Association is I. Paul Stouffer who recently took a course at State College and is an enthusiastic dairyman. His picture appeared in the January 22, 1923 issue on page 72 of the BREEDER AND DAIRYMAN.

IN COLD STORAGE

Sign on a South Side bakeshop window reads, "Ma's Bakery," Just underneath Ma's proud boast was lettered, "Pop on Ice." Looks as though they had the old man laid away.

THE TESTER'S TRIBUTE

The Baltimore County (Maryland) Cow Testing Association completed a year's record with the month of March, 1923. Among the eighteen herds tested, containing approximately 450 cows, the purebred Holstein-Friesian herd belonging to W. R. Whittingham, of Corbett, stands preëminent. The honor of having the highest yearly herd average in both butterfat and milk as well as the high individual cow belongs to Mr. Whittingham. His herd of fourteen big "Black and Whites" completed the year with an average production of 11,197 lb. of milk and 371.8 lb. of butterfat. The production of the high individual, Clothilde Delight, was 16,689 lb. milk containing 545.8 lb. butterfat.

These records were made by a very busy farmer producing market milk under "plain farming" conditions and they serve to substantiate the dominant position of the breed in that respect. Mr. Whittingham's herd impresses one with the uniformity of essential dairy-type characteristics which the individuals display. They are all big, rugged cows with evident quality—the kind that please the eye, prove themselves at the pail, and boost the breed.

A. P. STAEBNER, Tester.

SOUTH CAROLINA TESTING

During the month of March, twenty-seven purebred Holsteins were tested in South Carolina, of which twenty made the honor roll. There were forty-five Guernseys tested of which twenty-four made the honor roll and five Jerseys tested of which four achieved honors.

The state leader was O. K. L. Mamie, a daughter of Ormsby Korndyke Lad owned by V. M. Montgomery, Spartanburg. She produced 2,697.1 lb. milk, 100.6 lb. fat in the month. Second to her was Leafy Veeman Fobes De Kol another Montgomery cow with 95.6 lb. butterfat and she is the state leader for milk with a production of 2,827.2 lb. Mr. Mont-

gomery has thirteen cows and heifers on the honor roll. J. T. Willard of Spartanburg, has five and Clemson College is represented by two two-year-olds.

The Guernsey leader is Fern of Glenville and she has headed the list of her breed representatives for seven consecutive months. Her fat production of 89.3 lb. is third for the state. The Jersey leader Primrose Plymouth owned by Clemson College produced 55.6 lb. of fat.

GOOD PUREBREDS HERE

Black and white cows carried away the honors in the Byron, Wisconsin Testing Association for the thirty days ending May 1. E. M. Cowles & Sons owned the leader, a registered cow with a production of 2,157 lb. milk, 86.3 lb. fat to her credit. F. H. Boyle owned the next two both registered animals. The holder of second place had 1,950 lb. milk, 74.1 lb. fat to her credit while her stablemate produced 2,133 lb. milk, 68.2 lb. fat. A grade Holstein, owned by Walgenback Bros. is in fourth position with 1,314 lb. milk, 67.1 lb. fat while another Cowles purebred is fifth with 1,494 lb. milk, 64.2 lb. fat. The E. H. Korner dairy of nineteen registered Holsteins has the high herd average with 1,377 lb. milk, 44.83 lb. fat while the sixteen cow dairy of registered and grade Holsteins owned by Herman Peters have second place with an average of 1,017 lb. milk, 36.50 lb. fat, reports the tester, A. Miller.

THE EIGHTH WONDER

Dr. Calhoun—In all my travels, what interested me most was the mummy of a queen.

Pupil—It was wonderful wasn't it?

Dr. Calhoun—Wonderful! It was almost impossible that they could make a woman dry up and stay that way."

She: "John, let me go to France with you to see the places where you fought." He: "All right, dear, and in order that I may think I'm still at it, let's take your mother."

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

FIRST AND THIRD

Holsteins did well during April in Sullivan County, Pa., Testing Association. The leader was the registered Holstein, Bonnie, owned by C. N. Shaffer. This four-year-old produced 1,413 lb. milk, 53.7 lb. fat with an average test of 3.8%. A grade Jersey was second with 53.3 lb. fat while the third was a registered Holstein owned by Harrington & Co. She was fresh last September but produced 1,494 lb. milk, 52.3 lb. fat. A grade Holstein of the Shaffer herd was next with 1,209 lb. milk, 52 lb. fat. The other six animals in the leading ten are two grade Holsteins, two registered Holsteins, one grade Jersey, and a grade Durham and the ten cows each gave above 48 lb. fat, the average being 1,302 lb. milk, 51.2 lb. fat.

In the Association there are 26 herds containing 235 cows in milk and 47 cows dry, eight cows each produced over 50 lb. fat and 33 over 40 lb. while 23 exceeded 1,200 lb. milk.

"Sedentary work," said the lecturer, "tends to lessen the endurance."

"In other words," butted in the smart student, "the more one sits the less one can stand."

"Exactly," retorted the lecturer, "and if one lies a great deal one's standing is lost completely."

GOOD PRICES AT HOOD FARM DISPERSAL

The dispersal of the noted Hood Farm herd of purebred Jerseys brought together a big crowd at Lowell, Mass., April 21st. Hood Farm was, we believe, regarded as the leading American Jersey breeding establishment and the herd had been established 31 years.

Prices ruled high. The 96 head realized \$74,015 an average of \$771. The 23 bulls averaged \$1,209 and the 63 females \$733. Every animal was sold singly irrespective of age. The top price for a bull was \$15,600 and the top price for a female was \$5,350, in each case the purchaser being Wm. R. Kenan, Jr., of Lockport, N. Y.

The famous Sophie 19th of Hood Farm was not sold, being presented before the sale by Mrs. Hood to Jerry Koehane who has been the herdsman at Hood Farm for the past 25 years. Mr. Koehane has acquired a ten-acre farm near Lowell and on it he plans that Sophie and himself will end their days.

The night before the sale the Sophie-Tormentor Club was organized by about 100 owners of cattle of that lineage. The aims of this organization is somewhat similar to those of the Colantha Club in the Holstein industry.

NEW YORK ASSOCIATION SPRING SALE

The spring sale of the New York Holstein-Friesian Association was held May 8th and 9th and was well attended, visitors being present from Pennsylvania, Maryland, New Jersey and the New England States. The first day of the sale was pleasant but the second day was cold and stormy yet there were more present than on the previous day. There was quite a demand for fresh cows and they brought higher prices than cows of equal quality due to freshen in the fall. The auctioneers were Geo. Baxter and Glenn Mead with R. Austin Backus as pedigree man.

Secretary Bond announced that the 45 cows averaged \$219 and the 48 heifers, \$153. Nineteen calves under one year old averaged \$87; there were 13 bulls in the sale and they averaged \$143. During the two days 125 head were sold. The sale was held in the Earlville pavilion.

Tuesday evening a smoker was held at the Earlville Opera House. Mr. Hoadley of the Earlville Chamber of Commerce gave an address of welcome. President C. F. Bigler spoke on the New York State Association and the new Association Secretary M. C. Bond told of plans of the coming year. A. A. Hartshorn, former president of the Holstein-Friesian Association of America spoke on the labor situation and its connection with farming. A quartette from one of the local churches gave selections which were greatly appreciated. Two reels of motion pictures were shown, the one on the Ox Warble being especially interesting.

ROCK COUNTY SALE GOOD

The Rock County Breeders' Sale held at Janesville, Wis. May 1 was considered quite a success. There were 72 animals sold for a total of \$10,095, an average of \$140. Many of the animals offered were young heifers and bull calves. It was said that the offerings were of higher quality than have ever before been seen at a Rock County sale, and a large proportion of the offerings remained in the county.

The top price was \$410 received for Juliana Roella Hengerveld 2d, a nice young heifer consigned by J. H. McBride & Sons of Milton and purchased by J. A. Craig of Janesville. It is expected that this animal will be seen in the Rock County show herd this fall. Another one that also may be exhibited in the show herd is Belle Segis Beets Abbeckerk consigned by J. H. Pester of Whitewater and purchased by Mr. Craig for \$360.

The auctioneers were J. E. Mack and Edgar Eells with Everson as pedigree man. The animals bringing \$175 or more with names and addresses of their purchasers are:

Consigned by John Wehinger & Sons, Janesville, Wis.		
1	Rebecca Juliana Clyde, T. A. Tollefson, Orfordville, Wis.	\$315

WEST CHESTER BANQUET AND SALE

The Eastern Jersey Breeders' Association Sale and the Eastern Holstein Breeders' Sale will be held October 8 and 9 at West Chester, Pa., the Jersey sale being held on the first day and the Holstein sale on the second day. It is planned to have a banquet on the evening of October 8 to include all those interested in any purebred dairy breed and it is hoped that the national president of each dairy breed will be present as it is known that they are all scheduled to be in the eastern states around that date.

The idea of having the sales at this time was twofold. The Chester County Fair comes the week before (which by the way is one of the best livestock fairs in the East) where the cattle consigned could be on exhibition and compete for the premiums and be viewed by thousands of people and remain there until the sale. We hope to attract the Southern buyers on their way North to the National Dairy Show at Syracuse, West Chester being only a short distance from Philadelphia which city they would naturally pass through.

The Holstein cows to be entered in this sale must be those due to freshen next fall, from herds under federal supervision and subject to personal inspection before being accepted. For the good of the breed, however, rather than prices away up in the thousands, we would prefer to see a substantial average made by progressive farmers and breeders being buyers at a few hundred dollars per head, knowing that they are obtaining good healthy foundation stock. For the fancy breeder there will be included some cows with unusually high records, and a few bulls from such cows.

The entries are likely to close any time as we will take only 50 head. Up to the present the following approved nationally known Holstein breeders have engaged space for two or more head: Allamuchy & Tranquillity, N. J.; Mr. Allinson, Pa.; Bennett & Latzer, Pa.; Bloomingdale Farms, N. J.; Brentwood, Pa.; Mr. Cook, N. J.; Mr. Garrett, Pa.; Mr. Jones, Pa.; Mr. Keen, Pa.; Rancocas, N. J.; Robertson Farms, Pa.; Winterthur Farms, Del.; Woodward & James, Md.

F. C. BRINTON, JR.,
Agricultural Extension Office,
West Chester, Pa., May 10, 1923.

NICE AVERAGE AT MELVIN DISPERSAL

The R. C. Melvin herd was dispersed at the Cold Spring farm between Liverpool and Baldwinsville, N. Y. on May 2 and 3. Mr. Melvin, in addition to a large horse business, has been engaged in the cattle industry for a dozen years and his herd has been headed by animals that were nationally famous. For a number of years Mr. Melvin has imported cattle from Canada into the United States and the herd he has just sold carried a large percentage of Canadian blood. He has made many friends both in the eastern and western states and they regret his decision to sell.

Buyers were present from New Jersey, New York and Pennsylvania. There were 81 animals sold for \$14,077.50 an average of \$173.89. Excluding nine real young calves 72 animals averaged \$190.20. The top price was \$350 which was reached twice. W. J. Abbott purchased Lillian Vander Abbeckerk a good individual of Canadian breeding and Cook and Bennetsch of Langhorne, Pa. took Mary Pontiac Lyons, a daughter of Pietje Car Born Pontiac who was by King Pontiac Artis Canada from a 38 lb. daughter of Prince Hengerveld Pietje. The same gentlemen paid \$345 for Johanna Pearl Artis, a six-year-old daughter of Leila Queen's Artis. The auctioneer was Geo. W. Baxter with R. Austin Backus as pedigree expert.

(Concluded on page 366.)

GOOD BULL CHANGES HANDS

The well-known Holstein breeder and sale manager S. R. Miller, of Chambersburg, Pa., has sold to Speck and Omwake of Greencastle, the good bull, Ormsby Clothilde Lad. Mr. Miller says that in the herd of his new owners, Ormsby Clothilde Lad will have the opportunity his breeding and individuality warrants. The Miller herd consists of thirty-three head all told and every animal of milking age is in calf to this bull who is a son of Ormsby Korndyke Lad and Clothilde Dot 2d, a splendid cow that, as a junior three-year-old, made a seven-day record of 29.73 lb. butter. She has two daughters that have each made over 20 lb. butter in a week in official test. Her sire, Pontiac Aesula De Kol, is a son of Hengerveld De Kol from a good daughter of Pontiac Korndyke.

Ormsby Clothilde Lad is a son of Ormsby Korndyke Lad whose daughters have remarkable records both in short time and long time test. No bull with an equal number of tested daughters has as many in the 30 lb. list nor in the list of 1,000 lb. cows. The latest daughter of this bull to cross the 30-lb. mark is O. K. L. Mamie, who recently made 99.4 lb. butterfat from 2,179.6 lb. milk in a month and an official seven-day record of 31.07 lb. butter and during March headed the list of South Carolina honor cows by producing more than 100 lb. fat in the month.

The Speck and Omwake herd now consists of 100 head. In this herd are a number of daughters of Sir Colantha Pietertje Korndyke, who was a son of Pontiac Korndyke from Colantha Pietertje Korndyke, who as a four-year-old made a seven-day record of 30.8 lb. butter, 529.9 lb. milk. She is also a daughter of Pontiac Korndyke so that Sir Colantha Pietertje Korndyke has 75% the same breeding as Pontiac Lady Korndyke, former world's champion and the first cow to make 38 lb. butter in a seven-day official test.

ONGLEY STARTING WELL

Merl W. Ongley of the West View Stock Farm, Centerville, Pennsylvania, is building up a nice herd of Holsteins and now has seventeen head. He recently ran a test on three of his animals making records of 13.47 lb. butter, 319.4 lb. milk on Pauline Wetzel, 502.1 lb. milk, 22.68 lb. butter, on Maple Grove Pontiac Fanny 53.4 lb. milk, 20.87 lb. butter on Maple Grove Pontiac Fanny Glista. The last mentioned produced 78.6 lb. milk in a day and her seven-day record, considering age, is the highest in Crawford County, while the record of Pauline Wetzel was made ninety days after freshening. The two Maple Grove cows were bred at the Maple Grove Stock Farm which is in the same neighborhood and both Mr. C. Jones and Mr. F. Jones take as much pleasure in the performance of the Ongley cows as if they themselves still owned them.

Maple Grove Pontiac Fanny is from the good A. R. O. cow, Maple Grove Veronica Retta and was sired by King Pontiac Jupiter who has a long list of good record daughters and was sired by King of the Pontiacs from a good record daughter of Hengerveld De Kol. Maple Grove Fanny Glista is a daughter of Maple Grove Pontiac Fanny and her sire is Model Daniel Glista, whose dam, Glista Dinah is a good 25.7 lb. daughter of Glista Coreva, 34.08 lb. butter from nearly 600 lb. milk in a week, the second highest record cow in the Cornell University herd.

GOOD BULL CHANGES HANDS

Henning and Ogilvie, of Madison, Wisconsin, recently headed their herd with Crescent Pontiac King, a fifteen-month-old son of Harvest Johanna Pontiac. Crescent Pontiac King was obtained from the herd of Joseph Hoskins, of De Pere, Wisconsin, who in partnership with some other breeders of Brown County, recently purchased the bull which headed the Jefferson County show herd last fall.

The dam of Crescent Pontiac King as a three-year-old made a year record of over 21,000 lb. of milk. He is reported as being an excellent individual with a straight topline, neat shoulders and head, and shows promises of developing into a very handsome herdsire.

AN HOUR AT WINTERTHUR

A short time ago we had the privilege of spending about an hour at Winterthur Farms. Bess Johanna Ormsby was milking over 100 lb. a day at that time and although she had been fresh two and a half months, gave 104.8 lb. the day previous and no day since she freshened had she been below 100 lb. She looks every inch the great cow she is and her wonderful production has not pulled her down materially in flesh.

Her record of 44.18 lb. butter in seven days was made in her present lactation period as an eight-year-old but as a junior four-year-old she made 40.74 lb. butter in a week. She is the only living cow that has two 40-lb. seven-day butter records to her credit. She has four seven-day records made different years that average over 40 lb.; five records that average 37 lb. and it is a well-known fact that she is the only cow that made three 10-months records each above 1,000 lb. By the way she is shaping it looks as though she will again add to her laurels on long time test.

Her youngest offspring is a fine bull calf, thrifty looking and growthy. He was sired by Meadow Holm Ona Ormsby, a son of Sir Pietertje Ormsby Mercedes 40th and Meadow Holm Ona Clothilde, who, as a junior two-year-old, made 735.58 lb. butter in a year and, as a mature cow, made 851.34 lb. butter in a year. She is a daughter of Ona Clothilde De Kol, 1,100.6 lb. butter in 365 days who has one 1,300 lb. and another 1,000 lb. year record daughter. Meadow Holm Ona Ormsby is at the head of the herd owned by the University of Delaware and the University herd is federally accredited.

We looked over the Winterthur herdsires and they are a bunch of splendid Holstein bulls, remarkable individuals. Winterthur Bess Ormsby Boast, another son of Bess Johanna Ormsby, was in a roomy box stall. He is allowed to run

loose and when he is needed often has to be lassoed. Boast strongly objects occasionally and then he will catch the rope in his mouth as a dog will catch a bone or stick thrown to him. To see a 2,300 lb. bull catch a rope "dog fashion" is enough to cause John M. Kelley to try to purchase Boast for Ringling's circus.

We were unfortunate in missing Superintendent J. Russell Danks but Mr. Hamilton did the honors in great shape. He seemed very proud of Winterthur Ormsby Segis Anola, a daughter of King of the Ormsbys and Winterthur Inka Prilly Segis Nola. Anola freshened for the first time as a junior three-year-old. When fresh she made a seven-day official record of 24.72 lb. butter, 546.4 lb. milk but she was in test again 60 days after freshening and had produced 28 lb. of butter in the week, milking 628 lb., quite a showing for a heifer with first calf. She was giving better than 80 lb. milk a day right along.

The milking herd looked like the producing dairy it is and the calf barn was full of youngsters, lively as crickets. Sometime in the near future, we hope to pay another and longer visit to this great Holstein breeding establishment.

QUALIFIED

They tell a pretty good story on Professor Wing and his Animal Husbandry Class. The professor was showing a class of Cornell students some pictures of various breeds of cattle and flashed upon the screen a picture depicting a group of Holstein-Friesians. One of the young men came from New York City and was not overly interested in his studies, and the professor, rather sharply called him to attention. The future extension service worker answered, "Oh, I have seen those before; my grandfather uses that make."

REPEAT SALES FROM MAPLE GROVE

Maple Grove Stock Farm has recently sold to W. C. Himebaugh, of Centerville, Pa., a fine yearling bull. His dam, Maple Grove Alban Glista, as a heifer made a nice official record and is a daughter of Model Daniel Glista whose dam Glista Dinah is a 25-lb. daughter of the 34-lb. cow, Glista Coreva, until recently the second highest record cow in the Cornell University herd. The sire of Mr. Himebaugh's bull Clever Model Glista, is a son of Glista Coreva, who as a six-year-old produced practically 600 lb. milk, and over 34 lb. butter in seven days, then the next year produced 31.21 lb. butter in a week and practically duplicated her previous milk record.

Glista Coreva is very closely related to the great Glista Ernestine of the Cornell University herd, the only cow in the world to make a 30-lb. seven day butter record seven different years. This is peculiarly interesting at the present time as Glista Fortuna, a daughter of Glista Ernestine, has just produced 37.59 lb. butter, 607.7 lb. milk in a week in the Cornell University herd.

Another son of Clever Model Glista was sold to Merl W. Ongley, also of Centerville, and on another page of this paper we carry an account of some of the splendid records made in the Ongley herd on animals purchased from Maple Grove Stock Farm. So well do these cows do that Mr. Ongley went back to Maple Grove for his herd sire who is from Maple Grove Lady Fairview Spoford, 461.5 lb. milk, 20.60 lb. butter in a week. She was sired by a son of King Pontiac Jupiter, one of the good sons of King of the Pontiacs from a daughter of Hengerveld De Kol. Mr. Chas. Jones writes us that they consider Mr. Ongley's new herd sire to be one of the best bred young bulls ever in the Maple Grove herd and the Joneses father and son, are especially gratified as this is the second time both Mr. Himebaugh and Mr. Ongley have purchased herd sires from Maple Grove Stock Farm.

TWO NEW CENTURY SIRE

The limited list of century sires has been added to during the present calendar year. Korndyke Abbekerk, that great old sire and show bull, who for a number of years was at the Tranquillity and Allamuchy Farms now has 100 daughters in the A. R. O. list. His list of tested daughters have been steadily growing and the news that he is now a century sire will not be at all surprising to breeders in the eastern United States and was predicted several months ago in the BREEDER AND DAIRYMAN columns.

The only living century sire is Maple Crest Korndyke Hengerveld, a son of Friend Hengerveld De Kol Butter Boy and Maple Crest Flora Hartog. While bred in Ohio, this bull has spent most of his life in Michigan. The Blue Book credits this bull with 61 tested daughters so that he has had a large number of daughters tested during the past season. Maple Crest Korndyke Hengerveld is in service at the Battle Creek Sanitarium.

NICE RECORD IN STORRS HERD

Dorinda Storrs De Kol No. 262008 has completed a year's record in the Connecticut Agricultural College herd with 21,646.6 lb. milk, 826.1 lb. butter according to the college records. She freshened at the age of eight years, two months, eighteen days and is due to freshen again in June.

Dorinda has previously been reported with good long-time records. Calving at four years, one month, four days, she is credited with 18,523.1 lb. milk, 779.5 lb. butter in 365 days. Then at six years, three months, two days she was tested for 305 days and during this time she produced 13,238.3 lb. milk, 571.35 lb. butter. Her previous record was made under the ordinary care given the general college dairy. She occupied her regular stanchion, was milked by students four times a day and we are informed that the hay fed her was not of high quality. Then during the summer she was afflicted with hoof rot and her milk production dropped to fifteen pounds a day.

Dorinda was bred in the college herd. Her sire, King Segis Inka Fayne is a son of King Hengerveld Aaggie Fayne. Her dam, De Kol Hubbard Pietertje 2d has a number of good year records, the highest of which is 22,041 lb. milk, 1,009.3 lb. butter. She is a daughter of De Kol Hubbard Pietertje, who is credited with 23,176 lb. milk, 1,038.4 lb. butter. This is claimed to be the highest producing three generation group ever bred in the state of Connecticut. There average is 957.9 lb. butter, 22,288 lb. milk.

PRICED REASONABLE

The Horton, Crary & Co. own one of the best herds in Northwestern Pennsylvania and their establishment at Warren is visited every year by many from neighboring states as well as from the home state of Pennsylvania. Columns of the BREEDER AND DAIRYMAN have occasionally carried items telling of records made in this herd. The owners instead of basing prices of their surplus stock upon records made, offer them at a low price so as to insure a quick sale and to have them snapped up by near-by dairymen. What other firm can you think of that will offer you a yearling bull from a 34-lb. sire and from a 29-lb. daughter of a 31-lb. cow for as low a price as \$125? Many Holstein owners are asking you as much for a bull without any official backing whatever let alone a bull whose three nearest dams have seven day butter records averaging 31.93 lb.

HEIFERS HAVE GOOD PEDIGREE

Clarence McClelland, a young Holstein breeder of Berlin, Wis., recently purchased from S. A. Eastman, of Plymouth, three purebred Holstein heifers. The sire of these heifers is a son of Sir Pietertje Ormsby Mercedes 37th and their dams are daughters of Piebe Joe Oak De Kol Fobes, a bull of the Homestead strain, whose dam has a 28 lb. seven day butter record.

"Berkshires on Every Farm"

The Berkshire World

Devoted to the best interests of the swine industry, particularly to the Berkshires, the hog that won **Grand Championship** over all breeds in the dressed carcass classes at the late International.

Easy feeders, meat of unsurpassed quality, profitable. The Berkshire hog and the Holstein cow are the best farm animals today.

Full of practical information. All the news of the American Berkshire Association. Every number is worth more than a year's subscription to any farmer or swine breeder.

\$1 gets it for a year.
A good investment.

ROCK RIVER FARMS HAS GOOD DAIRY

The Rock River Farms are getting quite a lot of advertising at the present time on account of the splendid production of the Holstein cows in the dairy. During the past year in the Ogle County, Ill., Testing Association the eighty milkers averaged 13,573 lb. milk, 470.24 lb. butter fat.

The testing association credited each cow with the value of milk produced at the local price of \$1.94 per 100 lb. Home-grown feeds were charged at market price; purchased feeds at the actual cost. A charge was made for barn rent and equipment but the testing association figured that the offspring produced, with the manure, offset the cost of labor. On this basis this herd of eighty head made an average profit of \$101.59. The milk, however, was not sold at the local price but as certified milk and an average price of \$7.74 per 100 lb. was received. The difference between the local price and the actual price is not all profit because more labor was needed to place the certified product on the market. During the year, Farm Manager H. W. Allyn said the milk receipts amounted to \$66,873. Rock River Farms is located at Byron, Ill., and is owned by United States Senator Medill McCormick. Mrs. McCormick takes an active part in the management of the farm and dairy.

NOT A HOLSTEIN

The picture accompanying this article is not supposed to represent a Holstein but it does represent Bonnie J. No. 595351 of the Hereford Herd Book. Bonnie J. was the grand champion at the Chicago International, 1919. He is owned by E. E. Mack & Son of Thomasville, Georgia, good friends of the Holstein industry and the picture is shown as a compliment to those gentlemen.

The 1920 census says there are 14,302,000 animals of the Hereford breed in the United States or 21% of the total cattle. There are slightly more Short-horns, the figures being 15,429,000. The Holstein breed comes third with 11,069,000 or 16.2%; these figures, of course, include purebreds and grades.

The American Hereford Cattle Breeders' Association is the third largest cattle registry association in the world, it carries on an aggressive extension campaign. It does not charge any transfer fee yet, in spite of that fact, is accumulating a surplus.

BONNIE J.

Hereford Grand Champion at the 1919 Chicago International. Owned by E. E. Mack & Son, Thomasville, Ga.

Commenting on this fact a southern breeder of Herefords and Holsteins writes, "A surplus becomes a temptation in the hands of unscrupulous and ambitious directors. We certainly feel that any corporation like the Holstein Association, which is not being run for profit, that there should be no transfer fee charged. A lot of this extension work is Tommy-rot and is at the expense of the Association. If the Association wants to do some real missionary work, our idea would be for them to buy a lot of Holstein bulls, and sell them to the farmers at a cheap price and let them see the benefits of using a purebred sire.

There are many things like this that the Holstein Association could do in placing Holsteins in new territories and once this is done, the Holstein cow will make her own friends. An expert traveling hot air artist can not accomplish as much in one year in a given community as one purebred bull and half a dozen cows can do in that community."

Suspicious Wife (who has waited until midnight for her husband's return)—"Where have you been all evening?"
Culprit—"I've been talking business over with Tom Baker."

"Yes? And I suppose that is baking powder that is sprinkled all over your shoulder?"

MAKING GOOD AS RECORD MAKER

Harold Burdick, of Barron, Wisconsin, is making quite a reputation at the Holstein Testing Plant, at Dixon, Illinois. One of the records made under his care was 1,196.3 lb. butter from 25,353 lb. milk by the junior three-year-old, Tazewell Cornucopia Piebe. This record is all the more remarkable as it was made at first freshening. It is the second highest record in Illinois and the highest in the junior three-year-old class, while only one other heifer in the class has ever exceeded this showing.

Harold graduated last spring from the Agricultural short course at Madison. Besides this record a number of other good ones have been made by animals in his care, one junior two-year-old produced 716 lb. butter, 15,750.5 lb. milk while another made 722.85 lb. butter and 16,920 lb. milk, while a junior three-year-old produced 709.74 lb. butter and 17,999.9 lb. milk.

While a student in the Wisconsin short course Mr. Burdick fitted and exhibited a cow in competition with a number of agricultural students and won first prize. Two months in succession he won the monthly prize offered by the Dixon Chamber of Commerce for the herdsman whose animals and stalls were kept in the neatest condition at the testing plant.

NICE RECORD AT FERNDALE

A seven-day butter record of 31.51 lb. from 606 lb. milk has been made by Jewel Pontiac Mechthilde, No. 483678, owned by Frank W. Fernsler, of Lebanon, Pa. At the time of freshening she was four years, nine months and sixteen days old. She is from Lady Jewel Mechthilde 2d, a 29.27-lb. daughter of Sir Clothilde Gorter. Her sire is King Pontiac Lass, who was from the 29.7 lb. cow Hartog Gorter and was sired by Spring Farm Pontiac Cornucopia, whose dam is the former world champion K. P. Pontiac Lass, 44.18 lb. butter A. R. O. Mr. Fernsler has named his establishment Ferndale Stock Farm and is building up a nice little herd of producers. This is the first 30-lb. seven-day official record made in the herd and its owner has every right to be proud of it for a milk flow of more than six hundred pounds in a week with a fat percentage of better than four indicates a real good cow. The seven-day records of Jewel Pontiac Mechthilde and her two nearest dams average 30.16 lb. butter and the daily milk average is 77.1 lb.

SOLD SIRE TO NEIGHBOR

Antrim Pride Segis who for three years has been owned by Wade Woods-worth, of Evansville, Wis., was recently sold to H. A. Knapp & Bro., of Burnap Farms, one mile northwest of Evansville. Antrim Pride Segis is a son of Pioneer Princess who has a 28-lb. seven day butter record and 800 lb. year record. The sire of the bull is Finderne Pride Johanna Korndyke, the senior herd sire at the Pickering Farms, Belton, Missouri.

STATE CHAMPIONS IN SMALL HERD

The purebred Holstein herd of Edwin C. Wippermann at Lake Park Farm, Sheboygan, has a number of distinctions that make it worth looking over.

It contains Wisconsin's first 28,000 lb. cow.

The only 28,000 lb. cow with a 27,000 lb. daughter in Wisconsin.

The first cow in Sheboygan County to make 27,000 lb. milk in a year.

A dam and daughter in the herd hold the Wisconsin state record for yearly milk production.

Wisconsin's highest record three generation group for milk and butter production.

The winner of most money in the Holstein-Friesian Association's prize list in 1921.

The first prize winning two-year-old for milk production in the United States in 1921.

Some eight years ago, H. C. Prange of Sheboygan decided to farm as a diversion. He erected the barn, sunk an artesian well and provided Lake Park Farm with modern farm equipment. With the growth of business, he found he could not give the farm the attention it deserved, and he sold a half interest to Mr. Wippermann, who was born and raised in the neighborhood. Afterwards he sold his other half interest to a brother of Mr. Wippermann and last fall the present owner purchased this brother's interest.

The Lake Park Farm consists of 160 acres and is located on the shore of Lake Michigan. There are 150 acres under cultivation and the farm is very fertile. The rotation is corn, oats, hay and pasture and one field has been in alfalfa for six years. The land is all tilled. One of the chief attractions of the herd is Pearl Longfield De Kol, now seventeen years old, and looking as though she would last a number of years. She is Wisconsin's first 28,000 lb. cow and her daughter Pearl Longfield Pontiac produced 1,065.38 lb. butter, 27,074 lb. milk in a year. The older Pearl has a year record of 28,050.5 lb. milk and 1,215.1 lb. butter.

Lake Park Longfield Segis Pontiac, a granddaughter of the old cow holds the Sheboygan County record for milk and butter production, while Bess Longfield Ormsby, another granddaughter is now on year test and making a splendid record. The herd now contains 45 head of which 18 are in milk. The owner plans to retain the female descendants of Pearl Longfield De Kol and in course of time the entire herd will own her as an ancestor.

HOLSTEINS BIGGEST EARNERS

The Creamery at Blair, Wis., made 62,817 lb. butter in March and paid 56 cents per pound for butterfat. The total payroll amounted to \$29,206.72. The highest check was \$367.92 which was earned by the purebred Holstein herd of Peterson Bros. of Vosse Coulee.

EXPERIENCE OF TWENTY YEARS POINTS TO HOLSTEIN COW

After an experience of twenty-five years in the dairy business and in that time having had a variety of different kinds of dairy cattle, viz: Holsteins, Guernseys, Durhams, etc., I am finally convinced, with my past experience, that there is no cow in my judgment that compares favorably with the Holstein cow. In the first place she produces more milk than any other breed. Her calves, as a rule, are big, strong and healthy, always in demand and, it is an established fact, that she produces more milk, cream and butter than any other herd of cattle. Statistics show conclusively that the Holstein cow produces 70% of all the milk that is consumed, the other different herds producing only 30%. Eliminate the Holstein cow and you can readily see what a condition would exist with reference to the shortage of not only milk but butter, cheese, cream and many other articles of food needed for human consumption.

Two years or more ago a series of letters were sent to a great many of our farmers from some milk dealers advising them to substitute Guernsey cows for their Holsteins. I and others were open to conviction and accordingly I made several visits to different States among them Ohio, Western New York, and finally, to Canada with the view of procuring Guernsey cows to replace my Holsteins. After visiting these places and looking at quite a number of Guernseys in the section, I came home convinced in my mind that the Holsteins could not be replaced by any other breed.

I now have cows on my farm that have A. R. O. records from 20.27 pounds of butter in seven days and a cow making as much as 22,450 pounds of milk in 12 months. Recently a cow sold from my herd that is now owned in Baltimore County produced 97 pounds of milk per day. These facts prove conclusively to my mind that the Holstein cow is the cow for me.

CHAS. WERTHEIMER,
Frederick, Md.

EDITOR—The above appeared in the *Maryland Farmer*, issue of May 15, 1923. Mr. Wertheimer is one of the leading Holstein-Friesian breeders of his state and at present is president of the Frederick County, Md., Holstein-Friesian Club.

RAY OWNS SHOW BULL

Edward J. Ray, of Kewanee, Ill., is very proud of his herd sire King Ormsby Cecho. This bull is now eighteen months old and was purchased from the Winterthur Farms. He is a son of King of the Ormsbys and his dam has a record as a four-year-old of 30.72 lb. butter, 563.5 lb. milk in a week. King Ormsby Cecho is also a show bull and won first prize in his class at the Delaware State Fair and was later awarded junior championship. Mr. Ray has about 30 head of Holsteins of which thirteen are in milk. His herd is under state and federal supervision, and passed a clean test nearly a year ago.

AWAY DOWN IN GEORGIA

There is a good Holstein farm close to Atlanta, Ga. owned by T. H. Pitts, a well known Atlanta business man. Tom Pitts' place is shown to many dairymen from other states who visit Atlanta.

During the month of March, one of the cows in this herd made a profit of \$91.09 above feed cost. There are only 18 milkers, yet two members of the Pitts' herd stand first and second for milk production in the report of Georgia cows. The herdsire is Inka Prilly Segis Blois, who, when he was in the well known Winterthur herd, was the Delaware state champion of his age.

Mr. Pitts is very much interested in his dairy. Besides making a financial success on the basis of milk production, this herd is proving to Georgians that high class cattle can be bred and raised in the state and that it is not necessary to depend on scrub stock for dairy production.

FIRE DESTROYS GOOD HERD
